Base Program Description. The U.S. Trustee system requires centralized policy guidance, coordination and administrative support. The Director and Deputy Directors of the Executive Office for United States Trustees provide policy and management direction to the U.S. Trustees and their staff in the field. The legal services staff is responsible for giving legal advice and opinions to the U.S. Trustees and for assistance in maintaining the quality of legal work performed in the field offices. The management and administrative staff is responsible for budget development and execution, resource allocation, procurement and contracts, personnel, space, accounting, automated management information systems, program auditing, and management assessments of field office operations. There are numerous federal regulations, laws and executive orders which must be followed by the U.S. Trustees and which require the services of the Executive Office. For example, the General Services Administration regulations governing the acquisition and use of space require centralized handling of these responsibilities. The complexity of federal personnel regulations likewise precludes the delegation of this function to field office personnel. Procurement can be handled more cost effectively at the headquarters level. Program-wide legal and administrative policies can only be established and monitored effectively from one central location.

Accomplishments and Workload. The present staff has been able to meet the requirements of field personnel with a minimum of delay. Responsiveness to field office needs has been excellent in spite of the heavy demands placed on the administrative section, particularly in the areas of personnel and procurement, and on the legal staff, particularly in view of dealing with new substantive provisions of law.

The word processing component of an automated case tracking system has been implemented in all pilot field offices. During 1986, the computer portion of the system was pilot tested in the Alexandria field office and then implemented in the new Santa Ana office. Based on an evaluation of the computer test, expansion will begin to the Los Angeles and Chicago U.S. Trustee office (the largest in the country) during 1987. The expansion to other field offices is expected to coincide with program expansion over the period 1987-1989.

A U.S. Trustee administrative manual and guidelines for Chapter 13 standing trustees have been issued; several other operational manuals are being prepared for guidance in case administration. A national audit program for standing trustees has been implemented. Chapter 7 audit activities commenced during 1985. Training programs have been conducted for bankruptcy analysts and paralegals. For enhanced policy development and coordination, program-wide meetings are held periodically.

Program Changes. In 1988, only base program resources are being requested. This funding level represents an annualization of supplemental 1987 resources, providing a larger Executive Office to service the expanded field office program. By the end of 1988, the larger Executive Office will coordinate policy legal and administrative activities and audits for offices serving all 94 federal judicial districts.

Justification of Adjustments to Base
(Dollars in thousands)

	Perm. Pos.	Work-years	Amount
Transfers to and from other accounts:			
1. Transfer of FASS group. This represents the transfer of the Financial and Administrative Systems Support Group from the General Administration to the Working Capital Fund. The transfer of this group will place all of JMD financial, administrative systems support services on a user-reimbursable basis.	...	...	$2
Uncontrollable increases:			
1. One additional compensable day. The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation $6,220,000: 260 = $24,000 plus $2,000 for benefits.)	...	...	26
2. Annualization of additional positions approved in 1987. This provides for the annualization of 15 additional positions approved in 1987.	...	10	561

	1987 Increase	Annualization Required
Annual salary rate of 15 approved positions	$426,000	
Less lapse (60 percent)	-296,000	
Net compensation	130,000	$296,000
Associated employee benefits	22,000	35,000
Travel	4,000	19,000
Transportation of things	3,000	2,000
GSA rent	33,000	91,000
Communications, utilities and misc. charges	27,000	59,000
Printing	4,000	1,000
Other services	24,000	48,000
Supplies and materials	9,000	8,000
Equipment	22,000	0
Total costs subject to annualization	278,000	561,000

	Perm. Pos.	Work-years	Amount
3. Annualization of 361 additional positions requested in supplemental. This provides for the annualization of 361 positions requested in the 1987 program supplemental.	...	248	$14,090

	1987 Request	Annualization Required
Annual salary rate of 361 requested positions	14,095	
Less Lapse (73 percent)	-10,217	
Net compensation	3,878	9,592
Associated employee benefits	612	1,393
Travel	227	379
GSA rent	1,632	1,556
Communications, utilities and misc. charges	1,441	627
Other services	3,779	543
Total costs subject to annualization	11,569	14,090

4. Annualization of Federal Employees' Retirement System Costs. This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula. Total annualization required is $301,000.	...	...	301
5. Annualization of 1987 pay increase. This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 261 compensable days in 1987 and 68 paid days (October 1, 1986 through January 5, 1987) were not included in the pay raise amount of $93,000. Additionally $63,000 of the 1987 pay requirement was absorbed. Total annualization required is $156,000.	...	...	156
6. Within-grade increases. This request provides for an expected increase in the cost of within-grade increases. This increase is generally consistent with increases experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment. (Personnel compensation $5,912,000 and benefits $684,000 = $6,596,000).	...	...	65
7. Pay for performance awards system. The Office of Personnel Management is finalizing the implementation procedures for performance management for General Schedule and Wage Board employees. This performance management system will replace achievement awards for sustained superior performance, but assumes within-grade increases will remain intact. Insufficient resources are available to fund the required performance pool from which expenses should begin accruing in April 1987. Full year funding is requested for FY 1988.	...	...	24
8. Locality based per diem. Public Law 99-234 authorized a new locality-based per diem and lifted the $75.000 ceiling in certain geographic areas. An uncontrollable increase of $49,000 is required to meet the expected 12 percent increase to total travel funds.	...	...	49

		Perm. Pos.	Work-years	Amount
9.	GSA rent In 1987 the Rent System replaces the Standard Level User Charges (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $169,000 is required to meet our commitment to GSA.	...	...	$169
10.	GSA recurring reimbursable services Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard service. GSA has estimated a 4.2 percent increase of $2,000 in fees for these services in 1988 over 1987 charges of $48,000.	...	...	2
11.	Federal Telecommunication System (FTS) The General Services Administration (GSA) increased the 1986 FTS budgeted figure by approximately 16 percent to reflect unanticipated cost increases. In their development of the 1987 and 1988 estimates GSA used the increased 1986 base and included projected tariff increases and costs savings from projects underway. An increase of $100,000 over the revised 1987 base of $118,000 is requested.	...	...	100
12.	Telephone service On February 25, 1986, the District of Columbia Public Service Commission (PSC) issued its final order in the Chesapeake and Potomac telephone company (C&P) rate case. The PSC, in its order, allowed C&P to increase its rates by $31 million and set the rates for C&P's intrastate services. The PSC order effects the rates the Federal Executive Agencies will pay for basic exchange service, CENTREX services, service connections, direct inward dialing services and channel services. These changes will increase the FY 1987 cost of operating the Justice Telecommunications Service (JTS) by an estimated $522,000.	...	...	2
13.	Employee data and payroll services Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems maintenance and payroll accounting are based on the number of records maintained. The rate of $145.64 per record in FY 1986 will be raised to $155.76 per record for FY 1988. The change is based on anticipated uncontrollable cost increases of 6.9 percent for the operation of the Justice Employee Data Service. An additional increase of $9,000 has been included to improve the Human Resources Management Information System (HRMIS). This improvement will enhance the productivity of all Department components as well as the support units of accounting, budgeting and procurement. This retooling of support systems will allow the Department to operate an efficient, effective and businesslike administrative operation.	...	...	9
14.	General pricing level adjustment This request applies OMB pricing guidance as of July 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.7 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1988 estimates.	...	...	99

	Perm. Pos.	Work-years	Amount
15. Administrative Salary Increase. The request provides for an expected increase in the cost of administratively determined salaries. This increase is generally consistent with increases experienced in recent years and is approximately 3.6 percent above the base for compensation and related benefits for positions with administratively determined salaries. (Personnel compensation $1,458,000 and benefits $160,000 = 1,618,000).	...	...	$58
Total, uncontrollable increases	...	258	1,164
Nonrecurring Decreases			
1. Nonrecurring costs for background investigations. For the 15 new positions authorized in 1987, it is estimated that 9 additional background investigations will be conducted on a nonrecurring basis. (9 x $1,375 = $12,375).	...	...	-12
2. Nonrecurring costs for equipment. Equipment will be purchased for new employee authorized in 1987 on a nonrecurring basis. These purchases are estimated to total $17,000.	...	...	-17
3. Reduction in Health Benefits. The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance will be 60 percent of the total rate commencing in 1985. Effective for the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased approximately $9,000 due primarily to reduced carrier rates.	...	...	-9
4. Non-recurring decreases associated with 1987 supplemental request. This provides for the automatic non-policy decreases associated with the 1987 program supplemental request.	...	...	-4,511

	1987 Request	Decreases Required
Communications, utilities and misc. charges	1,441	-554
Rental payments to others	225	-200
Other services	3,779	-510
Supplies and materials	823	-360
Equipment and furniture	3,019	-2,887
Total non-recurring decreases	9,307	-4,511

Total, decreases	...	...	-4,549

Consulting and Related Services
(Dollars in thousands)

	1986 Actual	1987 Estimate	1988 Estimate
Consulting Services	$11	$28	$63
Management and Professional Services	32	1,351	811
Special Studies and Analysis	1	200	35
Total	44	1,579	909

Consulting and related services are required to provide those services beyond the scope of skills available within the U.S. Trustee program.

For the three fiscal years above, consulting services involve assistance to the Director of the Executive Office for U.S. Trustees in areas beyond the expertise of the permanent staff.

Expenditures for management and professional services are made when it is more cost effective to contract for services than to hire permanent staff. These specialists have assisted the program with computer programming, specialized accounting services, graphics, training, and technical systems development. A large increase in 1987 and 1988 reflects the expansion of the automated case management system and development of a more comprehensive demonstration electronic system for use by the program, the bankruptcy courts, and the general public.

Special studies and analysis are required to be performed in connection with the development of the automated systems; for example, as a requirement for continued procurements after design and development phases are complete, a return on investment evaluation must be performed.

OPENING STATEMENT

Mr. EARLY. The Committee is pleased to welcome the Director of the Trustee System, Mr. Thomas Stanton.

Mr. Stanton, we recognize that the increase is because of the nationwide expansion. We have your statement, if you want to submit the entire statement, then and you may summarize.

[The prepared statement of Mr. Stanton follows:]

DEPARTMENT OF JUSTICE

STATEMENT OF THE DIRECTOR AND COUNSEL,
EXECUTIVE OFFICE FOR UNITED STATES TRUSTEES
THOMAS J. STANTON

BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON
THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE,
THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to have the opportunity to appear before you today to discuss the 1988 appropriation request for the United States Trustees. The request is for 893 positions, 713 full-time equivalent workyears and $53,525,000. This is an increase of 339 positions, 172 workyears, and $14,182,000 above the 1988 base budget level.

As you know, we are in transition to a nationwide program in 1987 and 1988 pursuant to the "Bankruptcy Judges, United States Trustees and Family Farmer Bankruptcy Act of 1986." The Act placed 17 of the 18 former pilot judicial districts and 32 former non-pilot federal judicial districts under the purview of the United States Trustee program in 1987. By the end of 1988, United States Trustees will supervise the administration of bankruptcy cases filed under chapters 7, 11, 12, and 13 of the Bankruptcy Code in a total of 88 judicial districts in 21 regions. United States Trustee program oversight may be deferred until October 1, 1992, in six of the federal judicial districts. These districts may elect to join the system as early as August 1987.

The program increase of 339 positions, 172 workyears and $14,182,000 will provide the resources to appoint ten additional United States Trustees and bring 39 additional judicial districts into the nationwide program in 1988. The United States Trustee regions to be added in 1988 appear on page 9 of the budget justification materials. Each United States Trustee region reflects the judicial districts it will include.

A program supplemental to accomplish the 1987 portion of the transition to a nationwide program is also pending before the Committee. The 1987 supplemental request would add 361 positions, 102 workyears, and $16,436,000 to finance the first-year segment of the expansion. If the 1987 expansion is to succeed in meeting the August 23, 1987, deadline established by Congress in section 302(d)(1) of the Act, it is essential that resources in the supplemental request be appropriated at the earliest possible date. In the interim, existing resources are quite limited and have permitted us to begin only a very limited expansion effort.

Key areas of the request may be of special interest to members of this Committee. These include the United States Trustee System Fund, the demonstration electronic case management system and other ADP funding, and increased vigilance resulting from our audit program and staff accountants to address fraud, embezzlement and other bankruptcy related crimes.

The United States Trustee System Fund was established by the Act to provide self financing of the program. Two primary sources provide most of the revenues going into the fund: first, an increase in the fee paid when a bankruptcy case is filed; and second, a quarterly fee for chapter 11 cases under the supervision of the United States Trustee offices. This quarterly fee is charged only until a plan of confirmation is approved by the court. The quarterly fee would be payable for less time if, prior to confirmation of a reorganization plan, the case is converted to another chapter or dismissed.

The Fund started with a zero balance at the beginning of 1987. We request that Congress finance our 1987 and 1988 appropriation needs from general government revenues during the transition years. If deposits from increased bankruptcy case filing fees and quarterly chapter 11 fees are allowed to accumulate through 1988, the Fund should accrue sufficient balances to finance estimated appropriation needs for the nationwide system in 1989. For 1990 and subsequent fiscal years, annual revenues should be sufficient to finance appropriation needs.

A recent accomplishment that I am pleased to report to you today is that we have already established the needed process to collect the fees authorized by Congress to fund the program.

I would like to acknowledge the cooperation and responsiveness we received from the Administrative Office of the United States Courts (AOUSC) to establish procedures for collecting the increased case filing fees and to earmark the Fund's portion for credit to the appropriate Treasury account. Through January 31, 1987, filing fees credited to the Fund from this source were approximately $2.8 million.

United States Trustee staff in both the headquarters and the field offices worked nights and weekends to develop the means to collect the chapter 11 quarterly maintenance fees. This effort required the establishment of an entirely new collection process. When the President signed the Act on October 27, 1986, we had only two months to establish a workable method of collecting these fees. No system existed to collect user fees from bankruptcy cases. At our request and on very short deadlines, the field offices produced mailing lists of their active chapter 11 cases, which were subject to the fees. Using these lists, notices were sent to all affected debtors to inform them of the new fee, how to determine the correct fee, and when it was due to be paid. A billing system was designed and approved by the Department of Justice and the Department of the Treasury, and successfully put in place. This permitted us to collect the fees due from the quarter ending December 31, 1986. The procedures needed to implement the billing system not only considered the United States Trustees' program needs, but also integrated government-wide cash management initiatives into the billing process. Every check

received is deposited on the same day, maximizing the value of the money to the Government. Collections for the Fund from chapter 11 quarterly fees for the period from November 26, 1986 (the effective date of the fees), through December 31, 1986, now exceed $1.7 million.

During the debate on legislation to expand the program nationwide, several assumptions were made to estimate revenue potential of the chapter 11 quarterly fees. The Administrative Office of the United States Courts kept a running total of pending chapter 11 cases, but many of these cases had confirmed plans and were not subject to the quarterly fees. As a result, we could only estimate the number of pending cases that would be subject to the new fee. The law also provides a sliding fee schedule, based on ability to pay, hinged to disbursements made by chapter 11 debtors in possession. Again, only estimates were possible to determine what percentages of debtors would pay at what level. Another uncertainty was how many pending cases actually had the funds available to pay the fee. Our brief experience with revenues suggests that assumptions made to project quarterly fees were reasonable, although there were fewer total cases but more large cases subject to the fee than we had assumed. More accurate projections of revenue to be paid to the Fund are being developed as actual data accumulate. Since the pilot districts include the large urban areas of New York, Chicago and Los Angeles, it is difficult to project from our receipts so far what the national

case mix will be and what the chapter 11 receipts will be for a nationwide program.

The revenues from filing fees in all cases are determined easily from the actual numbers of cases filed. They should remain fairly constant from month to month unless there is a major change in the economy. The quarterly fees will phase in. As new judicial districts are brought into the United States Trustee system, the chapter 11 cases subject to our supervision then become subject to the quarterly fee. Therefore, quarterly fee receipts from chapter 11 cases will increase steadily over the two-year transition period. Beginning in 1989, revenues from quarterly fees should stabilize, and variance will then be the result of changes in the rate of overall chapter 11 case filings.

Section 310 of the Act requires that the program develop and operate a Demonstration Electronic Case Management System. Three judicial districts have been chosen to test the system, the Central District of California, the District of Kansas and the District of New Jersey. We are working to expedite the development and procurement phase of the project. The demonstration system will address bankruptcy case data needs of the United States Trustees, the bankruptcy judges, clerks of the court, panel trustees, debtor and creditor attorneys and the general public. The request includes $460,000 to complete the 1988 phase of the three-year test project.

The 1988 request also includes resources to install and operate our existing automated case management system in new United States Trustee regions as they are added during the year. This system can be viewed as a small subset of the demonstration electronic case management system noted above, in that its main purpose is to serve only the United States Trustee office by tracking and monitoring pending bankruptcy cases under the office's direct supervision.

The automated case management system consists of a minicomputer in each United States Trustee regional office. Local and remote terminals provide the work stations for employees in the regional office or in sub-offices located in other cities in the region. The system handles a variety of office automation tasks, including case tracking and reporting, mail and litigation control, trustee appointments, calendaring, financial analysis and text processing. Development of this system began in 1983 and was completed in 1985.

The control and operation of individual systems have been decentralized, while the Executive Office staff perform centralized support, training, software maintenance and development, quality assurance and programming functions. A total of $3,230,000 is requested to continue the non-personnel costs of installing the automated case management system in United States Trustee regions as they are added during 1988. This system has been found to be very cost effective and has permitted a lower

request for personnel resources. As you know, bankruptcy is paper intensive, and automation has gone a long way to reduce the staff time necessary to control the great paper flow that burdens each office.

In establishing the nationwide system, one area of concern has been how to handle bankruptcy related crimes. Given human nature, those entrusted with estate funds live each day with temptation. We take very seriously our job to reduce the temptation by screening the applicants for appointment to these positions of trust. For example, under the expansion, standing trustees will be subject to FBI background investigations and credit reports prior to appointment. When crimes do occur in the bankruptcy cases we supervise, we want to know that they will be detected and prosecuted to the fullest extent. Two areas of program activity should be mentioned, the audit program and how we use our professional staff.

The audit program continues to produce results for the program. The request before you proposes to expand the successful efforts of our outside auditors and the Justice Management Division's Audit Staff. These audits are a critical aspect of our program, and the cost to do true audits of the financial records of panel trustees, standing trustees, and debtors in possession should be reflected in our appropriation. Through the audit activities to date, one standing trustee was discovered embezzling funds, and a chapter 7 panel trustee was also caught in an

embezzlement scheme. In each of these cases, indictments and convictions were obtained. Accountants on our staff did complete reconstructions of the trustees' records. This involved extensive review of microfilm bank transaction records and court case files. As a result of our close cooperation with the FBI and the United States Attorneys in North Dakota and New Jersey, each trustee received a prison sentence for his crimes.

We propose to bolster the role of the program's bankruptcy accountants who hold the job title of bankruptcy analysts. We need added strength in this area to monitor cases for criminal activity and to provide support to assist the United States Attorneys in preparing these cases for trial. The financial schedules required to be filed with United States Trustee field offices can often suggest patterns of criminal behavior. Our accountants must have the expertise and skill to detect cases which need to be pursued by the appropriate law enforcement authorities. They will be working closely with the United States Attorneys and the FBI on criminal referrals and the reconstruction of books and records needed to develop cases for the grand jury and to prepare them for successful prosecution.

This concludes my prepared statement, Mr. Chairman. I will be pleased to answer any questions you or any member of the Subcommittee may have.

STATEMENT SUMMARY

Mr. STANTON. Yes, Mr. Chairman. I am pleased to be here.

Mr. Chairman and Members of the Subcommittee: I am pleased to have the opportunity to appear before you today to discuss the 1988 appropriation request for the United States Trustees. The request is for 893 positions, 713 full-time equivalent workyears and $53,525,000. This is an increase of 339 positions, 172 workyears, and $14,182,000 above the 1988 base budget level.

As you know, during 1987 and 1988, we are in transition to a nationwide program. And, as you mentioned, this is the result of enactment of the Bankruptcy Judges, United States Trustees and Family Farmer Bankruptcy Act of 1986.

The Act placed 17 of the 18 former pilot judicial districts and 32 former non-pilot judicial districts under our jurisdiction in 1987.

In 1988, we will assume responsibility for all of the other districts except for six, three in North Carolina and three in Alabama, which were excluded from the System from the period of the enactment until 1992. These areas have the right to come into the System sooner.

Under the request, we would have the resources to appoint 10 additional United States Trustees, which would bring us from 11 to 21. And we would have a total during the year of 39 additional judicial districts into which we will expand.

And, as you know, our 1987 request for the supplemental was approved on Tuesday during the mark-up.

I think a matter that may be of special interest to the Subcommittee is the United States Trustee System Fund, which was established by the Act to provide self funding for the program.

We have requested that Congress finance our 1987 and 1988 appropriations from general government revenues. In 1987, we began with a zero balance, and during that year and in 1988, providing we are allowed to accumulate money, we should be able to fully fund the program starting in 1989.

We have already established the needed process to collect the filing fees, which we do with the cooperation of the U.S. courts. The Administrative Office of the U.S. Courts has been very cooperative and responsive in establishing new procedures for the court clerks to earmark our portion of the filing fees collected for the Fund. Through January 31, we have now accumulated $2.8 million for the Fund.

There was no system to collect the chapter 11 maintenance fees. Those are the fees that are charged on chapter 11 cases as long as they stay in the system and prior to any confirmed plan of reorganization. We really worked nights and weekends to develop the collection system so that we could put it into place in time to collect the first quarterly fees that were due in January 1987. And for that quarter—it is a shortened quarter—only from November 26th until the end of the year, we have collected more than $1.7 million.

So the Fund, to start with, has everything in place. It is functioning well. We have worked with the cash management people at the Treasury Department. None of our receipts spend any time not on deposit. We have a lock box in a bank that the U.S. Attorneys have

been using. All of these deposits go to that bank and are immediately transferred to the Treasury on the same day as received.

Mr. Chairman, that concludes my oral statement. I will be happy to answer any questions.

PROGRAM EXPANSION

Mr. EARLY. Mr. Stanton, the appropriated funds are requested for this program only until the expansion is completed, at which time filing fees collected are expected to offset the entire program; is that correct?

Mr. STANTON. Yes, Mr. Chairman.

Mr. EARLY. And when do you expect the program expansion will be completed?

Mr. STANTON. The expansion will be completed by 1989, except for those six districts. Those districts can come in as late as 1992.

FUTURE APPROPRIATIONS

Mr. EARLY. Do you have any estimate of the appropriated funds required until completion date?

Mr. STANTON. Well, they would be the amount of the supplemental that was approved on Tuesday and the 1988 request before the Congress.

Mr. EARLY. Do you think this will be the last appropriation?

Mr. STANTON. I think this will be the last appropriation.

Mr. EARLY. I would like to think that.

During the expansion, once an office has been opened and in full operation, is it funded through filing fees or appropriated funds?

Mr. STANTON. Once they are opened, during 1988 they would be paid by appropriated funds. In 1989, they would be paid out of the filing fees and maintenance fees, no appropriation.

COLLECTION PROCEEDS

Mr. EARLY. The collected fees will be going into that?

Mr. STANTON. Yes. Our projections so far have been very accurate. I think the money we are collecting is exactly what we projected.

Mr. EARLY. How much do you anticipate collecting in filing fees in Fiscal Year 1987?

Mr. STANTON. In Fiscal Year 1987, our projection for 1987 was relatively low, I think about $16 million. That is because we only take responsibility for the cases as they phase in.

Mr. EARLY. Didn't you just tell us you have already collected $5 million?

Mr. STANTON. Yes. That is why I think we are in better shape than we thought.

Mr. EARLY. So you anticipate a lot more than $16 million?

Mr. STANTON. I am not sure of a lot more, but more than sixteen. The problem is initially——

Mr. EARLY. Do not be so conservative. Provide for the record what you think the collections might be.

Mr. STANTON. I think they will exceed $18 million.

POSITION INCREASE

Mr. EARLY. On page 8 of your justifications, you state that chapter 11 business reorganization cases are the most complex and time-consuming cases in the Trustee Program. Why do you require a 68 percent increase in positions when the workload associated with your most difficult cases grows by less than 10 percent?

Mr. STANTON. Because we have never had a program increase since the program started in 1979.

Mr. EARLY. Why don't you expand on that for the record.

Mr. STANTON. Because this was a pilot program, you will remember the Department was, to some extent, in the process of phasing the program out in the early years. We never received an increase until last year, and that was a very small one, 12 positions. It was the only increase of positions since, I think, 1981.

Mr. EARLY. I want you for the record to identify the number of positions associated with each type of case administered by the Trustee Program for Fiscal Year 1987 and 1988.

[The informaiton is inserted in the record following the testimony:]

Mr. EARLY. One final question: Mr. Stanton, your programs are going to be as good as your personnel. With the different costs of living we have around the country, I think you probably can recruit in Arizona and Massachusetts; but how are you going to recruit in L.A.? Have you had difficulty?

Mr. STANTON. We have had chronic difficulty recruiting in Los Angeles. To some extent, we were very lucky recently, we got a senior attorney who is independently wealthy. He has tired of the practice of law and he has agreed to come with the Program. Literally, they pay lawyers so much out there at any kind of senior level, that they are very difficult to retain. The longest any lawyer has been with the program is 18 months. And we have had a very difficult time selecting a U.S. Trustee for that office.

Mr. EARLY. That is going to be one of your problems; your program is only going to be as good as the your people.

I am going to yield to Mr. Rogers.

Mr. ROGERS. Mr. Chairman, I have no further questions. I will yield to Mr. Kolbe.

SYSTEM FOR COLLECTION

Mr. KOLBE. Mr. Chairman, just very quickly. You referred to the fact you collected, through January, $2.8 million, but you said no system exists to collect chapter 11 maintenance fees. What do you mean by saying there is no system, when you refer to a system being put in place?

Mr. STANTON. There are two kinds of cases in cases, one was an increase in the filing fees in a bankruptcy case. And the clerks already had a system of paying money into the Treasury.

All we had to do was establish a new account with the Treasury and get the clerks, when they make the allocation monthly, to allocate that money to our account. There is no additional expense with collecting that.

The other half of the money that comes in chapter 11 maintenance fees is not collected by the Clerk, it is collected by us. The

Department has a criminal fine collection system which, to some extent, is administratively similar. But other than that, there was not any infrastructure at all to collect that money. And we had to develop a contract and a contractor to do the data processing, the bank reconciliations. We had to get a bank to take the money and make arrangements with the Treasury—in fact, Treasury designated this particular bank to use at least for the initial stage, because we had to have the account almost immediately, because the money would come into it two and a half months after the effective date of the legislation.

Mr. KOLBE. How do you determine those maintenance fees?

Mr. STANTON. They are on a sliding scale set in the legislation. In most chapter 11 cases they are $50.00 per month, and in the largest cases they are $1,000 per month. That is the spread.

Mr. KOLBE. They are automatically collected by the trustees?

Mr. STANTON. They are collected quarterly. They are done really like a withholding tax. We will generate a statement to them without the amount, and they will fill in the amount, based on their disbursements.

Mr. KOLBE. And that amount is transferred from their account to your account?

Mr. STANTON. It is like you mail in your taxes to IRS, it is mailed directly to the lock box bank, at a mail stop number which goes to that bank.

Mr. KOLBE. When this system is in place and fully operational, do you see it having a significant impact on better administration of our bankruptcy laws? I guess what I am driving at is I am hearing from people that the explosion of bankruptcy in the United States is threatening our whole economic system.

Mr. STANTON. That is exactly why the system is needed. Bankruptcy is an essential function, but it has to be monitored closely. Right now, in both the criminal side and the civil side, there is just too much abuse. And the whole idea of this program is to put a watchdog on to make sure it is functioning properly. The judges do not have the time. The judges are really under an avalanche themselves.

Mr. KOLBE. The Trustee System itself is actually going to monitor through reporting mechanisms to Congress?

Mr. STANTON. Well, reporting mechanisms based with the Department of Justice. We have an oversight hearing next week on the annual authorization.

Mr. KOLBE. The Trustee System itself is actually going to be monitored through reporting mechanisms to Congress?

Mr. STANTON. No, we bring any kind of abusive action to the court's attention. We file a motion to either convert their petition to chapter 7 or dismiss it. Sometimes we will also take action to protect the money.

Last year, we developed a criminal system with the Criminal Division of the FBI. I think we have really made a difference in the districts where we are operating.

Mr. KOLBE. Thank you, Mr. Chairman.

72-165 O—87——31

QUALIFICATION FOR TRUSTEES POSITIONS

Mr. EARLY. Mr. Stanton, you say your expansion will be 21 trustees?

Mr. STANTON. Twenty-one.

Mr. KOLBE. Twenty-one lawyers.

Mr. STANTON. The U.S. Trustees will all be lawyers.

Mr. KOLBE. Why would not a competent accountant with a CPA be eligible for this type of position?

Mr. STANTON. I think statutorily they would be. The statute does not make a requirement that they be attorneys. I think the feeling at the Department of Justice has been that it is very difficult for a non-attorney to supervise some of the litigation that we have to do, and to provide real legal leadership in the office.

Mr. EARLY. Is not the trustee more of an administrator?

Mr. STANTON. I do not think that is the way it has developed. It is not a paper-moving process as much as it is litigative and a proactive attorney function.

We need the financial analysis to give us the tools through which we go to court and try to shut the debtor down and so forth.

Mr. EARLY. I think a competent CPA might argue differently and say that you need the data and we need the numbers. Then we get the lawyers to do what they are going to do. Lawyers do nothing but delay everything. Your agency is supposed to reduce and minimize. You say you are going to get confirmation and bring it down to the Justice Department, another group of attorneys. I would think, for example, that in L.A. where you cannot recruit lawyers because of the cost of living there that we could try CPA's?

Mr. KOLBE. Mr. Chairman, this is proof of bi-partisanship.

In all sincerity, has this developed in a way not anticipated?

Mr. STANTON. No, only that originally all of the trustees that were selected were attorneys. There has never been a U.S. Trustee in our program who was not an attorney.

SKILL REQUIREMENTS IN U.S. TRUSTEE OFFICES

Mr. KOLBE. It seems to me the success of the thing is administration, not litigation.

Mr. STANTON. Well, a lot of our offices ended up with a lot of complex litigation. There was a case in Chicago about four or five months ago that took almost a month and a half to try. These were a number of complex issues they had to deal with, and decisions had to be made how to handle them.

From the other side, I can understand what Mr. Early is saying. In fact, we are at least going to experiment in our office in Albany where the Assistant U.S. Trustee in that office will not be an attorney. That is the first time we have done that. We will see how that goes.

We have had Assistant U.S. Trustees who were not attorneys, but they have always been on the administrative side. Two assistants in an office, one legal and one administrative. We have done that, but we have never had a U.S. Trustee who was not an attorney.

Mr. KOLBE. We do understand there is a litigation side and an administration side. The Chairman and I are simply suggesting you

do not need lawyers to fulfill all of these functions, and it might be worth experimenting where somebody at the top is a lawyer and CPA, that kind of management.

Mr. STANTON. Sir, we are lucky. We have two U.S. Trustees who are lawyers and also CPA's.

Mr. KOLBE. Thank you, Mr. Chairman.

Mr. EARLY. Mr. Stanton, having been one who has championed and supported this program from the start, I would like to commend you. And now you are going a head with this nationwide expansion and a revolving fund in which bankruptcy pays for itself. People get service, not only rich people, but poor people too, and I think you are going in the right direction. I certainly hope, however, that you look at other than attorneys for administration and for the key roles.

My final question, Mr. Stanton, is what will happen when you are self-sufficient. When you have collected more fees than your appropriation, will you still come back here for funding?

Mr. STANTON. The law is such that you will be looking at us yearly, as you do now.

Mr. EARLY. Mr. Kolbe and I will be extremely interested in that.

We will recess until Monday afternoon at 2:00 o'clock.

[Questions and answers for the record follow:]

QUESTIONS FROM MR. EARLY

U.S. TRUSTEE SYSTEM FUND

Collection of Filing Fees

Question:

Are you offsetting any of the trustee program costs with filing fee collections in 1988? If so, how much? If not, why not?

Answer:

We are requesting that none of the filing fee collections be used to offset appropriations for the United States Trustees during 1987 and 1988, the two transition years to nationwide expansion of the program. During transition, receipts from chapter 11 quarterly fees will grow as additional chapter 11 cases in new districts become subject to the fees.

If Congress approves our request, we anticipate that deposits to the United States Trustee System Fund from filing fee collections and quarterly maintenance charges will accumulate adequate deposits so that, beginning in 1989, the Congress can appropriate from the Fund all monies needed to operate the nationwide United States Trustee system.

Workload

Question:

Please identify the number of positions associated with each type of case administered by the 1987 and 1988 Trustee Program.

Answer:

The Program does use time spent on the different types of cases supervised or administered in estimating resource needs. One can extrapolate the approximate level of staff effort by case type from what is known about how the employees use their time.

The chapter 11 caseload continues to be the most complex and time consuming from a resource allocation perspective. The review of financial schedules filed by the debtor in possession, appointment and organization of creditors' committees, monitoring of fees paid to professionals, and appearing in court on matters involving chapter 11 cases are some examples of this activity. We estimate that about 60 percent of field office staff time is devoted to chapter 11 case related matters.

The chapter 7 caseload involves a much higher number of case filings, but less staff time is devoted to individual cases. Rather, the appointed members of the panel of chapter 7 trustees do the actual work involved in administering the cases. The role of the United

States Trustee in chapter 7 cases is primarily a supervisory one. An estimated 22 percent of the staff time is devoted to chapter 7 matters.

Chapter 13 cases are also filed in higher numbers than chapter 11, and the standing trustee actually administers the collection of payments under plans, disbursements to creditors and other individual case related activities. The primary role of the United States Trustee is to recruit qualified individuals, maintain the integrity of the process through regular audits, and set the compensation and expense levels of the standing trustees. An estimated 3 percent of the field office staff time is devoted to chapter 13 matters.

Chapter 12 cases are being administered by standing trustees similar to the chapter 13 standing trustees already supervised by the program. The time associated with supervision of the chapter 12 standing trustees is based on the program's experience with chapter 13 (about three percent), although actual experience may differ from the estimate.

Field office administration accounts for the balance of the time spent by field office personnel. These activities would involve staff meetings and coordination of assignments, processing personnel actions, ordering furniture, reporting statistics, maintaining office supplies and machines, handling travel arrangements and reimbursements, preparing time and attendance records, leave, and training. These activities are estimated to consume the balance of the time of field office personnel, or about 12 percent of available time.

The table below shows the time equivalent of positions in the request associated with each case type.

Positions Associated with Case Types
or Administrative Activities

United States Trustee Field Offices

Case type or activity:	1987 Supplemental Request	1988 Appropriation Request
Chapter 11.....	300	503
Chapter 7.....	110	185
Chapter 13.....	15	25
Chapter 12.....	15	25
Administrative activities.....	60	101
TOTAL POSITIONS.....	500	839

Note: Position levels include total resources contained in the base budget and those in the respective requests.

ROBERT N. FORD, COMPTROLLER
MICHAEL J. ROPER, DEPUTY COMPTROLLER FOR BUDGET

Mr. DWYER [presiding]. Continuing with our review of the Department of Justice, we will now hear testimony from the Drug Enforcement Administration. The DEA requests $522,047,000 in fiscal year 1988, an increase of six percent over fiscal year 1987 amounts. We will insert in the record at this point the DEA fiscal year 1988 budget justifications.

Drug Enforcement Administration

Salaries and expenses

Summary Statement

Fiscal Year 1988

The Drug Enforcement Administration (DEA) is requesting 5,730 positions, of which 2,891 are special agents, 5,568 FTE workyears, and $522,047,000 in order to carry out its responsibilities in 1988. This represents a net increase of 50 positions, 419 FTE workyears, and $31,854,000 above the anticipated 1987 appropriation of 5,680 positions, 5,149 FTE workyears, and $490,193,000. Included in the proposed net increase are program increases of 108 positions, including 36 special agents, 82 FTE workyears, and $24,552,000; base reductions for management and productivity savings of 58 positions, 58 FTE workyears, and $911,000; and net other adjustments to base of 395 FTE workyears and $8,213,000.

In 1986, DEA reported a dramatic increase in the agency's arrests and seizures. Arrests of violators in major cases jumped 35.8 percent between 1985 and 1986, from 9,441 to 12,819. In all, 18,746 drug-related arrests were made during the year. Convictions in major cases during this same period increased 22.1 percent, from 6,221 to 7,595. Assets seized by DEA during 1986 totaled $378,814,291, an increase of 53.8 percent over 1985, when assets valued at $246,344,308 were seized. Drugs removed in the United States by DEA increased an average of 30 percent during the fiscal year. Cocaine seized increased by 52.6 percent, marijuana and hashish removed jumped 11.4 percent, dangerous drugs which include stimulants, depressants and hallucinogens, were marked by a 76 percent rise. The seizure of clandestine laboratories producing illicit drugs also went up during the 1986 fiscal year. While 329 laboratories were put out of operation in 1985, 442 were seized in 1986, an increase of 34.3 percent. International cooperation has never been stronger, and the major drug-producing nations are taking serious measures to control drug-crop production. Nonetheless, drug trafficking remains the nation's number one criminal problem.

During the past year, drug trafficking and drug abuse have emerged as a pre-eminent national policy and health concern. In response to this crisis, the President approved two policy initiatives as part of a comprehensive and systematic effort to create a "drug-free society". On April 8, 1986, National Security Decision Directive Number 222 was signed identifying drug trafficking as a threat to U.S. national security, thereby bringing the nation's national security apparatus into the fight against drug trafficking. On August 4, 1986, the President announced a 6-point program against drug abuse. Included in this announcement was a new initiative intended to reduce the demand for drugs and a renewed call to strengthen existing law enforcement efforts. Finally, passage of the Omnibus Drug Supplemental Appropriation Act of 1987 significantly strengthened the overall DEA enforcement capability, and reaffirmed the commitment of the President and Congress to rid our society of the catastrophic effects of drug trafficking and abuse.

The 1988 request is based not on optimal requirements, but on a practical approach of seeking a reasonable level of resources for high priority security and investigative needs, plus other investments which will enhance the productivity and effectiveness of existing resources. DEA has a strategic planning process which provides the agency with comprehensive and long-range plans that serve as the foundation for annual budget requests, systematically identifying and prioritizing not only investigative requirements but technological and management resources necessary to continue the successful fight against drug trafficking and abuse. The 1988 request is based on policy initiatives that were developed in the DEA 1988 strategic plan.

Following is a summary of the 1988 initiatives:

Continue Enhancement of Drug Enforcement ADP and Telecommunications Systems

This initiative continues the strengthening and modernizing of ADP and telecommunications systems. These increases will provide the support systems needed to maximize and protect DEA's efforts to combat drug trafficking. A total of 15 positions, 11 FTE workyears, and $12,417,000 is requested for the ADP and Telecommunications program to provide necessary resources for the second phase in securing, through TEMPEST-rated capability, the remaining segments of the Office Automation System, and to provide necessary ADP staff support to the DEA information environment. An additional 26 positions, 20 FTE workyears and $4,450,000 is also requested for the Domestic Enforcement program to provide increased DEA and contracted ADP technical staff support for field and headquarters data entry requirements.

Immobilize Targetted Major Drug Traffickers and Their Trafficking Organizations

The thrust in 1988 is to again focus new resources on areas where the increased investment will provide a maximum return through disruption of drug trafficking organizations. Increases requested include 30 positions (20 agents), 22 FTE workyears and $2,759,000 for asset removal teams in selected domestic divisions. DEA seized over $246,000,000 in trafficker assets in 1985 and $379,000,000 in 1986. These resources will contribute to the immobilization of drug trafficking organizations by exploiting DEA's authority to seize trafficker assets. A pilot program has shown that systematic methods for identifying, seizing, and processing traffickers' assets will produce substantial results.

Enhance Drug Enforcement Management and Administrative Services Capabilities

DEA's investigative goals and objectives cannot be achieved unless management and administrative support systems and services are strengthened and modernized. Further, adequate support services will increase the overall productivity of the agency. The increases in this area are those which are considered essential in 1988 in order to meet mandated responsibilities. DEA requests 9 positions (6 agents), 7 FTE workyears, and $930,000 to provide for improved security of staff and facilities, ensure staff integrity, and provide physical fitness services.

Meet Base Technical Operations Support and Equipment Requirements for Drug Enforcement

This request provides for an increase of 28 positions (10 agents), 22 FTE workyears, and $3,996,000, including $2,000,000 for technical equipment, to provide effective support for DEA investigations. This initiative provides a cadre of special agents specially trained in the covert installation and adaptation of technical equipment, and a cadre of highly skilled technicians to perform installations and repair of technical investigative and radio communication equipment. The demand for skilled technical assistance and technical equipment far exceeds availability. Equipment such as dialed number recorders (pen registers), video surveillance cameras and recording equipment, satellite tracking devices, direction finding devices, and Title III devices are in constant use, greatly enhancing investigative and intelligence gathering capabilities while providing a greater margin of safety for agents.

Drug Enforcement Administration

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include the proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter enclosed in brackets.

Salaries and expenses

For necessary expenses of the Drug Enforcement Administration, including not to exceed $70,000 to meet unforeseen emergencies of a confidential character, to be expended under the direction of the Attorney General, and to be accounted for solely on his certificate; purchase of not to exceed [five hundred seventy-five] five hundred twenty-five passenger motor vehicles of which four hundred eighty-nine are for replacement only for police-type use without regard to the general purchase price limitation for the current fiscal year; and acquisition, lease, maintenance, and operation of aircraft; [$412,000,000] $522,047,000, of which not to exceed $1,200,000 for research shall remain available until expended, [and] not to exceed $7,000,000 for purchase of evidence and payments for information, shall remain available until September 30, [1988] 1989: [Provided, That $180,000 shall only be available for the establishment and operation of an office in Hilo, Hawaii: Provided further, That notwithstanding section 1345 of title 31, United States Code, funds made available to the Drug Enforcement Administration in any fiscal year may be used for travel, transportation, and subsistence expenses of State, county, and local law enforcement officers attending conferences, meetings, and training courses at the FBI Academy, Quantico, Virginia]. not to exceed $4,000,000 for contracting for ADP and telecommunications equipment and not to exceed $2,000,000 for technical equipment

[For an additional amount for "Salaries and expenses", $60,000,000. (Omnibus Drug Supplemental Appropriations Act of 1987, as included in Public Laws 99-500 and 99-591, Title II.)]

[Construction]

[For necessary expenses of the Drug Enforcement Administration for planning, construction, renovation, maintenance, remodeling, and repair of buildings and the purchase of equipment incident thereto for an all source intelligence center, $7,500,000 to remain available until expended: Provided, That such funds shall be available for obligation upon submission by the Attorney General to the Committees on Appropriations no later than July 1, 1987, of a reprogramming request in accordance with section 607 of this Act which sets forth specific details for the use of such funds. (Department of Justice Appropriations Act, 1987, as included in Public Laws 99-500 and 99-591, section 101(b).)]

(Reorganization Plan No. 2 of 1973; Reorganization Plan No. 1 of 1968; 21 U.S.C. 801-966 as amended; 40 U.S.C. 304; Department of Justice Appropriation Act, 1987; as included in Public Laws 99-500 and 99-591, section 101(b); additional authorizing legislation to be proposed).

Explanation of changes

1. In addition to the ongoing replacement program (489 vehicles), the budget request provides for 36 passenger motor vehicles for new agent positions in the 1989 request.

2. The second change provides for added ease in fiscal planning and flexibility when contracting with the private sector for ADP and telecommunications and technical investigative equipment. Based on current experience and practices, the procurement process for these types of equipment requires a long lead-time that can extend beyond the immediate fiscal year. Without a one-year authority and appropriation, such contracting activities may have to be terminated at the end of one fiscal year and started again against funding authority of a subsequent year. A portion of funding for purchase of evidence and payments for information (PE/PI), for contracting for ADP and telecommunications equipment, and for technical investigative equipment is to be available for a two-year period, until September 30, 1989.

3. An office in Hilo, Hawaii will be established in 1987. Accordingly, repetition of this language is not necessary for 1988.

4. The Department of Justice has determined that the authority for payment of travel, transportation and subsistence expenses of State, county, and local law enforcement officers attending conferences, meetings and training courses at the FBI Academy, Quantico, Virginia, is more properly placed in the Department's authorization.

5. The supplemental appropriation of $60,000,000 was applicable to 1987 only.

6. The authority for no-year funding made available in the 1987 Continuing Resolution (P.L. 99-500) for the purpose of planning, construction, renovation, maintenance, remodeling, and repair of buildings and the purchase of equipment incident thereto for an intelligence center is not required to be perpetuated.

Crosswalk of 1987 Changes

Explanation of Changes

Congressional Appropriation Actions

This column is based on the data in Senate Report 99-425 and House Report 99-769, both to accompany H.R. 5161; and the Conference Report for P.L. 99-500 for the 1987 Omnibus Supplemental appropriations including funding for the construction of an intelligence center, restoration of funding for cooperative diversion programs, and reallocation of nondiscretionary increases to State and local task forces and State and local training programs

Reprogramming

This reprogramming reflects at this time the current plan for utilization of the 1987 Supplemental resources.

Supplemental Requested

1. Payroll supplemental request of $3,912,000, provides $2,532,000 to meet the increased pay requirements pursuant to P.L.99-500 and $1,324,000 for increased costs associated with the Federal Employees Retirement System (FERS).
2. Program supplemental request provides $776,000 for increased Federal telecommunications system rate changes.

This budget activity includes all programs directly responsible for drug investigations leading to the prosecution, conviction and immobilization of drug traffickers and their organizations. Included in this responsibility are all domestic and foreign investigative efforts and regulatory activities under the diversion control program.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Domestic enforcement	2,028	1,766	$148,366	2,017	2,008	$157,212	2,073	2,050	$164,421	56	42	$7,209

Long-Range Goal: To reduce the domestic supply of illicit drugs and to seriously disrupt or eliminate the organizations trafficking in those drugs.

Major Objectives:

To eliminate all domestic production and/or cultivation of illicit drugs.

To identify and seize as much drug evidence and related assets as possible from those individuals and organizations involved in the illegal drug trade.

To investigate and prepare for successful prosecution all major drug cases developed or received.

To respond to all appropriate requests for assistance from Federal, state and local law enforcement agencies involved in the fight against illegal drug production, cultivation and trafficking.

Base Program Description: This program addresses the national problems of: the manufacture, cultivation and distribution of illegal drugs; the criminal investigations relating to the diversion of legally produced drugs into the illicit market; and, the disruption or elimination of the individuals and organizations who distribute these illegal substances. The major thrust of the Domestic Enforcement program is the elimination or immobilization of the individuals and groups at the highest echelons of domestic drug production, smuggling and distribution organizations.
To address these problems, DEA utilizes various methods and activities in support of the major objectives stated above. The first step in eliminating the supply or distribution of illegal drugs is the identification of the source and individuals involved. This is accomplished through confidential informants, intelligence gathered from other sources and referrals from other Federal, state and local authorities. Once this is accomplished, evidence is gathered through undercover and reverse undercover operations, audio/video surveillance, Title III operations, and where warranted, establishment of a Special Enforcement Operation (SEO). When sufficient evidence is gathered, Federal, state and local prosecuting authorities receive the case for preparation for prosecution resulting in the indictment, arrest, and trial of the defendants involved. Concurrent with criminal prosecution is the seizure and initiation of forfeiture proceedings to remove all drug related assets from the individual or organization charged. Major violators and heads of organizations are targetted for continuing criminal enterprise prosecution which carries a 10-year to life sentence and allows for forfeiture of those items identified as part of the criminal enterprise proceeds. Prosecution of individuals or groups need not be confined to violation of drug laws. Where warranted, more and more use is being made of Racketeer Influenced Corrupt Organization (RICO) and IRS statutes. These laws are conspiratorial in nature and upon conviction allow consecutive sentences to be imposed, in conjunction with the sentence for drug law violation. In all these efforts and activities, maximum coordination and assistance is rendered to and received from other Federal, and state and local enforcement agencies where appropriate.

Accomplishments and Workload: Accomplishments and workload of the Domestic Enforcement program are presented in the following table:

Domestic Summary	1985	1986	Estimates 1987	1988
Investigative workhours by case class:				
Class I	1,224,548	1,321,212	1,377,613	1,566,536
Class II	255,959	268,453	279,125	315,949

Heroin

Because of its virulent impact on national health and crime, heroin remains one of DEA's major priorities. Since virtually all heroin abused in the U.S. is imported, domestic efforts are aimed at preventing heroin from reaching American markets through the disruption and immobilization of drug smuggling and distribution networks. The major sources of heroin imported into U.S. are the Southwest Asian countries of Pakistan, Afghanistan and Iran. However, there are recent identifiable increases in the heroin imported from Southeast Asia and Mexico.

979

During 1986, DEA continued its intensified efforts against the importation of heroin from Mexico through the establishment of Special Enforcement Operation COLUMBUS. This SEO targets major at Mexican heroin traffickers on both sides of the Mexican-American border. Additionally DEA continued SEO FULLPRESS which is DEA's participation in Operation ALLIANCE.

With the increased heroin resources provided in 1987, DEA expects the following additional statistical results in 1987 and 1988: 18,601 additional heroin investigative workhours in 1987 and 54,368 more in 1988; 91 additional heroin arrests in 1987 and 200 more in 1988; 46 additional heroin convictions in 1987 and 105 more in 1988; and 19 additional kilograms of heroin removed in 1987 and 41 more in 1988.

Cocaine

Cocaine continues to be the popular drug of abuse for such groups as young affluent professionals, entertainers and athletic figures. Since no coca plants are grown domestically, the domestic enforcement effort will be aimed at the following: the prevention of smuggling of cocaine from Latin American source countries; the identification, location and seizure of domestic clandestine cocaine conversion laboratories; and the disruption or elimination of cocaine traffickers and their organizations.

In attacking these targets, DEA will continue to employ the proven investigative techniques identified earlier in this package. Additionally, DEA will continue to work closely with the other Federal, and state and local enforcement agencies which, as in the case of heroin, has proven so successful.

During 1986, a new drug phenomenon, known as "crack" cocaine burst onto the illicit drug scene. Crack is an inexpensive, highly addictive form of cocaine that is designed to be smoked. The attraction of crack is its low price and intense "high". The bad side of crack is that it is so highly addictive and causes some dangerous physiological side effects.

As part of the 1987 supplemental DEA received increased resources to establish crack cocaine task forces in the following cities:

Atlanta	Ft. Lauderdale	Minneapolis	Portland
Baltimore	Ft. Meyers	Newark	San Diego
Boston	Houston	New Orleans	San Francisco
Dallas	Kansas City	New York (2)	Seattle
Denver	Los Angeles	Philadelphia	St. Louis
Detroit	Miami	Phoenix	

Also, as part of the 1987 supplemental, DEA received additional resources to enhance traditional cocaine investigative efforts. A major thrust of these enhanced resources will be against cocaine being transshipped from Mexico across the Mexican-American border.

During 1986, DEA continued SEO PISCES. This SEO is aimed at the money laundering activities of domestic cocaine trafficking groups. While Operation PISCES is based in Miami, it has resulted in drug and asset seizures from Miami to New York to Los Angeles. Since its inception in 1984, enforcement efforts under Operation PISCES have netted the following results: $40,000,000 in assets seized, 10 tons of cocaine seized; 6.5 tons of hashish seized; and 250 individuals arrested. Current planning for 1987 identifies 175 potential additional arrests.

Also, during 1986, DEA continued SEO PIPELINE. This SEO is aimed at training primarily State and local officers on how to interdict drugs and money being transported on the nation's highway system. In 1986 State, local and U.S. Border Patrol officers produced the following results:

3,000	State and local officers trained.
300	Border Patrol officers trained.
4,000	Pounds of cocaine seized.
7,800	Pounds of marijuana seized.
150	Pounds of liquid hashish seized.
66	Pounds of methamphetamine seized.
$8,721,600	in cash seized.

With the additional cocaine investigative resources provided in 1987, DEA expects the following additional statistical results in 1987 and 1988: 47,697 additional cocaine workhours in 1987 and 173,118 more in 1988; 339 additional cocaine arrests in 1987 and 1,276 more in 1988; 124 additional cocaine convictions in 1987 and 464 more in 1988; and 1,215 additional kilograms of cocaine removed in 1987 and 4,545 more in 1988.

DEA anticipates an increase of cocaine smuggling along the 1,900 mile Mexican-U.S. border in the future. As interdiction pressure has been increased in Florida and the Caribbean, a number of major Colombian traffickers have switched their modus operandi to utilize Mexico as a transshipment point. Whether this trend will diminish smuggling activity in the Caribbean is unknown. To date it has not.

Cannabis

The cannabis products abused in this country include marijuana, hashish and hashish oil. Since between 86 and 88 percent of the cannabis products abused in this country are produced in foreign countries, a major thrust of DEA's enforcement activities is the use of traditional investigative methods aimed at the immobilization or elimination of the trafficking organizations smuggling cannabis into this country.

To deal with the problem of domestically produced marijuana, DEA continued its highly successful program of domestic cannabis eradication. Again in 1986, all fifty states participated in the program. DEA's strategy in this program is to provide varying levels of support to each participating state in relation to the scope of the marijuana problem and the level of effort being performed by the state. In implementing this strategy, DEA provides training, equipment, funding, aircraft and investigative support to encourage the state to develop an aggressive program of cannabis eradication within its boundaries. Additionally, DEA encourages the states to employ the use of herbicides.

During 1986, DEA established Operation MAN, aimed at stopping marijuana traffickers from using false corporations to launder marijuana smuggling profits. Operation MAN has already resulted in the arrest of 9 class I violators and the seizure of $15,000,000 in real property assets. As a result of 1986 enforcement efforts under this effort DEA is ready to move against an anticipated $9,000,000 worth of boats in early 1987.

Another high point of DEA's cannabis enforcement program was the Domestic Marijuana Eradication Program. In 1986, 23 eradication schools were conducted to train a total of 887 law enforcement officials from other Federal, state and local agencies. DEA flew 281 air missions totalling 730 hours flown. Direct eradication efforts resulted in an 18 percent increase in plants eradicated, a 7 percent increase in plots eradicated, and a 7 percent increase in arrests.

Again in 1987, emphasis will be placed on booby-trap detection and avoidance during Domestic Marijuana Eradication Program training schools. This stems from the trend toward the use of dynamite, pipe bombs and other explosive devices encountered in 1985. Also on the increase was the use of guard dogs and animal traps. All of these efforts were aimed at preventing anyone from entering the area of cultivation.

Dangerous Drugs

In contrast to heroin, cocaine and cannabis, which are all derivatives of plants, dangerous drugs are all chemically manufactured. The four major drugs of concern to this program are methamphetamine, amphetamine, PCP and LSD. All of these substances are produced domestically. These four drugs and the other lesser abused dangerous drugs find their way into the illicit drug market in two ways. The first is through diversion of legally produced drugs into the illegal market, and the second is the illegal production of these substances in clandestine laboratories located throughout the U.S. Since production of dangerous drugs requires processes and substances not associated with the other drugs of concern to DEA, some of DEA's enforcement efforts are aimed in two directions not associated with the usual drug investigation targets. The first is the identification, location and eradication of the clandestine laboratories established to manufacture illicit dangerous drugs. Second is the restriction of the availability of the precursors known to be required for the manufacture of dangerous drugs. DEA has had success gaining the support of precursor manufacturers in reporting large sales of these substances. While these investigations are important, the primary thrust of DEA's efforts is the investigation, arrest and prosecution of the individuals and groups trafficking in these illicit drugs. Dangerous drugs investigations emanate from the traditional sources discussed in the opening section of this package and from the Diversion Control Program, which is a separate DEA program. With the increase in both clandestine laboratories and the clandestine production of controlled substance analogs, DEA is now identifying analogs for control and studying safety precautions, procedures and equipment to be used in clandestine laboratory investigations and hazardous chemical disposal.

As a matter of investigative policy, DEA decided to concentrate its dangerous drug investigative efforts against clandestine production laboratories. As a result, DEA seized a record 442 clandestine laboratories, a 41 percent increase over 1985. DEA seized 28,267,000 dosage units of dangerous drugs, a 32 percent increase over 1985.

With the additional dangerous drug resources provided in 1987, DEA expects the following additional statistical results in 1987 and 1988: 21,987 additional dangerous drug workhours in 1987, and 65,963 more in 1988; 186 additional dangerous drug arrests in 1987 and 570 more in 1988; 103 additional dangerous drug convictions in 1987 and 315 more in 1988; and 3,135,000 additional dosage units of dangerous drugs removed in 1987 and 9,607,000 more in 1988.

Program Changes:

Asset Removal Teams

DEA requests 30 positions (20 agents, 10 technical/clerical), 22 FTE workyears, and $2,759,000 to establish an asset removal team in the Miami, Chicago, New York, Houston, Washington, D.C., and San Francisco domestic division offices, and to expand the team in San Diego.

The resources requested to establish asset removal teams will dramatically contribute to the immobilization of drug trafficking organizations by fully exploiting DEA's authority to seize trafficker assets. Besides increasing the amount of trafficker assets seized, these resources will also allow the assigned case agent to concentrate on the criminal aspects of the case, leaving the asset seizure to the asset removal team. DEA's San Diego Division was the site of the first asset removal team and posted the following results:

1980 - No Asset Removal Team	$1,000,000 seized
1981 - Asset Removal Team in Operation for Half the Year	$4,900,000 seized
1982	$13,700,000 seized
1983	$8,100,000 seized
1984	$13,800,000 seized
1985	$23,700,000 seized
1986	$29,000,000 seized

Field Data Entry

DEA requests 26 positions, 20 FTE workyears, and $4,450,000 for field data entry support. It is estimated that 100 contract positions will be required at a cost of $3,550,000.

Most of DEA's systems have been converted to operate under Model 204 Data Base Management System (DBMS). When the office automation project is implemented, DEA's information systems will become accessible worldwide and the usefulness of the information will depend upon the accuracy and timeliness of the data entry. Therefore, it is necessary that DEA computer technicians, and contract data entry and analysis technicians be assigned to the DEA field offices and headquarters to perform data entry functions. It is proposed that each division, including EPIC, be supported with contract data analyst personnel varying from 2 to 5 positions, depending on the division size, workload and operational requirements. Also, a group of contract personnel would be employed to support headquarters elements and would be available, on short notice, to be deployed to the field to eliminate backlogs, as well as supporting those periods of time when data input is a critical issue. In addition, DEA employees positions will be required to provide contract and technical monitoring, workload quality control, continuity of operations and retention of instructional knowledge should contract lapses occur, and to provide support in particularly sensitive investigations.

Information systems training classes have been developed for some of the information systems that are operating under M204 to instruct DEA personnel on how to use the system and how to input the data. Additional training classes will be developed for new and recently converted systems as the systems are implemented. As DEA personnel are trained in the use of the information systems, the timely input of the data bases must be maintained in an up-to-date status if the optimum use of data is to be realized.

The application of data analysis and use of data entry contract personnel will allow the information systems data bases to be kept current. It will improve the credibility of the information and provide for the maximum application of the information systems data. The small administrative staffs in the divisions will not be impacted by the increased requirement for data entry and the functions will be performed by contract data entry personnel. The use of highly trained and experienced data entry personnel in the various systems will reduce errors and personal/personnel frustrations.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm Pos.	WY	Amount
Organized crime drug enforcement.....	762	749	$58,553	762	749	$62,865	762	749	$62,865	...	...	...

Long-Range Goal: To identify, investigate, and prosecute members of high-level drug trafficking enterprises and to destroy or immobilize the operations of those organizations.

Major Objectives:

To promote a coordinated drug enforcement effort in each task force region, and to encourage maximum cooperation among all Federal enforcement agencies.

To work fully and effectively with state and local drug enforcement agencies.

To make full use of financial investigative techniques, including tax law enforcement and forfeiture actions, in order to identify and convict high level traffickers and to seize assets and profits derived from high level drug trafficking.

Base Program Description: Organized crime is involved in drug trafficking. The major organizations that this program address are:
- Traditional organized crime figures;
- Major outlaw motorcycle gangs (e.g., Hells Angels, Pagans, Outlaws, Bandidos);
- Other organized criminal groups (e.g., major street gangs, prison gangs);
- Organizations that import and/or distribute large amounts of controlled substances, or finance the foregoing; or
- Physicians or pharmacists illegally dispensing substantial quantities of prescription drugs.

Thirteen Organized Crime Drug Enforcement Task Forces (OCDETF) have been established in the following regions. The core city for each of the task forces is indicated in parenthesis:

New England (Boston)
New York/New Jersey (New York)
Mid-Atlantic (Baltimore)
Southeast (Atlanta)
Gulf Coast (Houston)
South Central (St. Louis)
North Central (Chicago)
Great Lakes (Detroit)
Mountain States (Denver)
Los Angeles/Nevada (Los Angeles)
Northwest (San Francisco)
Southwest Border (San Diego)
Florida/Caribbean (Miami)

The overall program goal is accomplished by:

- Adding new Federal resources to the investigation and prosecution of these major drug trafficking organizations; and
- Fostering improved interagency coordination and cooperation in the investigation and prosecution of major drug cases

Task force operations are planned and coordinated through a network of committees representing participating agencies and under the general direction of the Associate Attorney General. At the national level, a working group formulates general policy and monitors the program with the assistance of a small administrative unit in the Department of Justice. In each of the 13 regions, the U.S. Attorney in the "core city" manages task force operations through the Task Force Coordination Group. This group approves and monitors all task force investigations in the region to ensure that investigations are consistent with program goals and objectives, and that appropriate interagency coordination takes place.

Individual task force cases are investigated and prosecuted by multi-agency teams in the judicial districts within each region.

Agents and attorneys in individual task force cases remain under the direct supervision of their respective agencies, but conduct investigations jointly with other task force agents and attorneys. Leadership responsibility for a specific case is decided on a case-by-case basis and assumed by one of the investigative agencies.

Accomplishments and Workload: During 1986, DEA capitalized on a modest 3 percent investigative workhour increase by producing a 24 percent increase in arrests, and drug seizure increases of 19 percent for cocaine, 45 percent for cannabis, and 395 percent for dangerous drugs. As the full force of the resource enhancements provided in 1985 comes to bear in 1987, DEA expects statistical results as reflected in the table below.

Item	1985	1986	Estimates 1987	Estimates 1988

	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Foreign cooperative investigations	481	426	$54,511	481	454	$58,565	481	454	$58,565	...	...	...

Long-Range Goal: To reduce the supply of drugs of foreign origin destined for the United States illicit market.

Major Objectives:

To conduct high quality cooperative investigations aimed at eliminating the supply of illicit drugs destined for the United States, and disrupt or eliminate the organizations trafficking in those drugs.

To gather and analyze as much intelligence as possible concerning illicit drugs of foreign origin destined for the United States.

To satisfy all appropriate requests from foreign governments for training of their respective law enforcement officials.

Base Program Description: This program addresses the problem of drugs of foreign origin destined for consumption in the United States illicit market. The majority of illicit drugs available in the United States are of foreign origin. DEA's overseas efforts are directed at assisting host governments in the development of programs to reduce the supply of drugs at or near the agricultural source; immobilize foreign clandestine conversion laboratories; identify export staging areas and interdict the drugs; and reduce the diversion of legitimate drugs from international commerce. In 1986, the Administration and Congress recognized the ongoing need for additional resources to assist foreign

narcotics control authorities in the suppression of illicit narcotics traffic actually or potentially impacting the United States. DEA overseas presence is at the invitation of the host country. DEA is represented in 64 offices in 42 countries. The basic authorities for this program are Reorganization Plan No. 2 of 1973 and Executive Order 11727 of 1973. This program is carried out in coordination with the Department of State in foreign areas, Department of Justice guidelines and in accordance with P.L. 94-329, which is referred to as the Mansfield Amendment, as amended by Section 2008, Title II of the Anti-drug Abuse Act of 1986. In addition to the social and economic threat posed by the supply of foreign-source drugs into the United States, there are other factors which directly relate to the activities of this program. These include:

- The level of acceptance of DEA's presence and assistance in foreign countries varies because of such factors as the degree of motivation, national pride, political instability and law enforcement capabilities of the host country.
- Many foreign governments appear to consider drug abuse a western phenomena; however, with the proliferation of drug abuse problems in other countries, this attitude appears to be changing.
- Some source countries have not been able to establish effective drug control in rural areas due to such obstacles as geography, limited and antiquated communications, and time-distance considerations. Denied access areas such as Iran, Afghanistan, Laos and Northern Burma pose even greater obstacles due to a complete lack of diplomatic dialogue.
- The consequences of traditions, conflicting jurisdictions, and divided provincial and tribal authority preclude effective narcotics control in many countries.
- Illicit drug cultivation provides a significant income which, in many areas, is traditional and not easily replaceable.
- International "legal" money transactions are an essential element of the world illicit drug traffic.
- Foreign government drug intelligence collection, production, and dissemination systems, particularly those directly supportive of U.S. drug enforcement efforts may be in need of improvement.

DEA foreign activities focus on the provision of expert advice and authorized investigative, intelligence, and training assistance in those foreign areas deemed most critical to the reduction of drugs destined for the U.S. A natural extension of these programs is DEA encouragement and assistance in the implementation of substantive intergovernmental enforcement cooperation and intelligence exchanges.

Intelligence collection activities overseas are supplemented through the development and implementation of Special Field Intelligence Program (SFIP) operations. The purpose of SFIP operations is to provide funding to exploit highly specialized or unique collection opportunities against a wide variety of intelligence problems in foreign areas. These efforts are largely targetted toward collection of data on all phases of narcotic raw material production, smuggling routes and methods, trafficking and abuse patterns, as well as other matters of collateral interest, such as terrorist or financial matters relating to narcotics activities. This material reported and disseminated through DEA channels provides foreign, domestic and headquarters line and managment personnel with detailed and accurate information which can be used for investigative as well as planning purposes.

Specifically, DEA has in recent years worked with such countries as Pakistan, Turkey, France, Italy and Mexico to develop the necessary intelligence to move against clandestine conversion laboratories, smuggling organizations, cultivation areas, and the organizations responsible for the trafficking of illicit drugs around the world. Additionally, DEA has maintained the necessary political liaison to influence the legislative process in various host countries in an effort to establish drug laws where none previously existed or were weak. Finally, DEA is making inroads into international financial investigations through the cooperation of host countries and the international banking and financial communities.

066

72-165 O—87——25

The diversion of legitimately-produced controlled substances from international channels has become a problem directly affecting the United States. DEA has responded to the problem by establishing international diversion programs in such cities as Bonn, West Germany and Mexico City.

As a result of diplomatic initiatives undertaken by DEA and the Department of State, foreign countries continue to make significant advances toward curbing the diversion of legally-produced drug substances. For example, all known methaqualone source countries have either ceased production or severely limited its exportation.

Current DEA planning for this program calls for continued expansion of DEA's presence overseas. With the use of existing resources in 1986, and the additional resources provided as part of the 1987 supplemental, DEA will be able to open new country and resident offices according to the following planned schedule:

1986
Australia and Nigeria Country Offices

1987
Paraguay, Trinidad/Tobago, Haiti and Belize Country Offices; Maracaibo, Barcelona, and Naples Resident Offices

1988
Kenya, Portugal and United Arab Emirates Country Offices; Sao Paulo and Toronto Resident Offices

1989
Ivory Coast, Morocco and Sri Lanka Country Offices; Calcutta Resident Office

991

Heroin

Since virtually all heroin consumed in the United States is of foreign origin, DEA has active heroin programs in 58 foreign locations. The primary source regions for production of heroin are the following: the Southwest Asian countries of Pakistan, Afghanistan and Iran; the Southeast Asian countries of Burma, Thailand, and Laos; and Mexico. DEA's focus in combatting heroin in these areas is to provide expert advice and/or investigative assistance, authorized investigative intelligence, and training in the areas deemed most critical to eliminating heroin production and smuggling. As a result of U.S. Government encouragement and support, the Pakistani Government has agreed to an aerial poppy spraying program for 1987-1988.

DEA efforts in Egypt and Nigeria have resulted in increased heroin seizures and intelligence for these countries and the continent as a whole.

Cocaine

Virtually all cocaine abused in the United States comes from the South American countries of Colombia, Peru and Bolivia. Additionally, Mexico is a major transshipment country. Traditionally, the cocaine traffickers have been extremely powerful in these countries with strong influence at the upper echelons of government and judicial systems. That situation is beginning to change as the governments in these countries are starting to assert their legal authorities and pursue the cocaine traffickers. DEA will continue to support these governments in their quest to control cocaine trafficking.

Specifically, DEA focuses its efforts in three major areas of emphasis to help South American governments fight cocaine traffic. The first area is the eradication of the coca plant and crop substitution efforts to provide a viable economic alternative to citizens growing the plant. Second, DEA continues its efforts to control the essential chemicals necessary to convert the raw materials into cocaine hydrochloride. These precursors are ethyl ether, acetone and potassium permanganate. Finally, DEA, with the assistance and permission of the host government, runs international Title III operations and requests extradition of traffickers to this country for trial.

Cannabis

The traditional source countries for marijuana are Colombia, Jamaica, Mexico and Thailand. Hashish and hashish oil are predominantly imported from the Middle Eastern countries of Lebanon, Pakistan and Afghanistan, with Jamaica becoming a major source country for hashish oil. These products tend to be smuggled into this country in ton quantities using all land, sea and air routes.

In combatting the flow of cannabis products to this country, DEA uses all the same methods as in heroin and cocaine. Extensive use is made of the Special Field Intelligence Program and Special Enforcement Operations.

Dangerous Drugs

This program is aimed at combatting the flow of dangerous drugs and their precursor materials into this country and between countries. In this case, since most of the drugs of abuse in this category are manufactured here at home, the main target of DEA overseas efforts is the control of the flow of precursor chemicals into this country. It has become absolutely clear that there is an ongoing and growing need for increased liaison with foreign governments where these precursors are manufactured. Of special interest in this area is the training of foreign officials in the enforcement of the laws governing the international trade of the precursor materials.

Training Foreign Officials

DEA requires the cooperation and assistance of competent law enforcement officials in and near the source countries of illicit drug production and smuggling to ensure success in DEA foreign cooperative investigations and assistance. To achieve this goal, DEA carries out a variety of training classes, both in the United States and in host countries with funding from the Department of State.

Diversion control	580	520	$30,299	580	562	$33,271	580	562	$33,271	...	...	...

Long Range Goal: To prevent legitimately produced controlled substances from being diverted into illicit channels.

Major Objectives:

To conduct high quality and timely criminal investigations of C-DFP I and II violators responsible for large scale drug diversion and participate in joint investigations with other agencies.

To conduct administrative revocation investigations which may result in the immediate revocation, denial, surrender or suspension of a DEA registration.

To conduct periodic, unannounced investigations of drug manufacturers, distributors and wholesalers on a minimum three-year cycle.

To conduct pre-registrant investigations on a timely basis prior to the issuance of DEA registration.

To respond on a timely basis to the most critical requests from state governments to assist them in their drug diversion efforts through violator targetting, investigative techniques, drug control actions and in specific problem areas.

To establish on a timely basis, manufacturing and production quotas on all substances with abuse potential to ensure that production does not exceed legitimate medical needs.

To swiftly identify all new substances which are being abused or have abuse potential and determine their placement in the appropriate CSA schedule, and provide a timely response to all requests from the United Nations concerning drug control issues.

To initiate and coordinate diplomatic efforts to eliminate diversion of controlled substances from international commerce and to respond to requests from foreign countries to assist them in improving their operational efforts to prevent international drug diversion.

To issue declarations and permits to pharmaceutical firms authorizing the import/export of controlled substances and provide the United Nations with statistical reports of import/export transactions as required by the Single and Psychotropic conventions.

To register all legal handlers of controlled substances on a timely basis and provide to registrants the order forms necessary for them to purchase schedule I and II substances.

Base Program Description: The Diversion Control program seeks to reduce to the maximum extent possible the diversion of legitimately produced controlled substances into illicit channels at all levels of distribution and to provide leadership and support to ensure that state and local agencies and the pharmaceutical industry establish and maintain programs and policies to control diversion. Drug abuse is one of the more serious problems facing America today. The high cost of drug abuse can be seen in our homes, schools, and factories. What is not well known is the role legally produced drugs play in the abuse problem. The President's Strategy Council on Drug Abuse reports that over seven million people use prescription drugs (barbiturates, amphetamines, tranquilizers) for non-medical purposes. Additionally, GAO has cite the report that legal drugs are involved in as much as 70 percent of all drug-related injuries or deaths. It is estimated that over 700 million dosage units are diverted annually from the legitimate channels in which they are manufactured, distributed and dispensed. Of this amount, 90 percent are diverted at the lower level or dispensing level of the distribution chain.

As part of its responsibility to protect the health and general welfare of the American people, the Federal government must respond to this problem. DEA is responsible for enforcing the provisions of the Controlled Substances Act, the Controlled Substances Import/Export Act, 21 U.S.C. 801-966 et., seq., and the Comprehensive Crime Control Act of 1984 as they pertain to legitimately produced controlled substances.

Criminal Diversion Investigations

It is estimated that approximately 12,000 practitioners are involved in violative acts. Under the Targetted Registrant Investigations Program, DEA identifies the highest level violators responsible for large scale diversion and conducts high quality and timely criminal investigations of their diversion activities. These investigations are made more complex because they involve legally registered practitioners as well as financiers backed by organized criminal elements. The aforementioned groups hire physicians who prepare a constant stream of illegally controlled drug prescriptions which result in millions of dosage units being diverted into the illicit market.

Public Interest Revocation Investigations

The Comprehensive Crime Control Act of 1984 created the Administrative Revocation Program through which DEA may deny an application for registration or immediately revoke or suspend a registration if it is determined that the issuance of such registration would be inconsistent with the public interest. This new authority allows DEA to impact on the violative registrant population which could not be effectively attacked through former existing authorities. As previously stated, approximately 90 percent of all diversion occurs at the practitioner level. This new investigative program will be directed entirely at that level and should result in significant reductions in drug abuse injuries and deaths.

CSA Mandated Cyclic Investigations

To ensure that diversion does not occur at the manufacturer, distributor or wholesale levels of the distribution chain, DEA periodically conducts unannounced investigations of these pharmaceutical firms. By regulation, DEA is required to conduct cyclic investigations of these firms at least once every three years.

Pre-registrant Investigations

Pre-registrant investigations are conducted on individuals and firms applying for DEA registration which ensures that only qualified individuals or companies are authorized to acquire or dispense controlled substances. The prescreening is the first line of defense against the obtaining of a valid DEA registration by a potential diverter.

State and Local Assistance

The Comprehensive Crime Control Act of 1984 included a state assessment provision which requires DEA to assess state programs aimed at suppressing the diversion of controlled substances from scientific, medical, research and legitimate distribution channels. DEA is now responsible for identifying areas of need and areas where assistance, advice and counsel should be provided to state and local government officials in order to make existing state diversion prevention programs more effective.

Drug Scheduling

DEA is responsible for determining the appropriate placement of controlled substances in the CSA schedule. There are five established schedules, each of which imposes varying degrees of control over prescribing, distribution, production, physical security and record-keeping. Domestic scheduling actions are initiated in response to new drug applications referred from the Food and Drug Administration and changes in trafficking patterns and abuse trends. In addition to domestic scheduling actions, DEA is heavily involved in international drug control issues. DEA is the lead agency in the United States in providing diversion data to the United Nations Secretary General. Approximately 50 percent of DEA's scheduling activities involve international drug control issues which DEA is mandated by treaty to address.

Pursuant to the Drug Diversion Control Amendments of 1984, DEA is authorized to schedule a drug in Schedule I for up to one year on an emergency basis if it is determined that such scheduling is necessary to avoid an imminent hazard to public safety. Generally, there are eight factors to be considered in scheduling a substance. Under this new authority, DEA must consider only three: (1) the history and current pattern of abuse of the drug; (2) the scope, duration and significance of its abuse; and (3) the risk to public health. This amendment reflects the concern caused by the rapid proliferation of controlled substance analogs (the so-called "designer drugs") including narcotics such as "China White," and the hallucinogens PCE or PHP which mimic the effects of PCP. It should be noted, however, that even with the emergency scheduling legislation, new controlled substance analogs continue to be a problem.

Schedules I and II consist of the most highly abused substances. DEA imposes a production quota on each substance listed in these schedules which limits the authorized production to the estimated legitimate medical and industrial requirements. When investigative information documents the substantial diversion and abuse of a schedule I or II drug, the production quota for that substance can be reduced. No individual or firm may dispense controlled substances unless they are registered with DEA. An annual registration requirement is currently imposed by DEA. The provision for three-year registration has been included in the Drug Diversion Control Amendments and regulations implementing this will be issued soon. The three-year registration period applies to practitioners and pharmacies. The annual registration requirement for distributors and manufacturers will not change. In order for a registrant to order Schedule I or II substances, a DEA order form must be utilized. It is critical that DEA be prompt in providing these order forms to registrants because failure to do so precludes their being able to conduct business as usual.

Accomplishments and Workload: During 1986, 353 criminal diversion investigations were conducted resulting in the arrest of 118 individuals. Asset removals and criminal fines or civil penalties in excess of $4.3 million were invoked. Also, during 1986, DEA conducted 740 cyclic investigations, 307 public interest revocation investigations and 1,326 pre-registrant investigations. Letters of admonition were sent to 266 firms, 45 administrative hearings were held, and 181 orders to show cause were referred for administrative action.

Special Operations

Special operations initiated against drug diversion have produced significant results. The Michigan Diversion Impact Program, for instance, has resulted in licensing action against eight pharmacies and ten registered pharmacists, with pending action against an additional six pharmacies, nine registered pharmacists and one wholesaler. The Michigan State Attorney General has filed civil complaints in all cases under investigation with proposed fines ranging from $52,000 to $12,000,000. Approximately 800,000 dosage units of schedule II drugs were seized. Operation WHITECOAT, which took place in Nashville, is another example of these special operations. To date, there have been nineteen arrests including four doctors, two pharmacists and thirteen street traffickers, financiers, and organizers. Approximately 200,000 dosage units of Schedule I and II controlled substances and $100,000 have been seized.

Operation SET BUSTERS was initiated in 1986 in Buffalo, New York, in response to fifteen reported deaths in the past three years in Erie, Pennsylvania, which were due to overdoses of the deadly combination of Doriden and codeine compounds called "sets." The source of these drugs were pharmacies in Buffalo, New York. Two pharmacists were indicted in May 1986, and at least six additional indictments against pharmacists and three against physicians are pending.

Operation QUAKER STATE has been proposed to deal with the significant amphetamine, methamphetamine and phenmetrazine problem in Pennsylvania. Based on the per capita consumption in relation to all other states, Pennsylvania ranked #1 in amphetamine, #1 in phenmetrazine and #2 in methamphetamine during the period 1982 through 1985. DEA personnel initiated investigations on twenty pharmacies. In addition to the pharmacies, nineteen doctors have been targetted for investigation. The operation is continuing with the assistance of the Pennsylvania Bureau of Narcotics Investigations.

International Diversion Activities

DEA has achieved great strides in curbing international diversion. Through our diplomatic initiatives and operational efforts, major advances have been made throughout the world to prevent the international diversion of controlled substances. A striking example is the virtual elimination of most known foreign sources of diverted methaqualone in the United States.

In July 1986, a Sino/United States policy level conference on the issues of drug abuse and illicit traffic was held in Beijing, Peoples Republic of China. This visit afforded the first opportunity for a comprehensive discussion of major drug policy issues on a bilateral basis and established an environment of cooperation between the United States and the Peoples Republic of China.

Two seminars relating to the diversion of drugs and chemicals were conducted with foreign officials. One was held in Argentina and the other in Chile. These seminars provided the forum to bring together for the first time forty host country officials from the Ministries of Health and Justice, Customs officials, etc., to discuss the diversion of legitimate pharmaceuticals, precursors and essential chemicals and

techniques for detection. Similar seminars have been held in Panama, Brazil, Venezuela, Ecuador, Buenos Aires and Chile. Another seminar held in San Juan, Puerto Rico, was specifically aimed at training Dominican Republic officials in regulatory control procedures. Seminars are planned for Peru and the Caribbean countries in 1987. DEA was also instrumental in initiating the first Diversion Investigations Training Seminar given by Interpol in France. Instruction was provided by DEA and others, and there were representatives from 15 countries present. Due to the favorable response of the first seminar in France, two others were held in 1986, one in Thailand and the other in Kenya.

A follow-up to the 1984 European Source Country Conference was held in Weisbaden, West Germany in December 1986. The conference, which was organized by Interpol and DEA, chaired by DEA and hosted by West Germany, was attended by seventeen countries. DEA is planning an Asian Conference on Diversion in Kuala Lumpur to be held in April 1987, which will be similar to the European conference and will include law enforcement, regulatory and Customs officials from seven nations. The seminars have been extremely well received in each country in which they have been presented, and both the seminars and multi-nation conferences provide an excellent forum to develop solutions to international diversion matters affecting the United States.

DEA, working with the State Department, has taken an active role in developing a new international convention for the suppression of trafficking of drugs of abuse. Representatives of DEA have been working with other governments on issues throughout the year. This new proposal is now in a draft form and will be presented to the United Nations Commission of Narcotic Drugs in February 1987. This new treaty addresses problems of international trafficking that are not being covered under existing treaties. During 1986, DEA processed 2,194 import/export declarations and permits.

Drug Scheduling

Since 1985, DEA has used its new emergency scheduling authority five times to control thirteen of the most dangerous and prevalent of the controlled substance analogs (designer drugs) under the CSA. The substances scheduled were: 3 methylfentanyl, a narcotic substance one thousand times more potent than morphine; MDMA, a neurotoxic hallucinogenic amphetamine; MPPP, a narcotic analgesic whose by-product, MPTP, has been responsible for a Parkinsonian syndrome in a number of individuals; PEPAP, a meperidine analog similar to MPPP; and nine fentanyl analogs, extremely potent analgesics.

A major effort is now underway to place these emergency scheduled substances under permanent scheduling. Emergency scheduling is effective for only one year. Since many of the analogs have never been produced commercially or studied in laboratories, the data required for permanent scheduling must be developed. The criteria for scheduling under the CSA requires that the pharmacology and chemistry be known before a scheduling action can be taken. Once the chemicals are acquired, we then obtain the pharmacological data necessary to meet the legal requirements for the scheduling of these most dangerous analogs. DEA has had the compounds synthesized so that the necessary data can be collected and the required standards can be prepared for analytical laboratory purposes.

In June 1986, DEA held a national conference on the problems of controlled substance analogs. The attendees, who were experts in the fields of medicine, science, law, law enforcement and education, exchanged information and formulated recommendations and guidelines to deal with the problem. Additionally, DEA, in conjunction with the Departments of Justice and Health and Human Services, drafted legislation which prohibits the manufacture, distribution and possession with intent to distribute controlled substance analogs for human consumption unless done in conformance with provisions of the Federal Food, Drug and Cosmetic Act. This legislation was incorporated in the Anti-Drug Abuse Act of 1986.

In addition to the thirteen substances which underwent emergency scheduling actions in 1986, DEA proposed the scheduling of three pharmaceutical drugs coincident with their anticipated approval for marketing, finalized the scheduling of three other pharmaceutical drugs, and removed one drug from the CSA. To satisfy international treaty obligations, DEA established more than 900 procurement and manufacturing quotas and provided technical expertise in a lengthy administrative hearing related to the scheduling of MDMA and quota hearings. DEA is frequently called upon to provide technical assistance in congressional hearings on controlled substance analogs and precursor chemicals. In response to requests from the U.N., the World Health Organization and Interpol, DEA prepared reports on the abuse, diversion and illicit trafficking of 33 sedative-hypnotics.

Seminars/Briefings/Training

In March 1986, DEA conducted the second Domestic Drug Policy Conference on the control and diversion of controlled substances which was attended by officials from 44 states and U.S. territories who have the authority to influence and establish controlled drug policy. Altogether, there were 72 state officials selected by the governors of the states to represent law enforcement and regulatory efforts at the state level concerning the control of legitimately manufactured controlled substances. The conference provided a forum to share and exchange current information regarding legitimately marketed controlled drugs, explore the issues of drug control and diversion and provide guidance to both Federal and state officials responsible for making policy as it relates to controlled substances. As a follow-up to the national conference, DEA sponsored and held three subcommittees on Model State Programs, legislative initiatives and multiple copy prescription systems.

In 1986, DEA participated in 24 national, state and local meetings using DEA officials in the field and 29 portable exhibits in furtherance of the program. The revisions of the PHYSICIANS MANUAL and PHARMACISTS MANUAL were conducted to include provisions of the Comprehensive Crime Control Act of 1984 and the Controlled Substances Registrant Protection Act of 1984. Eight DEA working committee meetings with industry, pharmacies, practitioners and drug wholesalers were held and continue to provide the agency with a forum for discussing matters of mutual concern. These meetings provide an opportunity to update the pharmaceutical industry on DEA requirements and supplies DEA with information concerning problems these groups may have in meeting the requirements of the CSA. DEA also conducted three seminars for state board and drug control investigators. The three-day sessions were attended by a total of 208 participants representing 43 states.

A second Advanced Diversion Training Institute was conducted for state regulatory officials. Topics discussed include CSA amendment changes and state programs initiated as a follow-up to the Second Domestic Drug Policy Conference.

Under the State Assistance Program, DEA conducted an assessment of each of the fifty states to determine their current capabilities and to identify those states which have the greatest need for investigative assistance, diversion control training, information collection and drug control legislation.

Other 1986 accomplishments include the processing of 788,000 registration applications and the issuance of 365,000 order form books.

Item	1985	1986	Estimates 1987	1988
Cyclic investigations conducted	579	740	820	875
Criminal diversion investigations	328	353	400	400
Pre-registrant investigations conducted	1,276	1,326	1,276	1,300
Public interest revocation investigations	72	307	700	750

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
State and local task forces	259	225	$30,632	259	254	$31,149	259	254	$31,149	...	...	...

Long Range Goal: To reduce drug availability and immobilize or eliminate significant drug trafficking organizations within the specific geographic/political boundaries under the jurisdiction of state and local law enforcement agencies involved in the task forces.

Major Objectives:

To conduct, in cooperation with the appropriate state and local agencies, high quality investigations leading to the arrest, prosecution and conviction of drug offenders significant to the specified area.

To seize as much drug evidence and drug related assets as possible from offenders arrested and prosecuted.

To establish and maintain an effective intelligence exchange with participating state and local police officers and agencies.

To conduct high quality on-the-job drug law enforcement training for participating state and local police officers.

Base Program Description: This program addresses the problem of reducing the drug availability and trafficking in specific geographic/political areas under the jurisdiction of state and local law enforcement agencies. Under this program, DEA special agents and state and local police officers are united into cohesive units that:

- Enhance inter-department/interagency cooperation during drug investigations and the ensuing prosecution;
- Facilitate the exchange of information and intelligence; and
- Permit State and local officers to receive first hand experience and on the job training in the conduct of Federal level drug investigations.

This program is not a unilateral assistance program. The state and local officers provide as much or more assistance to DEA as they receive. This is based on the following factors:

- By their sheer numbers, state and local police officers contribute significant amounts of manpower to the national drug law enforcement effort;
- By virtue of their presence in every city and state, these police officers cover areas DEA, with its fewer numbers, could never consider;
- State and local officers apply pressure to local drug dealers, thereby disrupting the area drug market and raising the costs of doing drug business;
- State and local officers develop investigative leads, informants and intelligence. Mutual exchange of this data with DEA agents assists both levels of drug law enforcement agencies in accomplishing their missions.

The Task Force program has proven itself an effective complement to the Federal drug enforcement effort by increasing the effectiveness of state and local drug enforcement activities aimed toward disruption of all levels of illicit drug trafficking. As part of a comprehensive national and international drug effort by Federal elements and their state, local and foreign counterparts, the Task Force program plays a critical role by attacking the mid-level violator, the link between the supplier and consumer. With disruption or removal of this link, the cycle of drug production and consumption--supply and demand--is significantly impeded. Moreover, the Task Force program provides DEA access to the lower levels of the trafficking spectrum, where investigations of new or previously unknown trafficking organizations are generally initiated, without a major investment of Federal resources.

At the end of 1986, there were 35 State and Local Task Forces operating out of the following metropolitan areas:

Baltimore, MD	Honolulu, HI	Phoenix, AZ	St. Louis, MO
Buffalo, NY	Long Island, NY	Portland, ME	Tucson, AZ
Burlington, VT	Louisville, KY	Reno, NV	Washington, DC
Charleston, WV	Lubbock, TX	Sacramento, CA	Wichita, KS
Chicago, IL	Minneapolis, MN	San Antonio, TX	Wilmington, NC
Cincinnati, OH	Newark, NJ	San Diego, CA	
Cleveland, OH	New Orleans, LA	San Jose, CA	
Denver, CO	New York, NY	San Juan, PR	
Detroit, MI	Orlando, FL	Savannah, GA	
Fort Worth, TX	Philadelphia, PA	Seattle, WA	

Accomplishments and Workload: DEA produced the following state and local task force results for 1986: 276,014 investigative workhours, a 28 percent increase from the 1985 level; 4,026 cooperative arrests, a 27 percent increase over the 1985 level; 2,261 convictions; 42 kilograms of heroin removed, 1,348 kilograms of cocaine removed; 137,629 kilograms of cannabis removed, and 15.9 million dosage units of dangerous drugs removed.

1001

As a result of the additional resources provided in 1987, DEA expects the following results: 29,501 additional investigative workhours in 1987 and 76,874 more in 1988; 430 additional arrests in 1987 and 1,119 more in 1988; and 224 additional convictions in 1987 and 624 more in 1988.

Total	1,099	1,017	138,991	1,068	1,029	122,866	1,111	1,062	139,279	43	33	16,413

This activity provides for the necessary collection and dissemination of strategic, tactical/operational, and financial intelligence information, laboratory services, training programs, technical engineering development, ADP, and investigative record keeping support required for DEA enforcement efforts to meet their goals. Included in the technical operations portion of the Research, Engineering and Technical Operations program are: radio communications and support; technical equipment and support; the air program; and the motor vehicle program.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Intelligence.....	362	341	$28,807	362	352	$24,129	362	352	$24,129	...	...	...

Long Range Goal: To provide all information necessary to achieve drug law enforcement objectives.

Major Objectives:

To provide accurate, comprehensive and timely strategic intelligence on drug trafficking patterns.

To provide timely tactical and operational intelligence which supports active investigations and operations and maximizes drug law enforcement efforts worldwide.

To collect, process, analyze and disseminate drug-related intelligence to meet the needs and requirements of all agencies with drug law enforcement or drug intelligence responsibilities.

Base Program Description:

Strategic Intelligence

Strategic intelligence develops a comprehensive and current picture of (1) drug trafficking and availability, (2) the scope and severity of present and projected abuse patterns, and (3) the long-range prospects of reducing the supply of illicit drugs. The fact that drug trafficking patterns are constantly changing compounds the difficulty of developing definitive estimates.

One major tool used for collection of vital narcotic intelligence is the Special Field Intelligence Program (SFIP). These probes are used to gather information which cannot be determined through normal collection methods. In addition to strategic information, SFIP's also provide valuable tactical/operational and financial intelligence to field investigations.

Strategic intelligence indicators have been developed, information reporting systems established, and statistical methods used to produce estimates and projections of drug cultivation, production, smuggling patterns and abuse.

To broaden the information base, appropriate liaison is conducted with other law enforcement and intelligence agencies to enhance the exchange of strategic intelligence information. This coordination function ensures that significant gaps and deficiencies in intelligence collection efforts are identified and that the resolution requirements are generated.

Among the publications of the Strategic Intelligence Program are the annual Narcotics Intelligence Estimate, the Quarterly Intelligence Trends, and the Monthly Digest of Drug Intelligence, as well as special reports and country profiles. Taken collectively, these publications form the most comprehensive and authoritative assessments available to the Federal Government of the major trends which impact on the worldwide illicit drug situation. They provide senior managers with essential information required to make realistic threat assessments and critical resource allocation decisions.

Tactical/Operational Intelligence

The tactical/operational intelligence program addresses the need to achieve the greatest impact from investigative resources by fully exploiting information available to DEA.

This activity is particularly challenging because of the vast amount of information which must be collected, collated, analyzed and disseminated in a timely manner. This information is sometimes conflicting and links between events and individuals involved in the drug traffic are not readily apparent. To develop meaningful actionable drug intelligence, the data is selectively and carefully analyzed. Analysts develop intelligence file reviews (which consist of all available data on a particular violator), identify co-conspirators and their roles in an organization, identify modus operandi, analyze seized documents and telephone tolls, debrief cooperating individuals (CI's), develop investigative leads, and recommend the initiation of SFIP's to fill operational intelligence gaps. The extensive use of ADP systems to manage and analyze information is critical to this program.

Analysts provide assistance to case agents and Assistant U.S. Attorneys through the management, organization and graphic portrayal of analyzed information for grand jury hearings. Following indictment, analysts continue to refine their analysis of new information, prepare association charts and often provide expert testimony in court.

Financial Intelligence

The financial intelligence program focuses domestic and foreign resources on the fiduciary aspects of narcotics traffic. The financial ramifications from international illicit drug sales are enormous. They include (1) the likelihood of significant capital flight from countries such as the United States, (2) drug financed corruption in source or producing countries, and (3) the creation of offshore havens through which significant amounts of the world's drug proceeds either pass or are permanently held. Many countries do not yet fully recognize these problems, which makes it sometimes difficult to collect financial intelligence.

Domestically, the DEA financial intelligence program encourages law enforcement personnel to increase the use of existing laws to obtain documentary evidence and intelligence on the flow of drug-related currency, to identify major money laundering methods, and seize all assets derived from the profits of drug trafficking.

Using provisions of the Comprehensive Crime Control Act of 1984 and data provided by the Bank Secrecy Act, financial intelligence analysts track drug currency to assess the economic impact on consumer, transit, source and "haven" countries. Foreign governments and "haven" countries, in particular, are being encouraged to enter into mutual legal assistance treaties and agreements and to enact asset forfeiture legislation similar to U.S. laws.

These activities complement efforts to deprive narcotics traffickers of their drug-related assets, immobolize major trafficking organizations and disrupt drug trafficking.

1005

The El Paso Intelligence Center

The El Paso Intelligence Center (EPIC) is a multi-agency facility staffed by nine Federal agencies. It was established in 1974 to facilitate the exchange of drug intelligence among law enforcement agencies and to provide law enforcement agents with immediate responses 24 hours a day, seven days a week to inquiries dealing primarily with drug, alien and weapon trafficking.

EPIC accomplishes its mission through the Watch and Analysis Sections. These sections are staffed by experienced investigative and analytical personnel drawn from the nine Federal agencies. The Watch concentrates primarily on two areas: (1) responding to inquiries regarding individuals suspected of committing crimes; and (2) placing lookouts with appropriate agencies on suspect individuals, vehicles, vessels and aircraft.

The Analysis Section integrates Watch activity with all investigative reporting from participating Federal, state and local agencies and provides law enforcement officials with current intelligence assessments. In addition, the section uses the Watch intelligence and investigative reporting to produce Special Reports concerning criminal organizations, concealment techniques, smuggling routes and other drug-related topics.

EPIC serves as the sole repository and analytical exploitation center for inter-agency, high-frequency radio interception. This activity provides valuable tactical data including real-time, geo-locational data on air and maritime smuggling vehicles and high-validity leads in long-term investigations. The EPIC Watch provides tactical and operational intelligence, and the EPIC Analysis staff provides the long-term research and analysis.

During 1987, DEA is planning to utilize $7,500,000, provided as part of the 1987 appropriation, to construct a new facility. The new facility will be built at Ft. Bliss, Texas.

1006

Accomplishments and Workload:

Strategic Intelligence

The Strategic Intelligence program provided geographic expertise, assessments, estimates, and alerts on drug cultivation, production, smuggling, and availability trends to foreign, Federal, state, and local authorities.

- Published recurring reports: The Monthly Digest of Drug Intelligence and the Quarterly Intelligence Trends. These are global in scope, with incisive analysis and reporting of the most significant developments in international narcotics trafficking. The Office of Intelligence also published the annual Narcotics Intelligence Estimate, the National Narcotics Intelligence Consumers Committee compendium of world-wide illicit drug cultivation, production, and smuggling trends and projections.
- Published the Worldwide Drug Assessment: Threat to the United States, which was used to formulate the national strategy for prevention of Drug Abuse and Drug Trafficking.
- Published special reports and country profiles regarding drug trafficking in countries of Latin American, Southeast Asia, Southwest Asia, and the Middle East and Africa.

- Initiated a new bi-weekly report, the Hat Trick Intelligence Summary, in support of the National Narcotics Border Interdiction System (NNBIS) operations underway in the Caribbean. With the shift of enforcement focus on trafficking westward, this publication series became the Mexico/U.S. Trafficking Assessment.

Tactical/Operational Intelligence

The Tactical/Operational and Financial/Special Intelligence programs provided support to investigations directed against high-level traffickers, their organizations and financial assets, and prepared briefing papers, congressional testimony and position papers for use by DEA management. Support was also provided to the Organized Crime Drug Enforcement Task Forces (OCDETF) and the National Narcotics Border Interdiction System. Other accomplishments include the following:

- Intelligence support to Operation STOP PROP/BLAST FURNACE, the bilateral anti-drug effort in Bolivia, included: a list of 400 airstrips and photographic information believed to be associated with cocaine trafficking; Headquarters and field division TDY analysts who assisted in violator and operational targetting; and direction to joint agency intelligence collection, analysis and dissemination.
- Researched and prepared in-depth analysis of DEA investigations from 1981 to 1985 detailing the extensive amount of diazepam (valium) diverted from licit channels in Canada, processed in clandestine labs into quaaludes and smuggled in the United States. This study provides the basis for an impending request from the United States Government to the Canadian Government to impose stringent controls on diazepam importation, production and distribution.

Financial Intelligence

- Encouraged and provided oversight for the development of the field asset removal teams program.
- Provided guidance and assistance to numerous foreign countries in the development of asset seizure and anti-money laundering legislation and encouraged arrangements whereby DEA will have access to offshore financial records.

El Paso Intelligence Center

The El Paso Intelligence Center continued to provide an intelligence clearinghouse for drug law enforcement information and comprises a unique form of continuous intelligence support to officials at the Federal, state and local levels:

- During 1986, there were 363,580 intelligence transactions. In 1986, EPIC lookouts were instrumental in seizures of 175 kilograms of heroin, 5,980 kilograms of cocaine, 1,607,912 pounds of marijuana, 62 aircraft, 100 vessels and $525,000 in currency.
- EPIC continues to provide 24-hour-a-day support and coverage to several prominent enforcement activities, particularly the Caribbean-based interdiction operations as well as the Organized Crime Drug Enforcement Task Forces and the National Narcotics Border Interdiction System.

1007

Item	1985	1986	Estimates 1987	1988
Intelligence reports	800	855	900	900
Special field intelligence programs	10	21	21	21
Information responses	17,000	17,000	17,000	17,000
El Paso Intelligence Center transactions	354,577	363,580	375,000	385,000

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm Pos.	WY	Amount
DEA laboratory services	223	202	$12,740	223	218	$12,809	223	218	$12,809	...	...	...

Long-Range Goal: To provide required laboratory support to ensure maximum achievement of enforcement, intelligence and diversion control activities.

Major Objectives:

To provide timely analysis of DEA and FBI drug evidence.

To provide expert testimony in court.

To provide field assistance (clandestine laboratory investigations and seizures and crime scene searches for trace drug evidence) to DEA and FBI special agents.

To assist DEA and the FBI in the development of conspiracy cases, the monitoring of foreign drug distribution patterns, and the determination of origin of controlled substances in illicit channels by conducting in-depth and signature analyses.

To provide information on the retail level price and availability and the domestic distribution patterns of heroin through signature analysis of Domestic Monitor Program evidence. In 1987, the Domestic Monitor Program will be partially replaced by the SENTRY program which will provide information on the availability and domestic distribution patterns of substances other than heroin, e.g., controlled substance analogs.

To conduct ballistics examinations on DEA and FBI evidence (tablets, capsules, and papers).

To improve forensic capabilities of law enforcement agencies worldwide.

To assist other Federal agencies in forensic drug examination.

To conduct research on new and improved methods of analytical techniques and to monitor the emergence of new drugs of abuse.

Base Program Description: This program addresses support for the enforcement, intelligence, and diversion control activities of DEA. Enforcement activities are supported through: the timely analysis of drug evidence by forensic chemists and presentation of expert testimony in court; providing field assistance to agents on clandestine laboratory investigations and crime scene searches for trace drug evidence; and conducting ballistics, in-depth and signature analyses for the development of conspiracy cases. Intelligence activities are supported through the heroin signature analyses to determine the origin of controlled substances and foreign drug distribution patterns and through signature analyses of Domestic Monitor Program evidence to monitor domestic drug distribution and price/purity data at the retail level. Diversion control activities are supported through ballistics examinations (comparison of microscopic tool markings with those of authentic/reference material) of tablets, capsules and papers which provide information on illegal distribution of licitly produced drugs to identify possible illegal activity by CSA registrants, and through field assistance in conducting inspections of CSA registered firms.

This program also provides forensic drug laboratory support to the FBI, which has concurrent jurisdiction for the enforcement of Federal drug laws, and provides support to other Federal law enforcement agencies that do not have their own forensic drug examination capability or which require the special expertise of DEA forensic scientists. Additionally, other Federal and foreign drug law enforcement officials will receive the training and assistance required to complement and enhance the mission of DEA.

The expeditious analysis of drug evidence submitted by DEA and FBI special agents and the presentation of expert testimony in court is essential to the successful investigation and prosecution of drug law violators and is therefore the primary purpose of the DEA laboratory system. The timely analysis of drug evidence is an integral aspect of DEA's compliance with the Speedy Trial Act of 1974 and Comprehensive Crime Control Act of 1984.

Additionally, the DEA laboratory system, which is comprised of seven field laboratories and the Special Testing and Research Laboratory, assists other Federal agencies such as the Coast Guard, Naval Investigative Service, Army Criminal Investigative Division, Marine Corps, National Park Service, Immigration and Naturalization Service, and General Services Administration through the analysis of drug evidence, provision of court testimony, and training.

DEA forensic chemists also provide field assistance (clandestine laboratory investigations and seizures and crime scene searches for trace drug evidence) to DEA and FBI special agents and field support to DEA diversion control investigators.

The DEA Laboratory Services program utilizes the System to Retrieve Information from Drug Evidence (STRIDE). This is a series of inter-related computer systems designed to support enforcement and intelligence operations through the processing of data generated at the DEA laboratories. STRIDE provides data regarding evidence examined at the DEA laboratories to produce information which is used to determine trends in drug abuse and trafficking of narcotics, to warn of new drugs of abuse, and to identify common sources of illegal drugs. This System is also used to

1009

provide information on illegal distribution of licitly produced drugs, data on the availability of drugs on the street, statistics on drug removal, and a system for monitoring the location of evidence. Information from the System is provided to local, state, Federal, and foreign law enforcement agencies. STRIDE is also a management tool to assist in measuring laboratory effectiveness and allocating resources as well as a mechanism of internal controls to monitor evidence inventory. The subsystems of STRIDE are: laboratory analysis program, ballistics program, laboratory manpower utilization program, and evidence inventory program.

DEA's laboratories are called upon, with increasing frequency, to provide information on the retail level availability of illicit drugs and trends of the United States illicit market. The Domestic Monitor Program requires subjecting street level heroin samples to source analysis, as well as qualitative and quantitative analysis to obtain price/purity data. This approximately triples the time of analysis for each exhibit. However, strategic intelligence is provided on area of origin determinations in addition to retail level availability data.

The DEA and FBI laboratory systems each have separate functions and unique expertise in the field of forensic sciences. When used together for the scientific analysis of evidence in drug investigations, they provide an expanded capability to the enforcement activities of both agencies' analysis. The DEA laboratories conduct qualitative and quantitative chemical analysis on drug evidence and the FBI laboratory provides numerous criminalistic examinations which are performed on the non-drug evidence resulting from these investigations. The individual expertise of the two laboratory systems complement one another and result in improved efficiency for the overall drug law enforcement effort.

Accomplishments and Workload: During 1986, DEA laboratories analyzed 31,689 exhibits of evidence (of which 2,979 exhibits were for the FBI and 3,613 were for combined FBI/DEA OCDETF efforts), testified in 776 trials, conducted 712 ballistics examinations, and identified 24 new illegal prototypes of tablets and 15 of LSD blotter paper that have entered the illicit drug traffic. Additionally, 78 logos have been added to the new packaging logo file which was recently added to the ballistics data base to identify common distribution patterns of illegal drugs through characteristic packaging markings.

During 1986, DEA laboratories also provided field assistance on 246 occasions, conducted 707 Heroin Signature analyses and 175 Domestic Monitor analyses and developed and published or presented 7 new methods for the identification and/or analysis of drugs for the international forensic community. Work is continuing on the identification of new controlled substance analogs.

Item	1985	1986	Estimates 1987	Estimates 1988
Laboratory exhibits analyzed	29,502	31,689	33,300	34,500
Ballistics examinations	720	712	1,107	1,107

Field assistance on clandestine laboratory raids	208	246	240	255
Average evidence turn-around time (days)	13	13	13	13
Domestic monitor program exhibit analyses	225	175	200	200
Issues of Microgram	12	12	12	12

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
DEA training.....	42	40	$4,846	39	37	$5,277	39	37	$5,277	...	...	...

Long-Range Goal: To establish and improve the capabilities of DEA personnel to carry out their responsibilities through specialized training.

Major Objectives:

To provide high quality entry-level training for special agents, diversion investigators and intelligence analysts.

To provide high quality advanced, in-service and specialized training to investigative and other personnel in response to all identified needs.

To provide high quality executive, mid-level management and supervisory training for appropriate agency officials.

To provide high quality foreign language training for all DEA personnel assigned to overseas and border offices in need of such training.

Base Program Description: During 1985, DEA's training center and programs were relocated from the Federal Law Enforcement Training Center (FLETC) in Glynco, Georgia, to the FBI's Training Academy in Quantico, Virginia. This collocation of training is a continuation of the interaction between the two agencies and results in a more effective Federal drug enforcement capability.

The skills and knowledge required to implement the DEA mission must be developed through specialized training. DEA meets these requirements through the following training programs:

Recruit Training

Specialized entry-level training for DEA core staff ensures the availability of well-trained personnel to perform the functions mandated to DEA by the Controlled Substances Act of 1970 and the Comprehensive Crime Control Act of 1984. The training consists of the most innovative techniques known to counteract sophisticated drug trafficking. Drug identification, interrogation, informant handling, undercover techniques, firearms, and many other essential subjects are mastered at this basic level:

- The entry-level agent curriculum was increased in 1985 to 13 weeks, due to the introduction of new subjects such as computer and financial training, and the need to adequately prepare new agents for the increasing threat of violence, terrorism, and the additional complexity of narcotic investigations.
- Because of the broadening of authority and responsibility under the Comprehensive Crime Control Act of 1984, Diversion Investigator training was increased to 8 weeks in 1985.

- The growth in DEA use of intelligence analysts has resulted in a two-phase, 4-week entry level intelligence training program to better accommodate integrating analyst trainees into their work. Phase I training familiarizes new analysts with drug enforcement responsibilities and methods. Phase II provides the more specialized operational skills.

Advanced and In-Service Specialty Training

Operational personnel need to receive training at all levels of career progression to perform the specialized tasks commensurate with that particular phase of their development:

- A variety of refresher and advanced programs are offered to special agents, diversion investigators, intelligence analysts and chemists through government and non-government sources. For instance, asset removal training requires instruction from representatives of banking, real estate, U.S. Attorneys, and the FBI, as well as DEA's most experienced investigators in this field. Use of a variety of instruction sources is essential to provide a full understanding of financial transaction and money laundering activity such as collections, letters of credit, wire transfers, and associated fiduciary matters. This powerful investigative approach is proving effective against the highest-level violators.
- Marine Law Enforcement training, which requires both FLETC and DEA instructors, provides the capability to more effectively and safely impact the smuggling of drugs by boat through coastal waterways. This training will continue at FLETC for the foreseeable future due to equipment and water proximity requirements.
- Clandestine laboratory training enhances DEA's effectiveness in eliminating the illegal manufacture of dangerous drugs. "Hands-on" instruction is provided by DEA specialized chemists and is reinforced by the synthesis of controlled substances in a clandestine laboratory.
- The Office of Training instructors/supervisory staff receive two weeks of training, to include Methods of Instruction and EEO counselor training, which certifies them as qualified agency instructors. Instructor training is also provided to the divisional training coordinators who conduct DEA in-service training in the field as well as state and local police training.
- The Individual Terrorist Awareness program is designed to enable DEA personnel to recognize and counteract narco-terrorists and terrorist oriented organizations. The instruction is presented by specially qualified DEA instructors with the assistance of recognized experts from outside the agency.
- To ensure that DEA's workforce possesses specialized skills, training is also provided in many technical skills, investigative aids, polygraph examining, covert transponder installation, firearms instructor training, advanced law enforcement photography, and intelligence collection and analysis.
- In-service training has also been developed to provide continuous exposure to modern techniques concerned with agent safety and survival.

Management and Supervisory Training

The level of performance required of DEA program managers and supervisors to achieve effective and efficient operations calls for a high degree of expertise and knowledge in management science.

- DEA requires that all newly assigned DEA supervisors receive appropriate management training. The supervisory training as well as the management training at both the mid-level and executive level is provided in Washington, D.C.

1012

- The Office of Training also oversees and controls all professional, administrative, technical and clerical training (PATCO) provided to employees throughout DEA. This training consists of many diversified subject areas and comes from a variety of sources as the employees functions and responsibilities require.

Foreign Language Training

DEA personnel need to be fluent in the language of the countries in which they operate in order to effectively communicate and coordinate the employees' liaison duties. To meet this objective, DEA requires language training prior to the employees being assigned to a foreign post-of-duty, or working in a post-of-duty proximate to a foreign language country.

Accomplishments and Workload:

- In 1986, DEA completed the transfer of training operations from Glynco, Georgia to Quantico, Virginia, and commenced eight basic agent classes, graduating 331.
- DEA trained three classes of new diversion investigators, graduating 88.
- DEA trained one intelligence analyst class of 37 students during 1986.
- Effective with the second quarter 1986, all new special agents received training in asset removal techniques in their basic entry level training program.
- Core in-service training programs were held for 5,217 participants in 1986. This figure included 42 participants in executive management and supervisor schools and 111 in foreign language training. Non-core employees provided in-service training included 62 in foreign languages and 37 in secretarial schooling.
- General and specialized in-service training was given to 708 professional/administrative and technical/clerical employees in 1986.
- DEA trained 815 employees in DEA information systems in 1986.
- During 1986, DEA's audiovisual training staff produced 9 training video tapes for issuance to the field.

Item	1985	1986	Estimates 1987	Estimates 1988
Total entry-level core students	319	456	450	450
Foreign language training students	104	151	200	220
Management and supervisory training	138	148	150	150
Employee development--PATCO students	1,430	708	750	800
In-service core training	4,438	5,217	5,300	5,300
Automated information system training	430	815	1,000	1,000
Students trained	6,859	7,495	7,850	7,920

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Research, engineering and technical operations	253	233	$50,803	253	243	$37,097	281	265	$41,093	28	22	$3,996

Long-Range Goal: To support DEA enforcement and intelligence programs through research, development, procurement, maintenance and management of technical investigative equipment, and provision of direct technical assistance to ensure maximum achievement of the agency's mission.

Major Objectives:

To increase the productivity of staff by providing quick-reaction support to current field operations to meet increasing demands for timely and high quality technical evidence and investigative support.

To increase the efficiency of agency field operations by the development of new or improved devices, systems plans and procedures that require applied scientific research and engineering development.

To provide scientific and technological information, training, coordination and liaison services for DEA and the national and international drug law enforcement and intelligence communities.

To increase the productivity and efficiency of scientific and technical personnel by providing advanced scientific instrumentation, electronic laboratories, testing equipment and data processing equipment.

To provide high quality and timely radio communications capabilities responsive to all operational and administrative requirements.

To provide high quality and timely technical and investigative assistance and support to all operational and administrative requirements.

To acquire, maintain and operate an aircraft fleet with sufficient capabilities to meet all operational requirements.

To acquire a fleet of high quality motor vehicles which is responsive to all operational and administrative requirements.

Base Program Description: The Research and Engineering program element addresses the problem of providing new technology and scientific support to the operational elements of DEA. As law enforcement has become more effective, there has been an ongoing response on the part of criminals to employ advanced technology and sophisticated countermeasures to protect their criminal enterprises. Various improvements in documenting telephone utilization and electronic surveillance and tracking aids have greatly increased agent productivity and have become essential to assure high conviction rates for drug prosecutions.

The base program described in this package provides the studies, analyses, development, testing and evaluation of communications, surveillance and agent protective systems and processes to provide direct field investigative support for special investigative support applications. Some of the areas included are: tracking and locating devices for vehicles; surveillance equipment; communication systems planning; and agent protective equipment. The clients served by the Research and Engineering program element are primarily DEA's special agents, Planning and Inspection Division, Operations Division, and the Office of Intelligence as well as other Federal, state, local and foreign law enforcement agencies.

The DEA and the FBI have established a joint technology review group to ensure that critical law enforcement research and development activities are being pursued and that both agencies are not duplicating their efforts. In addition, all DEA research and engineering activities are coordinated with all other law enforcement, intelligence and defense community technical activities to maximize the benefits of previous research and engineering, to negate any potential for duplicative efforts and to identify areas for joint or cooperative ventures.

As a result of the joint DEA/FBI technology review process, the following areas of agency responsibility have been assigned:

Technology Area	Lead Agency
* Fingerprint Scanning for ADP Security	DEA
* Remote Sensor Monitoring	DEA
* Satellite Communication	DEA
* Tape Processing	FBI
* Video Technology	DEA
* Remote Switches	Joint
* Audio Radio Frequency	Joint
* Dialed Digit Recorder Technology	Joint
* Microprocessors	Joint
* Telephone Technology	FBI
* Recording Devices	FBI
* Pager Communication	Joint
* Power Sources	FBI
* Antennas	Joint

The Technical Operations program element is designed to make optimal use of DEA's limited technical equipment, aircraft and personnel resources in a manner that allows DEA investigative personnel to maximize their efforts, enhance their personal safety, and accomplish the agency's mission. DEA technical personnel and their counterparts with the FBI are working closely through the Organized Crime Drug Enforcement Task Forces, meetings, study groups and other means to ensure that technical resources of each agency are being used to provide maximum support to the Federal drug law enforcement effort. As one example, FBI and DEA technical operations programs have and will continue to issue joint procurement documents to ensure maximum benefits and cost savings to the Federal Government.

1015

The radio communication/investigative equipment support is accomplished by a group of special agents and technical personnel assigned to headquarters and domestic and foreign field offices. The special agents and technical personnel assigned to the field program fall under the direction of a Technical Operations Officer. The technical officer ensures that available equipment and personnel are strategically and rapidly deployed to best support law enforcement activities. Because of the limited quantities of equipment and personnel resources, special agents and technical personnel must travel extensively and equipment must be rapidly shipped from office to office to support DEA investigations.

Radio Communications

Tactical radio communications are provided by a nationwide ultra-high frequency (UHF) law enforcement radio system of mobile, portable and fixed station radios. The DEA UHF radio system provides support for surveillance, license plate queries, suspect information queries and emergency or potentially dangerous situations. At present, only seven DEA divisions and the Quantico, VA training facility are operating in a voice privacy mode. DEA will be converting all of its domestic radio communications to voice privacy as part of a combined radio initiative, which includes DEA, the FBI, and the U.S. Marshals Service. Long-range communications support is being accomplished by a combination of DEA-owned voice privacy equipped mobile and base station high frequency single side band (HF/SSB) radios and the contracted services of Rockwell Collins in Cedar Rapids, Iowa. The Collins control center in Cedar Rapids provides support 24-hours a day for DEA's long-range communications. DEA also provides long-range communications to designated overseas offices, EPIC and Headquarters through the use of a satellite communications network known as SATCOM. The SATCOM system provides both improved communications and security for our agents assigned to often volatile posts of duty in Central and South America.

Investigative Equipment

A wide range of technical investigative equipment is available to support and enhance investigations, including video surveillance systems, audio transmitting devices, audio recorders, Title III (wiretap) devices, long-range tracking devices and others. These investigative aids are used to improve DEA's investigative capabilities to provide greater evidence for Federal prosecutors and to provide greater safety for DEA personnel.

Air Program

The aviation program is structured to support five operational areas, the western, southwestern, northern, southeastern regions of the U.S. and overseas areas, with each supervised by an area supervisor. It is the responsibility of each area supervisor to direct the activities of all special agent/pilots physically assigned to his geographic area. This includes reserve pilots during their involvement in flight operations. The supervisors in turn report to and receive supervision from the Deputy Chief Pilot. The overall responsibility for the management of the air program rests with the Chief, Aviation Unit, DEA Headquarters, Washington, D.C.

DEA's aviation program consists of 64 operational aircraft, including five twin-engine turbo prop fixed wing aircraft and one twin-engine helicopter to support long range over-water intelligence gathering missions. Two of the twin engine turbo props are stationed in Addison, Texas, to support DEA's worldwide mission; two turbo props are permanently stationed in Panama City, Panama, to support Central and South American operations; and, one turbo prop is stationed in Miami, Florida, to support undercover and intelligence gathering missions in that region. The twin engine helicopter is now stationed in Nassau to support Operation BAT. Additionally, procurement action is now underway for the purchase of a helicopter for assignment to Hawaii to support marijuana eradication operations.

The DEA air program provides support by the following means: air-to-surface surveillance of drug investigations, undercover aircraft and pilots; air-to-air surveillance of aircraft suspected of being used in illegal drug activities; as a communications command and control relay station for remote areas or widely dispersed investigations; transportation of investigative teams, equipment or evidence for time critical operations; transportation of personnel and equipment to remote sites not regularly serviced by commercial carriers; ferrying of aircraft and flights to develop or modify drug enforcement methods. Other functions for which DEA aircraft are utilized include recurring training; evaluation of safety procedures including cockpit workload and coordination, initial pilot qualification checks, and aircraft performance evaluation following maintenance or repair.

With the resources provided as part of the 1987 supplemental, DEA is authorized to purchase 3 replacement helicopters, 4 replacement single engine fixed wing aircraft, 2 new twin engine turbo prop fixed wing aircraft, and a new medium lift helicopter. The new medium lift helicopter is specifically authorized for use in Hawaii. Current plans call for delivery of this helicopter in February 1987.

Motor Vehicles

DEA has been following a six-year/60,000 mile motor vehicle replacement standard for agency automotive requirements. Vehicle resource needs are based upon accepted ratios of vehicles to DEA staff ceilings as follow: One vehicle for each field Special Agent, one vehicle for every two Diversion Investigators and variable ratios for Task Force staff (approximately 2:3 for state and local staff), EPIC, FLETC and Headquarters. Based upon the program criteria, the required fleet should approximate 3,000 vehicles. DEA would normally replace 489 vehicles of the currently projected motor vehicle fleet. An additional 36 vehicles are also required to support new agent positions for 1988.

DEA places approximately 250 seized vehicles per year into service. The basic criteria for placing a vehicle into service is its relative operating condition. Of the 250 vehicles, approximately 30 percent are other-than-standard sedans associated with undercover use. The remainder of the vehicles are basically a cross section of the general civilian vehicle population.

Accomplishments and Workload:

Research and Engineering

Research and Analyses

This work element attempts to improve the collection of scientific data by DEA, and to provide analyses of DEA plans, programs, and systems by conducting system analyses, operations research, prototype development and operational evaluations. Further, other analytical methodologies and scientific and technical information are applied where appropriate. Training and liaison services are also provided.

a. The earth orbiting satellite radio communication system (SATCOM) was formally turned over to DEA field operational personnel in 1984 for use and control. The system consists of a base station at the El Paso Intelligence Center (EPIC), eight portable radios deployed in the field, and five telephone remote terminals to be used by various headquarters elements. Developments are continuing on SATCOM II, an improved, second generation system.
b. Continuing engineering support has been provided to the Office of Information Systems on the Text Analysis System.
c. The development of the automated currency reader by the U.S. Customs Service has been closely followed by DEA. It is our intention to enter into contractual arrangements by means of a single requirement document after all design problems have been solved by both U.S. Customs and the FBI.

d. High altitude photography of the State of Florida was obtained from USDA and was evaluated for application to DEA's investigative requirements. It was found that clandestine airfields could be detected and located from the photographs.
e. An evaluation of medium gain, covert, UHF mobile radio antennas was completed. This effort identified potential candidates for DEA operational use and defined the technical limitations of this concept.
f. A research program was completed which resulted in a more accurate and valid method for estimating heroin user prevalence. These estimates will be used in future research efforts as well as for congressional and OMB queries.
g. Technical support was provided to the Office of Information Systems for the procurement of a system for Office Automation. This support included contractual procedures, and software and hardware evaluation and selection.
h. New initiatives include: examination of the means by which a video disc storage system can be used to augment the development of the Office Automation effort; coordination with the Defense Intelligence Agency in the product evaluation of a second generation fingerprint scanner; an experimental program with the USAF to establish an aircraft interdiction program of activities to evaluate and recommend voice privacy devices for selected components of DEA's radio system; an evaluation of various methods of disposal and destruction of hazardous materials seized from clandestine cocaine laboratories; an evaluation of the investigative file system in DEA and the application of automation to file maintenance; and the application of new techniques in photo enhancement to define areas of interest to DEA.

Technology Development

Technology development involves the application of new and improved technology and procedures to increase the efficiency of agency field operations by conducting applied scientific research and engineering development necessary to meet long-term operational requirements. Major projects underway are discussed below:

a. Satellite Tracking. The purpose of the satellite tracking project is to develop systems capable of worldwide tracking of vessels, vehicles, aircraft and containers. The initial system which includes Local User Terminals capable of providing position location was operational in 1981. New transmitters were delivered during 1982. During 1984, the Local User Terminals were upgraded for better position location, transmitters were modified for a new satellite, acoustic-coupled data terminals were installed at EPIC and Washington, D. C. and a transmitter test set was procured and tested. During 1985, new, smaller transmitters were delivered. In 1986, new, remotely operable Local User Terminals will be installed in the Western Hemisphere; additional transmitters will be delivered, and development efforts will be initiated for improved transmitters.
b. Search and Rescue. In 1986, a search and rescue program was initiated which will provide transmitters to DEA pilots and other special agents operating in remote areas. The Search and Rescue Satellite (SARSAT) system will be used to determine transmitter location and initiate appropriate action.
c. Automatic Phone-number Recording System (APRS). The manual processing of DEA dialed digit recorder tolls is inordinately expensive in terms of manpower. The purpose of this project is to automate the data collection from up to three (3) dialed digit recorders, producing the data on cassette tape and storing in electronic memory for MODEM transfer to the M-204 Data Base Management System (DBMS). Engineering and operational testing was completed during 1983. A specification for production systems and production contract was awarded in 1984. Delivery of 22 production systems is scheduled for first quarter 1987.

1018

d. Direct Automatic Phone-number Recording System (DAPRS). The DAPRS significantly reduces the manual processing of dialed digit recorder tolls by processing data from up to 16 dialed digit recorders, transmitting this data over telephone lines into the DEA M-204 DBMS. Engineering and operational tests of the prototype DAPRS began in 1984 and are continuing.

e. Enhanced Dialed Digit Recorder. An operational requirement which combines the features of a dialed digit recorder and computerized data collection, storage, and analysis system has been identified. When developed, this system will reduce the need for dialed digit recorders, including APRS/DAPRS systems. A contract award is anticipated in 1987.

f. Toll Report Analysis System (TRAS) Study. The objective of this study is to investigate the feasibility of developing a low cost, user friendly, computer system to be used by special agents and intelligence analysts as a regionally distributed data base system. This system, if realized, could complement the Enhanced Dialed Digit Recorder system. A contract was awarded in early 1986 for a feasibility study which will be completed in late 1986.

Technical Services

The objective of this work effort is to increase the quantity and quality of investigative evidence by providing quick-reaction technical support for application on current investigations, and to support ad hoc requests for short-term technical development and special engineering services. The output of this program is directed towards more efficient utilization of enforcement resources by minimizing the staffing required to conduct investigative operations, and improving the quality and quantity of evidence and protection of agent personnel.

Requests for Quick Reaction Support (QRS) are normally originated by a case officer and require a response time from several hours to several days to complete. These efforts are usually conducted in-house and take priority over other longer term research and engineering projects or tasks. In direct support of field operations, QRS includes the design and fabrication of special devices and transmitters such as the concealment of transmitters in assorted packages, and audio tape recording enhancement which significantly enhances the studio intelligibility of evidence tapes. Off-the-shelf hardware or pre-existing techniques and materials are used exclusively for these efforts.

The direct application of technology to specific short-term tasks is also accomplished under the technical services objective. These efforts consist of applying state of the art techniques to the development of surveillance equipment and systems. Tasks are accomplished using a combination of in-house and contract personnel and require from one to eight months to complete. Examples of this effort include the design, fabrication, test and evaluation of: special timers and motion sensors; audio systems secreted in common packages such as cigarette packs; and video systems packaged and camouflaged in such a manner as to make their presence difficult, if not impossible to detect.

Technical Operations

The Technical Operations program element continues to play a vital role within DEA. Technical/investigative, radio communications, air support and polygraph support are actively sought to support DEA's most complex investigations and are now routinely used in all phases of enforcement operations to enhance investigations and provide a safer environment for DEA's law enforcement personnel.

1019

In 1986, Technical Operations program element personnel and equipment continued to participate in the South Florida Task Force, the OCDETF, Operations TRAMPA, BAT, STOP PROP, Marijuana Eradication Program, and others providing:

- air support for the identification and location of suspect vessels and aircraft;
- tactical and long range communications;
- polygraph examinations;
- video, Title III and other investigative aids; and
- boats to support the marine requirements of these operations.

All the activities have been coordinated with the other Federal participants, including the U.S. Customs Services, the U.S. Coast Guard, the FBI and U.S. military elements.

Satellite tracking devices (SATTRAC) have become an important investigative aid in the location of illicit drugs being shipped to the United States and of precursor chemicals being shipped to drug source countries. The use of SATTRAC devices in relation to the shipment of precursor chemicals has resulted in the location, seizure and destruction of major cocaine conversion laboratories in South America. Much of the success of DEA's CHEMCOM operation is directly attributable to the use of SATTRAC.

The continued installation of satellite communications equipment in the Caribbean area and Central and South America has provided DEA personnel in those areas of the world with a reliable and effective means of communication with EPIC and DEA Headquarters.

In early 1986, voice privacy equipped radio systems were installed in DEA field divisions located in Seattle, San Francisco, Los Angeles, San Diego, Miami, Atlanta, and Washington D.C. and at DEA's Quantico, Virginia, training facility. DEA is now participating in a "test-bed" radio program in Boston which combines the radio communications requirements of the FBI and DEA. With the resources provided as part of the President's 1987 budget request ($6,500,000), DEA will proceed with the conversion to voice privacy of the DEA offices in the northeast corridor. This will include predominantly the Boston and New York field divisions.

The number of air missions flown by DEA totalled 5,379 in 1986 involving 14,255 flight hours for our special agent/pilots. As a direct result of air operations, the following accomplishments were realized:

- 25 clandestine laboratories were seized. In many instances, aircraft were the only effective means of detection and surveillance of these laboratories because of their location in remote almost inaccessible areas.
- 30 aircraft, 23 vessels, 409 vehicles and $57.7 million were seized in 1986.

In 1986, 243 polygraph examination/authorizations were granted and over 550 examinations were performed to support DEA investigations (80 percent of the examinations were performed in support of enforcement operations). The polygraph continues to be an important tool for supporting major drug enforcement operations.

1020

Program Changes: DEA requests 28 positions; 22 FTE workyears; and $3,996,000 for expansion of the technical and investigative equipment support program. The request includes $2,000,000 for the purchase of technical/investigative equipment which is simply not available now. This initiative fulfills an integral part of DEA's 1988 Strategic Plan, that of substantially increasing the special agent and non-agent personnel who are technically trained and possess the skills that are required to operate and maintain much of DEA's technical investigative equipment.

This request is made up of two distinct areas: personnel and technical/investigative equipment. The personnel segment of this request includes 10 special agents, 14 investigative assistants who serve as radio/electronic technicians, and 4 support personnel. As drug violators continue to become more sophisticated in the use of counter surveillance techniques and the use of communications and electronic devices, DEA must continue to provide specially trained agents to support and participate in investigations. Requested special agents and technicians will be trained in drug law enforcement application, adaptation and installation of technical devices intended to enhance DEA investigations and provide greater safety for DEA agents.

Agent Staffing Increase

The 10 agents will perform court authorized covert entries of businesses, residences, vehicles, vessels and aircraft. They will perform covert installations of intelligence gathering devices, e.g., room bugs, video systems, specialized microphones, tape recorders, etc., in conjunction with Title III and major conspiratorial investigations. They will work in an undercover capacity. They will advise other agents on the practicality of using certain types of technical equipment to support an investigation and recommend different approaches to improve the investigation based on their unique expertise as both Federal law enforcement officers and technical specialists. They will also individually adapt technical equipment to meet the specific needs of an investigation.

1021

Technical Staffing Increase

The 14 investigative assistants (technicians) will be assigned to DEA's domestic and overseas offices. DEA currently has a total of only 27 investigative assistants to support the communications and investigative equipment needs of the entire agency. The technical personnel will be trained in the installation, operation and maintenance of both radio communications and investigative equipment. These duties will include the installation, repair and operation of all types of radio equipment utilized by DEA including UHF, VHF, HF/SSB and satellite communications and the voice privacy devices that operate with these systems. They will also have expertise in the operation, installation and repair of DEA's investigative devices such as Title III equipment, video surveillance devices, covert transmitters, and tracking devices. They will work closely with DEA's technical agents in providing sophisticated technical support for the agency's major conspiratorial investigations.

The agents and technicians are needed to ensure that all technical equipment and devices are installed, used and maintained in a manner that is supportive of DEA's objectives.

Technical Investigative Equipment

DEA requests $2,000,000 in 1988 for the procurement of new and replacement investigative equipment to support and enhance DEA operations. Technical investigative equipment serves a two-fold purpose within DEA. The first being the enhancement of this Administration's law enforcement capabilities and the second being the improvement of security and safety for our law enforcement personnel.

In order to initiate and complete complex conspiratorial investigations, DEA utilizes investigative equipment in every phase of an investigation including the prosecutorial stage. Audio and video tapes and other electronically gathered evidence documenting illegal activities often provide the conclusive evidence needed by Federal prosecutors to gain convictions of drug violators.

Of equal importance, technical investigative equipment serves to improve the safety and security of agent personnel. For example, an agent wearing a body-worn transmitter can alert back-up personnel when a dangerous or potentially life-threatening situation develops. The personnel monitoring these transmissions can then respond in an appropriate and expeditious manner to protect the DEA undercover officer.

The requested technical investigative equipment will enable DEA to purchase approximately 20 percent of the investigative devices needed to meet DEA's operational requirements through 1988, to meet the levels of equipment listed in DEA's Table of Authorized Equipment and, to replace obsolete, damaged or inoperable equipment. Without increased funding, investigations will continue to be impaired due to the lack of equipment and agents lives could be unnecessarily endangered. Based on operational needs, technological advances and normal wear and tear on equipment, it is anticipated that the $2,000,000 will be a recurring annual requirement for the purchase of technical/investigative equipment.

The following is a breakdown by type of equipment to be purchased at this increased funding level:

Video Equipment, e.g.
- Cameras (color, medium light, low light)
- Monitors (color, black and white)
- Recorders (tabletop, portable, time-lapse, editors)
- Special Application (video transformer cans, video lamps)

Transmitters and Receivers, e.g.
- Covertly Worn Transmitters
- Remote Tracking Devices

- Intelligence Kits
- Relay Kits
- Satellite Transmitters

Audio Recorders, e.g.
- Cassette Recorders
- Covertly Worn Recorders
- Court-Room Systems
- Tape Duplicators

Title III Devices, e.g.
- Pen Registers
- Covert Microphones

Optical Equipment
- 35mm Still Cameras
- Photocopy Kits
- Binoculars
- Night Scopes and Goggles
- "Mug Shot" Cameras

1022

Federal Bureau of Investigation Reimbursement

An increase of $211,000 in funding has been included to reimburse the FBI for direct staffing provided in support and coordination of the Integrated Voice Privacy System under the FBI's leadership.

If the FBI, DEA and U. S. Marshals Service are to work closely in developing this system, then the utmost cooperation is required.

This initiative, while primarily in support of DEA's operational personnel, will impact to some degree on all Federal, state and local law enforcement agencies involved in drug enforcement.

The additional agents and technical personnel will ensure that all DEA technical devices are installed, used and maintained in a manner that is thoroughly supportive of DEA and administration objectives in the War on Drugs. The technical/investigative equipment will be used in support of DEA operations and this contributes to arrests or seizures resulting from such operations.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	Wy	Amount	Perm. Pos	Wy	Amount	Perm. Pos	Wy	Amount	Perm. Pos	Wy	Amount
ADP and telecommunications.....	131	118	$37,929	106	99	$39,191	121	110	$51,608	15	11	$12,417

Long-Range Goal: To provide high quality and timely automated data processing and telecommunications support sufficient to enable maximum achievement of the DEA mission.

Major Objectives:

To support, where applicable, statutory requirements of the Controlled Substance Act of 1970 (Public Law 91-513) and the President's Reorganization Plan Number 2 of 1973.

To increase the value of DEA's enforcement, intelligence and management information through systems integration.

To increase the information systems and technological flexibility needed to respond to DEA's changing environment.

To eliminate technological obsolescence which hampers the delivery of information services.

To increase the productivity in the delivery of information services and the effectiveness of ADP services.

To reduce the costs associated with DEA's ADP and Telecommunication support.

To improve the quality of information within the DEA ADP systems.

To provide for greater exploitation of information in support of DEA's mission.

To provide and ensure security and integrity of DEA's automated information.

To assure ADP availability to meet DEA's mission needs.

Base Program Description: This program provides all ADP and Telecommunication services to DEA on a nationwide and worldwide basis. The Office of Information Systems ensures DEA's information processing needs are implemented in accordance with DEA's long-range plan. The ADP and Telecommunication program provides for the implementation of modern Data Base Management Systems (DBMS), which provide for retrieval capability that can establish relationships between various DEA data bases while also significantly improving the ability to query any file within these data bases. The increased retrieval capability is being made available to a larger number of DEA offices, both domestic and foreign, through expansion and increased sophistication of the DEA ADP, Telecommunication, and Records Communications Systems. The highly flexible nature of DBMS, ease of programming and "user friendly" characteristics provide an increased capability to support routine and new DEA investigative, mission and operational requirements.

The following are brief descriptions of the DEA's major ADP/Telecommunication Systems:

1024

Narcotics and Dangerous Drugs Information System (NADDIS)

NADDIS is the major enforcement support system for DEA. This data base, which consists of about 1,800,000 records on persons, businesses, ships, aircraft and certain airfields, is the centralized index of all DEA investigative reports. NADDIS enables an authorized user to determine the subject's past criminal activity or associations which have been documented by DEA agents, and provides references to the location of further information on the subject of the query. Due to the worldwide, transient nature of illicit drug operations, it is not unusual for a single individual to be documented by DEA criminal investigators in various parts of the world. NADDIS, therefore, provides not only background information on individual subjects of interest to DEA, but also supports conspiracy investigations by showing linkages between individuals and separate DEA investigations.

NADDIS is accessed via the DEA Automated Telecommunications System (DATS) by over 300 terminals located nationwide and in Mexico, England, Italy, Germany, Thailand, South America, the Netherlands, France, Canada, Austin, Belgium, the Philippines, Korea, Egypt, and Pakistan. Current plans call for additional overseas terminals to be located in other European, South America, Middle East and Asian countries via a Secure Telecommunications System operated by the State Department. NADDIS operates at the Justice Data Management Center (JDMC).

NADDIS is interfaced with the FBI National Crime Information Center (NCIC) Wanted Persons File, Stolen Gun File and Criminal History Summary File. It is indirectly interfaced with the Stolen License Plates File and Stolen Vehicle File using the Justice Telecommunications System (JUST) network.

Enforcement Management Information System (EMIS)

EMIS provides a method of tracking specific DEA investigations to determine management information. It includes the capability to evaluate case activity, status, agent manpower use, and confidential source utilization by the Operations Division. EMIS is being developed in two phases. EMIS I primarily involves the purchase of evidence, which enables DEA to determine whether money seized as evidence includes currency previously expended by DEA for the purchase of evidence. This system also provides a summarization of case and drug violator class statistics. EMIS II will provide information on the utilization of intelligence analysts and compliance and criminal investigator resources under the Manpower Utilization application. Information will also be provided on the current status of DEA use of confidential sources of information. EMIS I and II will automate and widely disseminate information which was previously prepared manually and had only limited use due to the lack of accessibility by other DEA personnel.

PATHFINDER II

PATHFINDER is a component of the National Intelligence System, mandated by the President's Reorganization Plan Number 2 of 1973. This system provides DEA with centralized automated storage, retrieval and analysis of law enforcement intelligence information relevant to illicit drug activities. Intelligence and enforcement personnel access the system via on-line terminals. The data bases include information on individuals, activities, events, aircraft, vessels, movement reports of individuals and associated drug distribution networks. It includes a graphics output capability.

PATHFINDER information is made available to other Federal, state and local law enforcement officials who have a proper need-to-know and are signatory members of EPIC.

1025

Controlled Substances Act System (CSA)

The Office of Diversion Control is supported by the Controlled Substances Act System. CSA is used to control the registration and annual re-registration of more than one half million legitimate sources of Federally controlled drugs. The volume of data this statutory requirement imposes precludes manual processing. The system was established to implement the provisions of the Controlled Substances Act of 1970 (P.L. 91-513), requiring that all legal handlers of controlled substances annually register with the Department of Justice. The system processes new and renewal applications for registration, applies changes to previously established master records, issues order forms for the purchase, sale, or transfer of Schedule I and II controlled substances, and produces various fiscal accounting, control, and statistical records. The master records contain information on legal handlers of controlled substances, including name, address, DEA registration number, business activity, initial issue date of registration, expiration date of registration and drug schedules authorized. The CSA data base is used by suppliers for verifying physician and hospital order forms prior to delivery of controlled substances. The verification consists of an on-line inquiry by a DEA diversion investigator into the CSA data base via the DATS network.

System to Retrieve Information from Drug Evidence (STRIDE)

STRIDE supports DEA by processing information derived from drug evidence. This system supports DEA agents, intelligence, enforcement, administrative and laboratory personnel, primarily through monthly and quarterly reports of drug trends. STRIDE provides data resulting from forensic examination of drug evidence for tactical and strategic intelligence as well as planning and management purposes. The system is used to detect unusual occurrences and other matters related to drug intelligence. STRIDE consists of three subsystems: (1) Manpower Utilization, (2) Laboratory Analysis, and (3) the Ballistics program. The Manpower Utilization Program is used by the Forensic Sciences Division as a management information system to produce a monthly report of hours spent by chemists and laboratory technicians on various tasks, such as drug analysis, court appearances, training, assistance to agents and research. The Laboratory Analysis Program is based on data developed by DEA forensic chemists, such as the controlled substances chemical comparison of tablets and capsules. Data derived by the forensic analysis of drug evidence throughout the DEA laboratory system are input via computer terminals located in each laboratory by scientific intelligence technicians. The system is available for on-line queries to determine characteristics of drugs obtained during an investigation. STRIDE and Ballistics derived information is used to link investigations based on the similarity of exhibits and provides strategic intelligence on worldwide illicit drug trends.

DEA Accounting System (DEAAS)

This system was developed to automate highly labor intensive accounting and clerical functions. These include DEA funds obligations, expenditures, costs, and revenues for which program managers are responsible, generation of financial reports to meet internal needs and external requirements and to provide a basis for developing and reporting costs in accordance with programs, budget activities, special projects and organizational cost centers. The system is DEA-wide, incorporating budget and financial data of domestic offices, foreign offices, laboratories, intelligence centers, aircraft section, and Headquarters activities. DEAAS does not interface directly with the Department of Justice Accounting System. It does, however, use an abbreviated version of the DEA payroll file from the DOJ Payroll System as input on a bi-weekly basis. Detailed accounting transactions are transmitted via the DATS network to the JDMC and are collected for a batch processing update. Information is derived from basic documents such as allotment advices, operating plans, payroll data files, obligation documents, receipts documents, accrual documents, reimbursement agreements, manpower activity reports, and expenditures/disbursement documents.

Telecommunications

DEA has a requirement to support investigations of illicit drug operations worldwide. The highly transient nature of subjects under investigation requires the support of a worldwide, rapid and Secure Record Communication System. DEA's requirements, both for domestic and for certain foreign offices, for secure voice, secure teletypewriter, facsimile and general communications, are satisfied by the following:

- Secure Voice. Nine STU-II secure voice devices are now operational. They are located at DEA Headquarters, EPIC and Miami, San Diego, Dallas, Houston and San Juan. This equipment meets national cryptographic requirements, and provides DEA intelligence and enforcement personnel with the capability to rapidly and securely exchange information with all elements of the United States Intelligence Community. Many of DEA's offices overseas are accessible through the Department of State secure voice network. The secure voice equipment program is scheduled for expansion as STU-II's and STU-III's are delivered to DEA.

1026

- Facsimile. The DEA Facsimile System consists of 143 terminals, including all divisional and resident offices, laboratories, some airport details, Mexico City, Montreal, San Juan and Honolulu. Offices equipped with facsimile equipment can communicate with each other or with any other government agency or commercial firm that has compatible equipment (e.g., Xerox, Magnafax, Steward Warner, Graphic Sciences). Upgrading of the system has included placing unattended machines in several larger offices and by replacing six-minute per page models with a faster capability. Fingerprint facsimile machines are operational in 13 major field locations. This system is used to send prints to the FBI and receive a prompt response.
- Secure Teletypewriter Communications. Domestic - The DEA Secure Domestic Teletypewriter System presently consists of a Headquarters Telecommunications Center and 114 terminals in field offices, including Honolulu and San Juan. The short-range objective is for 130 operational locations. This is a private system within DEA; however, communications with other government agencies are available through the Headquarters Telecommunications Center. The DEA Teletypewriter System employs circuit switching as opposed to the previous data-phone operation. This allows any station in the network to send a message to all other stations in the network with any one transmission. KW-7 cryptographic hardware is being replaced by KG-84s. Foreign - Access to foreign offices is provided through the Department of Defense Automatic Digital Network and/or the State Department Diplomatic Telecommunications System, both of which are electrically connected to the Headquarters Telecommunications Center.
- Communications Security (COMSEC) Accounts. DEA has one of the largest COMSEC accounts within the U.S. Government. COMSEC accounts are administered by the Headquarters Center Office of Record (COR), by the DEA COMSEC Officer and COMSEC Custodians at each of DEA's 119 offices receiving cryptographic material. Custodians operate under policy promulgated by the National Security Agency for the positive and continuous recording and reporting of accountable COMSEC material from the time of receipt within DEA through destruction or final disposition. Regularly scheduled inspections of cryptographic facilities are the most effective means of ensuring that the required security standards are maintained at all times. The National Security Agency requires that all COMSEC accounts be inspected and audited at 18-month intervals. The purpose is to ensure that COMSEC material is used, stored, distributed, or accounted for, and that COMSEC equipment is employed and maintained in accordance with current standards. This material supports the DEA Secure Teletypewriter System.
- Law Enforcement Information Access Systems. Headquarters, EPIC, and 55 field offices have access to the U.S. Customs TECS and/or their State Police computers.
- Paging System. DEA Headquarters utilizes the NEC Paging System for 120 senior officials and duty agents. The Paging System is used by the Air Program to alert the DEA pilots in 23 field locations.
- Office Automation (OA). DEA is engaged in the installation, testing and implementation of an office automation system. A contract was awarded during April 1986. Phase I, the Pilot program, is being conducted during the first half of 1987. Phase II, full implementation, is scheduled for completion during the 1988. Phase I equipment will not be TEMPEST rated, Phase II equipment will be TEMPEST rated.

Accomplishments and Workload:

Overall Mission of DEA:

- DEA has begun the installation, testing, and implementation of an office automation system. Phase I, the pilot program, will be conducted during the first half of 1987.
- Exxon Information Systems was awarded the contract to supply DEA domestic offices with word processing equipment. Thus far, 600 machines have been installed.

1027

- Microprocessors have been introduced to support various missions. Among these were: an investigative/judicial information system in support of a conspiracy investigation and trial called "Operation Bushmaster"; a document tracking system was developed to support the Washington, D.C. Division Offices; several management systems were developed on a microprocessor for use by the Administrator; a budget appropriation and audit system were developed for the Office of Training in support of domestic, state, local and international accounts; a microprocessor was used to develop an application in support of OMB Circular A-123, Waste, Fraud, and Abuse; and to support store front operations, automated mail order, inventory and accounting activities programs were designed, written and installed to support daily operations.
- A capability was provided for the Office of Personnel to identify agents and chemists that are due for an annual physical.
- The laboratory system (STRIDE), is being rewritten to operate under Model 204 DBMS. This rewrite will enable STRIDE to share data with other DEA systems.
- The Property Management System has been rewritten to operate under M-204.
- A system was developed for the EEO office to support the Segar vs. Smith lawsuit.
- An EMIS II Manpower Utilization program was developed. This program captures and provides access to manpower utilization of special agents, intelligence analysts, compliance investigators and confidential informants.
- A Personnel Locator System was written under M204. It will provide, in an interactive mode, the capability to query by employee name, telephone number and current office location.
- Encryption equipment have been installed on the DATS network. This equipment will be used until the network encryption can be accomplished using NSA provided KG-84 devices.
- Six additional overseas locations have become operational on the DATS network (Santo Domingo; Panama City, Panama; Kingston, Jamaica; Lima, Peru; Bogota, Columbia and Islamabad, Pakistan).
- In an effort to improve ease of operation, reduce downtime, and improve system responses of DEA Secure Teletypewriter System, 21 existing model TI-732's are being replaced.

Enforcement Activities

- Microcomputers have been acquired to support Title III investigations. The equipment will be used throughout DEA field offices.
- An agent Application System was developed which provides a full range of reports concerned with tracking the status of DEA agent applicants.
- An agent Career File was developed for use by the Career Board in performing their functions. The information contained in the file allows decisions to be made and plans developed which normally require extensive manual labor.
- The Offender Base Transaction System/Defendant system is being rewritten to operate under M204.
- The Controlled Substances Information System which will allow, interactively, queries of chemical data bases indicating hazardous and toxicity chemical content, became operational under M-204.

Diversion Control Activities

- The capability for the CSA Registration office to query new applicant information in an interactive mode was developed, thus reducing the registration users' response time.
- CSA is now operational under Model 204 DBMS.
- The Prescription Information and Survey System (SCRIPT) is being rewritten to operate under M204.

- The Precursor system has been rewritten to operate under Model 204 DBMS. This system will now provide access to information pertaining to sales and other transactions concerning precursor chemicals. This includes the identification of cooperating companies, both public and private, engaged in the manufacture, wholesale and retail distribution of such chemicals as well as the identification and address of the individuals and companies purchasing or inquiring about precursor chemicals.
- The SCRIPT system was developed to support field investigations which require the collection and analysis of prescription information. SCRIPT support has been provided in Philadelphia, St. Louis, Atlanta and Detroit.

Intelligence Activities

- The PATHFINDER system has been rewritten to operate under control of the Model 204 DBMS. This conversion, enables the PATHFINDER system to share data with other DEA systems.
- A Text Analysis System (TEXAS) was implemented at EPIC which automates the communication traffic.

Program Changes: Threats to information systems incorporating data from the Intelligence Community sources have not diminished. In fact, recent national and international events have highlighted the consequences of neglecting the protection of information systems. For this priority initiative, DEA is requesting increases of 15 positions; 11 FTE workyears; and $12,417,000.

The resources requested will both modernize and protect DEA's investigative and administrative information systems, which are critical to effectively support drug law enforcement operations in the fight against drug trafficking. The ADP and Telecommunications program provides data on a world-wide basis in accordance with DEA's long-range plan. The ADP and Telecommunications program provides for the implementation of modern DBMS, which provide for retrieval capability that can establish relationships between various DEA data bases while also significantly improving the ability to query any file within these data bases. The increased retrieval capability is being made available to a larger number of DEA offices, both domestic and foreign, through expansion and increased sophistication of the ADP, Telecommunication, and Records Communications Systems. The highly flexible nature of DBMS, ease of programming, and "user friendly" characteristics provide an increased capability to support routine and new DEA investigative, mission and operational requirements.

In order for DEA to receive, process and transmit national security information, it is necessary to have total encryption and TEMPEST security of its ADP, office automation, teleprocessing and telecommunications activities. This type of secure system will allow DEA to have direct interchange of classified data with other agencies, as required, for drug investigations.

TEMPEST

Program funds of $10,571,000 are required for the TEMPEST program. A contract for office equipment has been awarded to Federal Data Corporation which includes the option to TEMPEST that equipment. The DEA Office Automation System will provide a multi-functional standardized workstation that will perform as a 3270 DATS terminal, stand-alone word and data processor, and a message and document transmission terminal over an encrypted telecommunications network throughout the domestic United States. Phase I, the pilot program, is being conducted in the first half of 1987. In the 1987 appropriation, there is an enhancement package of $8,173,000 for the first stage of the DEA TEMPEST program. This funding lays the foundation for the TEMPEST system. Funding requirements in 1988 to complete the TEMPEST program are as follows (hardware, software, and vendor support costs are based on the awarded contract):

1029

Cost Element		1987	1988	1989	1990	1991	1992	1993
Hardware								
Purchase	OT			$165,000	$165,000	$180,000	180,000	$180,000
Lease 1/	R	$1,582,543	$8,900,000	4,900,000	530,000

TEMPEST TTY	OT	1,238,000						
Computer 1	R	4,000,000	4,000,000	4,000,000	4,000,000	4,000,000	4,000,000	4,000,000
Computer Other 2/	R		4,000,000	4,000,000	4,000,000	4,000,000	4,000,000	4,000,000
Total Costs		$10,573,000	$21,833,000	$16,807,000	$12,730,000	$12,535,000	$12,891,000	$13,104,000
Available								
FY 1987			8,173,000	8,173,000	8,173,000	8,173,000	8,173,000	8,173,000
Wordprocessing		936,000	1,625,000	1,625,000	1,625,000	1,625,000	1,625,000	1,625,000
DATS		854,000	854,000	854,000	854,000	854,000	854,000	854,000
OA		610,000	610,000	610,000	610,000	610,000	610,000	610,000
Total Static Base		$2,400,000	11,262,000	11,262,000	11,262,000	11,262,000	11,262,000	11,262,000
Funding Requirements 3/		$8,173,000	$10,571,000	$5,545,000	$1,468,000	$1,273,000	$1,629,000	$1,842,000

1/ DEA is leasing the office automation equipment with the option to purchase (LWOP). The lease costs are the LWOP costs.
2/ Based on experience with the DBMS, an additional computer will be required to support DEA's information systems.
3/ Funding requirements 1988-93, represent total costs per year above a static base of $11,262,000. In 1989-91, there is a substantial decrease in funding requirements.

Continuation of the TEMPEST/Office Automation project will ensure that DEA has a secure system that allows for direct interchange of drug enforcement classified data with other agencies. The implementation of the office automation system will provide the capability to enter data directly into the workstations at the field locations and up-load the files to a host computer at a later time. The field will no longer have to mail input into the data base.

ADP Technical Staff Support

DEA requests 15 positions (13 computer specialists, 2 technical/clerical); 11 FTE workyears; and $3,016,000 to support both the increase in demand for ADP products and the increase in the number of staff positions within DEA.

The DEA core positions have increased over the past years with no increase in the ADP support positions. If the core positions are to receive the support that is required in order for them to perform effectively, then there is a need to increase the support positions. The personnel resources will be used in an Information Center environment, and will include COMSEC, technical control, DATS, system software, communications, communications operators and application specialists.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Records management.....	88	83	$3,866	85	80	$4,363	85	80	$4,363	...	...	...

Long-Range Goal: To provide effective and efficient records management, Freedom of Information/Privacy Act and library support to ensure the optimum success of DEA's mission requirements.

Major Objectives:

To upgrade the maintenance, retrievability, and disposition of DEA files through the application of records management practices and technology.

To provide responsive directives management services for prompt dissemination of policy and procedures.

To maintain and upgrade NADDIS.

To maintain EMIS II.

To maintain files of all drug investigations initiated by DEA field offices and to provide a records retrieval service for Headquarters enforcement and intelligence personnel.

1081

To provide training in NADDIS operations to agents, intelligence analysts and selected administrative personnel.

To maintain a central record of all DEA disclosures of information to individuals and agencies outside the Department of Justice, as required by the Privacy Act.

To provide an initial acknowledgement within 10 days for all FOI/PA requests.

To continue to improve and update the FOI/PA processing systems.

To provide efficient and responsive library services for all DEA elements.

To provide information from on-line retrieval systems to meet the needs of DEA in pursuit of its mission.

Base Program Description:

Records Management

The Records Management program element provides development and implementation of policy and procedures for DEA records management programs and systems, including reports management, forms analysis and design, files maintenance, records disposition, directives disposition, correspondence management, and systems and procedures studies.

Investigative Records

The Investigative Records program element maintains a large volume of hard copy files on drug investigations conducted by DEA worldwide field offices, and of drug intelligence reports received from the FBI and other agencies. Reports in these files are source documents from NADDIS, a computerized data base, and are used extensively by the Headquarters staff. The Investigative Records Unit is responsible for extracting pertinent information from these reports and entering this information into NADDIS. The Investigative Records Unit also maintains a central file of all disclosures of information to individuals and agencies outside DOJ as required by the Privacy Act of 1974. Names in these hard copy records are extracted and recorded on microfiche to provide an audit trail.

The program also maintains the following: the Case Status subsystem of EMIS, an on-line information system that has been designed to store, organize, and provide information about DEA case and general files; a central file on all DEA confidential informants, and enters information from these files into highly secure, computerized data base (EMIS II); and a central file of all disclosures of information to individuals and agencies outside DOJ as required by the Privacy Act of 1974. Names in these hard copy records are extracted and recorded on microfiche to provide an audit trail.

Freedom of Information

The Freedom of Information Operations program element prepares and provides responses to requests made pursuant to FOI/PA through use of specialists. The Litigation Unit assists in defending DEA against FOI/PA lawsuits.

1092

Library

The DEA library serves as a single source for historical and current information concerning the DEA mission. The library staff, and collection of 15,000 volumes of legal, scientific and general references provide support for the DEA staff in planning and executing the strategies for control of those substances under Federal jurisdiction.

The library's on-line computer information services, Dialog and Nexis, contain over 300 different data bases with approximately 80 million records. These services provide information on a variety of subjects ranging from citations on corporations and individuals to bibliographic citations.

Accomplishments and Workload:

Records Management

- Provided briefings on records maintenance and disposition requirements to DEA administrative officers, to promote reduction of the volume of files with subsequent cost savings in procurement of file equipment and acquisition of floor space.
- Conducted surveys of Headquarters offices in developing file plans to improve filing efficiency, reduce lost time for retrieving files, and dispose of valueless records.
- Provided detailed review and analysis of files operations that increased the number of accession requests made by DEA offices to Federal Records Centers.
- Visited two foreign DEA offices to reduce the volume of records and to facilitate the retirement of records.

Investigative Records

The Investigative Records program element processed 403,917 investigative reports in 1986 and opened 23,917 new investigative files. It created or updated 786,602 NADDIS records in 1986, increasing the data base to 1,951,917 records. The unit processed and reduced to microfiche 11,473 records. Installation of 70 ADP "POD" furniture work stations and carpeting without loss of production, will increase the efficiency and security involved in the highly detailed duties of this automated work environment.

Filing backlogs were reduced from approximately 50,000 to 3,000 through the efforts of summer help, clerical pool and program personnel in 1986.

NADDIS data base became operational under M-204 DBMS on January 21, 1986.

Freedom of Information

During 1986, the Freedom of Information Section received 2,046 requests for FOI data and completed processing of 2,185 FOI requests.

1083

Library

The Library has maintained an active program of replacing bound volumes of journals and law books with microforms. At the end of 1986, the library had 2,500 rolls of microfilm and approximately 3;500 microfiche. The substitution of microforms for bound volumes enables the library to better utilize available space.

The Library has acquired three on-line computer systems. Dialog and Nexis are systems which together contain over 300 different data bases with approximately 80 million records. The information provided from these systems will enable DEA staff to do a more complete job in investigations and research. The third system, On-line Computer Library Center (OCLC), is a library system geared to cataloging and inter-library loans. OCLC will enable the DEA library collection to become better known to outside users as the library enters more material into the system. The library maintains 130 special studies and reports for staff reference.

Drug Enforcement Administration

Salaries and expenses

Justification of Program and Performance

Activity Resource Summary
(Dollars in thousands)

Activity: State and Local Assistance	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount

Total.....	55	54	4,293	55	54	4,798	55	54	4,798	...	...	...

This budget activity encompasses training for state, local, military and other Federal professionals; laboratory analysis of drug evidence; and resources targetted for prevention of drug abuse.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
State and local training	30	29	$2,690	30	29	$2,998	30	29	$2,998	...	...	...

Long-Range Goal: To increase the competency of personnel from other organizations involved in controlling drug abuse and drug trafficking.

Major Objectives:

To provide training in basic, advanced, and specialized drug law investigation techniques and methodologies to state, local, military, and other Federal officers and forensic chemists.

To provide training in management and supervision of drug investigative units for state, local, military and other Federal professionals.

To develop agency-wide resources for prevention of drug abuse.

Base Program Description: DEA's training programs were relocated from FLETC in Glynco, Georgia, to the FBI Academy in Quantico, Virginia. This transfer results in more effective drug enforcement training for state and local recipients.

Advanced and Specialized Drug Law Enforcement Training

- The National Drug Enforcement Officers Academy is an eight-week course of basic instruction taught at Quantico. The Academy provides the investigator trainee with skills required to effectively conduct a criminal drug investigation. It develops expertise in the following: surveillance, undercover operations, search and seizure laws, drug identification and pharmacology, financial asset investigations, physical fitness, and firearms proficiency. The academy employs a unique "methods-of-instruction" training which enable graduates to share their academy instruction knowledge with fellow officers upon returning to their units.
- DEA conducts a variety of training throughout the country under the auspices of its nineteen division training units. This field training is in response to the needs of investigators who cannot attend the Academy. The courses vary from the two-week Basic Investigators School through one-to-three-day seminars on specialized topics, e.g., Clandestine Lab Operations, and Conspiracy Seminars.
- Cannabis Detection and Eradication Training is coordinated by the Office of Training and presented throughout the United States. Training emphasizes utilizing aerial observation technology as a primary tool in identifying and locating illegal cultivation sites.

Management and Supervisory Drug Law Enforcement Training

- Supervisory Drug Enforcement Officer Seminars provide management officials with the skills required to direct a comprehensive drug enforcement program within their area of responsibility. The curriculum focuses on management techniques, priorities, inter-departmental cooperation and available Federal support.

Drug Demand Reduction and Prevention Program Training

- DEA is continuing the Sports Drug Awareness Program (SDAP). The program is a joint undertaking of 40 organizations, including the FBI, International Association of Chiefs of Police, National Football League (NFL) and its Players Association (NFP) National High School Athletic Coaches Association, National Hockey League, and National Association of Broadcasters. In SDAP, DEA provides prevention and education material and programs about drug abuse in order to reach the 57 million school age-youth, including out of school juveniles, primarily through clinics for sport coaches, teachers, and student-athletes. The SDAP program also includes providing prevention publications which: emphasize the special rapport between the coach and athlete; present information on the signs of drug abuse; and provide guidance on how to establish prevention programs.
- DEA develops and provides technical assistance in drug prevention training to other law enforcement agencies. This encourages their participation in community prevention programs.

1086

Accomplishments and Workload:

- Due to the relocating of DEA's domestic training operations to the FBI Academy during 1985 and 1986, and to the academy's priority workload of commencing DEA Basic Agent Classes in the first quarter of 1986, no state and local officers were trained in the academy's basic instruction classes or in supervisory officer's school.
- State and local training classes conducted in field locations have trained 8,576 state and local officers during 1986.
- Fifty military personnel have been provided narcotics training during 1986.
- The 1985 Cannabis Detection and Eradication Training program gave field classes for 873 state and local officers.
- Due to priority for the DEA Basic Agent demands, only one Narcotic Specialization Training class was held during 1986, which provided in-service training for 17 FBI special agents at Quantico. DEA provided narcotic orientation training to 280 FBI new agents during 1986.
- DEA provided narcotic orientation training to 2,600 Border Patrol Officers and 210 Army Criminal Investigation Officers at field sites.
- During 1986, DEA sponsored and participated in prevention clinics and seminars involving more than 3,500 coaches and teachers and provided packets of material to participants. DEA will conduct seminars for an additional 3,500 participants in 1987 and provide agent speakers for related training and prevention events. Over the past two years, DEA has distributed approximately 200,000 publications including "For Coaches Only" and "Team Up For Drug Prevention".

Item	1985	1986	1987	1988
State and local officials trained at DEA training center.....	350	...	350	350
State and local officials trained at DEA field locations.....	9,105	8,576	9,105	9,105
FBI special agents trained.....	650	280	650	650
Participants in sports drug awareness clinics.....	3,500	3,500	3,500	4,000

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
State and local laboratory services....	25	25	$1,603	25	25	$1,800	25	25	$1,800	...	...	...

Long-Range Goal: To provide support to state and local law enforcement agencies through supplemental laboratory analysis of drug evidence, meeting applicable State Speedy Trial Act provisions and to aid and encourage state and local agencies in achieving forensic analytical self-sufficiency through provision of technical assistance.

Major Objectives:

To assist state and local laboratories to achieve self-sufficiency through the following:

- Publish technical information and participation in national and local forensic sciences meetings;
- Provide training to forensic chemists on drug analytical techniques; and
- Support to programs that assist in enhancing state and local laboratory capabilities (participation in American Society of Crime Laboratory Directors, American Academy of Forensic Sciences and regional professional associations).

To provide quantitative and qualitative analysis of drug evidence for those agencies that do not have laboratories, primarily the Metropolitan Police Department, Washington, D.C. (MPDC), and on difficult and complex exhibits requiring highly-specialized examinations for those agencies that do not have the necessary expertise or instrumentation.

To provide expert testimony in court relative to analytical findings for prosecution purposes.

To provide analytical drug reference standards where there is no commercial source.

To conduct ballistics examinations of tablets and capsules to identify common origins of clandestinely-produced dosage units and to identify licitly-manufactured dosage units diverted to the illicit market.

Base Program Description: The State and Local Laboratory Services program is responsible for providing state and local agencies with technical assistance, which is beyond the expertise of the forensic laboratory servicing the agency and for helping state and local forensic laboratories achieve self-sufficiency in the analysis of drug evidence for criminal investigations and prosecutions.

This program seeks means to upgrade the analytical capabilities of state and local laboratories. When state and local agencies cannot provide laboratory services or need technical assistance in the development of prosecutorial presentations and cross-examination of expert defense witnesses, DEA provides assistance. The major component is the analysis of drug evidence for duly constituted state, county, and municipal law enforcement agencies, assuring that cases developed will not be dismissed for lack of competent laboratory support. This program, in conjunction with other assistance programs, will help focus state and local law enforcement attention on the appropriate response to the drug problem.

DEA assists other agencies through the following: achieving forensic analytical self-sufficiency by conducting training in drug analytical techniques; publishing and distributing the scientific newsletter Microgram; providing intelligence and technical information to the forensic community; publishing technical information in scientific journals; participating in national and local forensic meetings; and providing analytical drug reference standards. The program mission, under DEA Reorganization Plan No. 2 of 1973 and 21 U.S.C. 872 and 873, is to conduct training programs for state and local forensic chemists and to provide laboratory support for state and local law enforcement agencies including analysis of drug evidence and expert testimony in state prosecutive cases.

1038

This program analyzes drug exhibits in a timely manner in support of prosecutions, provides expert testimony, and conducts highly-specialized ballistics analysis of tablets and capsules to identify common origins of licitly and illicitly-produced dosage units diverted to the illicit market. Expertise in the ballistics examination of drug dosage units rests solely with DEA.

DEA provides forensic analytical support to the Metropolitan Police Department, Washington, D.C. (MPDC), which is completely dependent on DEA for forensic drug analysis. Related to this analytical commitment is the resultant need to offer expert witness testimony in the D.C. Superior Court.

In general, other evidence analyzed within the state and local program which is of an unusual or difficult nature is analyzed by the DEA laboratory system as an aid to state and local forensic laboratories incapable of performing such analyses.

Accomplishments and Workload: In support of other agency drug investigations during 1986, DEA laboratories analyzed 7,963 exhibits of drug evidence, testified in 98 trials, conducted 112 ballistics examinations, published 12 issues of Microgram, published a new forensic chemist training manual, and conducted 4 state and local chemist seminars to train 55 forensic chemists. Additionally, DEA forensic chemists continued to participate in regional, national and international forensic science organizations by holding officer positions, participating on committees and presenting scientific papers. Representatives of the laboratory system held several meetings with officials of foreign law enforcement agencies to coordinate activities.

The success of this program in assisting self-sufficiency of state and local agencies can be significantly measured in terms of the reduction of evidence analyses from almost 16,000 exhibits in 1975 and 1976 to just 9,000 exhibits in 1984. However, in 1985, there was an increase to almost 11,000 exhibits analyzed (accomplished through the use of large amounts of overtime) due to escalated workload generated by the MPDC, Washington, D.C., which relies totally on DEA for analysis of its drug evidence. Since tabulation of MPDC evidence submissions began in 1978, the percentage of exhibits analyzed for MPDC has increased from 53 percent of state and local exhibits analyzed to 89 percent in 1985. In 1986, 7,174 MPDC exhibits were analyzed accounting for 90 percent of the total state and local analyses.

Program measures include the following:

Item	1985	1986	Estimates 1987	Estimates 1988
Drug exhibit analyses	10,766	7,963	8,543	8,543
Ballistics examinations	82	112	100	100
Issues of Microgram	12	12	12	12
Training conducted "seminars"	4	4	4	4
Court appearance	64	98	90	90
Evidence backlog	1,153	961	2,468	3,975

Drug Enforcement Administration

This budget activity provides all management and administrative services in such areas as fiscal/budget, personnel, supply/facilities, internal security and inspection, transportation and congressional/public affairs.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm Pos.	WY	Amount
Executive direction and control.....	264	249	$15,440	249	234	$16,672	258	241	$17,602	9	7	$930

Long-Range Goal: To develop, maintain and provide effective and efficient management, executive direction and control functions.

Major Objectives:

To provide quality management direction and control through policy development.

To provide accurate and timely information to congressional requests, to specific interest groups and to the public regarding DEA's mission and activities.

To provide a full range of legal services to the agency.

To provide effective budget planning, formulation and execution.

To provide an efficient DEA financial accounting and reporting system in compliance with OMB/GAO directives.

To strengthen management procedures and internal controls through OMB Circulars A-123 and A-76.

To investigate instances of integrity misconduct within DEA.

To maintain financial accuracy and timeliness through internal audits.

To effectively monitor and evaluate all programs within DEA through inspections for mission accomplishment and operational performance.

To provide physical, facility and information security to DEA.

To continue an effective strategic planning process for DEA.

To establish statistical systems for government-wide and DEA drug seizures, drug arrests, and asset seizures and serve as a clearinghouse for all DEA operational statistics.

To provide centralized program coordination and reporting of assets seized during agency criminal investigations.

Base Program Description: This program is responsible for setting policy, and providing solutions to problems in program formulation, management functions and internal control as well as ensuring the effective development and utilization of resources so that strategic goals and objectives continue to be met.

1041

Office of Congressional and Public Affairs

- The Congressional Affairs Section responds to congressional requests, provides DEA officials with reports on congressional activities, provides assistance in preparing for testimony and serves as congressional liaison.
- The Public Affairs Section responds to media, public and government inquiries, and issues press releases to inform constituents about drug-related issues.
- The Communications Services Staff prepares texts of speeches, outlines, talking points, and congressional testimony. They prepare recurring reports for the White House, Department of Justice and key DEA officials, and they produce DEA's major internal and external publications.
- The Demand Reduction Section develops and implements drug awareness and prevention programs and curriculum to impact nation-wide.

Office of Chief Counsel

This program's functions include: preparing legal briefs, opinions, presentations and providing technical legal training in regulatory and criminal matters, civil litigation, seizures, forfeiture of assets, personnel, EEO, procurement, and international matters. Most of this work is directly contingent upon the amount and complexity of agency enforcement and regulatory activity.

Office of the Controller

This program consists of the Budget Operations, Management Analysis, Accounting and Budget Execution, and Voucher Review and Analysis. This Office's primary responsibilities include: formulation and presentation of DEA's budget, which is integrated with the DEA's Strategic Planning process, to DOJ, OMB and the Congress; developing and maintaining resource allocation plans; and the design, operation and supervision of DEA's accounting systems. In accordance with OMB Circulars A-123 and A-76, this office maintains a system of internal control and accountability for programmatic and operational functions in all areas. Detailed studies are conducted to determine the effectiveness of DEA's organizational structure and its work methods and procedures. The Accounting Section was reorganized in 1986 into two sections by, in part, merging the staff and former functions from the Budget Execution Unit and establishing additional units to correspond to the increased accountability mandated by recent laws, regulations and policy. This will enable the Controller's Office to align those functions that are similar and interrelated as well as provide staff to functions requiring increased effort and attention. It will produce a more direct relationship within and outside the office to support mission objectives and improve productivity and program improvement. The new Accounting and Budget Execution Section consists of a Financial Systems and General Accounting Unit, Financial Policy and Assessment Unit, and Budget Execution Unit. The Voucher Review and Analysis Section consists of the Payroll and Cash Management Unit, and the Voucher Processing and Analysis Unit.

Board of Professional Conduct

Responsibilities include enhancing the DEA disciplinary system by bringing a balanced perspective of fairness, consistency and timeliness to its deliberations. Board activity involves close analysis and inquiry into integrity and accident investigations. Mitigation and aggravating factors are considered in determining the appropriateness of Board proposals for clearances and disciplinary actions.

Planning and Inspection Division

This program is the principal advisor to management on all matters pertaining to planning, evaluation, organization control, statistical systems, policy analysis, personnel, document and plant security and integrity/misconduct matters. These functions are coordinated and conducted through the Office of Inspections, Security Programs, Planning and Evaluation, Professional Responsibility and Security Programs. Their responsibilities are delineated as follows:

- The Office of Inspections is responsible for conducting inspections and audits. Inspections determine if investigative, administrative and financial operations are efficient, effective and in compliance with applicable laws and regulations. The Office conducts investigations in connection with undercover operations, Equal Employment Opportunity matters as well as surveys and inquiries ordered by the Administrator. All field divisional entities will be inspected every two years, DEA Laboratories at the rate of two to four per year, and selected Headquarters offices at the rate of 5 to 7 per year. Inspections also conducts approximately 16 EEO investigations each year.
- The Office of Professional Responsibility investigates integrity misconduct allegations directed at employees. The investigations are scheduled to be completed within 60 days.
- The Office of Security Programs ensures the enhancement of all DEA-wide security programs and plans for the protection of personnel, property, facilities, and information, including the promulgation of DOJ/DEA policy and procedures and auditing for compliance. The Office of Security Programs as mandated by Order DOJ 2600.2A will ensure the security of DEA and the follow-up necessary to implement security of ADP/telecommunications, documents, personnel, and contingency planning.

- The Office of Planning and Evaluation consists of the Planning and Program Evaluation Section and the Statistical Services Section. This office is also responsible for the following specific duties: conduct special studies of DEA operations and evaluate programs within DEA world-wide; coordinate all outside agency audits and evaluations within DEA; and coordinate and implement pilot programs and special projects developed as a result of evaluation findings. Specific responsibilities are:

  - The Planning and Program Evaluation Section is responsible for providing management direction and control through policy and program analysis and strategic planning. The Strategic Plan identifies agency policy and the action required to implement agency action over a three-year period. Various studies and evaluations of operations and programs successfully identify problem areas within DEA. This enables management officials to efficiently redirect resources, if necessary, and take corrective actions.
  - The Statistical Services Section implements and maintains statistical systems to meet DEA's needs. All DEA statistical functions were consolidated into this section in January 1983, in order to eliminate the previous fragmentation of statistical programs and to standardize the methodology used in the management of the various systems.

Accomplishments and Workload:

Achievements in the Office of Congressional and Public Affairs covering 1986 include:

- Coordinated the preparation and appearance of DEA officials in 25 Congressional hearings and 62 formal Congressional briefings, and prepared responses for 800 letter inquiries from Congress and responded to 897 Congressional telephone inquiries. Prepared and distributed 43 legislative summaries.
- Processed responses to 30,000 media inquiries and distributed three and one-half million publications.
- Represented the agency and participated in 60 drug-related conferences throughout the country.
- Prepared approximately 50 major speeches for the Administrator and the Deputy Administrator during 1986.
- Wrote three articles for Administrator's byline which appeared in criminal justice journals.

Office of Chief Counsel

The Office of Chief Counsel represented DEA management in administrative hearings involving regulatory, personnel and EEO matters. As a result of the expanded jurisdiction provided by the Comprehensive Crime Control Act of 1984, administrative litigation, forfeiture and criminal matters increased greatly. For example, the compliance and regulatory caseload increased from 64 in 1985 to approximately 100 in 1986, with corresponding increases expected in 1987 and 1988. Forfeiture cases totalled approximately 5,500 in 1986 and should increase to over 12,500 in 1988.

Office of the Controller

- A more intensive analysis and coordinated review of the budget has been implemented with the FBI.
- Integration of the DEA Strategic Planning process with the formal budget process was also accomplished.
- The Accounting Section was realigned to: increase effectiveness and efficiency in support of the agency's mission; establish a monitoring program on travel advances to minimize outstanding travel advances and timely collection of outstanding funds; and improve cash management practices in DEA to maximize the usage of government funds.

- The Budget Section evaluated agency base program resources and reallocated them to more accurately reflect operations and secured approval of a revised program structure to better reflect DEA's utilization of resources.
- The Management Analysis Section satisfied DOJ, OMB, and GAO requirements for implementation of OMB Circular A-123 through the direction and coordination of vulnerability assessments of DEA's programs, administrative functions, and ADP systems. Further analysis in the form of quality assurance reviews was conducted on eight of the 65 assessments. One material weakness and three areas of significant concern were reported to the Attorney General as exceptions to DEA's reasonable assurance for 1986. Three of the four functions designated by OMB for Circular A-76 commercial activity reviews were exempted by DOJ after the initial stages of analysis. Due to OMB Circular A-127, review for contracting in the accounting function has been deferred until DOJ completes development of Financial and Administrative Management Information System (FAMIS) and DEA converts to an automated system that is compatible with FAMIS or the FBI's accounting system.

Board of Professional Conduct

- Completed decisions on 72 Integrity and Misconduct cases referred by the Office of Professional Responsibility and 529 accident cases, submitted by field offices, involving Official Government Vehicles during 1986.

Planning and Inspection Division

- During 1986, the Office of Inspections inspected twelve domestic divisions, seventeen foreign offices, two laboratories, one follow-up inspection, one specialty program, and two Headquarters divisions. Twelve audits were conducted concurrently with inspections, four Special Enforcement Operations (SEO's) and four special audit studies. These inspections and audits resulted in the issuance of 481 Schedules of Findings (totaling 862 recommendations) that, when fully implemented, will result in increased efficiency, economy and effectiveness of operations, assure management that compliance with applicable laws, regulations and rules is achieved, and assure adequacy of internal control over agency assets and expenditures.

Office of Professional Responsibility

- Between 1985 and 1986, the number of integrity/misconduct investigations exceeded the planned output by 59.5 percent. This increase is considered significant, not only in the percentage increase, but by the complexity of investigations. These investigations continued to be conducted on a collateral duty basis by operational field DEA agents under the direction of DEA Inspectors.
- Standardized investigative and reporting procedures were established in 1984 to ensure uniformity in procedures and timely completion. Continued use of these procedures into the future will ensure sufficiency of the investigations and agency needs. Additionally, steps have been taken to automate the indices which will allow for on-the-spot analysis of investigative activity.

Office of Planning and Evaluation

- Coordinated the integration and completion of all aspects of the DEA 1988 Strategic Plan and its production and dissemination.
- Provided major leadership in the development of the 1986-87 National Strategy for Prevention of Drug Abuse and Drug Trafficking by participating in three out of five subcommittees.
- Conducted a review of policies and procedures regarding conditions adversely affecting the accountability or utilization of Federally owned property and developed an Executive Summary of findings and Recommendations.
- Initiated a Review of DEA's Special Agent Recruitment Program.
- Developed DEA's submission for the 1985 Attorney General's Annual Report and completed a draft of DEA's submission for the 1986 Report.

- Initiated a review of Sick Leave and Related Issues.
- Initiated a review of DEA's Fugitive Program.
- Coordinated on-site activities and/or requests for information or responses to reports on over twenty-five GAO and DOJ Audits of DEA.
- Coordinated OMB Circular A-123 reviews and provided recommendations to resolve issues identified in them.

Statistical Services Section

- Commenced the development of the Federal-wide Drug Seizure System, which will be fully implemented in early 1987.
- Initiated and completed 90 percent of the work required to redesign DEA's Defendant Statistical System in order to streamline the processing of arrest and conviction data.
- Produced six issues of the Quarterly Statistical Report and two issues of the Annual Statistical Report, a comprehensive statistical reporting series for use by DEA management.
- Participated in the Design and implementation of the new Computerized Asset Processing System.
- Provided statistical information in response to more than five hundred requests for information annually from other DEA offices and sources outside DEA.
- Initiated a study regarding the statistical quality of DEA's drug seizure data.

Physical Fitness Program

- Selected and trained 60 Physical Fitness Coordinators and 35 Senior Executive Managers.
- Defined the screening and testing mechanism for all special agent recruits.
- Completed two cyclic health and medical screenings and field assessment testings for special agents.
- Initiated health and physical fitness screening and testing, and provided exercise prescriptions for non-agent participants, and developed a computer program to store and analyze health and medical screening and field assessment testing results.
- Established and published a bi-monthly Health and Fitness Newsletter for the entire DEA workforce.
- Provided exercise training equipment to major field division offices. Provided corporate DEA memberships for special agents in resident offices.

Office of Security Programs

- Between May and December 1986, the Office of Security Programs conducted the following: 75 Comprehensive Physical Security Surveys of domestic DEA offices and laboratories; 8 Comprehensive Physical Security Surveys of DEA foreign offices; conducted physical security assessments of more than 30 foreign DEA residences; and 2 extensive Technical Surveillance Countermeasures Surveys.
- As a joint effort of the ADP and Physical Security Units, a computer program has been formulated for the rapid extraction of synopsized security data pertaining to DEA facilities by division, country office, individual office, survey date, criticality of security posture and servicing security specialist.
- The Executive Protection Detail, received in excess of 1,000 hours of specialized training in protection and anti-terrorist courses. This unit provided around-the-clock protection for seven days to the Italian Minister of Interior and his delegation at the request of the Attorney General's Office.
- A new computer program was implemented to monitor, synopsize, and report world-wide terrorist information that could impact on DEA operations and personnel.

Program Increase: Nine positions (6 agents, 1 intelligence specialist, 1 professional/administrative, 1 technical/clerical); 7 FTE workyears; and $930,000 (including contract funds of $80,000 for the Physical Fitness program) are requested for the Office of Planning and Inspection.

These resources are needed in the subject service areas to keep pace with the growth in agency size and to handle several new or expanded functions. Specific enhancements are required for the following services:

Function	Positions	Services Enhanced
Office of Professional Responsibility	3	Handle an increase in the more serious and complex employee misconduct and integrity investigations due to higher-level caseload in agency criminal drug investigations and its commensurate greater potential for staff impropriety.
Office of Security	5	Respond to recent trend of increased threats to staff and facilities, and to provide for more timely completion of background investigations.
Physical Fitness Program	1	Formalize the establishment of an agency-wide physical fitness conditioning and nutrition counseling for all staff to be coordinated at Headquarters. Two non-agent administrative support positions will be contracted out in lieu of establishing full-time permanent employees.

Expected benefits follow:

- The enhanced staffing for the Office of Professional Responsibility will assure that the integrity of DEA operations and staff remain at an unassailable level.
- The staff increase in the Office of Security will help to preclude costly damage to both DEA physical facilities and staff from terrorists and other hostile drug trafficking organizations.
- The new physical fitness program will ensure a more healthy, durable, and productive workforce by minimizing injury, sickness and stress-related disabilities, through nutrition, exercise conditioning, counseling and incentives. The program is particularly designed for the hazardous special agent work.

1046

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm Pos.	WY	Amount
Administrative Services	152	143	$9,108	151	142	$10,097	151	142	$10,097	...	...	...

Long-Range Goal. To provide effective and efficient administrative support to enable the optimum achievement of the DEA mission.

Major Objectives:

To provide effective position management and appropriate compensation of employees, including merit pay, benefits, awards and retirement services.

To provide guidance and assistance and to process all disciplinary actions, and grievances and to establish policy and advice on performance appraisals.

To validate personnel procedures and practices, which will withstand legal challenges in areas of employee performance appraisal, selection, promotion, and discipline.

To provide health services, including employee assistance on personal and behavioral problems affecting performance and well being.

To recruit, staff and manage DEA staff according to Federal Equal Employment Opportunity regulations and procedures.

To provide and manage office and special purpose space to meet various DEA requirements.

To provide permanent change of station orders processing and the necessary support services to employees who are being transferred.

To provide an efficient and responsive contracting and procurement program with full and open competition and to increase the level of participation of small, minority-owned businesses and firms that hire the handicapped.

To provide furniture, office equipment, and motor vehicles in support of all DEA operational and administrative activities.

To process and distribute office supplies and mail and to provide graphic arts services for DEA headquarters and field elements.

Base Program Description:

Personnel Operations

An efficient personnel program is required to recruit and bring on-board a variety of dedicated and proficient staff in order to carry out the difficult and diversified functions inherent in DEA mission responsibilities. The need for a highly mobile force for locations in every state and over forty countries throughout the world, adds to personnel operation problems and workload.

All personnel work, other than limited clerical functions are centralized in Washington, D. C.

- DEA requires comprehensive personnel management which includes the following: classification; pay and position management, employee relations, assistance, and benefits; recruitment and placement; health and safety; personnel systems automation development; and validation and analysis of personnel procedures.
- The Office of Personnel advises and assists managers and employees on personnel matters, develops policy and provides guidance for the effective management of the workforce. Processing actions involved include those associated with discipline, adverse action, grievances, appeals, performance appraisal, job description, retirement, awards, benefits, compensation, safety, health and employee relations assistance.
- Personnel resources have been expended to assist in fully automating the personnel systems during 1985, 1986 and 1987. This will culminate in a streamlined and more efficient operation, but it has and will continue to increase personnel staffing workload during the planning, designing and implementation stages.
- The Office of Personnel is also involved in validating personnel processes of selection, employment, promotion and appraisal. These efforts, which will also require automation, will continue through 1987.

Equal Employment Opportunity

EEO programs are needed to ensure that DEA focuses on the legal and moral responsibilities in acquiring and managing its workforce in order to prevent discrimination and morale problems and to achieve equitable treatment of its employees as follow:

- The EEO staff develops an EEO program report for minorities and women and the Affirmative Action Plan for Handicapped and Disabled Persons. The Office of Personnel develops the Federal Equal Opportunity Recruitment program plan. These plans form the basis for coordination and definitive actions to meet major EEO objectives.
- The EEO staff works closely with the DEA Office of Personnel to plan and implement special employment programs. The EEO staff also presents training programs for managers and supervisors on EEO and Affirmative Action responsibilities. Personnel policies, practices and procedures are reviewed to ensure there is no adverse impact on minorities, women or handicapped persons.
- An EEO specialist has specific responsibility for managing the DEA's complaint system in order to process complaints of discrimination in a timely manner.

General Services

The General Services staff responds to all administrative support requirements identified. All worldwide elements and employees of DEA are served by this program as follow:

- The acquisition and utilization of space are centrally managed. Requests for expansion of space and changes in current office dimension configurations as well as space problems are evaluated, with appropriate action taken.
- All permanent change of station orders are processed on a timely basis. This includes processing necessary information concerning relocation benefits and financial details for each employee undergoing transfer.
- Stocks of frequently used office supplies and forms are maintained. Limited art, photographic and audio visual services are provided through in-house capabilities. Contract services are used for the moving of furniture.

- Requests for formal contracts and requisitions for all other types of procurement are processed in accordance with applicable regulations and agency policy guidelines by the DEA Contract and Procurement staff. Representative samplings of field office procurements are also reviewed for accuracy and conformance to these guidelines and regulations.
- Furniture and equipment requisitions are carefully screened for need prior to authorization. Use of rehabilitated items are recommended whenever feasible.
- Motor vehicle resources are controlled and maintained through a central management program to insure that existing and future vehicles are adequate and efficient, properly utilized, economically maintained, and replaced as required by appropriate regulations.

Accomplishments and Workload:

Personnel Operations

During 1986 the following major achievements were realized:

- Essential technical assistance was provided to key individuals in various divisions, resident offices, and laboratories in pay administration (including Time and Attendance (T&A) reporting), classification, etc. Trips were made to various division, resident offices and laboratories to provide essential individual assistance on a variety of critical personnel matters. Presentations on more chronic personnel problem matters were also prepared and given to various groups of employees and management at conference, management meetings and training. Plans call for increases in these personnel field assistance trips.
- The new T&A Desk Top Guide was revised, updated and distributed throughout DEA, and has and will continue to provide valuable reference information on procedures and thereby prevent many errors. Standard Operating Procedures were developed to cover work done throughout the Office of Personnel, and will serve various purposes. Plans call for more and improved guidance to the field.
- Personnel has been providing the program assistance and working closely with the FBI in the initial efforts to establish a joint FBI/DEA Payroll/Personnel Information System. In early 1986, the Requirements Analysis phase was completed. Micro computers were obtained in order to utilize the DOJ Personnel and Payroll System when the Department of Justice Payroll/Personnel System files are accessed. Personnel specialists will have immediate access in 1987 to a variety of personnel and payroll information appropriate to servicing needs. Personnel/payroll system development will be an ongoing process for the next several years, to progress to full implementation.
- Continued progress has been made on expansion of health services and programs. Procedures have been implemented to ensure that examinations are completed annually for agents over 40 and every 3 years for agents under 40. An Employee Health Services contract was awarded to provide on-site services to all DEA division offices. DEA post incident/injury trauma teams were established, and implemented agency-wide.
- The second phase of a survey study was completed to analyze injury cause including a cost comparison for DEA and FBI.
- During 1986, identification of elements comprising valid special agent performance appraisal criteria and the various levels of subject job knowledge, skills and experiences was completed for all agent positions. A contracted statistical analysis was then completed which compared the agency's incumbent agent status to the identified valid elements of these positions. Development was processed into an automated DEA Validation Reporting Information System, which will provide ongoing assessments of agency personnel recruitment, placement and promotion practices to ensure equitable treatment of all agents.
- New job elements and work plans were developed for all agents and will be utilized by supervisors for criteria, procedures, and training in 1987.

Equal Employment Opportunity Programs

- In 1986, DEA awarded approximately 59 percent of its prime contracts, which amount to more than $29,326,000 to small business concerns and approximately 16 percent of its formal contracts over $10,000, which total $18,582,000, to minority business concerns under the Small Business Administration's 8(a) program.
- EEO complaints are continuing to be processed in a timely fashion.
- A cooperative education program to recruit women and minorities has been established and the Selective Placement Program for the Handicapped has been transferred from the Office of Personnel to the EEO staff.

Administrative Services

- The Transportation Unit developed an improved voucher submission suspense and follow-up system and recovered a total of $1,330,000 to be made available for additional transfers that would have otherwise had to be deferred.
- Tighter controls were implemented in the Property Management Unit to limit the number of transfers or donations of Official Government Vehicles to other agencies so that DEA was able to recoup greater sale proceeds for the purchase of replacement vehicles.
- Cost reductions were achieved by the Office Services Unit through rehabilitation of over 340 pieces of office furniture, replacement of 78 copiers worldwide, and through implementation of new controls for outgoing mail in 1986.
- New and improved procedures were implemented in the Contracting and Procurement Unit to aid in scheduling of work, interface with DEA technical staff and clients served, and ensure full and open competition.
- The workload in the Facilities Management Unit was realigned among the space management specialists to foster close working relationships with field clients, and to provide better monitoring and follow-up of ongoing projects, which totaled over 150 separate actions in 1986.

Status of Congressionally Requested Studies, Reports, and Evaluations

The Senate Report relating to Department of Justice Appropriation Act; 1987 (Senate Report 99-425) requested that:

1. In the conference report on the 1986 Supplemental Appropriations Act, Public Law 99-349, the conferees directed the Attorney General as Chairman of the National Drug Enforcement Policy Board, to convene the Board to address on an emergency basis the crisis phenomenon that cocaine freebase, "rock" and "crack" have caused in communities throughout the Nation. The Committee wishes to reiterate the importance of this report to State and local law enforcement authorities who are engaged in the battle to suppress "crack" houses and laboratories in areas such as Newark, NJ, New York, NY, and Miami, FL where this form of cocaine abuse is most prevalent.

   * This report was sent to Congress on October 1, 1986.

2. The Attorney General, in coordination with Drug Enforcement Administration, is directed to submit a report to the Committee on Appropriations no later than July 1, 1987, outlining the specifics for the use of funds recommended by the Committee for construction of a new all source intelligence center to modify or replace the El Paso Intelligence Center. This report shall include the location for such a center and detailed rationale for such site selection. It is the Committee's intent that this report will identify current usage of EPIC by all participating Federal agencies, as well as proposals for increased participation in a new or modified center.

   * This matter is under review at the Department of Justice.

The House Appropriations Committee Report on the Department of Justice Authorization Act, 1987 (House Report 99-669), directed the Drug Enforcement Administration to submit a report to the Committee in writing by January 1, 1987, on efforts to coordinate activities between the National Institute of Drug Abuse, the Centers for Disease Control and the Department of Education and the DEA. This report should include long-term plans at coordinated prevention activities.

   * This report was sent to Congress on January 27, 1987.

Salaries and expenses

Justification of Adjustments to Base
(Dollars in thousands)

	Perm. Pos.	Work-years	Amount
Savings Due to Management Initiatives	-58	-58	-$911
Uncontrollable increases:			
1. One additional compensable day	...	...	732
The annual salary rate for Federal employees is based on 260 paid days. 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation of $171,790,000 divided by 260 = $641,000 plus $91,000 for benefits.)			
2. Annualization of additional positions approved in 1987	...	395	11,181
This provides for the annualization of 785 additional positions approved in 1987.			

	Approved 1987 Increases	Annualization Required
Annual salary rate of 785 approved positions	$18,976	
Less lapse (50 percent)	-9,488	$9,488,000
Net compensation	9,488	
Associated employee benefits	1,693	1,693,000
Total costs subject to annualization	11,181	11,181,000

This estimate does not include the effect of employees transferring into the Federal Employees Retirement System (FERS).

3. Annualization of Federal Employees' Retirement System Costs	...	...	18,557

This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983, who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula. Additionally, $1,683,000 of the 1987 requirement was absorbed. Total annualization required is $18,557,000.

	Perm. Pos.	Work-years	Amount
4. Annualization of 1987 pay increase ..... This request provides for the annualization of the January 4, 1987, pay increase. The calculation of the amount required for annualization is based on 68 paid days (October 1, 1986 through January 3, 1987) which were not included in the pay raise amount of $2,593,000. Total annualization required is $4,806,000.	...	...	$4,806
68/261 x pay raise amount for 1987 ..... $1,301,000 1987 absorption of pay ..... 3,505,000 Total annualization 4,806,000			
5. Within-grade increases ..... This request provides for an expected increase in the cost of within-grade increases. This increase is generally consistent with increases experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment. (Personnel compensation $1,610,000 and benefits $225,000 = $1,835,000).	...	...	1,835
6. Retirement contributions - Social Security (FICA) ..... Beginning January 1, 1985, the base on which earnings for Social Security computations are calculated increased from $37,800 to $39,600. Additionally, beginning January 1, 1986, the base for computation increased to $42,000 and the rate changed from 7.0 to 7.15 percent. This increase is computed for 4,786 eligible employees.	...	...	36
7. Medicare costs ..... Beginning January 1, 1985, the base on which earnings for medicare computations are calculated increased from $37,800 to $39,600. Additionally, beginning January 1, 1986, the base for computation increased to $42,000 and the rate changed from 1.35 to 1.45 percent. This increase is computed for 5,680 eligible employees.	...	...	7
8. Locality based per diem ..... Public Law 99-234 authorized a new locality-based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $2,000,000 is required to meet the expected 10 percent increase to total travel costs.	...	...	2,000

		Perm. Pos.	Work-years	Amount
9.	Federal Employees' Compensation Act (FECA) - Workers' Compensation ..... This increase reflects the billing provided by the Department of Labor for the actual costs in 1986 of employees' accident compensation. The 1988 amount will be $4,280,000 or $172,000 over the 1987 base.	...	...	$172
10.	GSA rent ..... In 1987, the Rent System replaces the Standard Level User Charges (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $4,781,000 is required to meet our commitment to GSA.	...	...	4,781
11.	GSA recurring reimbursable services ..... Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard service. GSA has estimated a 4.2 percent increase of $204,000 in fees for these services in 1988 over 1987 charges of $4,854,000.	...	...	204
12.	Federal Telecommunications System (FTS) ..... The General Services Administration has advised of a 16 percent increase in Federal Telecommunications System (FTS) intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and 1985 costs which were not billed by GSA last year. An increase of $417,000 over the 1987 base of $4,676,000 is requested.	...	...	417
13.	Telephone service ..... On February 25, 1986, the District of Columbia Public Service Commission (PSC) issued its final order in the Chesapeake and Potomac telephone company (C&P) rate case. The PSC, in its order, allowed C&P to increase its rates by $31 million and set the rates for C&P's intrastate services. The PSC order affects the rates the Federal Executive Agencies will pay for basic exchange service, CENTREX services, service connections, direct inward dialing services and channel services. These changes will increase the 1987 cost of operating the Justice Telecommunications Service (JTS) by an estimated $552,000. An increase of $42,000 over the 1987 base of $660,000 is requested to pay DEA's portion of these charges.	...	...	42
14.	GPO printing costs ..... The Government Printing Office (GPO) is currently projecting a 3 to 4 percent increase over the 1987 printing cost of $399,000. An additional $12,000 will be required in 1988.	...	...	12

	Perm. Pos.	Work-years	Amount
15. Employee data and payroll services ..... Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems maintenance and payroll accounting are based on the number of records maintained. The rate of $145.64 per record in 1986 will be raised to $155.76 per record for 1988. The change is based on anticipated uncontrollable cost increases of 6.9 percent for the operation of the Justice Employee Data Service. An increase of $215,000 has been included to improve the Human Resources Management Information system (HRMIS). This improvement will enhance the productivity of all Department components as well as the support units of accounting, budgeting and procurement. This retooling of support systems will allow the Department to operate an efficient, effective and businesslike administrative operation.	...	...	$215
16. Foreign allowances ..... Allowances for Government employees in foreign areas are determined by the Department of State. The State Department anticipates a 7.9 percent increase in 1988. The requested increase of $324,000 provides 7.9 percent more than the $4,105,000 budgeted for 1987.	...	...	324
17. Distributed administrative support ..... Under the Foreign Affairs Administrative Support agreement, an annual charge is made by the Department of State (DOS) for administrative support items. The amount of this charge is determined by the DOS. The DOS advises that a 5 percent average increase in foreign operation costs is anticipated. The increase of $742,000 is based on a 1986 base availability of $3,620,000.	...	...	742
18. General pricing level adjustment ..... This request applies OMB pricing guidance as of December 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.5 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1988 estimates.	...	...	2,691
Total uncontrollable increases	...	395	48,754

	Perm. Pos.	Work-years	Amount
Nonrecurring Decreases:			
1. Reduction for change in hourly rate ..... Public Law 99-272, the Consolidated Omnibus Budget Reconciliation Act of 1985 required that the computation of annual salary rates be based on 2,087 hours rather than 2,080. The same amount that was reduced in 1984 and restored in 1986 is requested for reduction in 1988.	...	...	-$459
2. Reduction in Health Benefits ..... The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased approximately 6 percent due primarily to reduced carrier rates.	...	...	-269
3. Reduction in per page cost of the Federal Register and the Code of Federal Regulations ..... The Legislative Branch Appropriation Act of 1978 (P.L. 95-941) amended the Federal Register Act to require Federal agencies to reimburse the Government Printing Office for costs of printing, binding and distributing the Federal Register (FR) and the Code of Federal Regulations (CFR). The current cost estimates from GPO indicate a per page cost of $390 for the FR and $55 for the CFR for 1988. This represents an $18 per page decrease for the FR and a $5 per page decrease for the CFR.	...	...	-7

OPENING STATEMENT

Mr. DWYER. The Committee is pleased to welcome back the Administrator of DEA, Mr. John C. Lawn. Mr. Lawn, you may proceed with your statement and at your own pace.

Mr. LAWN. I thank you, Mr. Chairman.

I am pleased to have the opportunity to appear before you today to discuss the 1988 budget request of the Drug Enforcement Administration.

I would like to take this opportunity to thank the Congress, and this subcommittee, for its support. The passage of the 1983 OCDE and 1985 drug initiatives supplementals, the Comprehensive Crime Control Act of 1984, and the Anti-Drug Abuse Act of 1986 have and will continue to strengthen the overall U.S. Government and DEA enforcement capabilities. We are now beginning to see tangible results from our efforts.

1988 BUDGET REQUEST

This request reflects the Administration's dedication to a drug-free society in America. In this year's State of the Union Message, the President called for continuing the crusade against drugs to defeat the scourge of drug abuse, the principal cause of criminal activity. Consistent with the President's commitment to fiscal responsibility, the Nation's war on drugs remains one of the Administration's top priorities.

DEA has a strategic planning process which provides the agency with comprehensive and long-range plans that serve as the foundation for our annual budget requests. The plan systematically identifies and prioritizes investigative, technological, and management requirements and resources which are necessary to continue the fight against drug trafficking and drug abuse.

DEA's budget request for 1988 is for $522 million and 5,730 permanent positions, of which 2,891 are special agents. This represents a net increase of nearly $32 million and 50 positions above the 1987 appropriation anticipated level. The 1988 budget includes program increases of $24.6 million and 108 positions, including 36 special agents. These increases, however, are partially offset by reductions for management and productivity savings of $911,000 and 58 positions.

A brief description of our proposed program increases are as follows:

A program increase of 15 positions and $12.4 million to provide the necessary resources for the second phase in securing through TEMPEST-rated capability of the office automation system, and necessary support staff.

A program increase of 26 positions and $4.5 million to provide the additional DEA and contracted ADP technical support necessary to meet field and headquarters data entry requirements.

A program increase of 30 positions including 20 special agents, and $2.8 million to establish asset removal teams in the Miami, Chicago, New York, Houston, Washington, D.C. and San Francisco field divisions, and to expand the team in San Diego. These teams will enable DEA to make maximum effective use of the expanded asset forfeiture laws.

A program increase of nine positions including six special agents, and nearly $1 million to provide improved security of staff and facilities.

A program increase of 28 positions including 10 special agents, and nearly $4 million, including $2 million for technical equipment, to provide for special agents and highly skilled technicians trained in the covert installation and adaptation of technical equipment to enhance DEA investigations.

ACCOMPLISHMENTS

DEA has made dramatic gains in arrests of major violators and seizures of assets. For example: The arrest of violators in major cases jumped more than 35 percent between 1985 and 1986, from 9,441 to 12,819. In all, 18,746 drug-related arrests were made during the year.

Convictions in major cases, increased more than 22 percent, from 6,221 to 7,595, between 1985 and 1986.

Assets seized by DEA during 1986 totaled more than $386 million, of which more than 40 percent was currency. The value of assets seized by DEA represents an increase of 51 percent over 1985, when assets valued at $255 million were seized. In 1986, for the first time, the value of seized assets exceeded our appropriation.

Drugs removed in the United States by DEA increased substantially during the fiscal year for example:

Cocaine seized increased by 49.4 percent.

Marijuana and hashish removed jumped 9.4 percent.

Dangerous drugs, which include stimulants, depressants and hallucinogens, were marked by a 76 percent rise in removals.

Although heroin seizures have slightly declined, this is in part due to increased foreign heroin seizures, which have prevented opiates from reaching this country.

The seizure of clandestine laboratories producing illicit drugs also increased dramatically during 1986. Over 430 laboratories were seized in 1986, an increase of nearly 28 percent from the prior year.

STRATEGY

It is now clear that our efforts are becoming both more visible, and indeed, more effective. We are making progress and we have reason to be optimistic about the future. However, our efforts in reducing the supply of illicit drugs must continue to include mobilizing a world-wide commitment to international drug control efforts.

Although statistical performance indicators illustrate the general level of success DEA enjoyed in 1986, the following provides some insight into our cooperative world-wide efforts:

During 1986, DEA initiated Operation FULL PRESS, which is our participation in the multi-agency Operation ALLIANCE. The overall operation includes investigative efforts by DEA, the INS Border Patrol, and the U.S. Customs Service. Operation ALLIANCE is a coordinated effort to combat drug smuggling from Mexico into the United States and includes efforts against heroin, cocaine, and marijuana. As part of this program, 2,800 Border

Patrol agents have been given special authority to investigate suspected drug violators. This initiative has already resulted in the opening of over 150 additional investigations.

DEA coordinated a joint Bolivian/U.S. military/DEA anti-cocaine operation in Bolivia, "Operation BLAST FURNACE." The Operation was a success. Between July 15, and November 15, 1986, the effort accounted for the immobilization of 22 cocaine processing labs, and 24 staging areas, which included airstrips, ranches, warehouses and dormitories. These laboratories had the capacity to produce 15,000 kilograms of cocaine hydrochloride weekly.

Operation PISCES continues as a long-term undercover enforcement effort targeted against the principals of major cocaine organizations, focusing on the monetary proceeds and laundering activities.

Operation PIPELINE continues as a mechanism to train, primarily, State and local officers, on how to interdict drugs and money being transported on the Nation's highway system. In 1986, state, local and INS Border Patrol officers participating in this program seized 4,000 pounds of cocaine, 7,800 pounds of marijuana and $8.7 million cash.

These examples of enforcement operations demonstrate the diversity of DEA's efforts, cooperation at all levels of drug law enforcement, and the achievements possible from coordinated, cooperative efforts.

CRACK PROBLEMS

Also, during 1986, a new drug phenomenon known as "crack" cocaine burst onto the illicit drug scene. "Crack" is an inexpensive, highly addictive form of cocaine that is designed to be smoked but with dangerous physiological and and psychological side effects. The attraction of "crack" is its low price and intense "high".

DEA plans to establish 24 "crack" cocaine task forces around the country in those cities that have a demonstrated "crack" problem and where there is the most potential for meaningful enforcement results against the traffickers of this new, highly dangerous form of cocaine.

INTERNATIONAL DRUG ENFORCEMENT

In addition to enforcement operations, DEA encourages and supports other multinational activities which foster international drug control. The creation of the International Drug Enforcement Conference (IDEC), formed in 1983 at DEA's recommendation has facilitated the cooperation and communication among the Latin American countries and the United States. Until IDEC, there had been no nation-to-nation, face-to-face dialogue by narcotics law enforcement agencies from all these countries. As a result of this union, certain Latin American countries have assumed regional responsibilities and have taken initiatives in narcotics control efforts.

The fourth IDEC meeting was held last June with 13 Latin American nations and the United States participating, and 5 European countries observing. This meeting was the most successful to date, because all countries displayed a greater willingness to work together and develop practical solutions to our mutual problems.

The conference concluded with resolutions in support of regional communications and information systems, drug abuse prevention, regional aircraft interdiction, and regional control of precursor chemicals. Participants unanimously endorsed eradication as the best action for source countries.

Over the past year there has been a shift in emphasis from information sharing to regional enforcement strategies, such as the current campaign to target pilots, aircraft, and clandestine airstrips involved in drug trafficking. In addition, a regional communications and information system has been developed and implemented with the State Department's Bureau of International Narcotics Matters providing secure voice communications and radio teletype. Communications equipment has been installed and is operational in Colombia, Peru, Ecuador, Venezuela, and Bolivia. The fifth IDEC meeting is scheduled for this month in Sao Paulo, Brazil.

While DEA will continue its international enforcement efforts, we believe that cooperation among national and international officials in education programs is a vital key to our continued success. is DEA conducted a European drug prevention seminar in Belgium this past March, and is now in the process of preparing for a seminar to be held in Bonn, Germany, next month. We anticipate participants from the United States Department of Defense; international schools; foreign ministries and the U.S. Embassy in Bonn. We are also preparing for an East Asia Regional Drug Abuse Prevention Seminar tentatively scheduled for this fall.

Finally, I participated actively with the U.S. delegation at the Heads of Narcotic Law Enforcement Agencies (HONLEA) meeting in Vienna where we addressed the problem of international drug abuse and trafficking. At this meeting, we developed recommendations and resolutions regarding international drug control which will be presented to the first United Nations Conference on Drugs this summer in Vienna.

DRUG ABUSE PREVENTION ACTIVITIES

As you are well aware, Mr. Chairman, I regard education and prevention as a fundamental and essential component of our drug control strategy. DEA is sharing information about current drug abuse prevention initiatives with Federal and State governments, national associations, independent organizations, and the private sector. This interagency contact and forum provides the necessary opportunity to discuss current research results and to identify major trends and unmet prevention needs, as well as promote collaboration, identification, and sharing of resources.

Most recently, DEA has consulted with the Center for Disease Control regarding its school health education and teacher training programs, as well as its compendium "School Health in America." DEA has continuing coordination activities with the National Institute on Drug Abuse (NIDA) and the Department of Education. DEA participates in meetings, conferences, and seminars, as well as sharing publications and other materials. Some examples include: NIDA provided DEA with technical assistance in developing a videotape on drug prevention entitled "Say No to Drugs—It's Your Decision."

DEA disseminates NIDA and Department of Education publications and pamphlets, as well as DEA materials, to schools, parent organizations and civic groups through a network of DEA field offices.

DEA participated in the NIDA/National Institute on Alcohol Abuse and Alcoholism (NIAAA) first National Conference on Alcohol and Drug Abuse Prevention.

DEA provided assistance to the Alcohol, Drug Abuse and Mental Health Administration's (ADAMHA) recent national strategy conference to develop the new ADAMHA Office for Substance Abuse Prevention (OSAP).

DEA plans to continue working closely with ADAMHA and the Department of Education to identify needs, priorities for action, goals and objectives, and program options for the field of drug abuse prevention. Monthly coordination meetings with ADAMHA and the Department of Education are being held.

In support of the President's drug prevention program, DEA also undertook several internal management initiatives in 1986. First, a demand reduction section was established in DEA Headquarters to provide a comprehensive coordinating role in agency-wide drug abuse prevention efforts. Second, a full-time special agent was assigned in each of DEA's 19 domestic division offices to serve as a field coordinator for this program. Finally, DEA expanded its current drug abuse prevention program by enlisting the leadership and role model efforts of the Explorer Scout element of the Boy Scouts of America, and introduced the highly successful Sports Drug Awareness Program on the international scene by enlisting the efforts of international athletes and coaches.

In conclusion, we have come a long way and more can be expected from the new resources recently appropriated. We have experienced much success, as well as some profound loses. I see the determination of the country strengthened to bring drug abuse under control; and, speaking for DEA, we are proud to be part of this fight.

This concludes my statement, Mr. Chairman. I shall be pleased to answer any questions you or other members of the committee may have.

[The biographies of the witnesses will be inserted in the record at this point:]

JOHN C. LAWN, ADMINISTRATOR

Mr. Lawn was born and raised in New York City. He received a Bachelor of Arts degree from St. Francis College and a Master of Arts degree from St. Johns University. He also served as a Captain in the United States Marine Corps.

Mr. Lawn joined the FBI in 1967 and served in the Savannah, Georgia, and Washington, D.C. Field Divisions. Mr. Lawn also studied the Russian language at the Defense Language Institute in Monterey, California. In 1973, Mr. Lawn transferred to FBI Headquarters and supervised the handling of inquiries from the House Select Committee investigating the assassinations of Martin Luther King, Jr., and President John F. Kennedy. Mr. Lawn's last appointment in the FBI was as Special Agent in Charge of the San Antonio, Texas Field Division, where he supervised the investigation of the assassination of Federal Judge John H. Wood, Jr.

In 1982, Mr. Lawn was appointed Deputy Administrator of the Drug Enforcement Administration and March 1985 was nominated by President Reagan to be Administrator of the DEA. Mr. Lawn was sworn-in by Attorney General Meese on July 26, 1985.

DONALD P. QUINN

Donald P. Quinn is presently serving as the Assistant Administrator for Operational Support of the Drug Enforcement Administration. Prior to that he served as Assistant Administrator for Administration and Management, Drug Enforcement Administration. His previous appointments include Deputy Assistant Administrator for Administration and Management, Assistant to the Assistant Administrator for Administration and Management, Drug Enforcement Administration; Chief, Organizational Analysis Section, Drug Enforcement Administration; Deputy Comptroller Career Program Manager, U.S. Army Material Command, Department of the Army, Alexandria, Virginia; Senior Management Analyst, Theater Army Support Command, Department of the Army, Worms, Germany; Program Analysis Officer, Office of the Comptroller, U.S. Army Material Command, Washington, D.C. and Chief, Management Systems, Army Aviation Material Laboratories, Fort Eustis, Virginia.

Mr. Quinn was born in Scranton, Pennsylvania on July 9, 1940. He received a Bachelor of Science Degree from the University of Scranton in 1962, a Master of Science Degree from George Washington University in 1966, and is a graduate of the National War College (1983). He served with U.S. Army in Korea and Fort Eustis, Virginia as an Adjutant and Company Commander from 1963-1966.

Mr. Quinn and his wife Bonita have four children.

DAVID L. WESTRATE

Mr. Westrate was born on November 15, 1942, in Grand Rapids, Michigan. He graduated from Michigan State University with a B.A. in Criminal Justice. From 1965 to 1971 he served in the United States Marine Corps Reserve.

Mr. Westrate joined the Bureau of Narcotics and Dangerous Drugs (the predecessor agency to the Drug Enforcement Administration) in 1964. Since 1964 Mr. Westrate has held the following positions at DEA and its predecessor agency: Special Agent, Detroit, Michigan and Los Angeles, California; Staff Assistant, Office of Enforcement; Special Assistant to the Deputy Director for Operations; Assistant Regional Director, Miami Regional Office; Deputy Chief of Operations, Office of Enforcement; Executive Assistant, Office of the Deputy Administrator; Deputy Assistant Administrator for Intelligence, Office of Intelligence; Deputy Assistant Administrator for Enforcement, Office of Enforcement; and Special Agent in Charge, Washington Field Division.

Mr. Westrate was named Deputy Assistant Administrator for Operations in June 1984 and on July 5, 1985, he was appointed to his current position of Assistant Administrator for Operations.

Mr. Westrate is married and has three children. He has been the recipient of the following awards: Meritorious Service Award—1971; Sustained Superior Performance—1972; Quality Step Increase—1972; Special Achievement Award—1972; Quality Step Increase—1974; Quality Step Increase—1975; Special Achievement Award—1980; and The Attorney General's Distinguished Service Award—1983.

Mr. Westrate is a member of the International Association of Chiefs of Police and is on the Board of Directors of the Michigan State University Criminal Justice Alumni Association.

PHILIP V. CAMERO

Mr. Camero was born in Aparri, Cagayan, Philippines on June 16, 1938. He received his Bachelor of Sciences degree in 1972 and his Master of Sciences degree in 1975 from The American University.

Mr. Camero served in the United States Air Force from January 1963 through Janaury 1967. Upon leaving the military service, he joined the civil service as the Chief, Computer Programming Unit at Scott Air Force Base from January 1967 through May 1968. Mr. Camero started as a computer programmer at the US Army Personnel Center Computer Directorate in Washington, D.C. in June, 1968. In August, 1969, he was promoted to Chief, Computer Programming Team. He was again promoted in March 1970 to Deputy Project Manager and in August 1973 became Chief of the Directorate Planning Branch. Mr. Camero moved to Macon, Georgia in January 1978 where he assumed the position of Director, Information Technology Division for the Office of Personnel Management. In June 1980, Mr. Camero returned to Washington, D.C. to work at the Drug Enforcement Administration as the Deputy Assistant Administrator, Office of Information Systems.

Mr. Camero is married and has one daughter.

GENE R. HAISLIP

Gene R. Haislip is presently the Deputy Assistant Administrator of the Office of Diversion Control, Drug Enforcement Administration. Prior to that appointment, he served as Executive Assistant to the Administrator, Drug Enforcement Administration. Previous appointments include Assistant Chief Counsel; Acting Assistant Administrator for Program Planning and Evaluation; Deputy Assistant Administrator for Program Planning and Evaluation; Deputy Assistant Secretary of Health, Department of Health, Education and Welfare; Chief of Congressional Relations; Special Assistant, Office of the Deputy Director, Bureau of Narcotics and Dangerous Drugs; and Attorney, Bureau of Narcotics and Dangerous Drugs, Washington, D.C.

Mr. Haislip was born in Danville, Virginia, on July 14, 1938, and grew up in Norfolk, Virginia. He received a Bachelor of Arts Degree from the College of William and Mary (1960), L.L.B. from the College of William and Mary (1963), and L.L.M. from George Washington University (1966).

JAMES J. HOGAN

Mr. Hogan was born October 9, 1940, in Lexington, Kentucky. He is a graduate of the University of Kentucky with a Bachelor of Science degree in Business Administration with a major in accounting. He is a member of the American Institute of Certified Public Accountants (CPA) and maintains a current license with the State Board of Accountancy, State of Kentucky.

Mr. Hogan was employed by a CPA firm and was Controller and later Treasurer of the retail discount group of a conglomerate in Louisville, Kentucky before entering on duty as a Special Agent of the Federal Bureau of Investigation (FBI) in January 1971.

Mr. Hogan was assigned to the El Paso, Texas and Dallas, Texas offices of the FBI before being transferred to FBI Headquarters as a Supervisor of the Budget Formulation Unit. He has served as Chief of the Budget Unit, Chief of a Program Evaluation Unit and Chief of the Audit Unit of the FBI.

In November 1982, Mr. Hogan was assigned to the Drug Enforcement Administration (DEA) to establish an Audit Section in the Planning and Inspection Division. For his work here, Mr. Hogan received the Association of Government Accountants, Washington Chapter, Outstanding Achievement Award in 1984. In July 1984, he was assigned to the position of Controller of DEA.

JAMES K. WILLIAMS

James K. Williams is presently Budget Officer of the Drug Enforcement Administration. Prior positions held have been in the field of Financial Management in the Drug Enforcement Administration and its predecessor agencies, the Bureau of Narcotics and Dangerous Drug in the Department of Justice, and Bureau of Narcotics in the Treasury Department.

Mr. Williams was born in Paintsville, Kentucky on July 26, 1936. He attended the University of Baltimore and received a Bachelor of Science Degree in Accounting in 1963.

Mr. Williams is married to the former Carolyn Larson, and they have two children.

COCAINE SEIZURES, PRICE AND AVAILABILITY

Mr. DWYER. Thank you, Mr. Lawn.

On page 4 of your statement you talk about cocaine, the amount of cocaine seized increased by 49.4 percent, while marijuana increased by 9.4 percent. What has that done to the street price?

Mr. LAWN. The street price, Mr. Chairman, either has remained stable or has been reduced. In the case of cocaine, there has been a reduction in street price and this reduction is one that had begun several years ago.

Mr. DWYER. Is the price of drugs subject to the vagaries of the market place like most other products, in the case of supply and demand?

Mr. LAWN. Yes, sir. There certainly is a direct correlation between the price of the drug and the availability of that drug on the market.

Mr. DWYER. With an increase in seizures of almost 50 percent in cocaine, does that mean that there has been a significant increase in the amount of cocaine coming into the country?

Has it increased by some tremendous amount to be able to carry that type of seizure loss and at the same time have a reduction in price?

Mr. LAWN. Yes. Certainly, a cultivation in South America has increased substantially.

Mr. DWYER. Then let me phrase the question this way. Can you give me an estimate of how much cocaine was coming into the country in 1982, 1983, 1984, 1985, 1986 up to the current year?

Mr. LAWN. No, sir. We can give you an estimate of the cocaine based on a number of figures, such as emergency room admissions, and price, for example, but that is a variable. I can't give you a fixed amount.

I can give you a range between this amount and that amount consumed within the United States. I could say, for example, between 75 and perhaps 140 metric tons.

Mr. DWYER. A year? A day? A month?

Mr. LAWN. A year.

Mr. DWYER. A year?

Mr. LAWN. Yes, sir.

Mr. DWYER. So it has gone from 75 to——

Mr. LAWN. No, sir. I am saying that in a given year, last year, for example, I don't have the exact figure, but I would say somewhere between 75 and 140 metric tons of cocaine entered the United States.

Mr. DWYER. Can you come up with the same type of figure for the year before and the year before that?

Mr. LAWN. Yes, sir.

Mr. DWYER. Can you do that for the record, please?

Mr. LAWN. Yes, sir. I will.

[The information follows:]

Estimated range of the amount of cocaine entering the United States,[1] *1982–86*

[In metric tons]

Year	Amount
1982	40–65
1983	54–71
1984	75–140
1985	105–107
1986	[2] N/A

[1] Source is the "National Intelligence Estimates."

[2] Estimate for 1986 will not be available until April 30, 1987.

DEA/FBI RELATIONSHIP

Mr. DWYER. You share the responsibility with the FBI for the enforcement of the criminal drug laws. Is that done on a concurrent basis or does one agency supersede the other agency?

Mr. LAWN. No, sir. In 1982, the Federal Bureau of Investigation was given concurrent jurisdiction in Title 21, and in fact, has allo-

cated I think about a thousand agents to work in drug law enforcement, to supplement the work of the Drug Enforcement Administration.

We work closely together. Today, we have supervisors working in FBI headquarters and FBI supervisors working in DEA headquarters. We share space in 17 locations around the country. We work very closely in our domestic enforcement activities.

Mr. DWYER. We understand there has been some discussion about merger of both agencies.

Mr. LAWN. There has been discussion about merger for a number of years; yes, sir.

Mr. DWYER. Would you care to comment on the pros and cons of that type of discussion?

Mr. LAWN. Certainly. I certainly believe that with the scope of the drug problem that we face, it is imperative that we have a single mission agency with the responsibility to enforce the Controlled Substance Act.

The Bureau has supplemented those efforts, but the Bureau also has other priorities such as foreign counter-intelligence, white collar crime and terrorism. I think it is critical with the scope of the drug problem faced by this country that there continues to be a single mission agency responsible for and accountable for the efforts against drug traffickers.

Mr. DWYER. Have you ever extrapolated how much money might be saved if we had a single agency?

Mr. LAWN. No, sir. I have not. Since both agencies work within the Department of Justice, our budgets are prepared in working with one another, so that requests from the FBI are supportive of requests that come from DEA.

As far as the budget requests are concerned, we are not operating at separate purposes. We are doing that work concurrently.

"CRACK" COCAINE

Mr. DWYER. You also mentioned crack and its low price. Why should crack be so available at such a low price?

Mr. LAWN. Yes, sir. Crack is an additional process after the processing of cocaine into cocaine hydrochloride. Because of the manner in which it is used, generally smoked, it can hit the nervous system within six seconds. A very small quantity of crack can be utilized to effect the high, so small a quantity that it can be purchased in major cities around the country for as little as $5.

Mr. DWYER. Can you take a certain amount of cocaine and increase it by adding hydrochloride?

Mr. LAWN. Yes, sir, you can take cocaine hydrochloride, mix it with baking soda and go through a very simple process that can be done in someone's kitchen. The crack can be sold seemingly inexpensively for $5; but, so many grams of crack can be manufactured that actually the price would be substantially more than it would cost someone to purchase cocaine hydrochloride.

The problem we see with crack is the fact that the high is so intense, and the effect on the individual is so overwhelming that the crack user will immediately think about when he or she can come back for more crack.

Dr. Mark Gold from the Cocaine Hot Line has told us that he has dealt with cocaine abusers who didn't feel they had a cocaine abuse problem after having used cocaine for a number of years; however these same individuals who have now tried crack have found that it is almost instantly addictive. These same individuals who were cocaine users for a number of years, now find that their use of crack is out of control.

INTERNATIONAL OPERATIONS

Mr. DWYER. You mentioned a conference in your statement, 13 Latin American nations and five European countries. Is that the one held in Vienna?

Mr. LAWN. No, sir. The conference to which you are referring is the IDEC conference, International Drug Enforcement Conference.

Mr. DWYER. Let's stay with this conference that talks of 13 Latin American nations and five European countries.

Mr. LAWN. Yes, sir, IDEC.

Mr. DWYER. How much cocaine did they seize, those 18 nations? How much heroin have they seized in their own countries, at their own borders? How successful have they been in trying to interdict the flow of drugs?

Mr. LAWN. In the case of Colombia, for example, several years ago, at one lab site, a substantial seizure, 12,000 pounds, was seized and destroyed. They have continued to be effective in Colombia. In Bolivia, as I mentioned, with Operation BLAST FURNACE, 22 cocaine refineries and 24 transshipment sites were seized with a potential for manufacturing 15,000 kilograms a week.

I don't have the cumulative figures from those countries. All of those countries would be involved in cocaine, not in heroin seizures.

Mr. DWYER. What constitutes the principal market for cocaine, what country?

Mr. LAWN. Colombia predominantly.

Mr. DWYER. That is the source. I am talking about the retail market.

Mr. LAWN. The major retail market is the United States.

Mr. DWYER. By a very large amount?

Mr. LAWN. Yes, sir. Initially, a source country like Colombia said that the United States was responsible for the actual cultivation of coca, because if it weren't for our demand, they would find some other commodity to use for their economy. Now, the cocaine problem has surfaced throughout the world, so while we are still the number one consumer, most countries of the world are concerned about the potential of cocaine abuse within their own societies.

DEMAND VS. SUPPLY REDUCTION

Mr. DWYER. Of the monies we are spending in our war against drugs, we are spending about a six-to-one ratio on supply reduction versus demand reduction, if I remember the Attorney General's statement.

Does that sound accurate?

Mr. LAWN. I am sorry, Mr. Chairman, I don't know the ratio.

Mr. DWYER. I think he said we are spending about six-to-one. That is the ratio.

Mr. LAWN. Yes, sir.

Mr. DWYER. Do you think we should be spending more on market reduction rather than supply reduction?

Mr. LAWN. No, sir. I think that enforcement is absolutely critical. I think that we must be dismantling these major organizations, but at the same time we must begin a serious effort to do something about demand reduction.

I don't think that we can sacrifice the enforcement effort, the effort to get the traffickers out of the business, to sacrifice that in order to work on demand reduction.

I think both must be done in balance, but I, for one, take great singular pleasure in recognizing that in DEA's efforts to seize assets, the assets that we are taking from traffickers, are now being used in demand reduction. There is something wonderfully ironic about having the trafficker pay for the problems that he causes within our society.

ASSETS SEIZURES

Mr. DWYER. Mr. Rogers.

Mr. ROGERS. Thank you, Mr. Chairman.

Let me ask you about your asset seizures that you just talked about. In 1985 I am told you seized $255 million worth of assets. In 1986, that increased to $386 million worth of assets; is that correct?

Mr. LAWN. Yes, sir, that is.

Mr. ROGERS. What impact, if you can tell, have these measures had on the big traffickers?

Are we beginning to disrupt their operations to the point that they are feeling the results of these asset seizures?

Mr. LAWN. Yes, sir. I believe that we have disrupted their activity, and that they are experiencing problems. Historically when we would make arrests at mid-level or at the upper levels they could have readily been replaced because of the tremendous wealth that is engendered by drug trafficking.

Now, with asset seizures, the information we are receiving is that this is having a major impact on the trafficking organizations. Trafficking organizations are changing their patterns of activity. Threats against enforcement personnel in the major countries are increasing, and we think that these threats are surely a sign that we are having some success.

ASSET REMOVAL TEAMS

Mr. ROGERS. You are requesting $2.8 million and 30 new positions to establish asset removal teams.

Mr. LAWN. Yes, sir.

Mr. ROGERS. This would be in Miami, Chicago, New York, Houston, Washington and San Francisco, and for expanding the San Diego team. How would those new teams contribute to what you are already doing?

Mr. LAWN. Initially, when we began the asset program, we began it in one office, in our San Diego office. It was effective in San Diego. We expanded it to several other offices, and based upon the

success, we now believe that we should have an asset removal team in each of our 19 divisional offices around the country.

With this enhancement of personnel, we are requesting 20 special agents to participate in these teams, and these teams will be different from the criminal team that does the investigation. As the case is ready to be indicted, the asset team will then move in and prepare a profile of the financial worth of the trafficker, so that not only can we hope to have the trafficker prosecuted, but we can go after whatever monetary gain he has enjoyed from his trafficking activities. We feel by having these teams in each of our offices around the country that we will have an increasingly positive impact against the drug trafficker.

Mr. ROGERS. What would a team consist of?

Mr. LAWN. A team would consist of several special agents, a prosecutor from the U.S. Attorney's Office, and support personnel.

Mr. ROGERS. Such as?

Mr. LAWN. Someone to put developed information into the computer, clerical personnel, and stenographic personnel.

Mr. ROGERS. Would you have CPAs or financial experts? Is that where the money would have gone?

Mr. LAWN. No, sir. We have the capability within our special agent work force, our backgrounds are diverse. We have individuals within the organization who have, for many years, worked on financial investigations.

This would not require the influx of additional personnel, although in our teams we include personnel from the IRS, and we use any expertise that we can find.

Mr. ROGERS. You say that you seized around $386 million worth of assets in 1986. Can you tell us what you did with it, how much you realized out of that?

Mr. LAWN. Of the $386 million, about $140 million was in cash. The Department of Justice, through the Assets Forfeiture Fund, returned to the Treasury in excess of $50 million during 1986. Based upon our ability to share assets with State and local counterparts working in drug enforcement matters, the Department shared with its State and local counterparts in excess of $24 million.

Mr. ROGERS. Is that the first year that that has been done?

Mr. LAWN. The first year was in 1985, based upon our ability to work on assets from the Comprehensive Crime Control Act of 1984, and 1987 is the first year under the Anti-Drug Abuse Act of 1986 where we had that facility.

Mr. ROGERS. How much went back to the States?

Mr. LAWN. About $24 million.

Mr. ROGERS. How was that allocated to them?

Mr. LAWN. For example, when a local or State law enforcement agency works with DEA or with any other Federal law enforcement agency and the case is brought to trial, the individual entity, be it local or State government, has 30 days to file a request to share some of the assets seized.

Under the Comprehensive Crime Control Act of 1984 we have administrative authority to seize up to $100,000. Anything over $100,000 requires a judicial process, unless the defendant wants the court to look at the seizure.

Based upon the effort of the State and local governments, the determination is made for equitable sharing. If, for example, the Los Angeles Police Department worked hand-in-hand with DEA on a case in which $5 million in cash was seized, they would be entitled to up to 90 percent of whatever was seized in terms of cash.

Mr. ROGERS. Who makes that determination as to who gets what, when?

Mr. LAWN. It really is made jointly. The Los Angeles Police Department, in filing their requests, indicate what they felt their involvement in the case was. We would review that involvement, discuss it with them, and agree or disagree. We have had no disagreements that have come to me about the sharing of those assets.

OPERATION PISCES

Mr. ROGERS. Can you give us some additional details on the PISCES Program? What kind of success you are having in your efforts to combat money laundering?

Mr. LAWN. Yes. In general PISCES is an ongoing operation. It is a money laundering investigation.

In one part of the country we have seized about $25 million as a result of the PISCES operation. It is ongoing, however, and I prefer not to get into specific detail on it.

ASSETS MANAGEMENT

Mr. ROGERS. You said of the $386 million worth of assets recovered, $140 million I think you said was cash, and that you returned around $50 million to the U.S. Treasury.

Mr. LAWN. Yes, sir.

Mr. ROGERS. And you shared some with the local police departments. What happened to the rest?

Mr. LAWN. Some continues to be tied up, as evidence in the judicial process, and other money which hopefully will be shared with our State and local counterparts is tied up in problems associated with getting the administrative handling of those assets taken care of. Some goes to seized assets management expenses.

We have a tremendous backlog of requests from our State and local counterparts as a result of this asset sharing program, and that is something we are working on.

Mr. ROGERS. That is getting to be a rather huge program, with $386 million last year.

I assume this year it would be that much or more. That is getting to be a rather hefty amount of money and property. I assume that you have got a whole host of property on hand in one form or the other.

How are you handling the physical assets, other than cash that you seize?

Mr. LAWN. The assets are all turned over to the United States Marshals Service. They are the custodian for the assets. In some cases the actual handling of the property may be by hiring an individual familiar with horses, if we seize race horses, and have that individual take care of them, and the money to take care of those horses will actually come out of the Assets Forfeiture Fund itself.

The monies associated with taking care of the seized assets actually comes from within the Fund. It is not something that requires any additional expenditure of money outside the Fund itself.

INTERNATIONAL MATTERS

Mr. ROGERS. On the international front, eradication, extradition matters, the program to control the chemicals used in processing cocaine, the CHEMCON Program, and so forth, can you tell us a little about the division of responsibility between you and the State Department, for example, on drug eradication?

Mr. LAWN. Yes, sir. We work very closely with the Bureau of International Narcotics Matters (INM), in the State Department. The State Department would do the funding, for example, of an eradication program in a given country. They would work with DEA on the actual planning of the eradication, and in some cases the verification of the eradication program would become the responsibility of DEA and representatives of the State Department. We work very closely with them.

Mr. ROGERS. And how would you assess the efforts to eradicate?

Mr. LAWN. I think, in general, the efforts have been very successful. Five years ago, there were two countries involved in eradication efforts, with source countries believing that it was a United States problem.

Now, there are, I believe, 14 countries involved in eradication efforts, and every country in the world now concedes that drug abuse is either a real problem or has the potential for becoming a real problem within their own society. So I think the efforts are generally very good.

Mr. ROGERS. Would you say the same about the CHEMCON operation? That is, the control of chemicals used to process cocaine?

Mr. LAWN. Yes. The CHEMCON program has been a most effective program. We would like to see programs like the Chemical Control Program expanded, and have other countries in the world initiate programs similar to the one initiated in the United States.

Mr. ROGERS. Is there anything that Congress can do to help in the efforts between you and State, either in terms of encouraging State or in terms of legislation in any of these efforts?

Mr. LAWN. Thank you, but I think that we are doing what can be done. I don't believe that there is a need for additional legislation at this point to assist in the diversion program. Certainly, we would like to go to the conference in Vienna with the message that our Congress is most supportive of any country that would be involved in working in programs like the CHEMCON Program. But, as far as legislation at this point, I can't think of any.

Mr. ROGERS. It is my understanding that some of the South American countries, the cocaine countries, many of them are on the verge of an anarchy as a result of enormous power amassed by the drug traffickers, indigenous traffickers. Is that a correct assessment?

Mr. LAWN. Yes, sir. It certainly is. When we talk in our country about threats and about intimidation, we need only look at a country like Colombia, where the Minister of Justice, their Attorney General, was assassinated. His replacement, after his tour of duty

was over became a Colombian ambassador to an Iron Curtain country. He was shot five times in an assassination attempt.

Twelve of their Supreme Court judges were killed. Thirty judges were killed. The editor of a newspaper was killed. Thirty reporters were killed for writing articles supportive of anti-drug efforts.

Several hundred enforcement personnel involved in programs are killed each year. Not only was a very close associate of DEA from the Colombian National Police killed within the past six months, but at the time of his assassination, his wife and two children were also shot.

The Government of Colombia is experiencing some very, very difficult times because of their very strong stance against the drug traffickers.

EXTRADITION PROBLEMS

Mr. ROGERS. Has that changed since you extradited——

Mr. LAWN. Carlos Lehder.

Mr. ROGERS. Yes.

Mr. LAWN. It has changed only in that the extradition of Carlos Lehder was a clear indication to the world that Colombia is not backing down on their very strong stance against drug traffickers, because they see the potential, that drug traffickers with the power that drug traffickers and their finances have for actually destroying the society as it currently exists in Colombia and Bolivia and many other countries in South America.

Mr. ROGERS. Has there been any retaliation or attempted retaliation by these people since his extradition?

Mr. LAWN. No, sir. Information always surfaces from sources, some reliable, some not so reliable, about the potential for such activity, but we have not seen any attempts at retaliation.

INTERNAL INSTABILITY IN OTHER COUNTRIES

Mr. ROGERS. Are there other countries in the same throes as Colombia, facing internal instability because of the local drug traffickers?

Mr. LAWN. Yes, sir, certainly. Bolivia is a country that has those same concerns. Peru would have those same concerns. Terrorist activity is increasing in Peru.

That is just in this hemisphere. Mexico is recognizing increasing problems. The Mexican Government has told us that they are concerned because they see an increasing number of weapons being smuggled from the United States into Mexico, so each of these countries potentially are concerned about problems within their own society.

HEROIN PRODUCTION

Mr. ROGERS. Just a minute's worth here about heroin. Is Iran still the largest source of poppy out of the Asian nations?

Mr. LAWN. Yes. The golden crescent, Iran, Afghanistan, and Pakistan, accounts for almost 50 percent of the heroin that comes into the United States. Iran probably is the greatest source for heroin.

Mr. ROGERS. Can the sources in Iran in any form or fashion be linked to the Iranian Government?

Mr. LAWN. No, sir. I have no information of a direct link between the Government of Iran and the cultivation of poppy in Iran. Those countries traditionally have been source countries for opium poppy, and the cultivation in those countries unfortunately continues to increase.

Mr. ROGERS. Who cultivates it in Iran?

Mr. LAWN. Farmers, substantially, because Iran also has a tremendous drug abuse problem internally. Five years ago, the Government of Pakistan professed that there was no drug problem, even though Pakistan is another major source country for opium. Now, the Government of Pakistan is saying that, within this short span of five years, their addict population has gone from zero to 500,000.

Mr. ROGERS. How does the poppy get out of Iran physically? Where does it go to?

Mr. LAWN. The poppy goes from Iran probably into Pakistan. From Pakistan through Europe and other countries, but Europe predominantly, through India, and then through a network of other countries.

Mr. ROGERS. What about Turkey or Lebanon? Is that a transit country for Iranian poppy?

Mr. LAWN. Yes, sir, it is.

Mr. ROGERS. Both are?

Mr. LAWN. Both are, yes, sir.

Mr. ROGERS. Major?

Mr. LAWN. Let me turn to Dave Westrate, our Chief of Operations.

Mr. WESTRATE. Yes, sir. The heroin from that part of the world, I think is a great concern as would be Afghanistan. The flow is from Afghanistan into Pakistan and then into the United States. We are seeing some transiting through Iran, but as Mr. Lawn states, the user population in Iran absorbs an enormous amount of heroin that is trafficked there.

In Lebanon we do see the flow of heroin but also some major hashish cultivation and trafficking in that part of the world.

Mr. ROGERS. Where does that hashish originate?

Mr. WESTRATE. In Lebanon? In the Bekaa Valley and up in that area.

Mr. ROGERS. It originates in Lebanon?

Mr. WESTRATE. Yes, sir, and most of that is shipped to the U.S. in cargo containers on commercial ships.

Mr. ROGERS. Mr. Chairman, I have far exceeded my time. I have more questions. I will come back later.

ASSET FORFEITURE PROCESS

Mr. DWYER. The assets you seized, they are ultimately turned over to the Marshals Service; is that correct?

Mr. LAWN. Yes, sir.

Mr. DWYER. How is that going? Are you pleased with the way that is working out?

Mr. LAWN. Certainly, we are pleased with the asset program. We think that this is having a tremendous negative effect on traffick-

ers. We would like to see the procedure accelerated so that State and local counterparts who work with us receive the assets to which they are entitled under the law considerably more quickly than they are now receiving them.

Now, the turnaround time for those assets is in excess of 100 days. I believe GAO did an audit indicating about 102 days turnaround time. We would like to see a turnaround time of 30 days, so that local police can be able to plan ahead as far as their enforcement activities are concerned, based upon the monies they know they are entitled to.

Mr. DWYER. What you are really saying is you would like to see the Marshals Service turn it around quicker, is that it?

Mr. LAWN. I would like to see DEA, as well. All of us have some culpability in the problem

Mr. DWYER. I am not trying to play one agency against the other.

Mr. LAWN. No, sir. I realize that.

Mr. DWYER. I just want to find out if you are really pleased with the way the Marshals Service is handling it.

Mr. LAWN. I am not pleased with the way any of us are handling it, quite frankly, sir.

ORGANIZED CRIME DRUG ENFORCEMENT

Mr. DWYER. Organized crime drug enforcement, you didn't ask for any increase in that area, nor in the drug supplemental. Can you tell us why? I thought this was kind of your major target at some point.

Mr. LAWN. Yes, sir. The Congress with the $60 million that we received in the Omnibus Drug Supplemental Appropriations Act of 1987, placed us in a position where we received tremendous support as far as agent resources are concerned.

This year, we will graduate almost 450 new agents. The agents, who are currently in training, or will be training this year, will be a part of our entire enforcement effort, the organized crime effort, cocaine effort, and heroin effort.

In 1988, we are focusing on those areas where we feel that there is a shortfall based upon fiscal constraint ADP is a major problem. The asset program is a major problem. The $24.6 million we are asking for is where we feel the focus should be.

AUTOMATED DATA PROCESSING REQUEST

Mr. DWYER. You mentioned ADP. You are requesting 26 permanent positions, and also an estimated 100 contract positions, and $8 million for field data entry support. Tell us a little more about that.

Mr. LAWN. Mr. Camero is in charge of our Office Automation Program.

Mr. CAMERO. I will be very happy to, sir.

Basically, for that part of our program, the workload that is currently in the field divisions relates to the need to input information into various information systems, as well as to retrieve information from them. Primarily, it is to input information such as fiscal and intelligence information.

The package is constructed in such a way that we propose to put contract personnel out in the field divisions as well as to support a certain number of government employees who will retain the institutional knowledge, should the contract lapse or we have problems with contractor personnel. It is basically to support the field function.

ORGANIZED CRIME DRUG ENFORCEMENT

Mr. DWYER. Going back to the organized crime enforcement effort, does the FBI identify organized crime as their special area to investigate?

Mr. LAWN. The FBI has identified organized crime as one of their criminal priorities, yes. If, Mr. Chairman, you are referring to the Organized Crime Drug Enforcement Task Force they are requesting additional personnel for the task forces. That is true.

We have not. We have many assets involved in the OCDETF program, that is the Organized Crime Drug Enforcement Task Force program. In 1987, we plan to do an internal audit of our participation in the OCDETF program to see if additional support is necessary. Right now we think, and the U.S. Attorneys concur, that the support for that program had only one serious failing. That failing was not enough attorneys, which is being addressed by the current U.S. Attorneys budget request.

Mr. DWYER. At one point the GAO was critical of the DEA practice of assigning personnel to that particular unit on a detail basis, instead of designating them on a full-time basis. Would you care to comment on that?

Mr. LAWN. Yes, sir. I think for management control purposes, it is absolutely critical that we maintain control of our own personnel. It would be a very difficult thing to take X number of DEA agents, 500 agents for example, and have them assigned on a full-time basis to the Organized Crime Drug Enforcement Task Force program. In effect we would be creating a new entity.

This is something that was tried in the mid-seventies with a program called ODALE, Office of Drug Abuse Law Enforcement, which was operated out of the White House, where people were specifically designated.

From a management viewpoint, I think that approach would be a mistake. I would rather assign the work hours to the program rather than assigning or divorcing agents from DEA to work on the OCDE program.

Mr. WESTRATE. If I could just add one comment. The Organized Crime Drug Enforcement program is supposed to address the most complex, major cases that we have, and an investigation is developed a considerable way before it is nominated and then accepted into that program.

The difficulty here is that once the case goes over, if there is a cadre of assigned people, you would have to transfer the case to those people, which would be very inefficient, because the case agents, the agents who are handling the informants in the case, the agents who are familiar with the entire background, are the ones who should pursue the case. So, we assign the agents who worked that investigation over to the program for the duration of

that investigation, and it works much better. That, of course, turns up as agent work hours assigned on a temporary basis, but, in fact, it is more efficient.

Mr. DWYER. Is it a safe assumption to say that most of the drug importing and distribution is being done by organized crime?

Mr. LAWN. Generically, organized crime? Organized crime families? Certainly, organized crime families in Colombia have control of cocaine trafficking. Organized crime families in terms of La Cosa Nostra, no, sir. La Cosa Nostra does not have any strong element of control in cocaine and in marijuana. Their predominant role was in heroin, and their power has been diminished severely in the past 18 months by some excellent prosecutions in the United States.

Mr. DWYER. So when you talk about organized crime, you are talking about the organized crime families domiciled in the country of source.

Mr. LAWN. Yes, sir. The organized crime in that line of thought, the Colombian organized crime families do control cocaine trafficking.

OPERATION BLAST FURNANCE

Mr. DWYER. You mentioned Operation BLAST FURNANCE in your statement.

Mr. LAWN. Yes, sir.

Mr. DWYER. Is that continuing?

Mr. LAWN. Yes, sir. Operation BLAST FURNANCE was initiated at the request of the Bolivian Government last year. We, the United States Government, were able to furnish Black Hawk helicopters to assist the Government of Bolivia in attacking refineries in their country.

DEA provided manpower for training and for onsite supervision. At the end of November, the Black Hawk helicopters left Bolivia. They were replaced by other U.S. helicopters. Bolivian pilots are currently in training to fly those helicopters. So operation BLAST FURNANCE will continue this year and, hopefully, for the foreseeable future.

INTELLIGENCE—BOLIVIAN REFINERIES

Mr. DWYER. Does your intelligence indicate that any of those laboratories in Bolivia have re-opened?

Mr. LAWN. Yes, sir. Our intelligence has indicated to us that during the course of the time period, the down period from November until March, several of those refineries have re-opened and are processing cocaine. They will be the immediate targets when operation BLAST FURNANCE begins in the next few weeks.

Mr. DWYER. Mr. Rogers.

BUDGET REQUESTS FOR COCAINE, HERION AND DANGEROUS DRUGS

Mr. ROGERS. Your 1988 request calls for no increase for cocaine, heroin or dangerous drug clandestine lab investigations. Can you explain that?

Mr. LAWN. Yes. As I mentioned earlier, with the $60 million that we received in 1987 as a result of the Omnibus Drug Supplemental Appropriations Act of 1987, resources were provided for us to ad-

dress the area of clandestine labs. We are putting substantially more manpower into clandestine labs. We are hiring additional diversion investigators and hiring almost 450 additional special agents to handle a host of other enforcement priorities.

Our request in 1988 is one in which we hope to address those areas in support of enforcement, which were not addressed in the Omnibus Drug Supplemental Appropriation Act of 1987.

FBI/DEA ENGINEERING RESEARCH FACILITY

Mr. ROGERS. Is there anything in your 1988 budget request for the joint FBI/DEA engineering lab building, or is that all in the FBI?

Mr. LAWN. No, sir. The funding for that is coming out of the FBI budget.

Mr. ROGERS. Not out of yours?

Mr. LAWN. No, sir.

A-76 MANAGEMENT AND PRODUCTIVITY SAVINGS

Mr. ROGERS. Your 1988 request calls for A-76 savings in productivity totalling 58 positions and $911,000, leaving you with a net increase of 50 positions for 1988. Can those reductions be absorbed without substantial impact to your operations?

Mr. LAWN. I would have to say no, because those 58 positions come from not one particular element within the Drug Enforcement Administration, but come from throughout the organzation. They come from training and from the ADP area.

It will certainly cause disruptions. Can it be done? Yes, it can, but not without disruptions.

Mr. ROGERS. Is there a portion of it that can be done without disruption?

Mr. LAWN. When did I stop beating my wife?

Mr. ROGERS. I think you have answered it.

Mr. LAWN. Thank you very much.

GENERAL COMMENTS

Mr. ROGERS. Mr. Lawn, I want to congratulate you and your people, in closing here, for my part, on a good year. I think you have certainly, to use an old phrase, set the woods afire. Probably physically you have done that, too.

But the seizures that you have made and the raids that have conducted around the world are a great tribute to you and the dedication and courage of your people, so I congratulate you.

Obviously you know as well as the rest of us that that is only scraping the surface. We are still flooded with unparalleled floods of drugs and narcotics, in spite of the efforts of your good people, which I guess all goes to show that the answer is not in law enforcement as much as it is in perhaps trying to change the attitudes of people about using the drugs here or elsewhere. I guess that is a chore for the rest of us, but you and your people are doing a good job.

I want to congratulate you.

Mr. LAWN. Thank you very much. I will pass that on to a very dedicated work force.

EDUCATIONAL PROGRAM

Mr. DWYER. In talking about seized assets in your statement, do you use any of the these assets for an educational program?

Mr. LAWN. Yes, sir.

Mr. DWYER. What percentage?

Mr. LAWN. Unfortunately, a small percentage. I say unfortunately a small percentage, because with the seized asset program, the mandate to State and local law enforcement authorities is the money that is derived from the asset program should be used for law enforcement purposes, and in the case of major police departments, some consider putting police officers in class for drug education a good investment.

That is a law enforcement purpose. The Los Angeles Police Department, Chief Daryl Gates uses some of the money for education. It is something endorsed by the International Association of Chiefs of Police, and it is something that I would certainly endorse.

Mr. DWYER. I will come back to that in a second, but does your agency get to use any of the money for education?

Mr. LAWN. No, sir.

Mr. DWYER. It does not.

Now then, you would support a provision that would require local law enforcement agencies to use a certain percentage of their money for educational purposes?

Mr. LAWN. Yes, sir. Some States, in fact, require that when a police department within a given State receives additional money, that a certain portion of the money they receive must go into rehabilitation, must go into treatment, and I would certainly like to see increased efforts to have that money go into education.

DRUG EDUCATION FOR AMERICANS IN EUROPE

Mr. DWYER. There is no doubt about that. Going back to your statement, you mentioned I think you are going to hold a conference in Europe.

Mr. LAWN. We held a conference in Brussels in the spring of 1986.

Mr. DWYER. Was that sort of an educational program?

Mr. LAWN. Yes, sir. We had spoken to the U.S. embassies in Europe, and wanted to initiate a program wherein American dependents attending embassy schools would get the benefit of some drug education programs that we had initiated. We held a conference for our European embassies, to shown them what was available. So that American children going to school in embassy schools in Europe could get the benefit of the same programs that we are making available within the United States.

Mr. DWYER. Is that a concern with our our embassy families going to school in Europe, families of Service people, and other Federal employees? Do we have an indication that that is on the rise?

Mr. LAWN. Yes, sir. Our establishing that program in Europe was based upon the request of embassy personnel and of the joint military command in Europe, to ensure that American dependents overseas were given drug education programs. It was initiated only because there was an interest in that program.

Mr. DWYER. I am led to believe that the military has such a program now.

Mr. LAWN. Yes, sir. And we work very closely with the military in Europe on that program. We try to share the same assets, the same experiences, and are putting together videotapes or are bringing together editors in the United States involved in drug education, to share with the military.

We think it is part of what is necessary on the demand side.

SPORTS DRUG AWARENESS PROGRAM

Mr. DWYER. Tell me, do you bring programs into the school districts in this country?

Mr. LAWN. Yes, sir, we do.

Mr. DWYER. You do?

Mr. LAWN. Yes, sir.

Mr. DWYER. Do you want to describe one of those programs?

Mr. LAWN. Yes, sir. Let me describe for you a program that was begun several years ago. The genesis was the program that a high school coach in Washington D.C. came to us and asked——

Mr. DWYER. I think I know that program.

Mr. LAWN. This program has now expanded to every State within the United States. It is called our Sports Drug Awareness Program. We have spoken to countries throughout the world about using it, at least in their own countries, and this is how it has expanded worldwide.

DEA EDUCATIONAL EFFORTS

Mr. DWYER. I guess what I am trying to get a handle on is what type of a program do you put on in Bonn, Germany?

Mr. LAWN. In Bonn, Germany, we would do, of course, what we did in Brussels. We would bring an educator, a principal of a school, who would sit down with educators, U.S. teachers who are working in those schools, vocational counsellors, to talk about how to deal with an individual who comes in and says he has a drug problem.

We are the facilitators that bring together a Dr. Mark Gold, who talks about the cocaine problem and the principal in the school in the Northeast who has a very effective drug education program to discuss the drug problem.

We just facilitate the sharing of information currently available domestically in international schools.

Mr. DWYER. How many people will be at a conference like the one you anticipate to incorporate in Bonn?

Mr. LAWN. The one that I actually did in Brussels involved about 100 persons from U.S. embassies in Europe.

Mr. DWYER. This same type of group that you take to Bonn and Brussels, would you take it into a school district in this country?

Mr. LAWN. Yes, sir. They are the same people.

Mr. DWYER. And have you taken them into school districts?

Mr. LAWN. Yes, I have. As recently as last week I brought this same group to Massachusetts, where we spoke to 2,000 educators in the State of Massachusetts.

72-165 O—87——35

Mr. DWYER. Who has to originate the idea, the concept, the State and DEA or the State educational association or the State commissioner of education?

Mr. LAWN. Or all of them?

Mr. DWYER. Or altogether?

Mr. LAWN. Yes, sir. In our case, the Governor of the State of Massachusetts has a drug education program, and asked if we would come up and discuss with educators from throughout the State of Massachusetts the programs that exist throughout the country. We did the same thing in San Diego recently with 300 educators.

Mr. DWYER. Have you ever done it in New Jersey, which is my home State?

Mr. LAWN. We are currently working with Governor Kearn in New Jersey. We have done smaller programs, but none to the extent as the one we have just completed.

Mr. DWYER. You say you were working with the Governor? In what regard? To plan such a program?

Mr. LAWN. Yes, sir. I spoke at the National Governors Conference which was held in New Jersey, and explained to the Governors the drug education programs which we initited and are effective in the States.

The Governor of New Jersey hosted that conference. He was most interested in establishing an educational program within the State of New Jersey, and we are currently working with him to see if we can participate in that program.

Mr. DWYER. Thank you. We will have some questions that we will submit to you and you will supply the answers for the record.

[Questions and answers for the record follow:]

QUESTIONS FROM MR. DWYER

Drug Enforcement Administration

Domestic Enforcement

Question:

To what extent do the FBI and DEA jointly develop cases?

Answer:

Over the past four years, the FBI and DEA have developed and maintained a close working relationship. In addition to the Organized Crime Drug Enforcement Task Force cases, the FBI has over 300 joint drug investigations with DEA. The FBI/DEA relationship is based on the Implementation Directive of March 12, 1982, which defines specific roles for each agency.

Common guidelines on informants, undercover activities, and investigations are being developed. This direction will continue with further integration stemming from common national strategies. Common strategies which direct resources against Colombian/South American and Mexican drug trafficking organizations will enable investigators from each agency to work together to dismantle major drug trafficking organizations.

Question:

Have DEA and FBI truly integrated their drug law enforcement efforts or are they working independently?

Answer:

In 1986, DEA and the FBI continued to integrate operations where feasible to promote economy, efficiency and effectiveness.

For example, DEA completed the relocation of its training function from the Federal Law Enforcement Training Center at Glynco, Georgia, to the FBI Academy at Quantico, Virginia, and combined several courses from each agency's curriculum. DEA and FBI instructors jointly teach courses on legal issues, firearms, physical training, special operations and research, management sciences and executive development, and practical exercises. To enhance the effectiveness of FBI special agents, entry level training now includes training in drug law enforcement taught by DEA instructors. In addition, it is not uncommon to find DEA and FBI personnel collocated in several field office operations.

Presently, DEA utilizes the FBI's vehicle maintenance program. Further, DEA is locating its Data Processing Center within the FBI's headquarters to ensure secure computer operations.

To ensure continued progress in the integration of DEA and FBI drug law enforcement efforts, there is a committee for the coordination of FBI/DEA activities which exists to avoid duplication, effect economies and make the operations of the FBI and DEA more effective and efficient. Further, subcommittees meet periodically to identify link-up opportunities, assess progress and isolate obstacles which require elevation for resolution.

OMB Productivity Reductions

Question:

Does OMB expect you to contract out individual positions or functions?

Answer:

OMB expects us to follow the policy in OMB Circular A-76 to compare the price of performing support services with Government employees or commercial sources. In doing so, a thorough management analysis will be completed to determine the most cost effective way to provide these services. Government operations must be made as cost effective as possible before we compete. If commercial sources can provide the same quality service at less cost than the Government, OMB would expect the DEA to contract for the service. If the Government operation proves to be the most cost effective, then the operation would be retained in-house. The A-76 policy does not authorize us to contract for a Government operated function if the contract would cost more. We do have the management option, for activities with 10 or less full-time-equivalent (FTE) employees, to solicit commercial prices without conducting a full management efficiency study of the Government operations, but we must compare total costs and cannot convert if commercial sources are not more economical.

Based on DEA's initial inventory of commercial activities, containing 231 FTE, OMB estimated we could save 58 FTE in 1988. We distributed these potential savings as shown below. The reductions are based on average reductions obtained through the A-76 competitive process and will be appropriately adjusted if we complete our studies and the competitive results prove these reductions were too severe.

We have some concerns that we have included in our inventory positions that cannot be evaluated or competed with commercial sources to determine a more cost-effective operation. We will meet with OMB in the near future to discuss our concerns and propose a revised inventory.

Drug Enforcement Administration
A-76 Reductions in 1988

Program	Positions
Domestic Enforcement	14
DEA Training	3
ADP and Telecommunications	25
Records Management	2
Executive Direction and Control	11
Administrative Services	3
Total	58

OMB Productivity Reductions

Question:

Are there functions within DEA that are possible to contract out?

Answer:

Yes. DEA has already contracted out a number of commercial activities to the private sector. Some examples include:

1) Managerial/administrative training
2) Aircraft maintenance
3) Selected data entry functions
4) Selected computer programming and system design functions
5) Office automation
6) Manual labor supporting the supply equipment functions
7) Selected employees assistance activities
8) Entry of invoice and voucher payments
9) Printing
10) Interpretation and translation
11) Full-field investigations (non-agent personnel)
12) Architectural design
13) Selected research and design of investigative equipment
14) Selected graphics functions
15) Preventive maintenance of radios and office equipment
16) Facilities maintenance of janitorial services
17) Guard services
18) Relocation services

Additional contracts for functions of this type will be pursued in the future as the need arises. DEA is currently pursuing a contract for the processing of asset forfeiture cases which will include additional data entry personnel, and possibly, limited case analysis.

Digital Voice Privacy

Question:

The FBI took the lead in developing and implementing a single, integrated digital voice privacy radio system for FBI, DEA and the Marshals. Are you satisfied with the FBI's progress so far?

Answer:

Although the FBI has the lead for the implementation of the Integrated Digital Voice Privacy (IDVP) radio system, DEA has direct and daily input into the program. Prior to the implementation of an integrated system, many factors need to be considered. This includes issues such as how many radio frequency resources were available to each agency and how many more frequencies would be required to support IDVP. Also, questions regarding the frequency resources within the VHF spectrum versus a combination of VHF and UHF resources were also considered.

The majority of these and other questions have now been resolved. We are proceeding towards the full implementation of IDVP and are satisfied with the progress of the IDVP program.

Question:

How quickly will you be receiving this system in the field?

Answer:

In 1987, DEA will order sufficient fixed, mobile and portable digital voice privacy radios to convert the northeast corridor, including the Boston, New York, Newark and Philadelphia Divisions, to the integrated system. It is our intent to complete the system by the early 1990s.

Question:

Are you reimbursing the FBI for your proportionate share of the cost of the system? If so, how much is requested in 1988?

Answer:

In the President's 1988 budget request, DEA has requested $211,000 for the reimbursement to the FBI for direct staffing provided in support and coordination of the Integrated Digital Voice Privacy System under the FBI's leadership. This amount is a proportionate share of the cost of the management and administrative support of the system. DEA and the FBI are independently funded for the hardware in the system.

Engineering Research Facility

Question:

The FBI has requested funds in 1988 to expand their original design and construction of an Engineering Research Facility in Quantico to include DEA engineering and R&D activities. Why is it necessary for the DEA to collocate themselves with the FBI?

Answer:

At the FBI Academy in Quantico, Virginia, DEA and FBI personnel can consolidate their efforts to research, develop, adapt and provide advanced technical investigative and radio communications devices to its enforcement personnel. There will be little duplication of effort since both agencies will be aware on a daily basis of ongoing and/or proposed projects. Joint contracts will be issued for projects serving both agencies. Laboratories and testing facilities will be shared by both agencies. As a result, both agencies will benefit from this relocation.

Question:

Will the DEA pay a proportionate share of the operations and maintenance costs of the facility?

Answer:

DEA does plan on paying a proportionate share of the operation and maintenance costs of the facility. DEA will occupy approximately 16 percent of that facility. However, at this time, no specific amount has been determined.

Question:

Will DEA experience any costs savings associated with closing down their facilities here in the Washington, D.C. areas?

Answer:

The current annual cost of leased space for DEA's research and engineering function is approximately $178,000. With the move to Quantico, Virginia, DEA anticipates paying a proportionate share of the shared space, operation and maintenance costs of the new joint facility. Because no specific amount has been identified, it now is impossible to report any potential cost savings at this time.

Omnibus Drug Supplemental

Question:

In 1987, the Congress provided DEA an increase of $68,171,000 as part of the Omnibus Drug Supplemental. Can you tell us the status of these appropriations?

Answer:

The $68,171,000 in supplemental funding provided in 1987 has been allocated to program areas of immediate need to allow DEA to achieve the most effective and efficient use of resources. The additional funding will be allocated to the Domestic Enforcement, Foreign Cooperative Investigations, Diversion Control, State and Local Task Forces, Intelligence, DEA Laboratory and Research, Engineering and Technical Operations programs to combat the burgeoning problems of cocaine traffic, manufacture of illicit drugs and to enhance the airwing program. Further, the funding will be used to enhance programmatic efforts in foreign countries that cultivate, process, and serve as transshipment points for the cocaine trade. Cocaine investigative units are being established in major domestic source cities to include emphasis on "crack" cocaine. Also, clandestine laboratory teams are being formulated in Boston, Detroit, Denver, Dallas, Houston, San Diego, San Francisco and Seattle dedicated to the identification and seizure of these labs. The public interest revocation and retail level diversion investigative activities in the Diversion Control program will be emphasized. Also, six new State and Local Task Forces will be established and other existing Task Forces will be augmented. In support of the investigative enhancements, DEA's laboratory services will be augmented. Finally, funding will be used to construct an all source intelligence center to be located at Fort Bliss, Texas, by expanding the El Paso Intelligence Center.

Question:

This supplemental provided an increase of 629 positions for DEA enforcement, almost an 18 percent increase. Are you going to be able to fill all of these positions?

Answer:

DEA expects to have 95 percent of all positions filled as of September 30, 1987. The training schedule during 1987 will permit the filling of the additional 359 agent positions within the total increase of 629 positions appropriated in the Omnibus Drug Supplemental Appropriation Act of 1987. There are eleven basic agent classes of 44 each scheduled to fill these new positions as well as vacancies from existing positions.

Question:

Drug Supplemental funding provided you 315 workyears for these positions, which assumes you will have them onboard for an average of six months. Will you achieve this goal?

Answer:

Based on present hiring plans, DEA projects that it will utilize all 315 workyears in 1987. Further, DEA anticipates reaching 99 percent of the planned total of 5,149 workyears for 1987.

Question:

It appears that you are planning to reprogram resources within your enforcement activity. Why are you planning to shift appropriated funds and positions out of foreign investigations, diversion control and State and local task forces and into domestic enforcement?

Answer:

During 1986, the burgeoning problems of cocaine traffic and the manufacture of illicit drugs reached crisis proportions. In addition to recognizing a need to enhance traditional cocaine investigations, DEA was faced with a requirement to respond to a new drug phenomenon -- "crack" cocaine. Further, the domestic production of illicit dangerous drugs such as methamphetamine, amphetamine, PCP and LSD, as well as new and dangerous drug analogs, continued to play a significant role in the illicit drug market.

This reprogramming action reflects DEA's efforts to reallocate a portion of the resources from the Omnibus Drug Supplemental Appropriation Act of 1987 to areas of immediate need. The major portion of this reallocation involves the movement of 157 positions and $16,764,000 from the Diversion Control program as follows:

- 132 positions and $13,438,000 to the Domestic Enforcement program,
- 25 positions and $1,632,000 to DEA's Laboratory Services program, and
- $1,694,000 for DEA's airwing in the Research, Engineering, and Technical Operations program.

The transfer of positions and associated dollars from the Diversion Control program, to the Domestic Enforcement program, the DEA Laboratory Services program and the airwing, is not a matter of changing priorities, but rather an effort to reallocate these resources so as to reflect DEA's operational requirements and meet the overburdening demands on our resources. Between 1984 and 1986, staffing in the Diversion Control program increased 36 percent and will increase by another 17 percent in 1987. Additional resources at

this time simply could not be absorbed effectively. Further, these resources are urgently needed to enable DEA to focus on the burgeoning problem of the manufacture of illicit drugs in clandestine laboratories. Both diversion of licit drugs and clandestine laboratory investigations fall under the umbrella of dangerous drugs investigative activities. As such, it should be noted that more than 170 of the 241 positions as allocated by Congress are being applied to licit diversion and clandestine laboratory investigations. The remaining positions are being directed towards DEA's primary effort against cocaine as well as the laboratory program required to support that effort.

DEA also seeks to reallocate 37 positions and $1,476,000 from the State and Local Task Forces program, and nine positions and $174,000 from the Foreign Cooperative Investigation program to the Domestic Enforcement program. Those actions will more equitably distribute clerical and administrative support positions to agent positions and will permit DEA to apply investigative pressure against the immediate problems of cocaine and dangerous drug trafficking.

Question:

We are especially concerned about cutbacks in State and local task forces. Don't you think that making State and local law enforcement agencies more aware of the problem and more effective in dealing with it, will produce considerable results?

Answer:

The State and Local Task Forces program is the most effective and productive means to draw on the resources at that level. This program has consistently proven to be an economical way for the Federal Government to achieve significant results in drug enforcement for a minimal investment. The transfer of a portion of the resources provided for this program beginning in 1987 by the Omnibus Drug Supplemental Appropriation Act is only to more equitably distribute support positions to agent positions. The increased agent staff remains intact within this program. DEA will open six new task forces and enhance 12 others in 1987.

Asset Forfeiture

Question:

You request 30 additional positions and $2.8 million to establish asset removal teams in six offices and expand another. How many such teams do you currently have, and how many positions?

Answer:

At present, there are 27 full-time positions dedicated to asset removal teams in DEA field offices. The nine teams average three full-time positions per team and are located in San Diego, Chicago, Miami, Houston, Washington, D.C., New York, San Francisco,

Philadelphia, and Detroit. Asset removal efforts, however, are generally handled as collateral duties and team members are rarely available for uninterrupted asset removal work. It is for these reasons that it is vital that full-time positions be made available for this important work. Experience has shown that dedicated personnel develop an expertise in asset removal which makes them far more efficient and productive in that area than the combined efforts of several people, even though the workyear commitment may be equal.

Question:

On page 20 you identify the results of asset removals by your San Diego team which adds up to about $95 million between 1980 and 1986. Do you have any projections for 1987?

Answer:

In 1986, San Diego was responsible for the seizure of approximately $29 million in trafficker assets. In 1987, that total will probably remain more-or-less constant. There are three full-time team members in San Diego, all of whom are working at full pace. Without additional staffing, it is unlikely that more can be accomplished in 1987. There is of course, always the possibility of an unforeseen large seizure which will boost the projected total beyond the 1986 figure.

Question:

How much do you anticipate seizing with these additional resources?

Answer:

DEA seized a total of nearly $390 million in trafficker assets during 1986. In 1987, we will surely pass $400 million and probably approach $500 million. Because it is now impossible to predict the exact date certain investigations will be terminated and assets seized, it is not possible to provide a firm projection for 1988. We can expect some overall increase due to the increase in workyears being detailed to asset removal team activities and the growing expertise of the personnel staffing those teams.

Question:

What percentage of these seized assets do you eventually return to the suspect?

Answer:

During 1986, DEA returned $2.3 million in assets seized to the owner or lien holder. Measured against total assets seized in 1986, that is a return rate of only 0.6 percent. This is based on current data in DEA's automated assets information system.

ADP Support

Question:

How are field offices currently managing data entry and why do they require additional support?

Answer:

Only limited data entry is performed in the field. Most data entry is accomplished by forwarding forms to headquarters where the data is entered into the appropriate application. Data entry in the field is currently performed by special agents, intelligence analysts and the clerical/technical staff. This type of work results in delays in addressing other investigative and support activities.

Question:

Since you are automating what was apparently a manual or at least less efficient data system, won't there be some personnel savings?

Answer:

There are no anticipated personnel savings since the utilization of contract data entry personnel will allow DEA employees to handle delayed or unaddressed work in a more timely fashion. Since contract data entry personnel are solely dedicated to that task, an additional benefit anticipated by DEA from utilization of these personnel is more timely data entry.

Question:

Local law enforcement agencies have complained about long delays in obtaining their share of forfeited assets as allowed by the Comprehensive Crime Control Act of 1984. Some requests are apparently two years old and the agencies are still waiting. How long does it take DEA to approve such requests?

Answer:

The delay in processing equitable sharing requests is directly related to the delay in processing forfeitures. Because the amount of equitable sharing is based not upon the value of the seizure but upon the amount actually forfeited to the Federal Government, DEA does not process equitable sharing requests until forfeiture proceedings are completed. Given DEA's four-month backlog in processing administrative forfeitures, there is a considerable time lag before processing can begin. In October 1986, the U.S. Marshals Service reported that the average period of time between the date of forfeiture and date of decision on sharing requests at DEA was 102 days. This was at the height of the backlog and processing time has since improved. The U.S. Marshals Service's report also indicated that the requesting agencies contribute to the delay in that nine

percent of the 3,127 requests on file as of October 1986 had request dates later than the forfeiture date. DEA estimates that once the backlog is alleviated, equitable sharing requests will be processed within 10 days of forfeiture. (This applies only to administrative forfeitures valued at or under $100,000. The Attorney General has the authority to rule on judicial forfeitures valued over $100,000.)

Question:

Why are these delays occurring?

Answer:

The delays in forfeiture are caused by a dramatic increase in the volume of seizures and insufficient resources to process the workload. In 1984, DEA seized $84 million in trafficker assets while the 1986 seizure total was $386 million. Further, the Comprehensive Crime Control Act of 1984 changed the ceiling on administrative forfeitures from $10,000 to $100,000, thereby shifting a substantial workload from the court system to seizing agencies. The Act also had the effect of encouraging State and local governments to seek processing of their seizures through the Federal system in order to capitalize on the provisions of the Act. These adopted seizures, coupled with DEA's own increased effort in financial investigations, led to a case workload of 1,000 per month in 1986.

DEA has been the victim of its own success in terms of processing forfeitures and has been unable to match an effective seizure program with an efficient forfeiture processing system. The volume of the seizure caseload is magnified by the lack of resources to process forfeitures. To date, resources have been redirected internally. The total authorized staff for asset forfeiture has recently been increased to 27. In addition, 18 professionals have been detailed from other offices to create a task force to address the backlog. DEA is exploring the feasibility of contracting some of the forfeiture processing functions.

Question:

DEA requests funding for a National Drug Performance Indicators System which potentially will be extended to capture of Federal-wide asset seizure data as well. What would be the relationship of the DEA system to the National Asset Seizure and Forfeiture Program property information system maintained by the Marshals Service to provide Department-wide information on seized assets?

Answer:

The Federal-wide Asset Seizure System (FASS) will be developed as the third component of the Federal Drug Performance Indicator System. The first component, the Federal-wide Drug Seizure System, was implemented in 1987 and the second component, the Federal-wide Drug Arrest System, will undergo development during 1988.

FASS will provide for the collection and summary of statistical information regarding the seizure of assets from drug traffickers by the Federal Government. Like the other components of the Federal Drug Performance Indicator System, it will involve cooperation with several other Federal agencies having involvement in drug law enforcement and may well lead to system and/or reporting modifications within those agencies. It is presently anticipated that the Drug Enforcement Administration, the Federal Bureau of Investigation, the U.S. Customs Service, the U.S. Coast Guard, the U.S. Marshals Service, and the Criminal Division of the Department of Justice will all be involved in this project.

Question:

Does DEA intend for its system to service the Customs Service? If so, has it reached agreement with the Customs Service?

Answer:

Under the umbrella of the National Drug Policy Board, the U.S. Customs Service is a full participant of the National Drug Performance Indicator system.

Foreign Intelligence

Question:

DEA's presence in foreign countries is being expanded. The Administration has also expanded the role and activities of the U.S. intelligence community in an attempt to reduce foreign production and trafficking of drugs destined for the United States. What have been the results of our increased intelligence efforts abroad?

Answer:

The increased intelligence collection has provided the U.S. with a better understanding of the magnitude of the problem in terms of production and trafficking of controlled substances. The insight which has been gained has played a role in the development of short- and long-term planning. We are better equipped to marshal the full range of the U.S. Government agencies from enforcement activities to diplomatic strategies. Several initiatives currently in final planning stages are based, to a large extent, on the enhanced level of intelligence received and developed by DEA.

Question:

Are we obtaining more and better intelligence to target drug traffickers and their organizations?

Answer:

As a result of the increases in personnel and budget, DEA has greatly expanded its intelligence collection and data bases in many of the

Latin American countries. DEA has successfully compiled profiles on the major organizations responsible for production and distribution of controlled substances from that part of the world.

Question:

Has DEA been able to take advantage of the increased intelligence activities or do barriers exist to coordination and sharing of intelligence?

Answer:

Although some legal questions remain regarding the fusion of sensitive/classified information into case files that may be used in a U.S. courtroom environment, DEA has been able to take advantage of many of the assets of the Intelligence Community. Memorandums of Understanding have been formulated and coordinating mechanisms have been established for the sole purpose of exploiting all aspects of the Intelligence Community and the intelligence is flowing quite well.

Organized Crime Drug Enforcement

Question:

Don't OCDE efforts result in prosecution of the major drug organizations, which is the real target of your agency?

Answer:

For most agencies, drug investigations are one of a number of priorities, while for DEA, they are its single mission. Since most OCDE cases progress from DEA cases, the OCDE program can be considered an enhancement of DEA's investigative efforts. DEA targets major drug violators and organizations; however, designation of a case as an OCDE case facilitates interagency investigative and prosecutive cooperation.

Question:

Do you believe you are providing sufficient funds for this effort?

Answer:

The OCDE program has had a rapid growth since its inception and has developed into a stable operating program with significant funding. In 1987, DEA will evaluate the program and its performance levels to determine what operating increases and new resources will be required in the future. If new resources are needed, they will be requested through the appropriate budget mechanism.

Question:

How many of the 762 positions shown as DEA OCDETF represent individuals working on the Task Force Program on full-time basis?

Answer:

The 762 positions shown in the OCDE program for 1988 are determined by an allocation of investigative workhours during each fiscal year. Once the total agent investigative workhours are determined for a particular year, they are converted to agent workyears. For 1988, DEA projects 554 planned full-time agent positions for the OCDE program, while the remaining 208 positions are for field overhead agent workyears and the non-agent positions necessary to support the program.

Training

Question:

How much of your 1986 training fund of $7,235,000 was required for relocation of your facilities from Glynco to Quantico?

Answer:

Total actual funds spent on DEA Training during 1986 was $7,235,000 of which $123,896 was expended for the final stages of the relocation from Glynco to Quantico. The majority of the expenses incurred related to travel of the instructors between Glynco and Quantico, prior to their permanent change of duty station moves, expenses of office moving companies, and rental of office trailers.

Question:

In 1987, DEA will hire and train about 750 additional enforcement personnel. In 1988, the number of new enforcement personnel you must hire and train goes down to 45. Considering the large decrease in training requirements, why don't we see an associated reduction in your 1988 request?

Answer:

In the Justification of Adjustments to Base portion of the 1988 DEA budget, a total $2.5 million in training costs is reflected as non-recurring decreases. The remaining funding is necessary for training of new agents hired to fill vacancies, in-service training of agents and other training programs for the various personnel of DEA.

TEMPEST

Question:

You have a long-term program to TEMPEST DEA hardware and software. Please describe what benefits TEMPEST provides?

Answer:

TEMPEST addresses only hardware and telecommunications. Software security is addressed through the security packages which are part of the data base management system or through other specifically designed software packages to enhance system security.

As a result of separate needs assessments by the DEA, the FBI and the Justice Management Division's Office of Security Programs, it was determined that DEA has a continuing requirement to access National Security Information (NSI). In order to receive, process, or transmit NSI, it is necessary to have encryption at NSA standards and TEMPESTing of all ADP equipment and telecommunications. A system protected to this level will allow DEA to have direct exchange of NSI with other Federal Government agencies, including the Intelligence Community, as required to support narcotics investigations.

Question:

Will the TEMPEST program extend to all DEA activities or only those directly involving intelligence and enforcement? If so, why?

Answer:

All of DEA's ADP and telecommunications activities will be on a single secure network consisting of TEMPESTed hardware and National Security Agency approved encryption devices. This will result in savings for DEA since there will be a single telecommunications network rather than two networks to meet the DEA requirements. Additionally, with increasingly sophisticated techniques being utilized by drug traffickers, the TEMPEST system will provide better protection to the DEA data. In compliance with Department of Justice instructions, DEA and the FBI are currently preparing to locate the DEA Data Processing Center within the FBI. The FBI operates the Department's designated secure computer facility. It will be necessary for the DEA system to meet TEMPEST and encryption standards to operate there.

QUESTIONS FROM MR. REGULA

Asset Forfeiture

Question:

A Washington Post article last November noted that you are seizing more than $1 million every day in assets from drug traffickers. I am very interested in the process by which these seizures are turned back to the U.S. Treasury. I am also interested in the ways that State and local police agencies, through assisting in drug cases, can tap into these seized assets. How exactly does the procedure work for State and local claims on these assets? How is it determined what percentage should go to the local agencies? Are these local agencies then restricted in what activities they can fund with these seized assets?

Answer:

The procedure for State and local police agencies to share in assets seized and forfeited to the United States is set forth in the "Attorney General's Guidelines on Seized and Forfeited Property." (A copy has been provided to the Subcommittee.) Under these guidelines, State and local police agencies may request an equitable transfer of forfeited property to reflect the direct contribution of such agency in the seizure of the property. The amount shared generally is based upon the percentage of participation of the agency in the seizure. In terms of seized cash, the Federal Government may share up to 90 percent of the forfeited amount. With respect to property, the Federal Government may provide up to the entire amount to State and local authorities. The only restriction on use of the shared property is that shared assets must be used for law enforcement purposes, and that the transfer of the assets will result in an increase of law enforcement resources for that specific agency.

Question:

How much will it cost the DEA to establish asset removal teams around the country? Please provide more detail on these teams, such as their precise missions and locations.

Answer:

DEA requests 30 positions and $2.8 million in 1988 to establish asset removal teams in six cities including Miami, Chicago, New York, Houston, Washington, D.C., and San Francisco. Further, resources will be used to expand the existing team in San Diego.

In order to establish an asset removal team in each of DEA's 19 domestic divisions, and provide them with the necessary clerical support and headquarters processing support would require 97 positions and just over $8 million in first year costs.

DEA's domestic divisions are located in:

Atlanta, GA	Los Angeles, CA	San Diego, CA
Boston, MA	Miami, FL	San Francisco, CA
Chicago, IL	Newark, NJ	Seattle, WA
Dallas, TX	New Orleans, LA	St. Louis, MO
Denver, CO	New York, NY	Washington, DC
Detroit, MI	Philadelphia, PA	
Houston, TX	Phoenix, AZ	

The mission of the field teams would be to identify, seize, and turn over to the U.S. Marshals Service, for safekeeping, any and all seizable assets of the individual or organization under investigation. This would relieve the case agent of having to perform this function and allow them to concentrate on the criminal aspects of the case, thereby enhancing the prospects of successful prosecution when the case is brought to trial.

The mission of the headquarters staff is to assure that the centralized asset program data base is accurate and current and, thereby improve the monitoring, reporting and processing for forfeiture of assets seized in any particular case.

Digital Voice Privacy

Question:

The Justice Department's budget request seeks $11.1 million for an Integrated Digital Voice Privacy (IDVP) system to provide secure radio communications among the FBI, DEA and U.S. Marshals. Do I understand that you presently do not have secure radio communications with the FBI and Marshals? What is the state of your present radio systems and what is proposed?

Answer:

At present, the Organized Crime Drug Enforcement Task Force activities (OCDETF) have a limited intercommunication capability with the FBI. Other than this interaction, DEA does not now have secure radio communications with the FBI and the U.S. Marshals.

In DEA, tactical radio communications are provided by a nationwide ultra-high frequency (UHF) law enforcement radio system of mobile, portable and fixed station radios. The DEA UHF radio system provides support for surveillance, license plate queries, suspect information queries and emergency or potentially dangerous situations. DEA currently has six divisions (Los Angeles, San Diego, San Francisco, Seattle, Miami and Atlanta) of a total of 19 Divisions operating on UHF digital voice privacy radio systems. Thirteen divisions have a non-secure system. As the consolidated DEA, FBI, U.S. Marshals Service IDVP system program proceeds, these existing voice privacy systems will be incorporated into the IDVP system. Because of limited frequency resources, the IDVP system will include both UHF

and VHF equipment interconnected to accomplish integration. DEA will also be connected with the FBI's backbone microwave system for command and control of its fixed station transmitters. The approximate conversion will total $40 million and is expected to be completed by 1991.

Engineering Research Facility

Question:

The Department is also seeking $13 million for the construction of an FBI/DEA Engineering Research Facility for the "development of equipment equalling or surpassing that available to the criminal element". What sorts of equipment does this description encompass?

Answer:

The following is a breakdown by type of equipment:

Video Equipment, e.g.
  Special Application Equipment

Transmitters and Receivers, e.g.
  Covertly Worn Transmitters
  Remote Tracking Devices
  Intelligence Kits
  Relay Kits

Audio Recorders, e.g.
  Covertly Worn Recorders

Title III Devices, e.g.
  Pen Registers
  Covert Microphones

Question:

What is presently available to the DEA in terms of such a research facility?

Answer:

Presently, we have no research facilities available other than for the development of prototype equipment. DEA can accommodate one or a few items manufactured in-house. DEA and the FBI contract out for the development and procurement of large volumes of equipment.

Question:

How is the criminal equipment developed? In other words, I am assuming the criminals are not using such research facilities, but, rather, are relying on commercially available equipment for their use.

Answer:

The purchase of criminal equipment is through major manufacturers. The criminals have unlimited resources to keep them supplied. In some instances, DEA has been notified if an unusual amount of equipment has been requested by potential customers.

Question:

Why can't the Department tap into the commercially available facilities presently in place for the latest equipment?

Answer:

DEA purchases and will continue to purchase the majority of its radio communications and technical investigative devices from private industry sources. However, DEA must also have the capability to develop special devices for investigative enhancement of agent safety that are not readily available to the public, or in particular, to drug traffickers. The relocation of DEA to Quantico, Virginia, will not mean the abandonment of the procurement of commercial investigative devices for Federal Government-developed projects. It will, however, mean that DEA will have a greater capability for developing devices that may save lives or result in greater investigative rewards.

Question:

Please provide more detail on this facility, its mission, and its proposed contribution to the fight against drugs.

Answer:

The FBI/DEA Engineering Research Facility's objective is to provide improved technology to our agent workforce and enhance our intelligence and investigative gathering capability. To this end, plans have been laid to collocate FBI and DEA engineering activities in a single facility on the grounds of the FBI Academy. The detailed architectural design has been completed. Construction will be in modules to promote as early as possible use of the facility. Site preparation is now underway.

Question:

I am also interested in its proposed staffing.

Answer:

The proposed staffing based on 1987 resources is as follow:

FBI 250 employees
DEA 40 employees

We have provided the attached "Attorney General's Guidelines on Seized and Forfeited Property" to the Committee in response to Mr.Regula's question regarding asset forfeiture.

Federal Register / Vol. 50, No. 110 / Friday, June 7, 1985 / Notices

DEPARTMENT OF JUSTICE

Office of the Attorney General

Attorney General's Guidelines on Seized and Forfeited Property

AGENCY: Office of the Attorney General, Justice.

ACTION: Notice of Department of Procedures for Seized and Forfeited Property.

SUMMARY: This document sets forth the Department's policy under 21 U.S.C. 881(e) regarding the handling of seized and forfeited property. It is exempt from the notice and comment requirements of the Administration Procedure Act, 5 U.S.C. 553(b) by virtue of 5 U.S.C. 553(a)(2). The Department of Justice has determined that it is not a "major rule" within the meaning of Executive Order No. 12291 or a rule within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601(1).

FOR FURTHER INFORMATION CONTACT: Director, Asset Forfeiture Office, Criminal Division, Room 916, Federal Triangle Building, 315 9th Street, NW., Washington, D.C. 20530, (202) 272-6420.

ATTORNEY GENERAL'S GUIDELINES ON SEIZED AND FORFEITED PROPERTY

I. Statement of Policy

The following guidelines are designed to implement certain asset forfeiture provisions of the Comprehensive Crime Control Act of 1984 pertaining to the disposition of forfeited property, the management and use of the Department of Justice Assets Forfeiture Fund, and the discontinuance of federal forfeiture actions to permit forfeiture by State or local procedures.

The statute directs, "The Attorney General shall ensure the equitable transfer . . . of any forfeited property to the appropriate State or local law enforcement agency so as to reflect generally the contribution of any such agency participating directly in any of the acts which led to the seizure or forfeiture of such property."

This authority is consistent with the Department of Justice's purpose of promoting cooperative law enforcement efforts in drug trafficking and other investigations. The Department intends to manage its asset forfeiture program in a manner designed to enhance this Federal, State and local cooperation.

Title 21, United States Code (U.S.C.), section 881(e), authorizes the Attorney General to dispose of forfeited property by (1) retaining the property for official use; (2) transferring custody or ownership of the property to any Federal, State or local agency pursuant to the Tariff Act of 1930, Title 19, USC, Section 1616; or (3) placing the forfeited cash or proceeds of sale of forfeited property in an appropriation called the Department of Justice Assets Forfeiture Fund (hereinafter "the Fund"). A decision of the Attorney General regarding placing the forfeited property into official use or transferred the property to another agency is not subject to judicial review.

The Law Enforcement Coordinating Committee program will inform State and local law enforcement agencies as to the procedures for requesting an equitable transfer of forfeited property, help facilities the application for transfer of such property, and see that the spirit and letter of the forfeiture provisions of the Comprehensive Crime Control Act of 1984 are implemented in each Federal district.

II. Definitions

A. "Department of Justice investigative bureau" refers to the investigative unit within the Department of Justice that participated in the investigation and seizure of property and is responsible for the processing of the forfeiture arising from the seizure.

B. "Head of the Department of Justice investigative bureau" means the head of that bureau or his headquarters-level designee.

C. "Placing property into official use" means use of forfeited property by a Department of Justice bureau for any official purpose.

D. "Property" means tangible property and cash.

E. "Cash" means currency, negotiable instruments and securities.

F. "State and local agencies" means State and local law enforcement agencies.

G. "Appraised value" means fair market value.

III. Use and Transfer of Forfeited Property

A. Retention of Property for Official Use

a. The Attorney General has the authority to retain any civilly or criminally forfeited tangible property for official use by any Department of Justice bureau.

2. No forfeited cash, nor any proceeds from sales of forfeited property may be transferred to, or retained by, federal law enforcement agencies under the provisions of 21 U.S.C. 881(e) for disposition of forfeited property.

3. Payment of liens and mortgages pursuant to an authorization to place property into official use.

a. Liens and mortgages cumulatively amounting to less than one third of the appraised value of the asset and totalling less than $50,000 will be paid from the Fund at the request of the head of the Department investigative bureau.

b. Payments of liens or mortgages that, in the aggregate, total $50,000 or greater or exceed one third of the appraised value of the asset, will be paid from the Fund at the request of the Department of Justice investigative bureau subject to the concurrence of the Deputy Attorney General.

B. Official Use by Department of Justice Investigative Bureau

1. The Attorney General's authority to place tangible property into official use is delegated to the head of the Department of Justice investigative bureau.

a. In making a decision concerning placing forfeited property into official

use, the head of the Department investigative bureau must consider the financial status of the Department of Justice Assets Forfeiture Fund.

b. Exercise of this delegation of authority is subject to concurrence by the Deputy Attorney General for all property appraised at $750,000 or more.

C. Official Use by Other Department of Justice Bureaus

1. If the Department investigative bureau does not choose to place the forfeited property into official use, the Director, United States Marshals Service will determine appropriate disposal, including screening any remaining property suitable for official use by other Department of Justice bureaus.

a. A decision to place such property into official use is subject to concurrence by the Deputy Attorney General for all property appraised at $750,000 or more.

2. If more than one Department of Justice component wants to retain for official use the same piece of seized and forfeited property, the Deputy Attorney General will determine which component may place such property in official use.

D. Transfer of Property to State or Local Law Enforcement Agencies

1. Attorney General's Authority for Equitable Transfer of Seized Property

a. The Act authorizes the Attorney General to transfer forfeited property to state or local law enforcement agencies that directly participated in the acts which led to the seizure or forfeiture.

b. Tangible property not retained for official use by the Department of Justice investigative bureau is eligible for equitable transfer.

c. Where a participating law enforcement agency petitions for a share in the forfeited property, the Attorney General shall determine an equitable transfer of the property that generally reflects the relative contribution of the participating agencies.

2. Procedure for Determining Equitable Transfer

a. Any state or local law enforcement agency that participates in the acts leading to a Department of Justice seizure for forfeiture may file a request for an equitable transfer of the property.

b. The criteria for determining the equitable transfer of the property will be the same for all requests.

c. In all cases the final decision-making authority rests with the Attorney General or his designee.

3. Requests from Participating Law Enforcement Agencies

a. Within thirty days following the seizure for forfeiture, a state or local agency should submit a written request for an equitable transfer of the property subject to forfeiture.

b. This request must be filed with the local or regional office of the Department investigative bureau responsible for processing the forfeiture.

c. The request must include the following information:

(1) Identification of the property against which the claim is made;

(2) Details regarding the requesting agency's participation, including the amount of money and manpower expended by the state or local agency in pursuing the case;

(3) A statement of the intended use for the property;

(4) A designation of the proper fiscal officer to whom cash or check disbursements can be made;

(5) A designation of the proper official to whom transfer documents should be delivered by the United States;

(6) A designation of the proper party to whom possession should be delivered;

(7) A statement indicating that the transfer is not prohibited under the applicable state or local law;

(8) In instances of a joint application by several state or local agencies, the relative share of each state or local agency; and

(9) A statement that all fees and expenses necessary to effect transfer of title will be paid by or on behalf of the requesting agency not later than the time of transfer.

d. The requesting agency must certify that the information contained in 2(c)(6-7) above is true and correct.

e. Property will be transferred only in cases where the tangible property or cash will be credited to the budget of the state or local agency that directly participated in the seizure or forfeiture, resulting in an increase of law enforcement resources for that specific state or local agency.

f. An information copy of any request will be forwarded to the United States Attorney in the district where the transfer request originated.

4. Procedure for Processing Requests for Equitable Transfer

a. In all cases, the Department investigative bureau field unit receiving the request will prepare a written report that will evaluate the degree of assistance provided by the requesting agency or agencies in the underlying investigation.

b. The equitable share for a participating state or local agency should generally reflect the contribution of the agency participating directly in any of the acts which led to the seizure or forfeiture of the property, including, but not limited to, the following factors:

(1) Which agency initiated the case;

(2) Which agency identified the asset;

(3) The amount of money and manpower expended by the state or local agency in pursuing the case;

(4) Whether or not the state or local agency seized other assets during the course of the same investigation and whether such seizures were made pursuant to state or local law; and

(5) Whether or not the state or local agency could have achieved forfeiture under state law, with favorable consideration given to a state or local agency which could have forfeited the asset(s) on its own but joined forces with the United States to make a more effective investigation.

c. The head of the Department investigative bureau may place tangible property forfeited administratively or judicially into official use in cases in which a state or local agency has filed a request for an equitable share of that property.

(1) In making this decision, the head of the Department investigative bureau must consider the following factors:

(a) The relative needs of both the requesting law enforcement agency and the Department investigative bureau for the particular asset;

(b) The uniqueness of the asset and the likely ability to secure such an asset by other seizures in the near future;

(c) The relative significance of the requesting law enforcement agency's participation in the case, as well as all the other factors pertinent to the determination of equitable distribution as set forth in Part III.B.4.c. above;

(d) The potential of, or likelihood that, the requesting agency will be eligible for an equitable share of property from additional seizures arising from the same investigation or from other seizures in the near future; and

(e) The impact that a decision to place the property into official use might have on Federal, state and local relations in that District.

5. Decision-Making Authority for Determining Equitable Transfer

a. The equitable distribution of an asset forfeited administratively with an appraised value of $1,000,000 or less will be determined by the head of the Department investigative bureau.

(1) The Department investigative bureau's field unit shall forward its report and recommendation to the bureau head for decision.

(2) In making this decision, the head of the Department investigative bureau will consider the report and recommendation forwarded by the field

unit and issue to the requesting agency a written ruling on the request.

(3) A copy of the decision document will be forwarded to the United States Attorney, or to the Criminal Division section chief in a Criminal Division case, and to the Director, United States Marshals Service.

(4) A copy of the decision document will be made available upon request to the Director, Asset Forfeiture Office.

b. In the case of all administratively forfeited property with an appraised value greater than $100,000 and with all judicially forfeited property, the evaluation and recommendation will be forwarded to the appropriate United States Attorney or to the Criminal Division section chief in a Criminal Division case.

(1) The equitable distribution of an asset forfeited judicially with an appraised value of $100,000 or less will be determined by the United States Attorney or the Criminal Division section chief.

(2) In making this decision, the United States Attorney or section chief will consider the reports and recommendations forwarded by the head of the Department of Justice investigative bureau and will consult with the United States Marshals Service.

(3) A copy of the decision document will be forwarded to the Department of Justice investigative bureau, the Director, United States Marshals Service and the Director, Asset Forfeiture Office.

c. In the case of all property with an appraised value greater than $100,000, the United States Attorney or section chief will forward the evaluation and recommendation of the Department investigative bureau, along with his own recommendation, to the Director, Asset Forfeiture Office, who will determine the equitable distribution of those assets.

(1) In making this decision, the Director will consider the reports and recommendations forwarded by the head of the Department of Justice investigative bureau and the United States Attorney or section chief and will consult with the United States Marshals Service.

(2) A copy of the decision document will be forwarded to the Department of Justice investigative bureau, the United States Marshals Service and the United States Attorney or section chief.

d. The Deputy Attorney General will make the final determination of equitable distribution of any asset with an appraised value of $750,000 or greater.

(1) The request will be processed as in § c. above.

(2) A copy of the decision document will be forwarded to the Director, Asset Forfeiture Office, the Director, United States Marshals Service, the United States Attorney or section chief and the Department of Justice investigative bureau.

e. In all cases in which judicially forfeited property is located in a judicial district other than where the judicial proceedings are taking place, the party determining the equitable distribution must consult with the respective United States Attorney prior to determining equitable distribution.

6. Proceeds Placed in the Department of Justice Assets Forfeiture Fund

a. If the federal forfeiture action is not deferred, and the property is not placed into official use or transferred to a state or local agency, it will be sold and the net proceeds of sale will be placed in the Assets Forfeiture Fund.

b. Forfeited cash will be placed in the Assets Forfeiture Fund.

c. All Department of Justice bureaus will promptly notify the United States Marshals Service of any facts affecting seized property. Some relevant facts would include bills, invoices, orders of mitigation and remission, orders of sharing with state or local agencies, orders of designation for official use by Department of Justice components, and appraisals. Based upon these and other factors, the United States Marshals Service should appropriately dispose of the property.

7. Disposition of Forfeited Property

a. State or local agencies may share in seized and forfeited tangible property, and seized and forfeited cash.

b. Any property that cannot be used for law enforcement purposes must be liquidated.

c. Where tangible property is transferred to qualifying state or local agencies, monies from the Assets Forfeiture Fund will not be used to pay liens or mortgages on the property, to equip the property for law enforcement purposes, or to pay salaries.

d. The recipient state or local agency must pay the valid liens and mortgages on the forfeited tangible property prior to the transfer of such property.

e. The recipient state or local agency may be required to pay direct expenses pertaining to the seizure prior to the transfer of tangible property.

f. In the event of an interlocutory sale of property pending forfeiture, the Director, United States Marshals Service first must consult with the United States Attorney, Criminal Division section chief or the Director of the Asset Forfeiture Office in the case of judicially forfeited property, or the head of the pertinent Department investigative bureau in the case of administrative forfeitures, to determine the status of any state or local law enforcement agency requests for equitable sharing

IV. Department of Justice Assets Forfeiture Fund

A. Administration of the Fund

1. The Attorney General delegates t administration of the Department of Justice Assets Forfeiture Fund to the United States Marshals Service. It wil operate under guidelines developed b the Subcommittee on Asset Forfeiture the Department's Forum for Cooperati Strategy and in accordance with Department of Justice financial management policy.

2. The United States Marshals Servi will submit to the Deputy Attorney General on a quarterly basis a financi statement as to the current status of th fund.

3. Copies of the quarterly United States Marshals Service statement wil be provided to the Federal Bureau of Investigation, Drug Enforcement Administration, Immigration and Naturalization Service and the Asset Forfeiture Office to assist the recipient in making decisions as to the use and transfer of forfeited property.

B. Payments Allowable Under Department of Justice Assets Forfeiture Fund

1. Forfeiture cash and proceeds from the sale of forfeited property are to be deposited in the Department of Justice Assets Forfeiture Fund.

2. Money from the Fund may be used for the following:

a. Payment of liens and mortgages pursuant to an order of remission or mitigation;

b. Payment of liens and mortgages pursuant to an order to place into official use.

c. Payment of liens and mortgages pursuant to court order.

d. Payment to equip, for law enforcement purposes, conveyances placed into official use by the Drug Enforcement Administration, and the Immigration and Naturalization Service.

e. Payment of awards;

f. Purchase of evidence; and

g. Reversion to the United States Treasury at the end of the fiscal year of all amounts in excess of $5,000,000.

C. The Following, In Order of Priority, Will Be the Uses of the Forfeited Cash and the Proceeds of Sale of Forfeited Property

1. Payment of expenses incurred by the Department of Justice for the care,

custody and disposal of the seized and forfeited property;

2. Payment of expenses incurred by the Department of Justice in the seizure and forfeiture of the property;

3. Payment of expenses relative to the detention, inventory, safeguarding, maintenance, or disposal of the seized and forfeited property incurred by state and local agencies which assist in the seizure and forfeiture of the property;

4. Payments of orders of mitigation or remission;

5. Payments for orders of equitable sharing with state or local law enforcement agencies;

6. Payments for liens on vehicles placed into official use;

7. Payment of awards;

8. Payment to equip, for law enforcement purposes, conveyances placed into official use by the Drug Enforcement Administration Immigration and Naturalization Service; and

9. Purchase of evidence.

D. Limitation on Use of the Fund

1. The Department of Justice Assets Forfeiture Fund cannot be used to pay any of the following:

a. Salaries; and

b. Where property is transferred to state or local law enforcement agencies,

(1) Liens or mortgages on the property;

(2) Payments to equip the property for law enforcement purposes.

2. Liens and mortgages shall be paid from the Fund only pursuant to an order of remission or mitigation, an order of the court, or an order to place the property into official use.

V. Discontinuance of Federal Forfeiture Actions

A. Deferral of Federal Judicial Forfeiture Proceedings

1. A decision to forego an federal judicial forfeiture proceeding against any seized asset in favor of a state or local forfeiture proceeding requires the personal approval of the United States Attorney after review of the evaluation and recommendation of the concerned investigative bureau.

2. In making this decision, the United States Attorney must consider the status of the Department of Justice Assets Forfeiture Fund.

3. Judicial forfeitures foregone in favor of state or local proceedings are to be reported by the United States Attorney in writing, within five days, to the Director, Asset Forfeiture Office, Criminal Division, United States Department of Justice, Washington, D.C. 20530.

B. Deferral of Federal Administrative Forfeiture Proceedings

1. A decision to forego a federal administrative forfeiture proceeding against any seized asset in favor of a state or local forfeiture proceeding requires the approval of the head of the Department investigative bureau.

2. In making this decision, the head of the Department investigative bureau must consider the status of the Assets Forfeiture Fund and, where appropriate, consult with the United States Marshals Service.

3. Department of Justice investigative bureaus must develop procedures for recording these decisions and providing reports as required.

VI. United States Customs Service Forfeitures

A. Pursuant to Title 28 United States Code, section 524(c), all proceeds from the forfeiture of property under any law enforced or administered by the Department of Justice remaining after payment of expenses for forfeiture and sale authorized by law are to be deposited in the Department of Justice Assets Forfeiture Fund, except to the extent that the seizure was effected by a United States Customs Service officer or that custody was maintained by the Customs Service, in which case the provisions of 19 U.S.C. 1613a (Customs Forfeiture Fund) shall apply.

B. To the extent that the United States Marshals Service may have the capacity to do so, it may store and maintain seized property for the Customs Service.

1. Where the United States Marshals Service maintains custody of property seized by a Customs officer, the Customs Service will reimburse the Marshals Service for the expenses of such custody prior to the deposit of the net proceeds into the Customs Forfeiture Fund.

2. In instances where proceeds are to be deposited in the Department of Justice Assets Forfeiture Fund and the Customs Service, as a substitute custodian, has maintained custody of property seized by the Department of Justice, the Department of Justice will reimburse the Customs Service for the expenses of such custody.

C. Requests for transfers of forfeited property by participating state and local law enforcement agencies in forfeitures where the seizure was effected by a Customs officer of custody was maintained by the Customs Service should be directed pursuant to 19 U.S.C. 1616 to the Customs Service for evaluation and forwarding to the Assistant Secretary of Treasury for Enforcement and Operations with an information copy to the United States Attorney in the district of seizure.

D. In the event of an unresolved dispute concerning whether a given forfeiture constitutes a Customs or Department of Justice forfeiture for purposes of cash or proceeds disposition, or for state and local transfers, the Deputy Attorney General and the Assistant Secretary of Treasury for Enforcement and Operations shall resolve the issue. Where appropriate, they may submit the issue to the Organized Crime Drug Enforcement Task Force Working Group for recommendation.

Dated: May 24, 1985.

Edwin Meese III,

Attorney General.

[FR Doc. 85-13841 Filed 6-6-85; 8:45 am]

BILLING CODE 4410-01-M

Mr. DWYER. Thank you very much.
Mr. LAWN. Thank you very much.
Mr. DWYER. The Committee will stand adjourned until 10:00 a.m. tomorrow morning.

Immigration and Naturalization Service

Salaries and expenses

Summary Statement

Fiscal Year 1988

The Immigration and Naturalization Service (INS) is requesting a total of 15,453 permanent positions, 14,159 full-time equivalent (FTE) workyears and $838,828,000 for 1988. This request represents an increase of 2,208 FTE workyears and $106,859,000 over the 1987 anticipated appropriation. The 1987 anticipated appropriation includes a supplemental appropriation request of $146,843,000 to fund partial year start-up costs of implementing the Immigration Reform and Control Act of 1986, P.L. 99-603, as well as the non-Service detention of Mariel Cuban criminals. A more detailed supplemental appropriation request will be forwarded separately.

The mission of the Immigration and Naturalization Service is to administer laws relating to admitting, excluding, detaining, deporting, and naturalizing aliens. The Service inspects persons to determine their admissibility to the United States; prevents illegal entry into the United States; investigates, apprehends, and removes aliens in this country in violation of the law; and adjudicates requests of aliens for benefits under the law.

In addition to the traditional activities of the Immigration and Naturalization Service, this 1988 budget request incorporates the first full year of Service effort towards implementation of the Immigration Reform and Control Act of 1986. Passage of this landmark legislation marked a new chapter in the history of the Service and will have a profound and far reaching impact on its mission and activities. The Service will be completing its staffing and training of new personnel to improve enforcement of the Immigration laws, including the imposition of sanctions against employers of illegal aliens; the expeditious processing and removal of criminal aliens from this country; strengthening control on the Nation's Southern Border; completion of the temporary residency phase of the Legalization program; and implementation of the the Agricultural Worker programs.

Significant workload increases related to the Immigration Reform and Control Act of 1986 will first appear in 1988 (the greater part of 1987 will be spent in hiring and training activities). As a result of the passage of this legislation, new workload indicators appear for the first time in this budget. For example, in the Adjudications program, the categories "Applicants for Temporary Resident Status" and "Applicants Granted Temporary Resident Status" are new additions, as is "Site Visits," in the Investigations program which related to the employer sanctions provisions of the new law.

A summary of the mission and resources for each budget activity and program in INS follows:

Enforcement

This budget activity contains the resources dedicated to both preventing illegal entry to the United States and facilitating the entry of qualified persons. This includes inspection of applicants for admission, patrol of the border, and the appre-

hension of undocumented aliens who are in the United States subsequent to illegal entry or in violation of status after legal entry.

Inspections inspects each person seeking admission to the United States to determine admissibility.

Border Patrol prevents illegal entry, and detects and apprehends aliens smuggled into the United States. In addition to operational responsibilities in the immediate border area, the Border Patrol has enforcement responsibilities in the vicinity surrounding the border. The funding will enable the INS to continue recruiting, training and hiring the additional agents added as a result of the Immigration Reform and Control Act of 1986. Funds will also be used for necessary supporting equipment and supplies.

Investigations detects and prosecutes criminal violators of the immigration laws and general criminal laws, and conducts inquiries to support administrative decisions on applications for benefits and orders for removal. The funding will provide for the placement and training of personnel involved in the employer sanctions program and the location and removal of criminal aliens, as well as traditional investigative activities.

Anti-Smuggling curtails the growth of the undocumented alien population by locating and apprehending alien smugglers, particularly organized alien smuggling operators. The funding will meet current operational needs as well as the provisions of the Immigration Reform and Control Act.

Detention and Deportation detains deportable aliens whose freedom represents a danger to public safety or whose lack of funds or permanent address indicates that they are likely to abscond, and expeditiously processes and removes aliens from the United States. Contract detention funding will support the long-term detention of Mariel Cuban criminals until their repatriation can be arranged with the Cuban government or until another long-term solution to their detention in INS custody can be found. Funding is included to enable the Service to effectively meet the criminal alien provisions of the Immigration Reform and Control Act.

Citizenship and Benefits

The resources necessary to provide the benefits of the Immigration and Nationality Act are provided in this activity. Included are the adjudication of applications and petitions submitted for benefits, and the processing of naturalization and citizenship petitions and applications.

Adjudications and Naturalization adjudicates applications and petitions for benefits provided by the Immigration and Nationality Act and processes aliens eligible for citizenship.

Refugees and Overseas renders decisions on refugee applications.

Immigration Support

This activity includes the resources for construction, communications, records management, automated data processing, personnel training, research and development, field management, legal proceedings and the alien documentation program

(AUIT). In addition, it provides a capability to scientifically examine and analyze documents to assist in the identification, investigation and prosecution of major conspiracies which provide fraudulent documents to smuggled aliens.

Training provides the systematic development of all key occupational skills necessary for the effective enforcement and administration of INS programs including all basic officer training at the Federal Law Enforcement Training Center (FLETC) Glynco, Georgia.

Data and Communications Systems improves INS' effectiveness and efficiency through the use of computers and associated data communications to process information and also provides electronic and communications support to INS' operating elements. Funds will be used for digital voice privacy radio equipment, and the development and implementation of new systems relating to the Immigration Reform and Control Act: apprehensions, case management, employer information, and alien employment eligibility systems.

Information & Records Management provides timely and accurate information to the public, INS, and other enforcement agencies concerning INS plans and activities.

Intelligence provides predictive, tactical and strategic intelligence to INS' policy officials and line managers. Funds will be used to increase intelligence gathering and analysis in the United States and overseas, and for positions and equipment at the forensic document lab.

Research and Development examines the technical problems which tend to impede accomplishment of INS' mission and attempts to develop technological means for their solution.

Construction and Engineering maintains and improves INS' physical plant by designing and constructing new facilities and implementing energy conservation programs.

Field Management & Support provides day-to-day management direction to field units that implement major policy and management decisions made by INS' Central Office management.

Legal Proceedings represents the Federal Government in all cases, matters and administrative hearings in which INS is involved, and provides legal advice and support to INS' operating personnel and managers. Funds are included for attorneys and support personnel to process additional cases arising from passage of the Immigration Reform and Control Act.

Program Direction

This activity provides resources for the overall administration and management of the Service.

Executive Direction and Control establishes and maintains policy and program direction for INS.

Administrative Services provides administrative support to INS operations. This program includes funds for full-field investigations and payroll processing costs and provides administrative support for the officers and personnel requested in other programs.

72-165 O—87——36

Immigration and Naturalization Service

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For expenses, not otherwise provided for, necessary for the administration and enforcement of the laws relating to immigration, naturalization, and alien registration, including not to exceed $50,000 to meet unforeseen emergencies of a confidential character, to be expended under the direction of the Attorney General and accounted for solely on his certificate; purchase for police-type use (not to exceed 1,670 of which four hundred ninety, [all of which] shall be for replacement only) and hire of passenger motor vehicles; acquisition, lease, maintenance and operation of aircraft; and research related to immigration enforcement; [$593,000,000] $838,828,000, of which not to exceed $400,000 for research shall remain available until expended: Provided, That none of the funds available to the Immigration and Naturalization Service shall be available for administrative expenses to pay any employee overtime pay in an amount in excess of $25,000 except in such instances when the Commissioner makes a determination that this restriction is impossible to implement [:Provided further, That uniforms may be purchased without regard to the general purchase price limitation for the current fiscal year: Provide further, That no funds appropriated in this Act may be used to implement Immigration and Naturalization Service reorganization proposals which would have the purpose of or would result in the closing of the Northern Regional Office of the Immigration and Naturalization Service at Fort Snelling, Minnesota: Provided further, That effective immediately before September 30, 1986, $3,385,000 made available for "construction" for the Immigration and Naturalization Service in Public Law 99-88 shall be available for the Immigration and Naturalization Service, "Salaries and Expenses."]

Explanation of Changes:

The first change will accommodate the Service's need for additional passenger vehicles to implement provisions in the Immigration Reform and Control Act of 1986.

The second change deletes language lifting the ceiling on the amount that can be paid for uniforms. The Department's legislative proposal will propose specific uniform allowances for specific categories of employment. The deletion of the language prohibiting the closing of the Northern Regional office at Fort Snelling, Minnesota, was deleted by Congress in the 1987 Appropriation. The $3,385,000 for construction applied to 1986.

Congressional Appropriation Actions

The Congress provided $1,000,000 for the implementation of the Systematic Alien Verification for Entitlements (SAVE) Program and annualized the 1986 supplemental of $3,000,000 for the detention of Mariel Cuban Criminals. Funding of $14,584,000 was provided for uncontrollable cost increases. $5,266,000 was included to alleviate the impact of the 1986 reduction pursuant to P.L. 99-177 for the detention and inspections programs. Finally, funds were included in the amount of $883,000 to reduce the lapse rate in the inspections program. The net result was an appropriation $16,393,000 below the agency budget estimate.

Reprogrammings

The reprogramming of positions and budget authority reflects the permanent effect of the September 26, 1986 reprogramming notification. In the narrative accompanying the notification it was stated that the reprogramming was of a permanent nature and would carry into 1987.

Rescissions

The rescission request for $24,598,000 provides for a reduction of budget authority as a result of the availability of funding from immigration inspection fees for payment of inspectors overtime and information systems/data processing costs.

Supplementals Requested

1. The supplemental request for $147,793,000 and 4,316 positions provides for the implementation of certain major provisions of the Immigration Reform and Control Act of 1986 (P.L. 99-603), the detention of Mariel Cuban criminals, and the funding of increased costs for communications service under the Federal Telecommunications System (FTS).

2. The pay and FERS (Federal Employee Retirement System) request provides $15,774,000 to meet increased pay requirements pursuant to P.L. 99-500 and to meet higher retirement system costs pursuant to the provisions of P.L. 99-335.

This budget activity contains most of the resources dedicated to both preventing illegal entry into the United States and facilitating the entry of qualified persons. This includes inspecting applicants for admission, patrolling the border, locating undocumented aliens who are in the United States following illegal entry or are in violation of status after legal entry, and detaining and deporting illegal aliens.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Inspections	1,108	1,496	$68,039	1,108	1,518	$74,667	1,108	1,518	$74,667	...	...	...

Long Range Goal: Ensure that the entry of applicants for admission to the United States is controlled in a manner which is consistent with the national interest, facilitate the entry of qualified applicants, and identify and deny admission to those not qualified; provide support to the Adjudications program by approving or denying applications and petitions for benefits which are sent to ports of entry for adjudication during standby time; and issue Border Crossing Cards at ports of entry.

Major Objectives:

Inspect (in cooperation with other Federal agencies) all applicants for admission to the United States.

Facilitate the entry of qualified persons through ports of entry.

Prevent the entry of inadmissible applicants through ports of entry.

Detect fraudulent documents representing false claims to U.S. citizenship or permanent residence and seize conveyances used for illegal entry.

Adjudicate applications and petitions at ports of entry in order to efficiently use inspector standby time.

Base Program Description: Applicants for admission to the United States are inspected at ports of entry to determine if they are qualified for admission and if so, under what conditions. This process is coordinated with the Department of State, U.S. Customs Service, Department of Agriculture and local port authorities.

Cross-designated inspectors are utilized at both land borders and selected air ports of entry under the dual inspection concept whereby the officers of each agency conduct the primary inspection required by all agencies. "Citizen By Pass," "One-Stop" inspection and foreign pre-clearance inspections have been developed in cooperation with the U.S. Customs Service and the Animal and Plant Health Inspection Service of the Department of Agriculture to facilitate entry for the traveling public and better use of inspection resources at all ports of entry.

Determination of inadmissibility is based on examination of the applicant, related documents or prior information. Local and national lookout systems containing information relating to excludable aliens are available for use at each port of entry. Required documentation is examined to determine validity and relationship to the applicant. Inadmissible aliens are denied entry into the United States. Any criminal activity discovered in the inspection process is referred for appropriate investigation.

Consistent with the Enforcement provisions of the Immigration Reform and Control Act of 1986, additional permanent Immigration Inspectors will be assigned to high risk border ports. These resources are part of a 1987 supplemental appropriations request. The impact of these additional resources will be felt most strongly in 1988, because in 1987 most efforts will be directed toward recruiting, hiring and training these individuals. The goal of this enforcement effort is to improve the rate of detection of fraudulent attempts at entry into the U.S. Recent studies have demonstrated that a small increase in available officer time results in a large rise in detection productivity. The full deployment of Reform Act resources will essentially allow these results to be permanently maintained at major crossing points.

Applications and petitions for a full range of benefits under the immigration law are adjudicated during periods of standby time at most ports of entry during non-peak workload hours.

Applications for Border Crossing Cards are presented directly to ports located on the United States/Mexican border where they are adjudicated and issued by inspection personnel.

Accomplishments and Workload: Accomplishments of the Inspections program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Persons Inspected-Port of Entry	300,826,336	321,067,196	321,000,000	321,000,000
Persons Inspected-Pre-Inspection	6,830,171	6,974,689	7,000,000	7,000,000
Inadmissible Aliens Intercepted - Port of Entry	570,717	701,072	586,000	768,000
Inadmissible Aliens Intercepted - Pre-Inspection	14,053	18,989	19,000	19,000
Remote Adjudications Completed	668,000	643,797	700,000	700,000
Border Crossing Cards Issued	218,039	233,695	200,000	200,000

During 1986, the Inspections program experienced very high levels of workload. Total inspections were 328 million of which 134 million involved U.S. citizens. Pre-inspection functions at 10 major overseas airports accounted for 6.9 million additional inspections; a total of 720,061 inadmissable aliens were intercepted, equaling a rate of 2.2 detections per 1,000 inspections--up twelve percent from 1985. Improvements in methodology and techniques of detecting fraudulent and malafide attempts at entry into the United States continued throughout the year. Significant rises were noted in measures pertaining to detecting inadmissable alien applicants. For example, between 1985 and 1986 false claims to U.S. Citizenship were up twenty-four percent; alien registration card fraud increased by seventy-two percent; and border crossing card fraud rose by thirty-eight percent. Operational innovations leading to improvements in both border enforcement and facilitation of international travel continued to receive high priority during the past year. The new Nonimmigrant Information System and the National Automated Immigration Lookout System continued to be improved.

Workload figures are expected to rise substantially following implementation of the enforcement provisions of the Reform Act at major border locations. The enforcement provisions mandate that INS improve control of admissions at ports-of-entry; this will be accomplished through deployment of additional officers at high-risk locations, and through institutionalization of the fraud task force concept to all border ports.

With the passage of P.L. 99-500, the Department's 1987 Appropriation Act, an Inspections User Fee Account was established. The legislation, which provides for the collection of a $5 user fee from each alien and U.S. citizen arriving in the U.S. from foreign locations (other than Mexico, Canada or adjacent islands) by commercial air or sea transportation will allow the Inspections program to more fully provide effective services at all airports and seaports nationwide. On a continuing basis INS will be able to supplement its appropriated Inspections resources by charging the Immigration User Fee Account for the cost of existing and new officer positions at certain locations, inspectional overtime, and costs associated with improved fraud detection. Of the total Inspections program annual workload, approximately 13 percent involves inspections that now fall under the provisions of the User Fee legislation. During 1986, 41 million air and sea inspections were completed with 72,000 inadmissable aliens detected.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Border Patrol.....	5,541	3,731	$188,579	5,541	4,157	$217,829	5,541	4,157	$217,829	...	...	...

Long Range Goal: Ensure that the entry of persons into the United States between ports of entry is controlled in a manner which is consistent with the national interest as established and provided by Congress, by preventing entry of persons who have not been inspected and by detecting and apprehending illegal aliens within the United States.

Major Objectives:

Deter uncontrolled entry into the interior of the United States by the rapid detection, interception, and apprehension of illegal entrants before movement to the interior can be achieved.

Interdict drug smugglers, potential terrorists and criminals and deter such entrants from attempting entry.

Cause persons seeking admission to the United States to present themselves at designated ports for inspection.

Base Program Description: Approximately thirty-nine percent of Border Patrol officers' time is devoted to an activity known as linewatch. This activity prevents entry or promptly apprehends entrants after they have illegally crossed the border.

Officers engaged in linewatch are supported by computer monitored electronic ground sensors which alert them to illegal entries. Further support is provided by a fleet of observation aircraft, low light level television systems and infrared viewing devices. The Border Patrol officers use a wide assortment of vehicles adapted to local terrain and operational requirements, including motorcycles, all terrain cycles, boats and horses.

In addition to linewatch, traffic check operations are conducted along major routes of travel to restrict access to the interior by illegal aliens. Transportation centers are placed under surveillance for the same reason. Farm and ranch checks and city patrol operations are conducted to locate illegal aliens who have successfully entered the country.

The recently passed Immigration Reform and Control Act of 1986 mandated a vigorous, comprehensive enforcement effort to discourage, prevent and deter the illegal entry of aliens into the United States. The Border Patrol program will assist in this effort through the implementation of portions of the Employer Sanctions Program, as well as by significantly increasing its overall presence.

Accomplishments and Workload: Accomplishments of the Border Patrol program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Deportable Aliens Located.....	1,262,435	1,692,544	1,900,000	2,198,200

Item	1985	1986	Estimates 1987	1988
Smuggled Aliens Apprehended	95,741	114,665	127,950	146,530
Smugglers Apprehended	14,678	19,225	21,470	24,350

The Border Patrol apprehended a record 1,262,435 illegal aliens nationwide in 1985, the third consecutive year in which over one million illegal aliens were apprehended along the southern border of the United States. The number of apprehensions did not abate in 1986 with the total reaching 1,692,544. During 1986, southern border apprehensions increased by 29.2 percent to a level of 1,615,854. In addition, the Border Patrol is encountering and apprehending increasing numbers of other than Mexican nationals who are attempting illegal entry into the United States. For 1986, 56,842 illegal non-Mexican nationals from over 80 different countries were apprehended, almost double the number apprehended just three years ago. These upward trends indicate that Mexican nationals are not the only people increasingly seeking illegal entry across our borders.

On October 1, 1986, the Border Patrol stepped-up its drug interdiction efforts by placing special emphasis along the southwest land border. The new role undertaken by the Patrol is part of the Administration's Southwest Border Drug Task Force. This task force, which is coordinated by the National Narcotic Border Interdiction System (NNBIS) is made up of Federal, state and local agencies, and is aimed at cracking down on drugs coming across the southwest border. The Patrol has been assigned the major role for drug interdiction on land between the ports of entry. A selected number of border patrol agents have recently received expanded drug interdiction authority from both the Drug Enforcement Administration (Title 21) and the U.S. Customs Service (Title 19). In 1985, border patrol agents made 885 narcotic seizures, a 26 percent increase over 1984, with a valuation of $119.9 million. During 1986 agents made 1,300 seizures, valued at over $185.9 million.

The Border Patrol Crime Prevention Unit in San Diego, California, and the El Paso and Laredo, Texas, Foot Patrol Units have continued to be successful cooperative law enforcement activities that are conducted by border patrol agents and local police officers. These activities have been valuable in reducing the number of crimes committed against both U.S. citizens and illegal aliens because they facilitate the apprehension of increasing numbers of criminal aliens within border cities and the surrounding border areas.

The Air Operations program is a vital element in the total border enforcement effort. Total flight hours for both rotary and fixed-wing aircraft for 1986 has exceeded 30,000 hours for the third consecutive year. Apprehension assists from these operations are in excess of 100,000 annually. In addition, many lives have been saved as a result of the air operations units, from locating aliens lost in the desert to thwarting crimes being perpetrated by border bandits against aliens crossing the border.

Helicopters have become an essential component of Border Patrol operations in areas with high volumes of traffic. In addition they provide the Patrol with night air capability. Helicopters equipped with light bars provide an added dimension for the interdiction of aliens and enhance officer safety during hours of darkness. An officer's call for assistance will be answered in a rapid manner regardless of the type of terrain.

The Border Patrol has continued to increase its effectiveness by using the latest technological innovations available in detection and surveillance equipment. Those innovations include the use of remote image low light television and the most modern infrared scopes. These devices are invaluable in assisting agents during night operations when the majority of illegal aliens are attempting entry.

The Border Patrol is experiencing, with rising concern, increases in the number of persons seeking entry with criminal intentions, such as border bandits, alien and narcotics smugglers, kidnappers and persons suspected of terrorist involvement. Violence along our borders has been increasing at an alarming rate. This violence is especially prevalent along the southern border where last year there were over 150 recorded assaults against our agents resulting in 93 injuries. The trend has continued this year with 48 reported assaults occurring in 1986. These individuals pose a serious threat to the safety of the citizens of this country. Suspected terrorists must be prevented from entering the country.

The estimated workload is increased in 1988 as a result of passage of the Immigration Reform and Control Act of 1986. Due to this legislation, significant staff increases will begin in 1987 and will be annualized into 1988.

There is no appreciable workload associated with the new positions in 1987 due to hiring beginning well after the start of the fiscal year and the fact that formal training will be required for all officer positions before they actually enter on duty at their new duty stations.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Investigations.....	1,952	884	$70,181	1,952	1,507	$85,817	1,952	1,507	$85,817	...	...	...

Long Range Goal: Control and prevent illegal immigration by enforcing the Immigration and Nationality Act within the interior of the United States; identify violators and gather evidence of violations of the Immigration and Nationality Act and other related criminal laws; and initiate appropriate criminal prosecution or provide information to support administrative action to effect deportations and removals.

Major Objectives:

Ensure the investigation and apprehension of aliens involved in narcotics traffic, subversion, terrorism, and other serious or violent criminal offenses.

Identify employers who hire illegal aliens and deter the employment of illegal aliens.

Prosecute or stop illegal activities by persons or entities who conspire and assist aliens to obtain immigration benefits through the use of fraudulent documentation or schemes to perpetrate fraud.

Prevent aliens from fraudulently or illegally applying for and receiving benefits from government entitlement programs, and support prosecution or civil proceedings to recover benefits illegally obtained.

Investigate matters referred by other Service branches to locate aliens who have absconded from Service proceedings, develop grounds for denial of petitions and applications, and obtain evidence to support other administrative proceedings.

Base Program Description: Investigators detect criminal law violations and identify violators through various covert techniques and administrative procedures, and initiate appropriate criminal prosecution or administrative action. Categories of cases include investigations of multi-national criminal alien organizations involved in racketeering, smuggling, counterfeiting, prostitution, official corruption, weapons and narcotics traffic, as well as investigations of individual aliens who have entered the United States illegally to find employment. The experience of the Service and other law enforcement agencies has shown that the prosecution of individual street-level violators has no lasting effect on the operation of large criminal organizations. The Service is increasing its use of investigative task forces and undercover techniques to identify individuals at the upper echelons of criminal organizations who provide the guidance and resources for large scale operations involving either immigration violations or general criminal activities perpetuated by aliens.

Investigations personnel are deployed in more than 70 offices in metropolitan areas in the interior of the United States. A priority assessment system for case management is implemented at all offices to direct investigations resources to work those cases which are considered of greatest importance and have the most impact on controlling illegal immigration in the interior of the U.S.

Covert investigations gather evidence of criminal violations through undercover techniques which include consensual monitoring and video recording, use of confidential informants, purchase of illegal goods and services with confidential funds, and infiltration of criminal organizations.

Investigative task forces concentrate the resources of a local office, or combine the resources of several offices, to identify the members and activities of a criminal organization. Task forces often include investigators from other law enforcement agencies because of the wide variety of criminal law violations which are uncovered. Cooperation with other agencies increases the level of task force resources and enhances the ability of the Service to effectively uncover large scale criminal alien organizations.

Aliens involved in organized crime, subversion, and terrorism are taken into custody for Service deportation proceedings upon the completion of any term of incarceration imposed after criminal prosecution. Weapons, documents, vehicles, and equipment used in the commission of criminal violations are seized under search warrant for safeguarding as evidence, and vehicle forfeiture proceedings are initiated under the Immigration and Nationality Act. While these activities are effective in depriving violators of the assets to continue their criminal enterprise, the Service's forfeiture authority is limited to the confiscation of conveyances. Jurisdiction for other forfeitures must be passed to other agencies.

Administrative investigations are accomplished through the use of traditional overt investigative techniques, such as interviews at places of residence and employment, and reviews of civil and business records. Investigations often require the service of subpoenas and search warrants to obtain evidence or to gain access to employment sites where illegal aliens are working.

1130

The level of effort of the Investigations program has been drastically increased as a result of passage of the Immigration Reform and Control Act of 1986. Two provisions of the Act that greatly affect this program are the employer sanctions provision and the MacKay amendment.

The employer sanctions provision makes it illegal to employ illegal aliens. Commencing with a six-month period after enactment, employers will be provided with detailed information about the law. During that time the Investigations program will provide employers with literature and will conduct an active public information campaign. The actual enforcement of the law against the employers will begin after this education/information phase is completed in May, 1987.

The second provision affecting the Investigations program is the MacKay amendment. The MacKay amendment mandates that INS take affirmative action to locate, process and remove criminal aliens from the United States. It requires that the Service initiate deportation proceedings as expeditiously as possible after the conviction of an alien on a deportable offense. This initiative is targeted directly at aliens engaged in criminal activities. These aliens comprise a growing threat to the domestic and internal security of this Nation. In fiscal year 1985 alone, there were over 135,000 criminal alien referrals to INS from Federal, State and local law enforcement agencies. Of this number, 42,277 had been convicted and found to be deportable.

Accomplishments and Workload: Accomplishments of the Investigations program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Cases received	43,519	45,245	45,000	66,900
Cases completed	28,418	26,463	26,500	46,436

Resulting from casework	21	26	198	195
Other apprehensions	71	43	43	43
Site visits	...	...	...	19,900

The Investigations program places highest priority on cases involving criminal aliens, fraud schemes to obtain immigration benefits, and aliens who illegally receive benefits from government entitlement programs. These investigations are considered of great importance and impact on maintaining control of illegal immigration into the United States.

The effectiveness of the Investigations staff is not limited to the numbers of cases and apprehensions, but can also be demonstrated by the potential cost savings in terms of entitlement benefits saved, fines from prosecutions and wages not

paid to illegal aliens. There are also immeasureable benefits acquired by reducing the number of illegal aliens holding jobs that subsequently become available for citizens.

- In 1986, investigations identified nearly 50,000 ineligible aliens who were applicants for or enrolled in government benefit payout programs such as unemployment insurance, welfare, etc. The cost savings to State and local governments resulting from the removal or nonenrollment of these aliens in entitlement programs was calculated to exceed $100 million.

- In 1986, investigations located 15,593 deportable aliens holding jobs in this country. Using average annualized incomes, it can be estimated that U.S. citizens and resident aliens were displaced from jobs worth over $180 million.

- Also 968 cases targeting notorious employers of illegal aliens were completed in 1986. Over 600 of these resulted in successful cessation of hiring of illegals by target employers. Since employment opportunity is the major cause of illegal immigration, reduction of the number of employers hiring illegal aliens also alleviates one of the "pull" factors drawing people to this country illegally.

- Investigators closed down 593 major fraud schemes in 1986. Typically, the targets in fraud cases assist several aliens through the sale, distribution, manufacture or alteration of fraudulent documents. Other targets arrange marriage or other relationship frauds.

A major thrust for investigations has been to redirect investigative resources to focus on large scale criminal schemes. This is being accomplished through a task force concept targeted against crime rings and nationality groups. The task force operations to date have identified multiple conspirators and complex organizations that are international in scope, involving the manufacture of counterfeit immigration and other identification documents, the arrangement of fraudulent marriages, and the corruption of foreign-based travel agents. Extensive utilization of undercover operations and consensual monitoring equipment has resulted in successful prosecution and/or plea bargain agreements.

Other task force operations are ongoing. One investigation involves 1,100 suspected fraudulent petitions submitted by one nationality group. In 46 cases investigated, a 92 percent rate of fraud was uncovered, involving the interrelationship of eleven principals, two attorneys, immigration consultants, and notaries public. In another instance, a joint task force operation in Washington, D.C., with the Department of Health and Human Services involving the counterfeiting of alien registration documents and social security cards resulted in the arrest and charging of 10 principals, 15 additional aliens, and the recovery of a significant volume of the aforementioned counterfeit documents. A third extensive investigation involves Middle Eastern aliens engaged in fraudulent marriages, the sale of immigration documents to aliens at various locations in the United States and Europe for upwards of $7,500, sale of food stamps, and weapons and drug trafficking. This long-term inquiry has additionally targeted two attorneys who have knowingly submitted fraudulent documentation to the Service on behalf of these same aliens.

The estimated workload is increased in 1988 as a result of passage of the Immigration Reform and Control Act of 1986. Due to this legislation, staff increases will begin in 1987 and continue into 1988. The large increase in apprehensions resulting from casework is attributed to the expectation that most of the resources received in Immigration Reform will focus on that type of work.

There is no appreciable workload associated with the new positions in 1987 due to hiring beginning well after the start of the fiscal year and the amount of time required for training new officer positions.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Anti-Smuggling.....	390	317	$16,784	390	358	$19,640	390	358	$19,640	...	...	...

Long Range Goal: Reduce the number of illegal aliens in the United States and prevent the entry of unqualified persons by detecting and successfully prosecuting those individuals involved in smuggling and transporting aliens.

Major Objectives:

Identify smugglers of aliens.

Investigate and apprehend smugglers of aliens, concentrating resources on major violators.

Prepare sufficient evidence to support the U.S. Attorneys in obtaining convictions of smuggling violators.

Increase deterrent efforts such as conveyance seizures, extraterritorial prosecutions, fines and sentences.

Base Program Description: While the large majority of alien smugglers apprehended by INS enforcement personnel are considered minor violators operating independently and infrequently, a growing number of these violators are associated with large-scale, highly organized criminal conspiracies. Quite often, these professional organizations are simultaneously involved in other illegal activities such as narcotics and weapons smuggling, extortion, kidnapping, peonage, and document fraud on an international scale. Criminal investigators assigned to the Anti-Smuggling program identify and infiltrate these organizations through interviews, the use of informants, surreptitious surveillance, and undercover and task force operations.

To increase its effectiveness in infiltrating and combatting alien smuggling conspiracies, the Anti-Smuggling program works closely with the U.S. Attorneys and with officials of the Republic of Mexico and Canada. The Mexican Government has instituted assignment of special units at interior road checks in Mexico resulting in the apprehension of a number of Central American aliens before they reach the U.S. Border. Further, Canada has changed its laws to permit prosecution of smugglers in Canada who violate United States laws.

Accomplishments and Workload: Accomplishments of the Anti-Smuggling program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Smuggling Principals Apprehended (Anti-Smuggling).....	3,399	3,016	3,500	4,200

Item	1985	1986	Estimates 1987	1988
Smuggling Principals Apprehended (Servicewide)	18,077	22,241	24,970	27,850
Cases completed	2,607	1,804	2,000	2,400
Prosecutions				
Major	1,073	1,810	1,800	2,200
Minor	5,587	6,189	6,200	6,800
Convictions (Defendants):				
Felony	1,463	1,379	1,600	1,900
Misdemeanor	3,660	5,200	5,200	5,800
Sentences (Months-All charges)	23,084	33,501	36,000	40,200
Conveyances Seized	10,348	13,965	14,000	14,700

A number of significant investigations of large-scale smuggling organizations were conducted during 1986 by Anti-Smuggling units. In one such case, a U.S. Air Force Lieutenant Colonel was apprehended as the leader of an organization smuggling illegal Dominican aliens into the United States for fees ranging from $4,000 to $6,000 per alien. In another case, a convicted narcotics trafficker was convicted of alien smuggling, three counts of second degree murder, and threatening to kill one of the witnesses who testified against him. This smuggler was attempting to smuggle illegal Chilean aliens into the United States by boat. When his boat broke down, he forced three of the aliens overboard where they subsequently perished.

Other successful prosecutions included: several joint Federal Bureau of Investigations and Drug Enforcement Administration/INS investigations; labor contracting smuggling; and smuggling with tractor trailers, motorhomes, and other unusual vehicles.

The increased focus by the INS on reducing illegal immigration is reflected in the higher numbers of alien smugglers apprehended and successfully prosecuted. The Service apprehended 22,241 smugglers, an increase of 4,164 over 1985. Reflecting the intensified efforts of the Anti-Smuggling program to identify and break up large-scale alien smuggling organizations and improve the quality of criminal investigations, a total of 7,999 prosecutions of alien smugglers was authorized, resulting in 6,679 convictions (an eighty-two percent conviction rate). As an adjunct to criminal prosecutions, the Service seized a total of 13,965 conveyances (cars, trucks, vessels, airplanes) used in alien smuggling, with an appraised value of more than $31 million. This is a considerable increase over the 10,348 vehicle seizures in 1985. The Service transferred more than $8 million to the Asset Forfeiture Fund from the sale and disposition of seized vehicles and incorporated 252 suitable vehicles into the INS fleet during 1986.

In 1986 the program continued its focus on the identification, apprehension, and successful prosecution of major alien smuggling organizations, particularly in those instances where there is the likelihood of conspiracy. The program continues to conduct extensive investigative efforts against broadly diversified smuggling organizations engaged in infant smuggling, hostage/extortion situations, corporate smuggling, drug and counterfeit document trafficking, extraterritorial prosecutions, and terrorist activities. Beginning in 1986, the program was asked to be a part of the Southwest Border Interdiction Program under Operation Alliance. The Anti-Smuggling program responded by cross designating one hundred and twenty-three of its special agents for drug interdiction.

The estimated workload is increased in 1988 as a result of passage of the Immigration Reform and Control Act of 1986. Due to this legislation, staff increases will begin in 1987 and continue into 1988.

There is no appreciable workload associated with the new positions in 1987 due to hiring beginning well after the start of the fiscal year and the time required for training new officer positions.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Detention and Deportation....	1,644	1,267	$109,240	1,644	1,607	$140,270	1,644	1,607	$140,270	...	...	...

Long Range Goal: Adequately detain until ready for removal those aliens subject to exclusion proceedings and those subject to deportation proceedings who are likely to abscond or whose freedom at large would clearly represent a danger to public safety and security. Maintain and further develop a system of control which ensures that every case involving a deportable or excludable alien is processed expeditiously and that the alien is removed from the United States when appropriate.

Major Objectives:

Promptly remove deportable and excludable aliens and avoid detention to the greatest extent possible.

Ensure that adequate alien detention capability is available by staffing and maintaining seven accredited INS Service Processing Centers (SPCs), and detaining aliens when necessary in non-INS facilities--including contract facilities which meet INS standards.

Allow apprehension activities to operate at full capacity by maintaining a parity of removal capability. Fully support apprehending activities in implementation of the Immigration Reform and Control Act of 1986.

Maintain an automated control system necessary to cope with the increasing number of illegal aliens apprehended.

Base Program Description: The Detention program and the Investigations, Border Patrol and Anti-Smuggling programs are interdependent in that (1) Detention is reliant upon the other three to apprehend the aliens to be detained; and (2) the Investigations, Border Patrol and Anti-Smuggling program activities must be paced to the availability of detention space. When an alien's freedom at large would clearly represent a present danger to public safety or security, or when an alien's lack of funds or fixed address supports a finding that she/he is likely to abscond, that alien must be detained by INS pending a determination of deportability. Additionally, the Immigration and Nationality Act mandates that aliens who appear to be excludable be detained for further inquiry. To accomplish these detentions, INS utilizes Service Processing Centers (SPCs) and non-Service detention space.

The Detention program currently maintains seven permanent SPC's. These centers are located in Manhattan, NY; Boston, MA; Miami, FL; El Paso and Port Isabel, TX; El Centro, CA; and Florence, AZ; and have a combined rated detention capacity for 2,239 illegal aliens. The immigration detention officers assigned to these facilities are responsible for all matters relating to the care and custody of the aliens detained. In addition to the SPC's, an INS/Public Health Service facility is operational at St. Elizabeth's Hospital in Washington, D.C., for the detention of mentally ill Cubans. INS also maintains a full-time staff in the Atlanta Penitentiary because of the criminal Cubans detained there. In addition to these overnight facilities, the Service operates a number of Service Staging Areas for the temporary holding of apprehended aliens.

In 1986, Congress added resources to INS' appropriation for the staffing and operation of the Oakdale Federal Alien Detention Facility. Although originally intended for use as an Alien Detention Facility, Oakdale is now being used temporarily as a detention site for Mariel Cuban criminals. This use of Oakdale is one initiative of an overall Department of Justice strategy designed to handle this serious detention problem. The Federal Prison System (FPS) continues to handle the operational aspects of the Oakdale facility while INS is responsible for case review and transportation.

It is often cost-effective for the Detention program to use non-INS detention facilities. More than 900 of these non-INS facilities throughout the United States were used in 1986. About 45 percent of the aliens detained were kept in non-INS facilities. INS will continue to utilize non-INS detention facilities as much as possible to enhance its detention capability. Unfortunately, available detention space in State and local jails has declined because of escalating prison populations. In addition, some of the facilities previously used cannot continue to be used because they fail to meet INS detention standards which were developed with the assistance of FPS.

The Deportation program accomplishes the removal of illegal aliens under either voluntary departure procedures or formal deportation proceedings. The major responsibilities of immigration deportation officers include the supervision of aliens while under bond, released on their own recognizance, or in detention. Additional responsibilities include maintaining liaison with the Department of State and foreign governments to obtain travel documents in order to effect deportations or removals expeditiously.

An alien removal capability is provided by various methods. INS operates its own fleet of passenger vans, buses, and an aircraft to transport aliens. In addition, an alien travel fund is maintained to cover the transportation expenses of those aliens expelled at U.S. Government expense.

The recently passed Immigration Reform and Control Act of 1986 will increase the workload in the Detention and Deportation program especially due to the employer sanctions provision and the MacKay Amendment, which requires INS to initiate deportation proceedings as expeditiously as possible after the conviction of an alien for a deportable offense.

The additional Detention and Deportation positions added in the 1987 Supplemental Appropriations request to implement the Immigration Reform and Control Act of 1986 will allow INS to process, detain and transport the large number of criminal aliens expected to be apprehended through drug enforcement efforts, as well as those who must be held on detainers in State and local facilities after completing sentences for drug crimes and other criminal violations. Those aliens who are involved in lengthy deportation proceedings will be detained to prevent them from absconding and possibly returning to their various criminal activities.

Accomplishments and Workload: Accomplishments of the Detention and Deportation program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Detention				
a. Aliens detained (Total)	145,989	137,332	115,000	136,800
• INS Facilities	68,691	75,114	69,000	69,000
• Non-Service Facilities	77,298	62,218	46,300	67,800
b. Number of detention days	1,476,430	1,437,266	1,651,000	1,957,000
• INS Facilities	916,970	896,962	982,000	1,036,000
• Non-Service Facilities	559,460	540,304	690,000	921,000
c. Average stay in detention (days)	10.1	10.5	14.4	14.3
Expulsions				
a. Aliens expelled (b+c+d+e)	1,069,680	1,614,519	1,797,000	2,136,700
b. Voluntary departures under docket control	44,538	28,665	32,000	56,800
c. Voluntary departures not under docket control	1,001,766	1,559,838	1,733,000	2,012,200
d. Deportations effected	21,588	23,681	29,000	63,700
e. Exclusions effected	1,788	2,335	3,000	4,000
f. Deportable aliens located, percentage expelled	81.2%	91.5%	95.8%	90.4%
g. Expelled aliens, percentage detained	13.6%	8.5%	6.6%	6.4%
Recognizance, Bond and Supervision				
a. Aliens released on recognizance	5,259	8,696	8,000	9,000
b. Aliens placed on bond	41,224	33,016	33,000	56,200
c. Aliens placed under supervision	139	116	100	100

The Detention program accomplished its mission during 1986 through the operation of seven SPC's. Through an expansion program, the combined rated capacity of these seven facilities is now 2,239 detainees. INS also utilized contract detention facilities, located in Los Angeles, Denver, Laredo, and Houston. A standard statement of work for contract facilities has been developed and will be used in future opportunities to utilize private sector entities for the safeguarding and care of Service detainees.

The Deportable Alien Control System (DACS), an automated docket control and detention booking system, is now operational in the SPC's and in Oakdale, as well as in the San Diego, Chicago, New York and Philadelphia District Offices.

Before the suspension of the United States/Cuba agreement on the Cuban Removal Program, five successful flights were conducted on which approximately 200 Mariel Cuban criminals were removed from the United States.

Several long-term improvements to the SPC's have been recently completed. The Krome North SPC now has an in-house kitchen and a medical clinic. Expansion of barracks, improvement of sewage and water treatment plants and an outdoor recreation facility have been completed at Port Isabel.

INS has worked closely with the Public Health Service (PHS) to ensure that adequate medical and mental health care services are available in the SPC's. PHS has provided a medical staff for two INS facilities on a reimbursable basis, provided medical escorts when necessary, inspected INS facilities, and recommended improvements where required.

Because of the suspension of the Cuban repatriation agreement, and overcrowding at FPS facilities, INS has had to detain an increasing number of Mariel Cuban criminals in its minimum security facilities. Supplemental funding was provided by Congress in 1986 to address this problem and additional supplemental funding is requested in 1987. DOJ initiatives to address the Mariel Cuban detention problem include:

- Change of mission of the INS/FPS Oakdale Federal Alien Detention Center to house 500-600 Mariel Cuban criminals through 1988.
- Additional 300 beds (maximum security) at Oakdale will come on-line by February 1987.
- CRS halfway house placement programs will remain at 360 beds.
- Vocational, counseling, and educational programs for Cubans will be established at Oakdale and result in a population segment who become eligible for release to immediate family members.
- The population at the Atlanta Penitentiary will be reduced from its current ceiling of 1,800 to 1,500 in February 1987 to allow for renovation.
- A Case Review Plan will be established at Oakdale by the end of the second quarter of 1987. It will operate fulltime to determine and review appropriate placement for more than 3,000 Cubans now in INS custody as well as the anticipated 70-80 releases per month to INS custody from state and local jails.

The estimated workload is increased in 1988 as a result of passage of the Immigration Reform and Control Act of 1986. Due to this legislation, staff increases will begin in 1987 and continue into 1988.

There is no appreciable workload associated with the new positions in 1987 due to hiring beginning well after the start of the fiscal year and the time required for training new officer positions.

Activity: Citizenship and Benefits	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Adjudications and naturalization	1,325	1,309	$51,408	1,325	1,540	$64,141	1,325	1,540	$64,141	...	...	...
Refugees and overseas	106	142	8,270	106	174	10,452	106	174	10,452	...	...	...

The resources necessary to provide the benefits of the Immigration and Nationality Act are provided in this activity. Included are the adjudication of applications and petitions submitted for benefits, and the processing of naturalization and citizenship petitions and applications. All operations conducted overseas except preinspection are within this activity.

	1987 Appropriation			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Adjudications & Naturalization.	1,325	1,309	$51,408	1,325	1,540	$64,141	1,325	1,540	$64,141	...	...	...

Long Range Goal: Provide for and facilitate the efficient, timely adjudication of applications and petitions for benefits provided by law, and naturalization of all eligible applicants.

Major Objectives:

Assure that benefits are provided to those entitled to them under the Immigration and Nationality Act, and denied to those not entitled, in a prompt and courteous manner and without undue burden on the public.

Attain and maintain a current workload in adjudications cases, which equates to a projected total of 230,000 pending cases (5 1/2 weeks' receipts).

Attain and maintain currency in naturalization and citizenship cases, which equates to a projected total of 156,000 pending cases (four months' receipts).

Attain and maintain currency in asylum applications, which equates to 6,000 pending cases (four months' receipts).

Manage resources in response to workload so that applicants will receive decisions of consistent quality and timeliness in all geographical jurisdictions of the Immigration and Naturalization Service.

Base Program Description: The Adjudications program--The principal statutory authorizations that this program administers are Sections 203, 204, 205, 212, 214, 245, 248 and 249 of the Immigration and Nationality Act. The purpose of the program is to provide prompt, consistent and correct decisions to persons seeking benefits, and to detect fraudulent applications.

The Naturalization program--Article I, Section 8, Clause 4 of the U.S. Constitution mandates the establishment of a "uniform rule of naturalization". The Congress, in compliance with its Constitutional mandate, has specified in Sections 301 through 360 of the Immigration and Nationality Act of 1952 (8 U.S.C. 1401 through 1503) the means by which an alien may become a U.S. citizen. It vests exclusive jurisdiction to naturalize in certain Federal and State courts. It also reserves to the Attorney General the authority to prescribe the nature and scope of the examination of petitioners for naturalization as to their admissibility for citizenship and to make appropriate recommendations to the naturalization courts. This authority in Section 332 of the Act (8 U.S.C. 1443) is exercised through INS employees designated by the Attorney General to administer the naturalization laws.

The Immigration Reform and Control Act of 1986 provides temporary resident status to aliens who entered the U.S. illegally or lapsed into illegal status prior to January 1, 1982, who resided continuously in the U.S. since then, and who are not excludable. Aliens may apply for this benefit between May 5, 1987 to May 4, 1988. It also allows these aliens to apply to adjust their status of these people to permanent resident after 18 months of temporary status upon showing general admissibility and basic citizenship skills. Section 202 further provides for adjustment to permanent resident status of certain Cubans and Haitians who entered the U.S. prior to January 1, 1982.

It is anticipated that fees collected from applicants seeking benefits under the Legalization provision will fund the Legalization aspects of the Act.

Section 301 of the Act creates a separate and distinct temporary worker program for agriculture, the "H-2A" program. Section 302 of the Act mandates adjustment procedures whereby aliens who can demonstrate they have performed seasonal agricultural services in the United States for at least 90 mandays during the 12 month period ending May 1, 1986 can apply for temporary resident status. Temporary workers can apply for resident status between June 1, 1987 to November 30, 1988. These new provisions will significantly increase the workload in this program.

Accomplishments and Workload: Accomplishments of the Adjudications and Naturalization program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Adjudications:				
Adjudications cases received	1,897,160	2,203,631	2,300,000	2,300,000
End of Year Pending	347,387	324,000	324,000	274,000
Adjudications Completed within the Program	1,298,946	1,357,018	1,400,000	1,450,000
Adjudications completed using immigration inspector standby time at ports of entry. (These case completions are not included in the "adjudications completed within the program" figures above.)	668,000	643,797	700,000	700,000

Item	1985	1986	Estimates 1987	1988
Major Fraud Investigations	...	...	...	1,470
Major Fraud Prosecutions	...	...	...	275

1/ Form N-400 is entitled "Application to File Petition for Naturalization." Form N-600 is entitled "Application for Certificate of Citizenship."

During 1984, the Adjudications program established the Balanced Adjudications System for processing Adjudications casework. Within this system, emergency cases, fraud cases and cases requiring an interview are handled by district offices. Simple non-interview cases are sent to ports of entry for completion by inspectors during standby time. Complex non-interview cases are remoted to the four Regional Service Centers (RSCs), where personnel are free from collateral duties, telephone calls, and walk in visits by the public. Completions at ports of entry have increased by 33 percent in the last two years, while RSC completions have increased by 75 percent.

On April 1, 1986, the Adjudications Program implemented a quality review system at all four regional service centers. These centers adjudicated 27 percent of the Service's applications for 1986. This quality review program provides for a supervisory review of a statistically valid sample of return and approvals. One hundred percent of denials are reviewed by supervisors. The system will be refined and improved in 1987. INS is also testing a quality review system for district offices in 1987. It will be implemented at selected offices in the fourth quarter of 1987, contingent on available resources.

INS continued development of the direct mail initiative in 1986. Eastern Region implemented Phase I of direct mail on August 1, 1986. Northern Region implemented Phase I on October 1, 1986 and Southern Region implemented Phase I on December 1, 1986. Western Region is scheduled to implement Phase I on February 1, 1987, but workload and space problems may require a deferral. Phase I includes five form types and, on an annual basis, over 202,000 applications and petitions are expected to be handled this way. Phase two of direct mail has been deferred until Immigration Reform priorities have been resolved.

The new categories of workload for 1987 and 1988 reflect new functions mandated by the Legalization provision of the Immigration Reform and Control Act of 1986.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Refugees and overseas	106	142	$8,270	106	174	$10,452	106	174	$10,452	...	...	...

Long Range Goal: Approve qualified applicants for refugee status and for admission into the United States; adjudicate petitions and applications for benefits under the Immigration and Nationality Act (INA); verify claims on applications and petitions by conducting immigration investigations; and coordinate other enforcement related activities.

Major Objectives:

Coordinate with U.S. missions abroad and represent U.S. immigration policy interests and concerns to host governments, international organizations, and private voluntary agencies.

Receive and adjudicate applications from persons requesting entry into the U.S. as refugees in accordance with the INA and yearly consultations between the President and the Congress.

Adjudicate applications and petitions related to individuals seeking admission into the United States as immigrants, and other benefits under the INA.

Conduct investigations in order to verify entitlement to benefits under the INA and prevent fraud, alien smuggling, and other violations of U.S. immigration laws.

Provide planning, coordination, review, and evaluation of the Service's asylum and interdiction programs.

Base Program Description: Under the INA, as amended, the Attorney General is responsible for the review and approval of applications from individuals seeking to enter the United States as refugees. Under a delegation of this authority from the Attorney General, these refugee determinations, which exceeded 65,000 approvals and denials in 1986, are made by the overseas offices of INS. In addition, these overseas offices receive and adjudicate petitions, applications, and waivers from the inadmissibility provisions of law, submitted on behalf of aliens seeking to enter the United States as immigrants and obtain other benefits under the INA.

The Service also provides assistance to citizens and lawful permanent residents abroad regarding adoptions, immigration or parole of alien spouses and children and other benefits under the INA. In support of overseas refugee and adjudications work, investigations are conducted to verify entitlements, and if possible, prevent fraud, smuggling, and other violations of U.S. immigration laws in Service offices in the U.S. and in U.S. overseas offices.

Overseas offices, in coordination with U.S. missions abroad, carry out the Attorney General's responsibility for controlling the entry of aliens into the United States by representing immigration policy interest and concerns to foreign governments, international organizations, and private voluntary agencies. In representing these concerns to other institutions and individuals, the overseas offices provide for increased sharing of information in the international community on refugees and trends in international migration, the immigration laws and policies of the U.S. and other nations, immigration fraud and international smuggling, and possibilities for collaborative enforcement and other immigration related efforts.

This unit also plans, coordinates, reviews, and evaluates agency field efforts in processing applications from individuals seeking asylum in the United States. These individuals, though distinct from refugee applicants in that they are already physically present in or at the border of the United States, must satisfy the requirements of the Refugee Act of 1980.

Finally, this unit is responsible for reviewing requests for the use of the Attorney General's authority to grant humanitarian parole into the U.S. for deserving individuals, and coordinating the Service's interdiction program with other participating Federal agencies. The latter program, with the assistance of the Coast Guard, provides for interdiction and return to countries of embarkation, individuals attempting to reach our shores illegally.

Accomplishments and Workload: Accomplishments of the Refugees and Overseas program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Refugees Applying for Entry				
*Pending/Backlog	13,707	15,895	12,000	12,000
Received	93,415	81,017	100,000	100,000
Completed	79,708	65,122	90,000	90,000
Adjudications Completed				
*Pending/Backlog	1,762	4,952	...	...
Received	65,604	57,725	96,000	196,000
Completed	66,896	55,468	81,000	141,000
Investigations				
Pending/Backlog	...	1,762	...	...
Received	5,239	5,147	5,700	6,400
Completed	5,580	4,434	5,600	6,150
Diplomatic Liason				
Completed	...	273	325	400
Public Service Completed	...	2,949	3,000	3,000

* These are incompleted cases at year-end, adjusted for cases withdrawn and other types of termination actions.

In 1986, major accomplishments included: revision of the Worldwide Guidelines for Refugee processing; participation in refugee consultation; development of a proposal for a private sector alternative to meet refugee admission needs; and commencement of a humanitarian parole program for Khmer on the Thai-Cambodian border. In addition to these achievements, the Service has also begun to increase the ability of overseas offices to contribute to the agency's domestic goals and operations through strengthened and more closely coordinated adjudication, investigation, and enforcement related activities.

Accomplishments in the Service's asylum program have included: the elimination of the agency's asylum case backlog, the establishment of monthly processing goals, the installation of new asylum officer training programs, and improved coordination of the Service's asylum operations with the Department of State, and the Executive Office of Immigration Review, whose immigration judges receive asylum claims during expulsion proceedings. The unit has also revised the asylum regulations in coordination with the Attorney General's office.

To facilitate the Service's interdiction program, the Refugees and Asylum program has continued its 1986 efforts to strengthen cooperation between participating Federal agencies and the countries of the Caribbean from which most of those intercepted embark.

Activity: Immigration Support	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount

Total	2,717	2,191	182,399	2,717	2,639	183,813	2,717	2,639	183,813	...	...	...

This activity includes the resources for construction, communications, records management, automated data processing, training of personnel, research and development, field management, legal proceedings and the alien documentation program (ADIT). In addition, it provides a capacity to scientifically examine and analyze documents to assist in the identification, investigation and prosecution of major conspiracies which provide fraudulent documents to smuggled aliens.

	1987 Appropriation			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Training	89	73	$9,192	89	87	$9,960	89	87	$9,960	...	...	...

Long Range Goal: Establish and maintain an employee development system that meets the needs of management and individual employees and complies with regulatory requirements.

Major Objectives:

Servicewide Operations Training:

1. Basic training for all new recruits to the officer corps including those recruits related to the implementation of the Immigration Reform and Control Act of 1986.

2. Advanced technical training primarily for the journeyman officer corps.
3. Updated curriculum for the basic and journeyman officer corps training programs.

Servicewide Support Training:

1. Training for INS supervisors, managers, management officials and executives.
2. Technical training programs to meet requirements not satisfied by in-Service programs.

Regional and Local Training:

1. Training for organizational and individual requirements that are not accomplished through national or Servicewide programs.

Base Program Description: INS training requirements are identified annually and revised during the year as dictated by new regulations, legislation or organizational needs such as those related to the Immigration Reform and Control Act of 1986. Actual training is accomplished by in-Service training programs using INS instructors, training programs conducted by other agencies, private firms or a combination of the foregoing. In-Service training programs are primarily related to specific INS subjects. The following is a brief description of the activities:

Servicewide Operations: Comprises the law enforcement, supervisory and other operations training (basic and/or advanced) delivered to the officer corps personnel and any other employees directly involved in Servicewide operations (e.g., contact representatives, and deportation docket clerks). Training is conducted primarily at the Officer Development Training Facility (ODTF) in Glynco, Georgia. Included under this activity are the positions permanently assigned to and the general administrative costs at the ODTF.

Servicewide Support: (1) development and implementation of technical training programs for executive, managerial, clerical and administrative employees; (2) technical training not conducted at the ODTF for all other occupational groups; (3) development of policies and procedures regarding employee development; (4) determination of effectiveness and efficiency of all INS Servicewide training programs; (5) evaluation, consultation research and implementation of new training techniques to improve curriculum; and (6) the formulation and execution of the INS training budget. Included in this activity are the positions permanently assigned to the Central Office (excluding the training officer).

Regional and Local Training: Includes specialized training and development needs of employees in the Central Office and the regions. These needs primarily have individual or local implications which are not presently required for Servicewide programs. These programs are conducted either locally, in-house or by external sources. Included in this program element are the training officer and support positions permanently assigned in the central and regional offices, and those resources needed to cover tuition costs, travel and per diem.

Accomplishments and Workload: Accomplishments of the Training program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Workload Production/Training Completions:				
Border Patrol Basic	582	539	900	1,320
Immigration Officer Basic	230	141	390	390
Detention Officer Basic	73	72	124	124
Journeyman Officer Training	396	504	860	650
Basic Supervisory Development	222	216	216	266
Management Development	150	170	200	250
Executive Development	22	32	30	30
Extension Training	560	580	600	600
Contact Representatives and Docket clerks	46	48	150	150
Regional/Central Office Training	2,745	2,658	2,550	2,550
Workload Production/Training Starts:				
Border Patrol Basic	1,218	637	984	920
Immigration Officer Basic	187	160	370	390
Detention Officer Basic	74	71	124	124

In 1986, 752 officers completed the basic officer corps training program at the OOTF. The length of these basic officer programs is as follows: Detention - 6 weeks, Immigration - 14 weeks, and Border Patrol - 17 weeks. Journeyman training was provided for 504 officers, and 222 INS supervisors and managers attended supervisory training sponsored under Servicewide programs. In addition to Servicewide programs, 2,658 individual training courses were provided to INS employees to meet regional and local training needs.

The workload indicators for 1987 and 1988 reflect the impact of the implementation of the Immigration Reform and Control Act of 1986, particularly due to the permanent expansion of major existing enforcement programs.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Data and Communications Systems	209	191	$50,639	209	195	$63,774	209	195	$63,774	...	...	...

Long Range Goal: Increase the efficiency and effectiveness of INS' operational, administrative and managerial functions by providing the optimal level of data automation support; provide the modern data communications required to support all of INS' information needs; produce and issue alien identification documents; and provide radio and electronics equipment and systems required by the INS to support its service and enforcement functions.

Major Objectives:

ADP Systems--

Operate and maintain systems with upgraded access by Service employees through enhanced software and additional user hardware: (1) Current mission support systems: Non-Immigrant Information System, Central Index System, Student/Schools Database, Systematic Alien Status Verification System in conjunction with the Systematic Alien Verification for Entitlements (SAVE) Program, (in 1988, the SAVE automated system will become available to designated entitlement agencies under the U.S. Departments of Labor, Health and Human Services, Housing and Urban Development, Education, and Agriculture, for implementation in all states except in those areas where waivers are granted by the appropriate secretaries of the departments noted), Operational Activities Special Information System (OASIS), National Automated Information Lookout System, Cuban Adjustment Program System, Naturalization Casework System, Deportable Alien Casework System, Legal Case Tracking System, Immigrant Visa Data Capture System; and (2) Business support systems, i.e., Directives Access Information System, Freedom of Information Act System, and Performance Analysis System.

Operate and maintain new ADP based systems and databases: Remote Adjudications Tracking System, and those systems identified with the responsibilities of the Immigration Reform and Control Act of 1986 and User Fee legislation.

Continue with the implementation of the ADP Plan through the installation of hardware and word processing, data communications and facilities operations.

Data Communications--

Operate the Immigration and Naturalization Service 36,000 mile Communications Network (INSINC). Provide INS field offices with inter-office data communications and remote access to centralized databases and computing resources with the capabilities to expand to support new applications contained in the Long Range ADP Plan and those needed to support new legislation by upgrading the backbone network with higher speed lines to maintain system operations with increasing transaction volumes. The INSINC contractual support for the network will be continued until it is replaced by the new Department of Justice Telecommunications Network (JTN). The competition for the new JTN has begun and will be continued through 1987 and 1988.

Alien Documentation, Identification and Telecommunications (ADIT) Systems--

Maintain high volume, cost-effective production and issuance of secure identification cards and updates to computer databases associated with identify information.

Electronics Support--

Provide INS operating units with reliable, modern radio and electronics equipment and systems through expanded use of MICROWAVE systems. These will support the mission goals associated with enforcement and control of illegal migration.

Provide automated intrusion detection capabilities at selected Border Patrol sectors consisting of a variety of sensor and imaging equipment with centralized monitoring at the sector for dispatch and reporting purposes through the CADRE System.

Provide an effective maintenance program and equipment replacement and upgrade schedule. This is required to ensure effective operation of communications and electronics capabilities.

Base Program Description: Development, operation and maintenance of existing and developing ADP systems are accomplished by: (1) computerized support provided on a reimbursable basis by the Justice Data Service Center in Washington D.C., and the dedicated Southwest Data Center in Dallas, Texas; (2) INS Satellite Data Centers; and (3) purchased or leased hardware.

Systems will be maintained at current and expanded levels of service through the operation of existing and recently developed systems defined in the long range ADP Plan.

The Data and Communications Systems program will continue to operate the recently implemented data communications network providing remote access to central computer records.

The operation of a single facility will accomplish: the issuance of large numbers of immigration identification cards, database establishment and maintenance, and the collection of data from immigrant visas and adjustments of immigration status to update the database. These services will be merged through a combined recompetition of both services in 1987 with start up operation in 1988. The facility will operate under contract with technical and operational direction and performance monitoring performed by on-site INS personnel.

The Radio Communications program provides Service operational elements with radio communications, intrusion detection (electronic sensors and imaging equipment) and electronics security equipment and systems. Radio frequency management, inventory and replacement schedules are maintained through the use of microcomputer and time-sharing services.

Accomplishments of the Data and Communications Systems program:

I. ADP SYSTEMS

1. Systems Planning--

The 1987 request represented the fourth full year for the INS automation program as defined in the Service's existing Long Range ADP Plan. Three accomplishments that continue to allow early implementation of the plan are (1) a contract for software development and (2) the Department of Justice Southwest Data Center that supports the software systems which are developed, and (3) the ADP hardware and facility operations contract. These initiatives have provided a continuing source of ADP professional and computer processing resources for development and implementation efforts underway as identified below.

1148

2. Systems Operation--

The following operational systems have been recently expanded and/or proliferated and are available at 149 INS sites: (1) The Central Index System which houses records on over 20 million individuals and supports State government access to the SAVE program; (2) the Non-Immigrant Information System has been improved to a point that over 625,000 records can now be loaded in a 24-hour period and currently maintains over 55 million records on the database; (3) the casework systems including the Deportable Alien Casework, the Naturalization Casework and the Legal Case Tracking Systems were proliferated to additional sites; (4) numerous improvements were made to the various subsystems of the Service's Financial Management Information Systems; (5) the Anti-Smuggling Information System which supports the El Paso Intelligence Center, was redesigned and renamed as the Operational Activities Special Information System (OASIS) and includes subsystems of Anti-Smuggling Information, Seized Vehicle Information System, Fraud System and a yet to be developed Criminal Information System; (6) the A-File Tracking System (AFACS) which records the movement of alien files in district offices was installed in six district offices.

3. Data Exchange--

A significant accomplishment in 1986 was the successful implementation of a pilot project with the Department of State for the electronic exchange of data. The project was implemented at the Consulate in Montreal that allows the transmission of immigrant visa data through the Department of State in Washington and then to the INS IMDAC facility in Rockville, Maryland. This automated sharing of data is cost effective in that it eliminates the re-keying of information at the INS facility.

II. DATA COMMUNICATIONS

The Service's data communications network (INSINC) has been expanded to over 149 INS field offices allowing for immediate access to INS systems on the Justice Data Centers. INSINC has been expanded to include access to at least two non-INS information sources--the National Law Enforcement and Telecommunications System (NLETS), which provides information from State law enforcement systems and the FBI's National Crime Information Center (NCIC), which provides information on Federal offenders.

III. ELECTRONICS SUPPORT

1. Radio Systems--

The Southern California Microwave System was installed and is being used for that portion of the joint INS/FAA microwave backbone established under an existing INS/FAA interagency agreement. Implementation of the microwave backbone for the New Orleans segment (Texas and Florida) and the Southern California segment (Los Angeles to Arizona) is continuing. Installation of the Dallas-San Antonio-Houston microwave system is continuing. A substantial amount of portable and mobile radios were replaced in 1986.

1149

2. Intrusion Detection--

Contracts for both land mobile infrared imaging equipment with remote image TV and airbone Forward Looking Infrared (FLIR) imaging equipment have been awarded. Low Light Level TV Systems (LLLTV) are being expanded to additional border partrol sectors.

Software development and system design continued for a uniform detection system (CADRE).

3. SAVE Program--

The SAVE Program, standardized since October, 1985, is now available to every State and all entitlement agencies. At present, 15 States are participating in the program either formally or through pilot projects.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Information & Records Management	1,414	1,323	$42,557	1,414	1,488	$48,365	1,414	1,488	$48,365	...	...	...

Long Range Goals: Information Services--Provide timely, accurate information to the public and the INS concerning immigration benefits and procedures, policies, plans, activities, and immigration reform policies and procedures.

Records--Provide timely, high quality records responsive support to INS' operating components and other U.S. law enforcement agencies and administer a Servicewide program designed to ensure the utility and reliability of data generated by INS information systems both in-house and those which are contracted.

Freedom of Information and Privacy Acts--Ensure Servicewide compliance with the Freedom of Information and Privacy Acts.

Statistics--Provide analytical, technical expertise on statisical matters, and timely, accurate, statistics upon which to base policy decisions.

Base Program Description: Information Services--Inquiries received by telephone, in person and in writing are handled by Immigration Information Officers.

Records--- Provide for the control and access of records support to INS' operating components. Alien files and various other records are maintained at 55 field offices throughout the United States, including Regional Service Centers and offices established to implement the Immigration Reform and Control Act of 1986.

Freedom of Information and Privacy Acts--Requests for access to or amendment of INS records are received at INS offices throughout the nation. The determination to grant or deny a request is made at the district or regional office receiving the request and maintaining the appropriate records.

Statistics--Statistical data is submitted to the Central Office from a variety of sources, and tabulated and analyzed by the Statistical Analysis Branch. This includes both workload data and statistics on immigrants, refugees, nonimmigrants, deportable aliens and nationality from manual and automated sources. As appropriate, monthly, quarterly, annual, or special ad hoc reports or bulletins are published. Statistical information and analyses are provided to Service management, the interested public, other agencies and Congress. Technical advice is provided within the Service on statistical matters. The Statistical Analysis Branch also maintains liaison with other agencies and outside groups which have related statistical and policy interests.

Accomplishments and Workload: Accomplishments of the Information and Records Management program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Information Services:				
Pending Beginning of Period - Correspondence	9,810	11,665 1/	25,000	38,000

Inquiries Answered	2,700	2,700	2,700	2,700

NOTES:

1/ Includes adjustments for changes at the beginning of the period.

2/ New method for calculating the workload for this item.

In November 1985, the first of two comprehensive on-site reviews of the contractor's quality control performance of data collection, document control, and data conversion operations was completed. An extensive review of INS' NIIS quality assurance on-site program was concluded in 1986. Current workload volumes received and processed through quality assurance at both contractor work-sites were completed during 1986 without developing backlogs.

Information Services in 1985 installed two totally automated "Ask Immigration" telephone answering services. The first began operation at Charlotte, N.C. in May 1985. The second began operation at Portland, Oregon, in June 1985. Workload reports from these two locations indicated that telephone assistance almost doubled at these two sites. In 1986, a fully automated disk expandable system was installed at San Jose to test and evaluate the equipment capability to provide direct local access to the Ask Immigration library tapes and then forward calls needing assistance to Western Telephone Service Centers.

The Records Systems Division implemented a workload remoting program on January 7, 1985. This program was designed to reduce excessive records workloads at selected field offices.

Statistics--The production of the INS Statistical Yearbooks, which had been delayed in previous years, was returned to schedule with the publication of the 1984 and 1985 yearbooks during 1986. Other publications during the year included quarterly reports on nonimmigrants arriving in the United States and an advance report on immigrant arrivals during 1985. The 1965 through 1985 yearbooks were made available for purchase through the National Technical Information Service.

Data collection was completed in a joint INS-Census Bureau Current Population Survey supplemental to monitor changes in the resident undocumented population. In addition, a project was initiated by the INS and the Census Bureau to project labor force growth and potential future migration from four major countries.

As a result of the enactment of the Immigration Reform and Control Act of 1986, workloads for 1987 and 1988 are projected to increase substantially, based on planning estimates developed for the implementation of the new Act. The impact is primarily reflected in information services, inquiries, and in records receipts and completions.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Intelligence.....	53	45	$2,314	53	51	$2,709	53	51	$2,709	...	...	...

Long Range Goal: Develop an international immigration intelligence capability for the collection and dissemination of information regarding global migration patterns and trends, and provide meaningful intelligence support on a regular basis to INS operational components for enhanced effectiveness and efficiency.

Major Objectives:

Provide intelligence support required for maximum operational efficiency of INS field components.

Provide regularly scheduled strategic intelligence assessments to INS management for consideration in short and long-term operational planning.

Maintain liaison with appropriate U.S. and foreign government agencies on matters regarding immigration and national security, including the movement of known or suspected international terrorists.

Furnish assistance to international immigration and enforcement agencies and international air carriers.

Provide technical support and assistance in the prosecution of major document counterfeiters, alien smugglers and other violators of the Immigration and Nationality Act and new provisions of the Immigration Reform and Control Act of 1986.

Base Program Description: The INS Intelligence Program provides strategic and tactical intelligence support and technical assistance to INS policymakers and field personnel. This support enhances Service efforts to prevent the entry of illegal aliens, terrorists, and narcotics traffickers, as well as assists in the detection and disruption of alien smuggling operations and fraud schemes designed to gain Federal benefits.

The Forensic Document Laboratory (FDL) provides scientific analysis of questioned documents and subsequent expert testimony in Federal criminal cases involving the production and use of such documents. The FDL produces working aids and develops training programs to assist INS officers in the detection of fraudulent documents, conducts surveys and research into the technical aspects of document fraud; establishes technical reference resources relating to international travel documents, and develops intelligence information regarding the technical aspects of recent document fraud schemes. The FDL also is responsible for assistance in the development in counterfeit-proof travel and identification documents. The laboratory will play a major role in the enforcement of new provisions of the Immigration Reform and Control Act of 1986, particularly in the legalization and agricultural workers programs where large numbers of aliens may submit counterfeit documentation in support of fraudulent applications for permanent resident status.

INS continues to participate with the Drug Enforcement Administration (DEA) in the El Paso Intelligence Center (EPIC). At EPIC, INS maintains databases on alien smuggling and false claims to U.S. citizenship. INS intelligence analysts provide tactical and analytical intelligence support to operational field units upon request. Additional intelligence is disseminated via periodic EPIC reports and responses to INS field inquiries. The utilization of joint intelligence efforts and the access to multi-agency information systems has proven to be a cost-effective means of producing and disseminating intelligence information.

The INS representative to the National Central Bureau (NCB) of INTERPOL became part of the Intelligence program during 1984. The INTERPOL representative enhances the international enforcement liaison capability for the Service and provides enforcement support and assistance to INS field components regarding foreign police records information.

The INS Intelligence Program also maintains responsibility for the coordination of INS resources associated with the National Narcotics Border Interdiction System (NNBIS).

Accomplishments and Workload: Accomplishments of the Intelligence program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Scientific examination and analysis of Fraudulent Documents Conducted	45,700	48,400	81,000	265,000
INS Data Inputs Processed at EPIC	25,077	21,320	26,200	27,400
Queries of INS Databases at EPIC	30,165	31,452	31,700	34,000
Positive INS Responses Provided to Queries	6,177	5,394	6,300	6,600

The estimated workload is increased in 1988 as a result of passage of the Immigration Reform and Control Act of 1986. Due to this legislation, position increases will begin in 1987 and continue into 1988.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Research & Development	2	2	$516	2	2	$539	2	2	$539	...	...	...

Long-Range Goal: Increase INS' capability to rapidly, reliably, safely, and economically detect and apprehend illegal entrants at the border before they move into the interior. Develop a formal method for more accurately estimating total intrusions into the U.S. between ports of entry. Improve secure documentation techniques supporting the immigration processes.

Major Objectives:

Research, develop, apply, and evaluate surveillance technology and systems to more effectively cover alien and drug intrusions over thousands of miles of border with emphasis on automation, reliability, and low cost.

Develop methods based on statistical techniques to support Enforcement and Examinations in detecting alien and drug smuggling, setting bond levels, minimizing costs of detention/deportation, and detecting marriage fraud.

Provide liaison with the Federal, industrial, and university research and development communities to stimulate, maintain, and integrate technical work relevant to high priority interests of INS.

Base Program Description: The Research and Development staff defines problems, develops concepts of technical solutions, fabricates laboratory models of solutions, designs and implements tests and evaluations of potential solutions, directs contractors, initiates and directs interagency technical programs, and provides technical consulting to the Central Office and operating groups.

The objectives of the programs are being pursued through in-house, contract, interagency agreement and information interchange activities. These activities cover signal processing, radar, infrared imaging, low light level video, stationary and mobile platforms, communications, mircoprocessing, data processing, automatic controls, digital and analog techniques, pattern recognition, simulation, test and evaluation, and systems analysis.

Accomplishments:

- The Image Enhancement Vehicle Program was expanded to integrate the joint interest of the Army and INS in the research and development of a low cost, automated, mobile surveillance system.
- A 2-year study was initiated to investigate the feasibility of a novel approach to high quality but low cost infrared imaging based on old semiconductor fabrication technology combined with new miniaturization fabrication techniques.
- The first year of a 3-year research grant was completed by the University of Texas at El Paso for adapting software and hardware to provide automatic means of interpreting video images and tracking images of interest, thereby removing need of manned video terminals for surveillance purposes.
- A review of INS's past research was completed for automatically and rapidly detecting people hidden in large and small vehicles. It indicated that the research should be resumed, applying newer and much more capable signal processing techniques to achieve decision time and accuracy goals of 15 seconds and 95 percent, and to maintain operational effectiveness under high wind speeds, greater levels of ground noise, and, most importantly, without the need for turning off engines or refrigerator motors.
- Initial studies were completed and reported on applying artificial intelligence and linear programming techniques to Enforcement and Examinations problems in traffic checking, bond setting, and marriage fraud.
- A comprehensive survey was completed citing and evaluating all known and anticipated technologies which may be applied to the protection of documents against fraud and to the support of Enforcement and Examinations against misuse of authentic documents.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Construction and Engineering...	18	19	$45,216	18	19	$14,046	18	19	$14,046	...	...	...

Long Range Goal: Provide adequate facilities for all INS operating units so that they can fulfill their requirements to administer the Immigration and Nationality Act and to provide maximum service to the public.

Major Objectives:

Construct, alter and maintain adequate, energy conserving, accessible to the handicapped, attractive facilities required by the operating elements to perform safely and effectively.

Base Program Description: Construction and Engineering performs the administrative functions related to the INS space and facilities requirements, provides design and construction capability for alteration of existing and new facilities, and plans and implements the energy conservation program and facilities for the handicapped program. As a result of permanent program expansions required by the Immigration Reform and Control Act of 1986, the base program has been broadened to provide adequate support.

Space is acquired through the General Services Administration (GSA), by INS lease, by INS built and subsequently owned construction, by joint INS/Customs Service construction and through assignment by airport authorities. New inspection facilities are coordinated as necessary with the Customs Service, Public Health Service, Department of Agriculture, GSA, state, county, local, airport and foreign authorities. Office space requirements are coordinated with GSA. The development and support for the design of facilities, using quality of life office systems techniques and visual identification aids, are being actively pursued.

Accomplishments and Workload: Accomplishments of the Construction and Engineering program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Major New Construction Projects	10	5	23	23
* Review Federal Buildings Fund	354	357	497	497
Building Audits	35	20	40	45
G-68 - Alterations/Repairs	155	172	340	180
Airport Projects	15	15	17	20
SF-81/144 (Request for Space) sent to GSA	82	84	215	75

* Verification of Quarterly GSA billings for all facilities Servicewide to determine accuracy.

As a result of the enactment of the Immigration Reform and Control Act of 1986, workload for 1987 and 1988 are projected to rise due to the increased number of construction projects to be executed and new office space to be planned, acquired and occupied by Service personnel.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Field Management & Support.....	314	290	$14,303	314	289	$15,961	314	289	$15,961	...	...	...

Long Range Goal: Provide day-to-day management direction to field units that implement major policy and management decisions for more than one program.

Major Objectives: Ensure effective law enforcement and uniform implementation of INS policy, procedures and operational goals; provide efficient service to the public and devise techniques and procedures for responding to regional and local conditions and circumstances.

Base Program Description: Field Management and Support is responsible for providing line management and staff support for the implementation and operation of the field activities and functions associated with the INS mission of controlling and facilitating immigration, nonimmigrant foreign travel and citizenship including support for the implementation of the Immigration Reform and Control Act of 1986. It includes managers and supervisors who are charged with responsibility for and authority over multiple programs, where more than one decision unit exists, at field locations.

Accomplishments:

The measuring instrument used for this program is the feedback received from the managers at the Central and regional offices, DOJ, OMB and Congressional delegations and INS employees at all levels.

Specific accomplishments of the program personnel are not quantifiable since this program is made up predominately of top management officials and their staff located at the many INS field offices. These officials oversee all facets of INS operations, including a support role for the implementation of the Immigration Reform and Control Act of 1986.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Legal Proceedings.....	618	255	$17,662	618	508	$28,459	618	508	$28,459	...	...	...

Long Range Goal: Provide legal representation for the U.S. Government in all cases and matters arising before Immigration Judges and the Board of Immigration Appeals; provide representation for INS in all other contested administrative hearings in which the agency is involved; provide legal advice and support to INS operating personnel on all legal matters, including those arising from passage of the Immigration Reform and Control Act of 1986; and provide litigation assistance in all INS cases being tried in the Federal courts.

Major Objectives:

Try exclusion and deportation cases expeditiously.

Provide prompt and professional representation for INS at all other administrative hearings.

Provide legal counsel to INS officers operating in the field.

Provide more litigation assistance and achieve more successful results in Federal court litigation involving INS.

Base Program Description: INS attorneys represent INS before Immigration Judges, the Board of Immigration Appeals, the Merit Systems Protection Board, the Equal Employment Opportunity Commission, and Boards of Contract Appeals. Attorneys provide litigation support in agency litigation being conducted in U.S. District Courts, Courts of Appeals, and the Supreme Court. Attorneys also advise the Central Office, Regional Commissioners, District Directors, and Border Patrol Sector Chiefs regarding legal problems arising at all levels of agency operations.

Accomplishments and Workload: Accomplishments of the Legal Proceedings program are presented in the following table. Workload projections reflect passage of the Immigration Reform and Control Act of 1986.

Item	1985	1986	Estimates 1987	Estimates 1988
Workload Demand Estimates				
Trial Attorney Appearances	182,152	237,191	270,400	517,800
Workload Production Estimates				
Cases Prepared	159,239	194,158	225,800	461,100
Preparation of Legal Briefs	8,258	13,509	15,800	31,900
Legal Consultation -- Litigation	54,970	64,678	75,300	153,700
Legal Consultation -- INS Branches	69,333	80,636	93,900	191,800
Collection of overdue debts ($'s)	2,600,000	2,459,962	2,500,000	3,000,000

The attorney consolidation and other organizational improvements made over the past several years to streamline the Legal Proceedings program are now complete and producing dramatic results. We now have the structure in place and an attorney staff that is individually well trained to carry on exclusion and deportation hearings, work with the U.S. Attorneys, and provide optimum legal administrative support to INS management and operations in the field. The Office of the General

Counsel continues to move aggressively on many fronts, e.g., planning for the Immigration Reform and Control Act of 1986, and launching new initiatives to continue the trend of increased litigative success and improved administrative legal support to the Service:

- Productivity improvement. In 1985 there were 1,103 appearances and 965 cases prepared per attorney. In 1986, this had increased to 1,340 appearances, up 21 percent, and 1,096 cases prepared, an increase of 14 percent.

- Recruiting has been improved. INS has assumed a major role in the Attorney General's Honor Law Graduate Program. In 1985, 200 candidates were interviewed, and 12 were hired. In 1986, 250 were interviewed and over 30 were hired. The Honor Law Graduates represent over 50 of the top law schools in the country.

  Equal employment objectives were also furthered by this effort in that some twenty percent of those hired are minorities, and fifty percent, women.

- Relations with U.S. Attorneys have been improved . INS has historically faced difficulty in the prosecution and presentation of its cases in the U.S. Attorney's offices because of the legal complexity of the cases. The Office of General Counsel has made considerable progress in eliminating this problem by conveying the importance of the INS mission at U.S. Attorney conferences throughout the country, and by continued meetings with the U.S. Attorney. It has instituted a Special Assistant U.S. Attorney's program in 15 large U.S. Attorney's offices. The benefits of the program can be seen by such cases as the successful prosecution of the sanctuary defendants in Tuscon, Arizona and the authorization of 1,810 major felony prosecutions in 1986, as opposed to 1,073 in 1985. On the civil side, denials of writs of habeas corpus have increased dramatically and the number of successful injunctions and class action lawsuits against INS have diminished.

- Bad debts are being collected. In 1982, INS collected $190,000. In 1985, INS collected $2,653,794 and in 1986, $2,459,962. The General Counsel has developed and recommended two innovative steps in the debt collection area; new surety regulations (8 CFR 103.6) and a "Transportation Agreement" which would revitalize and update existing agreements with transportation carriers. It would correct deficiencies in the collection of fines for "transits without visas" aliens, 31 Act Overtime and fines that now exist. One major debt collection litigation case, now in discovery stage, has a potential for collecting $10,000,000. Legal Proceedings continues to actively assist operating divisions to improve their debt collection activities.

- Class action suits involving Sanctuary, INS Transfer Policy, and Salvadorans are being contested. INS is actively defending lawsuits regarding the above issues. A temporary injunction filed in the Orantes case regarding asylum rights for El Salvadorans has caused a substantial increase in detention costs for aliens filing frivolous applications for asylum. A task force consisting of Office of General Counsel attorneys, the Office of Immigration Litigation, and the U.S. Attorney's has been set up to defend these cases. In one case, Orantes-Hernandez v. Meese, over fifty INS witnesses have testified during the trial.

- Interaction with clients continues to improve. Attorneys have moved into the mainstream of Service operations as the benefits of their involvement are recognized by program managers, regional commissioners and district directors. At the same time the attorneys have become better informed about the operational needs of the Service.

- Significant litigation and litigation support. More than 1,700 cases were heard in federal district courts and courts of appeals where the Service's position was upheld more than 80% of the time.

  In Hector v. INS, the U.S. Supreme Court upheld the Service's position that a niece was not a "child" for purposes of obtaining suspension of deportation. In two other cases the Supreme Court granted certiorari: in Cordoza-Fonseca v. INS to resolve the issue of whether the "well founded fear" standard for asylum is more generous than the "clear probability" standard for withholding of deportation; and in United States v. Mendoza-Lopez, to determine whether an alien defendant in a prosecution for re-entry as a deported alien may collaterally attack his previous deportation order.

  Other significant litigation victories during the year included:

  - Fifth Circuit Court of Appeals decision in U.S. v. Merkt which upheld that the defendants convictions for transporting aliens for the Sanctuary Movement were not barred by the first amendment.

  - Eleventh Circuit Court of Appeals in Garcia-Mir v. Smith affirmed the authority of the Executive Branch to detain and deny parole to illegal Mariel Cuban criminals.

- Immigration Reform and Control Act of 1986 and other new legislation. The General Counsel has taken a number of steps to assist in the implementation of the new law, including assigning two senior attorneys to work full time on the Legalization and Employer Sanctions programs. The General Counsel also established a Prosecuting Unit to prosecute employers who violate the Sanctions provision. A senior attorney has been appointed whose principal duty will be to develop training materials to train attorneys and Service personnel about the legal aspects of the new law.

  The attorneys in Legal Proceedings have also conducted extensive liaison with the Subscommittee on Immigration, Refugee and International Law; the Executive Office of Immigration Review; Office of Immigration Litigation; and other offices in the Department of Justice to assist in implementing the following new legislation impacting on immigration:

  - Immigration Marriage Fraud Amendments of 1986
  - User Fee Legislation
  - Anti-Drug Abuse Act of 1986
  - Consular Efficiency Bill
  - Omnibus Territories Bill

  In addition to liaison functions, attorneys spent a great deal of time drafting regulations, producing legal opinions and memorandums to management and the field interpreting provisions in the new legislation, and establishing legal definitions for significant "key" phrases of the new legislation to assure consistent legal guidance to the field.

Activity: Program Direction	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount

This activity provides for the overall administration and management of the Service.

	1987 Appropriation			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Executive Direction & Control..	200	184	$9,486	200	194	$10,814	200	194	$10,814	...	...	...

Long Range Goal: Increase the effectiveness of INS through the use of Mission Plan goals and strategies; formulate and coordinate meaningful and consistent policy; provide program direction throughout all levels of the INS; and evaluate policy with a view toward recommending practical changes.

Major Objectives:

Provide for continuity, coordination and control of the overall management and administration of INS.

Direct Servicewide policy and implementation responsibilities.

Implement major immigration reform legislation.

Improve agency responsiveness through continued enhancement of management systems including:

- maintaining and refining delegations of authority and requirements for accountability for national policy direction, for regional implementation and district and sector execution, including appropriate control of resources;
- continuing to emphasize and institutionalize INS' Management by Objectives (MBO) system with further integration between mission and priority planning and systems of resource allocation and control,
- continuing rapid development of information systems to meet the needs of INS management and national immigration policy formulation.

Increase leadership in the formulation of national immigration policy.

Base Program Description: This decision unit addresses the maintenance and enhancement of the capacity for responsive, consistent and effective overall direction of the agency in a situation of expanding workload, rapidly emerging challenges to national immigration policy and increased expectations for the control of immigration and service to the public.

Accomplishments and Workload: Accomplishments of the Executive Direction and Control program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Congressional Affairs:				
Telephone replies	37,048	25,512	97,000	97,000
Written replies	6,123	4,871	15,000	15,000
Professional Responsibility:				
Major cases received	353	443	805	775
Major cases completed	247	299	375	375
Field Inspections and Audit:				
Field inspections and audit reports production	26	20	1	26
External audit reports production	6	14	1	17

Major areas of emphasis have been improved and more effective management of the agency has enhanced operational effectiveness through the concentration of effort on high priority activities and leadership for national immigration policy. Improvements in the organization of the agency's management and decision processes have been expanded by clear structuring of the roles and responsibilities of line and program managers, supported by institutionalizing management by objectives, which now implements strategic planning through annual priority objectives integrated with resource planning allocations. Progress in control of the border will continue based on direction of carefully coordinated multi-program resource acquisition and corresponding program development for the Southern Border. Management direction has also insured progress in the Service's broad policy renewal approach to effect the detention and removal of illegal aliens, including aggressive and consistent litigation. Consistent and comprehensive action for improved service to the public has been initiated and coordinated to reconfigure programs and practices, and concentrate resources to eliminate backlogs and provide better service to those who operate within the system.

In 1987 and 1988 the impact of the Immigration Reform and Control Act of 1986 will be reflected in workload changes in replies to congressional inquiries, professional responsibility cases, and in field inspections and audits performed and reported.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Administrative Services	470	423	$27,583	470	465	$31,385	470	465	$31,385	...	...	...

Long Range Goal: Provide the full-range of administrative support services to all INS units on a timely basis in compliance with laws, policies, and external and internal requirements.

Major Objectives:

Personnel and EEO support services and program direction on a timely basis.

Accounting support services and program direction on a timely basis.

Property management, procurement support and program direction on a timely basis.

Overall management direction and control for all management programs and the full-range of security, safety and health support activities.

Full support for the implementation of the Immigration Reform and Control Act of 1986.

Base Program Description: Administrative Services is responsible for the development, implementation, direction, evaluation and operation of administrative support systems and services that meet internal operational and managerial needs and externally mandated requirements. The major functions within this program include: personnel; accounting; EEO; procurement and property management; fleet management; security and health; A-123 program; and other miscellaneous general services, which serve all programs within INS. These functions have been expanded to provide the support critical to the implementation of the Immigration Reform and Control Act of 1986.

Accomplishments and Workload: Accomplishments of the Administrative Services program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Personnel Actions	56,215	38,619	108,789	125,000
Bills	79,782	101,612	38,000	46,700
Vouchers	150,612	162,148	163,000	169,500
Collection of Fines, Fees, etc. (000's)	57,000	75,908	177,000	308,600
EEO Evaluations and Assistance to Management Officials	334	209	350	450

Major areas of emphasis have been: (1) improved and more effective management of the agency; and (2) enhanced operational effectiveness through the concentration of effort on high priority activities and leadership for national immigration policy. Improvements in the organization of the agency's management and decision processes have been expanded by clear structuring of the roles and responsibilities of line and program managers, supported by institutionalizing management by objectives, which now implements strategic planning through annual priority objectives integrated with resource planning allocations. Progress in control of the border will continue based on direction of carefully coordinated multi-program

resource acquisition and corresponding program development for the Southern Border. Management direction has also insured progress in the Service's broad policy renewal approach to effect the detention and removal of illegal aliens, including aggressive and consistent litigation. Consistent and comprehensive action for improved service to the public has been initiated and coordinated to reconfigure programs and practices, and concentrate resources to eliminate backlogs and provide better service to those who operate within the system.

A new area of emphasis in 1987 and 1988 will be the managerial and administrative support which will be required for the implementation of the Immigration Reform and Control Act of 1986. Additional hiring and personnel actions will be impacted significantly. Purchase of additional equipment and supplies for new employees will be a critical major undertaking.

Immigration and Naturalization Service

Salaries and expenses

Status of Congressionally Requested
Studies, Reports, and Evaluations

1. The Conference Committee Report 99-414 required the Immigration and Naturalization Service to undertake a thorough review of its ADP modernization program and to share the results with the General Accounting Office and appropriate Committees of Congress. The Data and Communications program has been assigned this task. The Immigration and Naturalization Service has entered into an interagency agreement with the Federal Computer Performance Evaluation and Simulation Center (FEDSIM). Under this agreement FEDSIM will perform an analysis and evaluation of alternative systems architectures. Each alternative will address ADP equipment, systems and applications software, and data communications. FEDSIM began work on February 3, 1986. The effort, scheduled to be completed the week of September 22, 1986, has been delayed and is scheduled to be completed February 27, 1987.

   In performing the analysis of architectural alternatives FEDSIM will perform the following tasks: identify objectives; define constraints and assumptions; define evaluation criteria; document information flows and workloads; define alternative architectures and implementation approaches; model alternatives; develop cost analysis of alternatives; compare alternatives and recommended architecture; and produce final report.

2. The Senate Appropriations Committee Report 99-82 required the Attorney General, in consultation with the Secretary of Labor and the Secretary of Health and Human Services to conduct a study to evaluate the use of a telephone verification system for use by the Department of Justice in determining employment eligibility in the United States. The study shall concentrate on those databases that are currently available to the Federal Government which through the use of a telephone and computation capability could be used to verify instantly the employment eligibility status of job applicants. The Investigations program of the Immigration and Naturalization Service has been assigned this task. An initial meeting has been conducted with representatives from the Department of Health and Human Services. Agreement was reached on the method by which the study would be conducted.

3. The Senate Appropriations Committee Report 99-425 required the Immigration and Naturalization Service to conduct a study, using information obtained from the Naturalization Casework System (NACS), of citizenship applicants who are turned away as nonfiles and returns.

   The NACS software has been modified in order to determine the number of nonfiles and returns by nationality. The study is ongoing and is expected to be completed and reported by the April 1, 1987 deadline set in the Committee Report.

4. The Senate Appropriations Committee Report 99-425 required the Immigration and Naturalization Service to submit a report by January 1, 1987, on its proposals to reduce existing inspectional delays in clearing arriving international passengers for entry into the country.

The Committee, in its report accompanying H.R. 5161, addressed the issue of inspection delays occasionally experienced by foreign travellers at the nation's larger international airports. While the Service has in recent months taken actions to minimize these delays, consistent with its overriding mission of enforcing the law through control of applicants for admission to the U.S., there continues to exist a structural imbalance between available resources and workload demand.

The User Fee Legislation, contained in P.L. 99-500 was formulated to alleviate this imbalance by providing resources sufficient to allow INS to staff airport and seaport facilities at a level that will insure that inspectional services are sufficient to meet the demands of the travelling public and that a consistently efficient enforcement posture is maintained in the inspection of all arriving aircraft and vessels.

To implement the specific provisions of the legislation, and to conform to the program objectives outlined in the appropriations committee report, INS is taking action to hire an additional 300 airport inspectors for assignment to major airports and seaports Nationwide. Also included are requests for authority to expend funds on the expansion of the preclearance concept to major airports worldwide, since the Service's ability to effectively manage arriving passengers is greatly enhanced when preinspection processes have been employed. Additional User Fee cost items are: expansion of ADP Support Systems at major airports, detention of aliens deemed inadmissible to the U.S. and development of a National Debt Collection System.

Transfers to and from other accounts:			
Savings resulting from management initiatives:			
1. Management and productivity savings	...	-219	-$2,572
This initiative will achieve a 219 FTE savings by utilizing commericially available services. Open market competition should yield lower cost on commonly required general maintenance and repairs. This reduction is in conformance to the Administration's initiative to achieve production improvements in government agencies.			
2. Transfer of FASS group	...	...	20
This represents the transfer of the Financial and Administrative Systems Support Group from the General Administration to the Working Capital Fund. The transfer of this group will place all of JMD financial, administrative systems support services on a user-reimbursable basis.			
Uncontrollables increases:			
1. Annualization of 1987 pay increase	...	...	9,748
This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 68 paid days (October 1, 1986 through January 3, 1987) which wre not included in the pay raise amount of $11,176,000. Additionally, $6,836,000 of the 1987 pay requirement was absorbed. Total annualization required is $9,748,000.			

68/261 x pay raise amount for 1987	$2,912
1987 absorption of pay	6,836
Total annualization	9,748

1170

	Perm. Pos.	FTE	Budget Auth.
2. Annualization of Federal Employees' Retirement System Costs.....	...	...	$27,243

This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula. Total annualization required is $27,243,000.

3. Partial annualization of 4,316 positions approved in 1987.....			...	2,428	79,200

	Approved 1987 Increase	Annualization Required
Annual salary rate of 4,316 approved positions.....	$99,191	
Less lapse (80 percent).....	-89,051	$63,360
Net compensation.....	10,140	
Associated employee benefits.....	6,085	15,840
Total costs subject to annualization.....	16,225	79,200

4. One additional compensable day.....			...	...	1,327

The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation and benefits totalling $345,020,000 - 260 = $1,194,000 plus $133,000 for benefits.) This is based on personnel costs prior to computing Immigration Reform estimates. Costs for Immigration Reform are included in the additional positions approved in 1987 (See uncontrollable increase 3.)

5. Within-grade increases.....			...	...	2,942

This request provides for an expected increase in the cost of within-grade increases. This increase is generally consistent with increase experienced in recent years and is approximately one percent above the base for compensation and

	Perm. Pos.	FTE	Budget Auth.
related benefits for permanent employment. (Personnel compensation $2,648,000 and benefits $294,000 = $2,942,000). This is based on personnel costs prior to computing Immigration Reform estimates. Costs for Immigration Reform are included in the additional positions approved in 1987 (See uncontrollable increase 3.)			
6. Locality based per diem	...	...	$850
Public Law 99-234 authorized a new locality-based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $850,000 is required to meet the expected 12.5 percent increase to total travel funds.			
7. Federal Employees' Compensation Act (FECA) - Workers' Compensation	...	...	1,193
This increase reflects the billing provided by the Department of Labor for the actual costs in 1986 of employees' accident compensation. The 1988 amount will be $1,193,000 over the 1987 base.			
8. GSA Rent	...	...	10,864
In 1987 the Rent System replaces the Standard Level User Charges (SLUC) system. GSA will charge rental rates that approximate those charged to commerical tenants for equivalent space and related services. An uncontrollable increase of $5,878,000 is required to meet our commitment to GSA.			
9. GSA recurring reimbursable services	...	...	195
Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard service. GSA has estimated a 4.2 percent increase of $195,000 in fees for these services in 1988 over 1987 charges of $4,642,857.			
10. Federal Telecommunication System (FTS)	...	...	1,459
The General Service Administration has advised of a 16 percent increase in Federal Telecommunications System (FTS) intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and FY 1985 costs which were not billed by GSA last year. An increase of $1,058,000 over the 1987 base of $6,612,500 is requested.			

	Perm. Pos.	FTE	Budget Auth.
11. Telephone service	...	...	$51

On February 25, 1986, the District of Columbia Public Service Commission (PSC) issued its final order in the Chesapeake and Potomac telephone company (C&P) rate case. The PSC, in its order, allowed C&P to increase its rates by $31 million and set the rates for C&P's intrastate services.

The PSC order affects the rates the Federal Executive Agencies will pay for basic exchange service, CENTREX services, service connections, direct inward dialing services and channal services. These changes will increase the FY 1987 cost of operating the Justice Telecommunications Service (JTS) by an estimated $552,000.

An increase of $51,000 over the 1987 base is requested to pay these charges.

12. GPO printing cost	...	...	117

The Government Printing Office (GPO) is currently projecting a 3 to 4 percent increase over the 1987 printing cost of $3,904,926. An additional $117,000 will be required in 1988.

13. Employee data and payroll services	...	...	497

Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems maintenance and payroll accounting are based on the number of records maintained. The rate of $145.64 per record in FY 1986 will be raised to $155.76 per record for FY 1988. The change is based on anticipated uncontrollable cost increases of 6.9 percent for the operation of the Justice Employee Data Service.

An additional increase of $366,000 has been included to improve the Human Resources Management Information System (HRMIS). This improvement will enhance the productivity of all Department components as well as the support units of accounting, budgeting and procurement. This retooling of support systems will allow the Department to operate an efficient, effective and businesslike administrative operation.

	Perm. Pos.	FTE	Budget Auth.
14. Foreign allowances	...	...	$742
Allowances for Government employees in foreign areas are determined by the Department of State. The State Department anticipates a 7.9 percent increase in 1988. The requested increase of $742,000 provides 7.9 percent more than the $9,392,404 budgeted for 1987.			
15. Distributed Administrative Support	...	...	324
Under the Foreign Affairs Administrative Support agreement an annual charge is made by the Department of State (DOS) for administrative support items. The amount of this charge is determined by the DOS. The DOS advises that a 5 percent increase in foreign operation costs is anticipated. The increase of $324,000 is based on the 1986 base availability of $6,480,000.			
16. Audio visual and media services	...	...	2
This increase reflects proposed rate increases for various types of audiovisual services that range from seven to 240 percent higher than percent rates. An estimated 16.5 percent overall increase will be assigned to each affected organization for 1988. This equates to an increase of $2,000 over the 1987 base of $12,000.			
17. General pricing level adjustment	...	...	10,162
This request applies OMB pricing guidance as of December 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.5 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expenses where inflation has already been built into the 1987 estimates.			
Total uncontrollable increases	...	2,428	146,916

	Perm. Pos.	FTE	Budget Auth.
Decreases (automatic non-policy):			
1. Reduction for new construction	...	...	-$35,000
$35 million was requested for new construction in the 1987 supplemental appropriations request.			
2. Reduction for full field investigations	...	...	-832
Nonrecurring cost for full field investigation conducted in 1987 for new positions received in that year.			
3. Reduction for change in hourly rate	...	...	-772
Public Law 99-272, the Consolidated Omnibus Budget Reconciliation Act of 1985 required that the computation of annual salary rates to be based on 2,087 hours rather than 2,080. The same amount that was reduced in 1984 and restored in 1986 is requested for reduction in 1988.			
4. Reduction in Health Benefits	...	...	-897
The Federal Employees' Health Benefits Act (P.L. 93-246) provide that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased due primarily to reduce carrier rates. The requested decrease of $897,000 was derived from the decreased costs from pay period #1 ($426,063) to pay period #2 ($391,567) projected for 26 pay periods.			
5. Reduction in per page cost of the Federal Register and the Code of Federal Regulations.	...	...	-4
The Legislative Branch Appropriation Act of 1978 (P.L. 95-941) amended the Federal Register Act to require Federal agencies to reimburse the Government Printing Office for costs of printing, binding and distributing the Federal Register (FR) and the Code of Federal Regulations (CFR). The current cost estimates from GPO indicate a per page cost of $390 for the FR and $55 for the CFR for 1988. This represents an $18 per page decrease for the FR and a $5 per page decrease for the CFR.			

	Perm. Pos.	FTE	Budget Auth.
6. Adjustments due to Immigration User Fee Account	...	-1	...
This is a technical adjustment made to reflect the 1987 rescission in 1988. The 1987 Department of Justice Appropriations Act provides for the establishment of an "Immigration User Fee Account". Since this Act authorizes the Secretary of Treasury to refund the amounts paid for certain expenses incurred, this workyear is double accounted and needs to be removed from the direct appropriation and made a reimbursable workyear.

Immigration and Naturalization Service

Immigration Legalization

Summary Statement

Fiscal Year 1988

The Immigration Reform and Control Act of 1986, Title II, Sections 201-204, establishes a Legalization program which provides temporary resident status to aliens who entered the U.S. illegally or lapsed into illegal status prior to January 1, 1982, who resided continuously in the U.S. since then, and who are not excludable. It also adjusts the status of these people to permanent resident after 18 months of temporary status upon showing general admissibility and basic citizenship skills. Section 202 futher provides for adjustment to permanent resident status of certain Cubans and Haitians who entered the U.S. prior to January 1, 1982.

To implement this program, the Immigration and Naturalization Service will require $125,241,000, 292 permanent positions, and 1,002 FTE workyears in 1987. Due to growth in application processing workloads the program will require $144,445,000, and 2,369 FTE workyears in 1988. The cost of the program is to be paid from fees paid by applicants for temporary and permanent resident status.

Section 201 calls for the Attorney General to prescribe a fee schedule to charge aliens for filing for adjustment. The fees collected will be available, without fiscal year limitation, to cover all the administrative and other expenses incurred in connection with processing applicants for Legalization (except adjusting Cubans and Haitians), and will include expenses of the Federal Bureau of Investigation (FBI) and other Federal agencies.

Justification of Program and Performance

Activity Resource Summary
(Dollars in thousands)

Activity: Immigration Legalization

This budget activity includes resources for the payment of specific expenses necessary in conducting a nationwide immigration legalization program, pursuant to the Immigration Reform and Control Act of 1986, Title II, Sections 201-204. This part of the Act provides temporary resident status to aliens who entered the U.S. illegally or lapsed into illegal status prior to January 1, 1982, who resided continuously in the U.S. since then, and who are not excludable. It also adjusts the status of these people to permanent resident after 18 months of temporary status upon showing general admissibility and basic citizenship skills. Section 202 further provides for adjustment to permanent resident status of certain Cubans and Haitains who entered the U.S. prior to January 1, 1982. The program will be complex and large in scale. INS will establish temporary offices to receive applicants and large regional processing centers in which applications will be reviewed and approved or disapproved.

Long Range Goal: To receive, process, review and subject to final action all applications submitted for temporary and permanent resident status under the Immigration Legalization Program, authorized by P.L. 99-603, Title II, Sections 201-204.

Major Objectives:

- To establish up to 100 temporary legalization offices in key locations throughout the country for the purpose of receiving applications for temporary and permanent resident status.
- To establish four regional processing centers to receive completed applications from the legalization offices, review, and approve or disapprove the applications.
- To enter into deportation proceedings those aliens not approved for temporary and permanent resident status who do not elect to leave the country voluntarily.

- To provide training for the personnel who will be staffing the legalization offices and regional processing centers.

- To provide high speed data and communications systems support for the various offices to support the application receipt, review, and decision making processes.

- To provide reliable and accurate information and records support for the various offices so that information needed for the review of applications is correct and provided in such a way that processing is expedited.

- To provide necessary intelligence and document analysis to prevent the approval of fraudulent applications supported by falsified documents.

- To conduct limited research into the development of fraud resistant documents and cards for use in the legalization program.

- To provide the representation needed by the Service in all legal proceedings generated by the program, primarily due to deportation proceedings and hearings which will result from the denials of applications for temporary and permanent resident status.

- To assure that adequate management and administrative support is available in the field and in the Central Office so that the operations of the legalization offices and regional processing centers are efficient and that services to those offices are timely.

- To provide increased staffing for the Office of Professional Responsibility and the Office of Program Inspections and Review so that they can expand their activities to cover the legalization program.

- To provide additional staffing for the Plans and Analysis staff to develop the reports and studies required under the Immigration Reform and Control Act of 1986 pertaining to the legalization program.

Base Program Description:

INS plans to provide the administrative review, approval or denial of applications for legalization by utilizing as many as 100 temporary legalization offices strategically placed throughout the country. The agency plans to use a combination of reemployed annuitants (300), and new hires to staff the legalization offices; it will rely on a temporary workforce to do the majority of the work.

Beginning May 5, 1987, the legalization offices will accept applications from aliens for legalization. Applications will be reviewed for completeness, and interviews of aliens and alien families will be conducted. If claims appear legal then applicants will be conditionally approved and temporary resident cards will be issued. Voluntary agencies will be paid a fee by the Service for assisting the aliens in completing their application packages and in scheduling their processing through INS offices.

1186

After the Service has accepted an alien's application, final approval will be reserved until name, fingerprint and other security checks can be made. These checks will be made at one of four regional processing facilities. Fraud profiles will be developed and matched against incoming alien applications. To the extent possible, fingerprint checks with the FBI and State law enforcement officials will be done on a tape to tape match. Data entry will be a major cost item at these regional processing facilities.

At the regional processing facilities there will be adjudications, records, and intelligence personnel. Adjudications staff will review all conditional denials and sample the conditional approvals. Intelligence personnel will use sophisticated document examination techniques to analyze alien applications and supporting materials.

Aliens who are denied temporary or permanent resident status will either voluntarily leave the country or enter into the appeals process to have denials overturned. Additional personnel are included for the Detention and Deportation program in order to meet the workload requirements of the legalization program. In the Legal Proceedings program, attorneys and support staff must be added in order to represent the agency in litigation arising from the new program, in appeals, and in deportation cases which will result from denials of applications for temporary and permanent resident status.

The Research and Development program will use resources to conduct work on the development of fraud-resistant documents and immigration identification cards. This will build upon efforts by the Service in an area of long-term importance to the nation.

The Construction and Engineering request largely supports the leasing and furnishing of the legalization offices and the regional processing centers. Lesser amounts are included for increased space requirements in other offices, and for additional space management staff.

Within the Administrative Services program, efforts will be directed toward the maintenance of the current level of administrative support by the Central Office and the regional offices in the face of substantial growth in operations. Nonpersonnel resources will provide for a publicity campaign contract, vehicles, equipment, supplies, a guard services contract for the legalization offices, background investigations for temporary INS employees, printing, supplies and various other expenses.

The amount requested for the Executive Direction and Control program will allow for the expansion of the Office of Professional Responsibility and Program Inspections staffs as they confront a substantial new program; the Plans and Analysis staff will also be increased to accommodate the reporting requirements under the new law.

Accomplishments and workload: The workload for the Immigration Legalization Program is presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Applicants for temporary residence status	...	...	1,635,000	2,285,000
Basic officer training completions	...	...	50	50
Other training completions	...	...	300	100
Alien files opened	...	...	1,635,000	2,285,000
General searches completed	...	...	500,000	700,000
Information services inquiries	...	...	3,100,000	4,100,000
Scientific examination and analysis of fraudulent documents conducted	...	...	18,000	200,000
New INS data inputs at El Paso Intelligence Center (EPIC) processed	...	...	1,200	2,400
Queries researched at EPIC	...	...	2,000	4,000
Positive INS responses to queries received by EPIC provided	...	...	300	600

Workload figures are based on planning assumptions developed for the Immigration Legalization Program taking into consideration the interrelationships of the indicators and the growth of the workload in 1988 when the greatest impact on operations will be experienced.

Program Changes:

The 1988 request includes additional FTE workyears and related costs due to the additional staff needed to receive and process nearly 2.3 million applications expected to be submitted during 1988. Other changes reflected in the 1988 request include reductions due to the nonrecurring cost of equipment purchases, full field investigations, and contractual services which have been completed.

Immigration and Naturalization Service
Status of Congressionally Requested Studies, Reports, and Evaluations Under the Immigration Reform and Control Act of 1986

1. Study on Telephone Verification of Employment Eligibility

   The Immigration Reform and Control Act of 1986 requires the Attorney General, in consultation with the Secretaries of Labor and Health and Human Services to conduct a study on verifying employment eligibility via telephone. A status report is to be made to the Congress by April 1987 and a final report is due by November 1987.

   Status: Planning for a telephone verification study is in the initial stages. Various approaches are under review.

2. Visa Waiver Pilot Program

   Under the Act, the Attorney General and the Secretary of State are authorized to conduct a pilot program for certain nationals from up to eight low-risk countries to enter the United States for up to 90 days without nonimmigrant visas. Prior to implementation of a pilot project, the Attorney General must certify to the Congress that a system to monitor such entries and subsequent departures is in place. A report evaluating the visa wavier program and its impacts must be made to the Congress no later than two years after the start of the program.

   Status: INS is currently studying its Nonimmigrant Information System to determine how it might be modified to serve the program. In addition, the visa waiver pilot program has been placed on the agenda of the INS/Consular Affairs Quarterly Consultation Group for coordination.

3. Triennial Report on Immigration Impacts

   The Act formally assigns responsibility for a triennial report on immigration to the President. Actual responsibility for the preparation of the report will be shared by the various affected Federal agencies, including INS. The INS will be responsible for gathering and analyzing data on the numbers and types of aliens legally admitted to the United States and an estimate of the resident illegal alien population. The first report to the Congress is due no later than January 1, 1989 and every three years thereafter.

1189

Status: Preliminary discussions have been held with concerned agencies. Plans are being developed to ensure data availability to provide the requested information.

4. Report on Implementation of Employer Sanctions

For three years after the implementation of employer sanctions, the INS will report annually to the Congress on the operations and impacts of this program. Included in the reports will be an analysis of the adequacy of the employment verification system, the results of demonstration projects, the number of illegal aliens and violations of nonimmigrant visa status and the enforcement impacts in the U.S. labor market (to be done in cooperation with the Department of Labor).

Status: In-house discussions have been initiated in identifying information needs and the most appropriate methods for data collection.

5. Report on the Legalization Program

Two legalization reports, one due no later than November 1989 and the other by November 1992, are required by the new law. The first report, which will provide the Congress with a description of the legalized population and include information on their origins and demographic characteristics, will be the responsibility of INS.

Status: INS is currently considering the most cost effective approach to gathering the information required by the report. Discussions have also been initiated with the other involved agencies and with persons knowledgable in the field of immigration research on the most appropriate methods for collecting the required data.

6. Report on INS Requirements to Implement the Immigration Reform and Control Act of 1986.

The new law requires the Attorney General to submit a report to the Congress on what resources--type of equipment, physical structures and personnel resources--are needed by INS to implement its amendments and to carry out ongoing service and enforcement activities. The report is to be submitted within 90 days of enactment.

Status: INS is in the process of drafting its report on resource requirements. It will be forwarded to the Congress in early February.

Immigration and Naturalization Service

Immigration User Fee

Summary Statement

Estimates for Fiscal Year 1988

In the 1987 Appropriation Act for the Department of Justice, (P.L. 99-500), the Immigration User Fee Account was established effective December 1, 1986. Section 205 of the law directs the Attorney General to charge and collect $5 per individual for the immigration inspection of each passenger arriving at a port of entry in the United States, or for the pre-inspection of a passenger in a place outside the United States prior to such arrival, aboard a commercial aircraft or commercial vessel, with the exception of Canada, Mexico and adjacent islands. All fees collected are to be deposited in an Immigration User Fee Account. Section 205 of the law directs the Secretary of the Treasury to reimburse, out of the Immigration User Fee Account, to the Immigration and Naturalization Service's appropriation the amount paid for: providing immigration inspection and preinspection services for commercial aircraft or vessels; providing overtime immigration inspection services; administration of debt recovery, including the establishment and operation of a national collections office; expansion, operation and maintenance of information systems for non-immigrant control and debt collection; detection of fraudulent documents used by passengers traveling to the United States; and providing detention and deportation services for excludable aliens arriving on commercial aircraft or vessels.

The Immigration and Naturalization Service estimates collections of $120,000,000 in inspection fees for 1987 and $150,000,000 for 1988. INS' anticipated expenses resulting from the implementation of the law are $70,389,000 in 1987 and $74,000,000 in 1988. The Immigration and Naturalization Service's 1987 anticipated appropriation will be offset by a rescission of $24,598,000 associated with salaries and expenses of immigration inspections at air and seaports and the non-immigrant related automated record systems. These items, currently paid for out of appropriated funds, will now be funded through receipts to the user fee account. INS' 1988 President's budget request reflects a reduction in the 1988 estimates of $26,428,000 associated with these base items, which will now be funded through user fees.

In conformance with the specific provisions of the legislation and the program objectives outlined in the Senate Appropriations Committee Report 99-425, the Immigration and Naturalization Service will be able to staff airport and seaport facilities at a level that will ensure that immigration inspection services are sufficient to meet the demands of the travelling public, that fees are collected and deposited in a timely manner, and that a consistently effective enforcement posture is maintained in the inspection of all arriving aircraft and vessels.

Immigration and Naturalization Service

Immigration User Fee Account

Justification of Program and Performance

Activity Resource Summary

(Dollars in thousands)

Activity: Immigration User Fee Account

This budget activity includes resources for the payments of specific expenses necessary in providing immigration inspection and pre-inspection services for commercial aircraft and vessels, providing overtime immigration inspection services for commercial aircraft and vessels, administration of debt recovery, expansion and operation of information systems for non-immigrant control and debt collection, detection of fraudulent documents, and providing detention and deportation services for excludable aliens arriving on commercial aircraft or vessels.

Long Range Goal: To utilize the capabilities provided in the establishment of an Immigration User Fee Account (P.L. 99-500); to provide and maintain sufficient resources to carry out immigration inspection and preinspection services for commercial aircraft and vessels; to administer debt collection activities and enhanced data systems support for non-immigrant control and debt collection; and maintain an effective enforcement posture regarding the inspection of passengers on all arriving aircraft and vessels.

Major Objectives:

- To pay expenses incurred in the inspection of aliens and citizens arriving from foreign territories other than Mexico, Canada or adjacent islands.
- To expand pre-inspections activities to other locations worldwide.
- To increase the Inspections program staff at selected airports and seaports.
- To improve the administration of debt recovery, including the establishment of a National Collection Office.
- To develop new data systems, and expand and upgrade existing ones to monitor and control non-immigrant travel, detect fraudulent documents, and manage debt collection.
- To provide for the detention and deportation of excludable aliens arriving on commercial aircraft or vessels.

- To increase resources devoted to conducting investigations of major smugglers.

- To conduct training for foreign carriers and immigration authorities on the detection of fraudulent documents.

Base Program Description:

The Senate Appropriations Committee, in its report accompanying H.R. 5161, addressed the issue of inspections delays occasionally experienced by foreign travellers at the Nation's larger international airports. While the Service had recently taken action to minimize these delays, consistent with its overriding mission of enforcing the law through control of applicants for admission to the U.S., there continued to exist a structural inbalance between available resources and workload demand.

The user fee provision, contained in P.L. 99-500 was formulated to alleviate this imbalance by providing a mechanism to allow for sufficient resources for INS to staff airport and seaport facilities at a level that will insure that inspections services are sufficient to meet the demands of the travelling public and that a consistently efficient enforcement posture is maintained in the inspection of all arriving aircraft and vessels.

The funding requested here will enable INS to be reimbursed for expenses related to the inspection of aliens and citizens arriving at airports and seaports from noncontiguous foreign nations, i.e., the cost of existing and new officer positions and related inspectional overtime, costs related to fraud detection and improved debt collection, and expenses associated with the detention and deportation of excludable aliens arriving on commercial aircraft or vessels.

Accomplishments and workload: The workload of the Immigration User Fee Fund Program is presented in the following table: 1/

Item	Estimates 1987	1988
Total persons inspected at airports and seaports	33,330,000	40,000,000
Smugglers apprehended (anti-smuggling)	...	200
Deportable aliens apprehended (investigations):		
Non-casework	...	4,500
Casework	...	600
Cases completed (investigations)	...	86
Cases completed (anti-smuggling)	...	100
Convictions of smugglers (total)	...	225
Number of detention days	42,000	51,000
Average stays in detention (days)	2.4	2.4
Detections	9,900	12,000
Aliens expelled	7,425	9,000
Inadmissible aliens intercepted (inspections)	41,700	50,000

1/ Note that this workload will differ from the workload depicted in the 1988 Congressional submission because only a portion of INS' total Inspections workforce and related activities will be funded through user fees. This display reflects only the workload associated with those activities funded through user fees.

The increased number of inspectors at airports and seaports will uncover more smuggling violations with fraudulent documents. This will obligate INS to pursue these investigations for criminal prosecution. Investigators will be stationed at airports and seaports to keep pace with the additional workload.

The resources provided to INS from user fees will be used across various programs, consistent with implementing this provision of the Appropriations Act. They will be distributed as follows:

Program	FY 1987 Amount	FY 1988 Amount
Inspections	$41,426	$47,076
Anti-Smuggling/Investigations	1,499	1,576
Detention and Deportation	5,544	6,307
Refugee and Overseas	374	450
Data and Communications Systems	19,801	16,626
Legal Proceedings	1,085	1,250
Administrative Services	660	715
Total	$70,389	$74,000

Immigration and Naturalization Service

Status of Congressionally Requested

Studies, Reports, and Evaluations

Section 205 of Public Law 99-500 in providing for the collection of an immigration inspections user fee directs under part (h) "disposition of receipts" a periodic review of the status of the account. The purpose of this provision is to insure that the funds being obligated in providing inspectional services under the user fee equal the receipts collected in the special user fee account. The Attorney Gereral is further directed to recommend changes in the fee to allow such equity to be maintained.

1199

Mr. NELSON. I appreciate the opportunity to be with you again.

I would like to introduce Mark Everson, Executive Associate Commissioner of INS, who is here at the table with me, and we have other staffers here also who can bail me out as we have questions.

Mr. Chairman, we have a prepared statement which we would like to submit for the record.

[The statement of Mr. Nelson follows:]

DEPARTMENT OF JUSTICE
IMMIGRATION AND NATURALIZATION SERVICE
STATEMENT OF THE COMMISSIONER
ALAN C. NELSON
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON
THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE,
THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to have the opportunity to appear before you in support of the 1988 budget request for $838,828,000 and 15,453 positions for the Immigration and Naturalization Service. When funds from the nonappropriated Immigration User Fee ($74.0 million) and Legalization ($144.4 million) accounts are included, total resources available to the agency will exceed $1 billion in 1988. This is the first budget which contains full-year funding for the implementation of the landmark Immigration Reform and Control Act of 1986. This legislation provides what the country has needed for years--a credible large-scale enforcement effort to control illegal immigration, employer sanctions, a humane amnesty program, and new agricultural workers programs.

Earlier we submitted a request for a supplemental appropriation of $147,793,000 for 1987 to begin implementing the Act, as well as to provide resources to detain Mariel Cuban criminals ($9,000,000) and cover Federal Telecommunications System tariff increases ($950,000). Most of this amount is needed to hire, train and equip the personnel needed for employer sanctions, border enforcement, Systematic Alien Verification for Entitlements (SAVE) program expansion, the control and

removal of criminal aliens, and the special agricultural workers program. I would like to take this opportunity to thank the Subcommittee for its positive response to the requests contained in the supplemental. The 1988 budget request before you annualizes our 1987 supplemental appropriations request.

The budget for INS has grown from about $440 million in 1982 at the beginning of the Reagan Administration to a request for over $1 billion in 1988. These increased resources are required to provide the country with the type of comprehensive immigration program it has needed for some time.

Now I would like to discuss the work we have under way to implement the Reform Act. Extensive work has been done to develop the regulations under which the new programs will be operating. We introduced an extra step in the process when we released draft regulations to obtain the greatest possible input from the public before the publication of the regulations in the Federal Register. This openness allowed us to obtain and consider numerous comments, many of which were taken into account before the regulations were published for formal comment. I am certain that this approach has led to the development of a superior final product.

Legalization Program

As you know, Title II of the Reform Act establishes the Legalization Program. The law provides temporary resident status to aliens who:

- entered the U.S. illegally or fell into illegal status prior to January 1, 1982
- resided continuously in the U.S. since then, and
- are not excludable.

It also adjusts the status of these people to permanent resident after 18 months of temporary status upon their showing general admissibility and basic citizenship skills.

The Reform Act stipulates that the cost of this program is to be covered from fees paid by applicants for temporary and permanent resident status. We are prepared to process as many as 1,635,000 applications by the end of FY 1987, with up to 2,285,000 more in FY 1988. INS is getting ready to open up approximately 100 local offices to receive the applications, and four major regional centers to process, review and take final action on them. The program is expected to cost $148,540,000 in 1987, and $180,692,000 in 1988, the "peak" year of activity. Of these amounts, INS is expected to incur the majority of the costs. However, to provide fingerprint and record checks on applicants we expect to reimburse the Federal Bureau of Investigations (FBI) $23.3 million in 1987 and $36.2 million in 1988. We are planning to use a combination of reemployed annuitants and new hires to staff the majority of positions in the legalization offices, where a temporary workforce will be sufficient to do most of the work. Arrangements are also being made to have qualified designated entities assist aliens in completing their applications.

With regard to the fees charged for legalization, I have determined that a separate fee for temporary and permanent applicants will be charged. The fee for temporary status will be $185 per applicant, and the fee for permanent status will be determined after the Service identifies the number of approved temporary applicants (by July 1, 1988). To ensure that large families will not be unduly burdened by a per capita fee, we will charge $185 for each

parent and $50 for each minor child living with his or her parents, and establish an overall family cap of $420.

I believe that such an approach protects the taxpayer, consistent with the language of the Reform Act, by ensuring that the Government's costs are covered by the revenue generated by the fees collected. It also assures that a reasonable fee is charged, and provides the flexibility to charge a fee for permanent residence which will ensure that costs equal revenues. The fee of $185 for temporary residence is reasonable based on the service provided and the benefit obtained by the alien. It assures that the costs of the temporary residence phase of the program are covered if only 2 million aliens (of the 3.9 million we originally estimated) apply. Should a surplus occur, the excess funds can be used to offset our expenses for the permanent residence phase of the program. This fee compares favorably with the $185-$200 in fees charged for aliens seeking entry into the United States as immigrants--specifically, $35 to $50 for the relative petition approved by INS, and $150 for the immigrant visa issued by the Department of State.

In view of the value of the benefits under this program, we expect that some aliens will attempt to obtain temporary status by submitting fraudulent applications. To counter this, our intelligence and documents analysis capabilities will be expanded. We must also expand our investigations resources to investigate and prosecute those who supply aliens with bogus documents or facilitate the filing of fraudulent applications.

Enforcement Improvements

The Reform Act provides INS with important resources and statutory authority

to control illegal immigration. This comes at a time when we are assuming a much greater role in fighting crimes perpetrated by criminal aliens and in the fight against illegal drugs.

The employer sanctions provision is the most important part of the enforcement effort. We are currently in a national informational/educational phase during which employers are being advised of the contents of the law and what they will have to do to comply with it. We will enter the actual enforcement phase in June of this year. We expect the availability of jobs for illegal aliens will be greatly curtailed with the full implementation of sanctions against employers who ignore or refuse to comply with the law.

The Service is committed to providing public education with the goal of establishing a well-informed business community regarding the sanctions provisions of the Reform Act. The Office of Employer and Labor Relations has been created within INS for this purpose. Seventy-one positions will be assigned to this unit Servicewide.

Another major provision of the Reform Act mandates the expansion of the Border Patrol. This effort is being planned over a multi-year period in view of the magnitude of the undertaking in terms of recruitment, training, acquisition of equipment, expansion of facilities, etc. The budget includes a total of 1,848 positions for the Patrol expansion. Some of these will be in support areas which are necessary to operations (radio operators, electronics technicians, auto and truck mechanics, and clerical support). The 1988 budget includes resources for this expansion which will have begun with funding in the 1987 supplemental appropriations request.

Other enforcement improvements begun with the 1987 supplemental request are under way in the Inspections, Investigations, and Anti-Smuggling programs.

Additional inspectors will be added at high-traffic/high-risk border ports of entry to reduce illegal entries into the country. The increase in personnel will allow more time for inspections, which results in the detection of greater numbers of fraudulent entry applications. In addition to the number of inspectors requested in our 1987 supplemental appropriation request, we also plan to augment inspections staff through the establishment of user fees as provided for in the Department's 1987 Continuing Resolution.

An increase in the Investigations program will provide the staff which is needed to improve productivity while meeting the provisions of the Reform Act regarding open land entry warrants. Failure to add personnel to deal with this new requirement would dilute the effectiveness of our basic investigative program. New staff will also be committed to the investigation, and prosecution of aliens using fraudulent entry documents and facilitators of immigration fraud schemes.

The Anti-Smuggling program is receiving a moderate increase to expand efforts directed at large-scale, sophisticated smuggling operations. These groups are expected to become more diversified--offering aliens transportation into the country, fraudulent documents, and "safe" contacts at their destinations--in return for higher fees for their services.

The Reform Act requires the Service to expedite the deportation of criminal aliens. This comes at a time when serious crimes involving aliens constitute a significant problem for INS investigators and a growing part of their workload.

Aliens are becoming more involved in organized criminal activities such as drug trafficking, extortion, prostitution, and gambling. When alien criminals are convicted of (or plead guilty to) deportable offenses, it is imperative that every possible effort be made to prevent them from doing further damage. We are moving ahead with the recruitment of our expanded staffs for the Investigations, and the Detention and Deportation programs to expedite the deportation of criminal aliens. Public safety will benefit greatly when these undesirable individuals are permanently removed from the country.

The Act expands the SAVE Program, turning it into a national effort to prevent illegal aliens from receiving benefits through federally funded entitlement programs such as Aid to Families with Dependent Children, Medicaid, unemployment compensation, food stamps, housing assistance, and educational assistance. This is an important step for the country. It has the potential to reduce government benefits costs by hundreds of millions of dollars in a period when our efforts must be concentrated on containing costs. The results which have been achieved by the SAVE program have been very promising. During 1986, Investigations identified nearly 50,000 ineligible aliens who were applicants for or were enrolled in benefit programs. The estimated annual savings was in excess of $100 million. Preparations are now being made to create a separate data base outside of the Department of Justice Data Center to support this expansion. This will facilitate nationwide access to the data and make the program more cost effective.

Agricultural Workers Programs

The Reform Act includes provisions for two agricultural workers programs to meet the labor needs of farmers and growers. The largest of the two,

authorized under Section 302 of the Act, mandates adjustment procedures whereby aliens who can demonstrate they have performed seasonal agricultural services in the U.S. for at least 90 days during the 12-month period ending May 1, 1986, may apply for temporary resident status. Applications under this Special Agricultural Workers (SAW) program will be received at American consulates overseas and at our domestic offices established for the Legalization program.

SAW applicants will pay the same fees as temporary resident applicants under the Legalization program: $185 per adult applicant, $50 for each eligible minor child living with his or her family, and an overall family cap of $420. Evidentiary standards will be firm but fair. An applicant must provide evidence of eligibility apart from his or her own testimony. All evidence submitted will be subject to verification. The information provided is confidential and will be used only to determine eligibility and for enforcement of the statutory penalties for false statements. Preparations are under way to receive and process as many as 800,000 applications during an 18-month period from June 1, 1987 to November 30, 1988.

The second agricultural program, which we call the "H-2A Program", will allow growers to import temporary workers after establishing that qualified domestic workers cannot be found and determining that admission of these workers will have no adverse effects on similarly employed domestic workers. Operation of this will require only limited additional staffing.

Immigration User Fees

The 99th Congress also took significant steps to permanently improve the

immigration inspection process by passing legislation to permit INS to collect a fee for the inspection and screening of each passenger arriving at a port of entry aboard a commercial aircraft or commercial vessel or for processing through overseas pre-inspection airports. Arrivals from Canada, Mexico and nearby islands do not pay the fee.

In 1987, when this fee is in effect for only a portion of the year, we expect to collect up to $120 million, while in 1988 we anticipate this will rise to approximately $150 million. Of these amounts, we expect to obligate $70.4 million in 1987 and $74 million in 1988.

These obligations will fund a variety of activities, consistent with the enabling legislation. These include: providing immigration inspection and overseas preinspection/preclearance services for commercial aircraft or vessels; providing overtime immigration inspection services; administering debt recovery, including the establishment and operation of a national collections office; expanding, operating and maintaining information systems for non-immigrant control and debt collection; detecting and investigating sources of fraudulent documents used by passengers traveling to the United States; and providing detention and deportation services for excludable aliens arriving on commercial aircraft or vessels.

The benefits to the country are considerable. First, these resources offset costs in our appropriation, allowing a reduction in appropriated funds of $24.6 million in 1987. This amount is associated with salaries and expenses of immigration officers at airports and seaports, the non-immigrant related automated records systems, and associated support to the inspections process.

We are confident that these comprehensive efforts will yield a much more efficient and effective Inspections program.

It is important to recognize that the Service has continued to carry out its existing statutory mission with great effectiveness. I would like to give you some highlights of our basic program accomplishments. I think they are impressive and indicative of the hard work being done by dedicated Service personnel.

In the Inspections program a total of 328 million persons were inspected at ports of entry and at overseas pre-inspection locations. Out of this number, 720 thousand inadmissable aliens were intercepted and denied entry--an increase of twelve percent over the 1985 denial rate. This is attributable to our concentrated efforts to improve the detection of fraudulent and malafide attempts at entry.

These efforts have led to an impressive one-year increase (1985-1986) of more than 76 percent in the detection of fraudulent documents and false claims to United States citizenship, a 70 percent increase in vehicles seized, and a 39 percent increase in drug seizure cases made by immigration inspectors. I expect similar results in the future, once we have recruited additional staff for airports and seaports with funds provided by the new Immigration User Fee, and when we begin planned operations at selected ports of entry by terrorism, drugs and fraud detection teams.

In 1986 the Border Patrol set another record in the apprehension of illegal aliens--1,692,544 apprehensions. Increasing numbers of aliens other than Mexican nationals were encountered--a trend which began several years ago and is expected to continue. Over 19 thousand alien smugglers were arrested, up almost 5 thousand from 1985.

The Patrol has become much more involved in drug interdiction operations since I met with you last year, and is now playing a key role in the "Operation Alliance". There were 1,300 seizures of druys by the Patrol in 1986, with a value of over $185 million. These figures will certainly be surpassed this year, as we expand Patrol resources in the anti-drug effort. The results we are gettiny through "Operation Alliance" are a very good indicator of what is beiny encountered on the border. In the first six months of participation, the Patrol seized 50,600 pounds of marijuana, 3,392 pounds of cocaine, and 40,000 units of various dangerous druys. It is clear that an effective Border Patrol presence on the Mexican border is now more important than ever before.

The Investigations program continues to concentrate its resources on more serious cases involving criminal and narcotics violators, fraud facilitators, and aliens who attempt to illegally receive benefits from government entitlement programs.

In 1986, Special Agents shut down 593 major fraud conspiracies involving facilitators of fraudulent immigration schemes, such as unscrupulous attorneys, notaries, arranyers of sham marriages, and manufacturers and vendors of counterfeit documents. An additional 7,212 investigations of individual perpetrators of fraud were successfully completed. In one notable case a million dollar marriaye fraud and smuggling ring, involving over 100 fraudulent marriages

between Indian Sikhs and United States citizens, was broken up with the arrest and conviction of 24 conspirators, including an immigration attorney. As a result of the operation, Canadian police seized over $35 million in 80% pure Southeast Asian heroin in British Columbia's laryest narcotics seizure.

Agents also completed 12,543 investigations of criminal aliens through the arrest and initiation of deportation proceedings. Another 44 complex investigations of alien organized crime groups were completed, many of which involved newly emerging non-traditional ethnic crime groups. For example, a task force operation successfully closed down a sophisticated alien prostitution ring operating in New York City, San Francisco, and Denver. Over 50 Taiwanese women, either smuggled into the United States or provided with fraudulently procured visas, contracted to work in brothels until they each paid off their $5,000 smuggling fees to the operators of the ring. The case resulted in one of INS' first uses of the Racketeer Influenced Corrupt Organizations (RICO) statutes, substantial periods of incarceration for the convicted principals, and seizure of over $140,000 in assets.

The Anti-Smuggling program continued to yield positive results in 1986 by concentrating its resources on major criminal conspiracy cases. Arrests of alien smugglers Servicewide topped 22,000 and a total of 7,999 prosecutions resulted in 6,579 convictions. The severity of sentences for smuggling convictions continued to increase in 1986, with sentences in major felony convictions averaging over 17 months. At the same time, nearly 14 thousand vehicles used in the smuggling of aliens were seized. They were valued at more than $31 million. If current trends continue, future cases are expected to become increasingly more complex in that major smugglers have also begun to

involve themselves in drug and weapons trafficking, hostage-taking, extortion, document vending, and other profitable and violence-prone criminal activities.

During 1986 the Detention and Deportation program continued to process and manage extremely heavy workloads. A total of 137,332 aliens were detained for a total of 1,437,266 detention days, using service processing centers and contract detention facilities in Los Angeles, Denver, Laredo, and Houston. We are now detaining approximately 3,360 Mariel Cuban criminals--as of March 6, 1987 we had: 611 in our Oakdale facility, 1,806 in the U.S. Penetentiary in Atlanta, 118 in St. Elizabeth's Hospital, 304 in Service Processing Centers, and 526 in non-Service facilities. Work continues on the development of a long-term solution for the detention of this dangerous group of aliens. However, we are appreciative of any assistance that this Subcommittee could be in encouraging liaison with other entities under your jurisdiction, such as the State Department, to assist in achieving a long-term solution to the problem.

The Adjudications program continued to meet its objectives during 1986. Over 2.2 million cases were received for processing. Of these, 644,000 were processed by Immigration Inspectors during "down time" at ports of entry. Our four Regional Service Centers functioned very effectively, with completions up by 75 percent over the last two years. These accomplishments are expected to continue into the future as a result of our efficient resource management activities.

During 1986 the Data Systems program continued to make substantial progress in expanding the data communications network and making additional systems available to service personnel throughout the country. The network now includes 153 INS field offices, allowing immediate access from approximately 1,500 work

stations to automated systems such as those now available to support casework in deportation, naturalization, legal case processing, and enforcement operational activities. The A-File Tracking System has been completed and installed in six district offices.

The Non-Immigrant Information System has been improved to the point that over 625,000 records can be loaded in a 24-hour period. Over 55 million records are now maintained on this database.

In 1986 INS maintained and improved good working contacts with our counterparts in Mexico. For example, Mexican authorities continued to intercept groups of aliens destined for the border where they would have attempted to entry the U.S. illegally. Border crime and violence persist as areas of concern for both governments. Efforts are being made to determine the causes of these problems and to resolve them. We also expect to be in more frequent contact with Mexican law enforcement authorities as Border Patrol personnel become more involved in anti-drug operations.

We have made a number of organizational changes in the last year which will be of benefit to the Service in the future. Most pertain to the implementation of the Reform Act. We have in place new units for Legalization, Legalization Appeals, Special Agricultural Workers, Employer and Labor Relations (Sanctions), and Operations Support. These are essential to implementing major provisions of the Reform Act.

Conclusion

The budget which you have before you today is the largest ever submitted for INS. I believe that it is enough to do the job which the Congress expects

the Service to do in carrying out its basic program and in implementing the Reform Act in a sound, efficient manner.

Never before has INS had the opportunity which it now has to address and resolve the problems stemming from illegal immigration. With the legislation and the resources to carry it out, we will have what we need to accomplish the goals of reform and complete the job of restoring control of our Nation's borders.

Thank you, Mr. Chairman, I will be happy to answer questions you or other members of the Subcommittee may have.

72-165 O- 87——39

SUMMARY OF 1988 REQUEST

Mr. NELSON. I will summarize some of the chief points and give you a couple of items that we covered in our press conference where we announced some of the new proposed regulations and rules for the implementation of the Immigration Reform Bill.

We appreciate the good hearing we had a week ago on our 1987 supplemental, and appreciate your prompt action in marking up that bill. I am here today on the fiscal year 1988 budget request for $838,828,000 and 15,453 positions for the Immigration and Naturalization Service.

In addition to these appropriated funds, there are several areas of non-appropriated funds: a user fee in the amount of $74 million, and a legalization fund in the estimated amount of $144.4 million. So if you add these non-appropriated amounts together with the $838 million that we request as appropriated, we are talking about resources available to the INS for fiscal year 1988 in excess of $1 billion.

[The following information was submitted for the record subsequent to the hearing:]

IMMIGRATION LEGALIZATION FUND RESOURCES

The 1988 budget request identifies budget authority of $180,692,000 for the Immigration Legalization Fund. $144,445 is an estimate for obligations for the Immigration and Naturalization Service and the remaining $36,247,000 will be provided to the Federal Bureau of Investigation.

Mr. NELSON. This is the first full year of funding, as you note, for the implementation of the Immigration Reform legislation. I think, as we have testified before and as you and others have indicated, this major legislation gives us an opportunity that has been needed for many years to gain control over our immigration policies, particularly the illegal immigration issue.

The INS budget has grown during the Reagan years from about $440 million in 1982 to the figure as noted of over $1 billion for 1988.

IMMIGRATION REFORM

The Immigration Reform Bill implementation is going forward, we think, in an orderly, deliberate process. Yesterday, we announced and received the approval from the appropriate Federal agencies, including OMB, to publish regulations in the Federal Register to implement the Immigration Reform Bill, for at least a major part of the Bill, sanctions and agriculture workers. Other pieces are moving down the track.

We did announce several aspects yesterday, one, the legalization fee, and the special agricultural worker program of $185 per applicant. In the case of a family we would have a family cap of $420. So if you had a husband and wife together, they would each pay $185, which would be a total of $370, then each child pays $50, but we would limit it at $420.

So in the case of a family, a family of three would pay the $420. Any other children would not pay, and we think that is fair, reasonable and a good balance.

Mr. SMITH. Is that regardless of the age of the applicant?

Mr. NELSON. Under 18 in the home. This fee is identical to the individual fee of $185, that a legal immigrant pays for their immigrant visa so we think it is not only fair and reasonable, but proper that the illegal alien who can be legalized pay a comparable fee.

It also meets the Congressional mandate of covering the cost of the program and also the Congressional mandate that it be comparable to other fees. As indicated, it is that.

We think those fees will cover the anticipated numbers. The key issue is that it would be a user fee concept for those getting the benefit and that the taxpayers not have to bear that burden. We think it is balanced, fair and based on the best estimates we can make of costs. We feel very confident and comfortable that that is reasonable, and certainly allows the illegal alien to make it.

That fee is quite reasonable compared to the money they have already probably put out for alien smugglers, lawyers, other items they have, so we don't think there should be any problem with those eligible in applying, and we encourage that.

COMMENTS ON NEW EMPLOYEE VERIFICATION FORM

We also, yesterday, Mr. Chairman, put out the draft employer verification form that will be used by employers. We think it is a good form.

We have already conferred with the U.S. Chamber of Commerce, AFL–CIO, other business groups, and think that we have boiled it down to a one-page form, but we are still asking for comments.

We are sending it out as part of the regulation package and if we can get further ways to simplify it, we welcome that. Before they are finalized, we will continue that process, but we think that is moving along well.

Of course, there is a 30-day comment period that will end roughly in the middle of April. We will review the comments and put out interim regulations, if we have to, allowing us to get them in place before the May 5th opening for the Legalization Offices and the June 1st formal beginning of sanctions.

We did, as you know, Mr. Chairman, use a unique process and one that I think worked well of going out not only asking for input initially from any interested groups on what the regulations should be, but in January of this year issuing informal draft regulations.

We received numerous comments. That helped us in the product we have now just announced. We think that has been well received, even though a number of people don't necessarily agree with all the points. That will never happen. We feel the process is in order.

OPENING OF LEGALIZATION OFFICES

We expect to open the Legalization Offices, over 100 of them, by May 5th, as scheduled. We are meeting extensively with employers, unions, community groups, asking for their input and suggestions, and also telling them what we are planning.

In the next few months we will be accelerating public information campaigns, distribution of these forms, and procedures. We think we will be able to move forward in a proper manner to implement the law.

As noted in the testimony also based on the Congressional authorization, we have been hiring a number of re-employed annuitants to bring experienced people and a temporary work force to help us in this program.

Since legalization is a temporary program, we need to staff up with several thousand people, but obviously not to add those to the permanent payroll. That is going forward.

We have had excellent cooperation from both the General Services Administration and the Office of Personnel Management as well as OMB in processing and space, and in bringing on these people. Again, there will be some difficulties, I am sure, but over all we are pleased with the way it is working.

LAW ENFORCEMENT IMPROVEMENTS

I turn now to several of the enforcement improvements. As you know, Mr. Chairman and members of the committee, the bill is an enforcement bill, the Immigration Bill, the employer sanctions being a key part. The investigative positions we asked for are a key to enforce the employer sanctions.

Another aspect that the Congress mandated, and we welcome, is more attention to criminal aliens, more efforts to investigate and deport those involved in crimes, particularly narcotics related, so there is money in there and positions to deal with these.

When we are talking about employer sanctions, we concentrate as much as we can, and we think appropriately, in working with the employer community, the labor community and others to obtain voluntary compliance.

We are not interested in penalizing people unless we have to. We want people to comply. We want them to hire American citizens and legal aliens. That is what the thrust of the law is. We think there are economic, social and moral reasons as well as the legal ones. We are working and will work very hard with the entire community in those areas, but of course will enforce the sanctions provisions, particularly against those more blatant violators.

We did create the new Office of Employer and Labor Relations, which I think will emphasize the point I just mentioned of a cooperative approach there.

We testified at length about expansion of the Border Patrol at a hearing last week. That recruitment is going on.

We think that we are achieving the mandate of Congress, to increase the Border Patrol by 50 percent. The positions are there, and the dollars are there for maybe a 39 percent increase, which is about the phase-in that we think is appropriate for the time involved. That is going forward.

There will also be additional equipment and other facilities. We think the Border Patrol, with the Interior Enforcement program, SAVE which will keep the illegal aliens from getting benefits to which they are not entitled and dealing with the criminal issue, which I mentioned, is the proper balance in the enforcement area that will allow us to do the best job we can.

We have talked about additional inspectors at our ports of entry at both airports, land border ports, and seaports. The user fee that I mentioned, the $74 million, will fund substantially increased posi-

tions at the airports and seaports. Since that comes from the airlines, it covers those areas.

That will give us the ability to facilitate people coming through as well as do better inspections, and hopefully deter more of the illegal entrants. We certainly have substantial illegal entrants coming through our airports as well as our land borders.

In addition, at the land border, some of the positions there which we have talked about, I think will help us do a more effective job.

We have improved in the anti-smuggling area. We will be expediting the deportation of criminal aliens. I certainly don't want in any way to give the impression that all illegal aliens are involved in crime, not so at all. But there are substantial criminal activities by groups of illegal aliens, and particularly some of the organized crime rings. We are now a formal member of the Organized Crime Drug Enforcement Task Force.

DRUG OPERATIONS

We are as you know, a lead agency in the narcotics area. We have the lead role in Operation Alliance on the Southwest border now, and have been responsible for the largest percent of the drug seizures. We are there. Our people are there. We know the border. We know the territory and the language and we are very effective in both interdicting illegal aliens and illegal narcotics.

SAVE PROGRAM

As I mentioned, the SAVE program is a very significant part of this legislation. We have run this program on a voluntary basis and I think we have 16 or 17 States participating.

We believe we have saved well over $100 million and identified about 50,000 ineligible aliens. That is just scratching the surface. If we can get this program implemented in all the States and in all the benefit programs, not only will it help our immigration enforcement, but it will certainly save the country hundreds of millions of dollars and carry out the laws as they are meant to be carried out.

VARIOUS LEGISLATIVE PROGRAMS

We do have, as you know, Mr. Chairman, the agricultural worker programs, the SAW programs. Again, as I mentioned, the fees are the same, $185, with the family cap of $420. It is important that an applicant for this program especially produce the evidence of eligibility because of the short timeframe, the 90-day period. We have set out procedures in our regulations to cover that.

We believe we could have as many as 800,000 applicants under that program. We don't know, of course, but that could well be.

In addition, the H-2 program is part of the legislation. It is another vehicle to assist the growers as well as others in getting temporary agricultural help. That program, which has the lead by Departments of Labor and Agriculture, is to provide a temporary work force as necessary.

OVERSEAS PRE-INSPECTION

Several of the other areas that we are talking about funding are in the inspections area. We have had, as you know, Mr. Chairman,

pre-inspection in Canada for a number of years. It has worked extremely well.

Last year we had the first overseas pre-inspection in Spain and Ireland. It is appropriate on St. Patrick's Day to talk about that. That worked exceedingly well. The Irish Government is very supportive. All indications are that it worked well. The Irish want to reinstate it, effective in June, on a permanent basis, as we do.

We have talked to many other countries in Europe, South America, and Asia about the possibility of similar programs where people are inspected at that end. This can avoid a lot of delays at our incoming airports, and obviously also can screen out ineligible travelers before they get here and cause the problems once they are here of trying to get them out. That is going forward.

With the user fee we will be able to improve our information systems. Our whole data processing to cover the detention and deportation services for those people who do come in illegally, improve our debt recovery on finance, and so forth. We think that will work very well.

ACCOMPLISHMENTS

Just a few other things, Mr. Chairman, not to take too much time, on reviewing a few of our program accomplishments. I will just cite a few.

The volume of inspections, I think, surprises people. Last year we inspected 328 million persons, both returning citizens and aliens coming in. That is almost one-and-a-half times our population. Out of that, 720,000 inadmissible aliens were intercepted and denied entry. That was a 12 percent increase over 1985.

In fraudulent documents, there was a 76 percent increase in the detection of fraudulent documents last year; a 70 percent increase in vehicles seized, a 39 percent increase in drug seizure cases made by immigration inspectors in addition, of course, to the Border Patrol. On Border Patrol, there were nearly 1.7 million apprehensions at the border, and 19,000 alien smugglers were arrested. This was up 5,000 or a 20 percent increase.

As indicated, in drug smuggler interdictions, I think our record has been outstanding. Last year in the Border Patrol, there were 1,300 seizures of drugs—I am talking about fiscal year 1986—valued at over $185 million.

It is interesting, in the first quarter of 1987, we have already seized $95 million, almost half of what we did over all of last year. That figure will go up.

As I said, we have a very significant lead role in Operation Alliance. We think that has been a very good program, a good start, and one that will bear much more fruit downstream.

We had marriage fraud legislation, as you know, enacted last year that has worked well. It is just beginning. We are dealing more with the vendors of counterfeit documents and the sham marriage issues, and we expect that to expand over last year.

In the Detention and Deportation program, last year we detained over 137,000 aliens, a total of almost 1.5 million detention days. Again, these are significant numbers when you look at the tremendous numbers we are dealing with.

In adjudications, we adjudicated over 2.2 million cases, and again we are very proud of it. Our inspectors at the ports of entry, when they have down time between flights for example, are working in the office adjudicating cases. We think that is a good use of time.

We have made significant progress in our data systems. This has been an important area for the volume we deal with. We think we made very good progress, and that is certainly essential as we go forward in implementing the immigration bill.

RELATIONS WITH MEXICO

In Mexico we have had, I think, good relations. We have met with the Mexican officials. I was in Mexico in December, met with President de la Madrid and other top members of the cabinet and our ambassador, (at our invitation) to assure them that we do not anticipate mass deportations. There will be impacts, but we are satisfied those will be gradual and orderly. We believe it is in everybody's interest downstream to have a legal system and not the current illegal system.

We are working with Mexico. We have set up a new position on the border to coordinate border issues, particularly border violence to be sure we cut that down. In the mutual interest of both countries we are working to deal with the other issues on the border. We are working, we think, well with the Mexicans on some tough areas for them in difficult economic times.

Mr. Chairman, in conclusion, this budget before you today is the largest ever submitted by INS. We have had excellent cooperation throughout with the Administration and Congress. We believe that this budget request is necessary to carry out the Immigration Reform and Control Act.

We thank you for the opportunity to be before you, and will be pleased to respond to your questions.

LEGAL OPINION ON FEE STRUCTURE

Mr. SMITH. This fee that you set yesterday or announced yesterday, do you feel that you are directed by Congress to set it within certain parameters and that the fee you have set is required by law?

Mr. NELSON. That is correct, Mr. Chairman.

Mr. SMITH. Do you have a legal opinion on that?

Mr. NELSON. Well, I have the statute and I think that is pretty good legal opinion here.

Mr. SMITH. But you didn't have it reviewed in the Department?

Mr. NELSON. I don't recall whether we had a formal legal opinion or not.

Mr. SMITH. If you did, put that in the record.

Mr. NELSON. We will do that.

Mr. SMITH. Then put in the record also the statute you rely on, and any supporting evidence that you used to establish the amount of the fee.

Mr. NELSON. We will do that.

[The information follows:]

STATUTE AND LEGAL OPINION ON FEES

The Immigration and Naturalization Service did not prepare a legal opinion or request one from the Department. The Immigration Reform and Control Act of 1986 is very clear regarding the collection and use of fees. In Section 201(c)(7)(A) the Act states "The Attorney General shall provide for a schedule of fees to be charged for the filing of applications for adjustment. . . ." "Section 201(c)(7)(B) requires the Attorney General to deposit fees collected". . . in a separate account and amounts in such account shall be available, without fiscal year limitation, to cover administrative and other expenses incurred in connection with the review of applications filed. . . ."

In view of the explicit nature of these sections of the Reform Act, we do not feel that a formal legal opinion regarding the collection and use of fees is necessary.

FEE STRUCTURE

Mr. SMITH. Do you have any indication that your fee structure will exclude anyone because they won't have the money?

Mr. NELSON. We do not, Mr. Chairman. First, as you know, the law is clear too, that people are not eligible if they are a public charge, and $185 is certainly not very high considering the tremendous benefit they are achieving.

As I say, it is the same fee that a legal immigrant pays willingly. Most of the people are employed. Most, of course, have cars, TVs and other amenities, so that $185 is hardly going to be discouraging for the benefit.

If it happens to be, it would almost be a matter of logic, we believe, that it would put them probably in the public charge category and they wouldn't be eligible in any event.

Mr. SMITH. Mr. Kolbe, do you have a few questions?

Mr. KOLBE. I have a few questions. I'll make this brief. Thank you, Mr. Chairman. And thank you, Mr. Nelson.

I wanted to follow up on the Chairman's comments about the legislation fees. The section of the law says that "the Attorney General shall deposit payments received under this paragraph under separate accounts and amounts and such accounts shall be available without fiscal year limitation to cover administrative and other expenses covered under applications filed under this section."

You propose a legalization fee of $185 per individual with a cap of $240, I think it is?

Mr. NELSON. Four hundred and twenty dollars.

Mr. KOLBE. And the revised statement now is that only two million people will be processed under this, is that correct?

Mr. NELSON. Again, Mr. Kolbe, these estimates are difficult. Our planning estimates are that as many as 3.9 million would come forward, so we are gearing up our offices to handle that number, but our estimate is, at this point, about two million.

Mr. KOLBE. I realize the law on the one hand says it has got to cover the cost and on the other hand it says it should be comparable. The proposed regulations, regarding verification of continuous residency in the country are going to imply a great deal of deeper investigation than is now conducted. Isn't that going to mean much higher investigation costs? Are these fees really and truly, are these costs going to cover the expense?

Mr. NELSON. In our best estimate, they will. We are opening up new offices and, of course, there is the cost of acquiring offices, the personnel I mentioned, the additional investigations. In addition,

some of the money is reimbursed to the FBI for performing fingerprint checks.

Some goes to State or local governments for checks on public charges and so forth; a small fee, $15 goes to the qualified agencies who help people, so there is a certain outlay there. Our projection of our overall costs indicates that the $185 fee will cover that, if we process two million applicants. This is our best estimate.

If more applicants come forward, we could actually have a surplus. As we indicate, if we do have a surplus, that could be applied to the permanent residence phase.

If we happen to run short, then of course we would have to seek a supplemental appropriations request, but our best estimate is that with two million applicants, we should be able to cover our costs. We think our estimates are accurate.

Mr. KOLBE. That is what I am trying to get at in terms of identifying whether these fees will be sufficient. Given the additional investigations that are going to be required, if the current fee for legal immigration is an accurate fee, and covers what really are the expenses to INS, then how do we reconcile that with what appears to be greater investigations and presumably expenses that are going to be involved in the legalization program?

Mr. NELSON. I think, again, Mr. Kolbe, volume is a relevant factor. If we receive two million or so applications with that volume, you can centralize a lot of your efforts. It is true there will be more investigations, but we have charted out what we think appropriate.

The other fee for the legal immigrant, of course, is combined. Most of that goes to the State Department, because that is a visa fee for overseas, and a small part goes to us.

There is activity there, too, but all I can say is that our estimate is based on our total anticipated costs. This fee is just about on target. We do not want to try to charge too much on the one hand.

We have gotten a lot of flack, as you know, from people saying we are charging too much. We think we are as close as we can get based on the overall cost estimates as well as the appropriate level and the comparability factor.

NEW REGULATIONS

Mr. KOLBE. Let me ask you a couple of questions about your new regulations, which I haven't had a chance to read in detail, but I saw them in the draft form.

As I understand it, you are going to require no more than 45 days of absence from the country during a period in the aggregate of 180 days since 1982?

Mr. NELSON. Correct.

Mr. KOLBE. And no absences since the date of enactment of this legislation?

Continuous residence is going to be awfully tough to prove to an investigator. How do you intend to go about doing that?

Mr. NELSON. There are a lot of areas that are difficult to prove here, but I think the basic thrust is that it is up to the applicant to prove his or her continuous residence. We recognize these absences are probably a little tougher than some other aspects of it. If appli-

cants for example, have been employed and there are some significant gaps in their employment, then it would be up to them to give proper evidence to explain that. That would be one aspect.

Mr. KOLBE. Lots of employment, as you know, is done on a cash basis. It is going to be very hard to find records on this kind of thing.

Mr. NELSON. Again, the burden is on the applicant. We think, of course, we are going to be reasonable, but they must have the burden of proving their employment, their continuous residence and the other factors.

Mr. KOLBE. I assure you if the burden is on the applicant, you could act quite reasonably within the basis of this law and turn down virtually every applicant. I don't think you are going to be able to find the documentation. I would think it is going to be the toughest aspect of your whole job trying to prove their continous residency.

Can you give me some indication of how those periods were picked, 145 and 180 days aggregate? Is it just kind of a compromise? How do we decide that this constitutes continuous residence?

Mr. NELSON. Let me make a run at it. Maybe others can elaborate.

Certainly in the statute and in the Congressional history there was, you might say, the direction that limited absences would not prevent qualification. That Congressional direction was clear. Then it is merely a matter of trying to determine what is reasonable.

Initially, in the draft we came out with in January, we picked 30 days and 150. There were a lot of comments coming in. Of course, a lot wanted six months, so we made some adjustments to go from 30 to 45 and from 150 to 180, thinking that that was reasonable, with the idea that if somebody was out of the country for, in this case, 45 days, that that would not necessarily disqualify them. Again, it was trying to balance both the practical aspects of it, what made sense.

ANTICIPATION OF LITIGATION

Mr. KOLBE. Do you expect litigation on this point?

Mr. NELSON. It is probably fair to say we will have litigation on a lot of points, but we are ready for it.

Mr. KOLBE. Have you included litigation in your budget estimates?

Mr. NELSON. Yes, we do have substantial increase in the number of legal positions as well as immigration judges which will be funded through another appropriation within the Justice Department's budget.

QUALIFICATIONS OF QUALIFIED DESIGNATED AGENCIES

Mr. KOLBE. I have one last area of questions, Mr. Chairman. Again I appreciate your allowing me to go ahead of others.

I am interested in the role of the qualified designated agency, such as the Catholic Diocese Church, support groups, different groups that are going to be doing the initial screening.

How does a group become officially qualified? How do you select them?

Mr. NELSON. Mr. Kolbe, we put out within the last week or so a proposed form of agreement or contract, if you will, that had been distributed to all of the people that are interested, and we have several meetings with them. We set forth some very specific requirements. We would be happy, if we haven't already, to provide it for the Committee.

It sets forth what their duties are, what ours are, and what fees they can charge. They will be charging for their services. I think that is appropriate as long as it is kept within certain limits.

We will reimburse them $15 per application that they submit to us. They have helped us in that regard, but again, it provides what they must do and what they can not do.

IMMIGRATION FEE STRUCTURE

Mr. KOLBE. Is the application and the $15 charge, is that an application for an individual or can it be for a family?

Mr. NELSON. That would be an individual application. Now, if we end up with a family package—but I think we would probably pay them the $15.

Mr. EVERSON. That would be a reimbursement for each individual.

Mr. KOLBE. Each individual, if there are five in a family, it would be five times $15 or $75?

Mr. NELSON. If we got over the $420 cap, I am sure we wouldn't pay them the $15 in that case, but for all intensive purposes, $15 per applicant.

Mr. KOLBE. I have heard from some of these agencies that this fee, this reimbursement is not even going to touch the real costs. Have you been hearing that? I realize that the investigation is very limited.

Mr. NELSON. But they are talking about charging on their own up to $75.

Mr. KOLBE. They will be permitted to charge?

Mr. NELSON. They can charge on their own. As far as we are concerned, $75 is the maximum they can charge in addition to $25 for reimbursement for photographs, fingerprints and that. They can charge an applicant up to $100 and in addition, they get $15 a person, so these groups are not going to be hurting financially from this program.

Mr. EVERSON. I might add one thing: We have distributed over 1,200 applications to interested parties in connection with the program, and they can continue to apply until April 10, 1987.

Mr. KOLBE. To serve as an agency?

Mr. EVERSON. To serve as——

ORGANIZATION INVOLVEMENT

Mr. KOLBE. Are you going to do it on a national basis? Are some going to be just local?

Mr. NELSON. Yes, clearly, like the Catholic Church will be deeply involved, the Catholic Conference will be involved, and they have sort of an umbrella, national organization. Lutherans would be another example, American Council of Nationality Service and so forth, a nationwide structure. But local agencies can do it, and it is

not just voluntary. Church groups, labor organizations, employer groups, growers associations and others can also qualify.

Mr. KOLBE. Will they get up-front monies to set up their programs?

Mr. NELSON. Well, not up front in the sense of any grants. We will advance some money to them, limited amounts to get started.

Mr. KOLBE. And that will be a draw basically on the applications that they process?

Mr. NELSON. Correct.

Mr. KOLBE. What kind of information or training are you going to do?

Mr. NELSON. Through our outreach people, we have had a series of meetings. Those will be continuing. We are developing a specific training package. We will train the trainers, so to speak. They in turn will follow up on that. That is under way already.

Mr. KOLBE. Thank you very much, Mr. Chairman.

NUMBER OF LEGALIZATION APPLICANTS

Mr. DWYER. Mr. Rogers.

Mr. ROGERS. Thank you, Mr. Chairman.

You said you expect around two million applicants?

Mr. NELSON. That is our best estimate, Mr. Rogers, again in a difficult area.

Mr. ROGERS. Is that just adults or is that the entire number of people?

Mr. NELSON. Again we don't break it down. It is hard to know, Mr. Rogers, how many children are involved here. Mostly they are going to be adults, we believe. In rough estimates, we are talking most of those being adults.

Mr. ROGERS. You are talking about the entire group of people, children included?

Mr. NELSON. Yes, but again that is a very, very general estimate, so we haven't tried to make a breakdown, just because there is no way of doing it. As I say, we plan on the basis of almost twice that many.

We think that two million applicants is a reasonable target. Probably half the people say we are going to be low and half say we are going to be high.

Many outside groups seem to think there will be more than two million. As you know, other countries that have had a legalization program have almost traditionally had the experience of fewer coming forward than anticipated. All indications here have been that many will come forward. In Los Angeles, for example, which I think will probably be the heaviest area, there have been indications already that up to 800,000 potential applicants are lined up.

Mr. EVERSON. This ought to put to rest the issue of a 1987 supplemental on legalization. Nationwide we already feel there are one million people out there who are more or less queued up.

In Los Angeles alone, our district director told me last week they have over 300,000 names and addresses of people who have been in touch with these various entities, and are on record as already intending to come forward. By just canvassing some of these larger offices, we came up with about one million people who are pretty

firmly identified and would certainly carry the program through those early months of 1987.

CAP ON FAMILY LEGALIZATION FEES

Mr. ROGERS. From what you know now, from those people who are queued up or you have information on, what is the average of size the family that would be admitted?

Mr. EVERSON. It is hard to say, but I think to buttress what the Commissioner is saying, the indication is that most of the people will be principals.

You have to remember many children have been born subsequent to arrival here. They are citizens. If somebody is going to qualify under this program as having been here since 1982, he or she may have children born here who are already citizens. There doesn't seem to be as many children as one might have thought earlier based on the discussions we have had.

Mr. ROGERS. What I am driving at is the proposal for schedule calls for $185 per adult, and the cap of $420 a family; $420 a family would be two adults and one child obviously. You are assuming that the family unit would consist of three people, the mother, father and one child under 18; is that correct?

Mr. NELSON. Right, for the cap.

Mr. EVERSON. I don't think that we are assuming that the family unit will be three or four. We are just saying we are going to stop charging at three.

Mr. NELSON. And of course a lot, too, Mr. Rogers, are single-parent families. In that case you would get four or five children paying the $50 each before you would reach the $420.

Mr. ROGERS. Suppose there was a mother, father, one minor child and one 21-year-old child, what is the charge?

Mr. NELSON. We are talking about the cap relating only to children under 18 in the home, so if they are either over 18 or outside of the home, they would be adults and would pay $185.

Mr. ROGERS. The cap would not include them?

Mr. NELSON. That is correct.

FEES FOR LEGAL APPLICANTS

Mr. ROGERS. What is the charge again—I think we have heard this before—for a legal applicant for citizenship?

Mr. NELSON. That is also $185. I note you raised that question at the hearing on the 1987 supplemental last week. We think that is a significant factor, that the legal alien shouldn't pay more than the illegal alien in this case. We think that is a proper comparability and fairness factor. That is one reason we fixed on that fee.

We had obviously explored different fees in the range from $150 to $250.

Mr. ROGERS. And what is paid for a child under 18?

Mr. NELSON. My understanding is that there is not a discount factor on the legal immigrant fee,

Mr. ROGERS. The legal immigrant child would also pay $185?

Mr. NELSON. That is our understanding.

Mr. ROGERS. Not $50?

Mr. NELSON. That is correct.

Mr. ROGERS. Is there a family cap for legal applicants?

Mr. NELSON. Not to my understanding.

Mr. ROGERS. In effect, you are giving the break to the illegal immigrant here. The person who broke down the barriers to the country and came in illegally as opposed to the person who waited patiently for ten years. You are giving the violator of the law a break here, aren't you?

Mr. NELSON. In the sense of the cap, we certainly are giving them a break in terms of the cost. That is correct.

PERCEPTION ON INEQUITY OF LEGALIZATION FEES

Mr. ROGERS. What does that say to the rest of the world? Doesn't that say, to forget the laws, we are going to sneak in and get a better deal?

Mr. NELSON. We hope not. That is, of course, one reason we have set the overall fee.

As you might know, many of your colleagues attacked from the other side that this fee is outrageous and way too high. As we stated in our testimony, we think it not only meets the statutory direction for comparability but that it is fair and balanced.

I think the idea of the family cap, though, was a recognition that for a family unit, a cap is reasonable. As indicated, we don't expect to have a lot coming in under the cap because of either single-parent families or applicants not having children at all.

Mr. ROGERS. If I were a person determined to get into the U.S. and I had been on the waiting list five years from some other country other than from our southern border, where most of these illegal immigrants are coming from, I would say, to heck with the American laws; I am going to go to Mexico and I am going to sneak across. Or I am going to find a way to get around this thing, because there is a better deal. The way to get into the U.S. is to violate the laws and they will give you a reward.

That is just the way this thing smells to me. Obviously you don't think so, because you said it the other way, but I just wanted to register that.

Mr. NELSON. I appreciate your opinion.

Mr. ROGERS. I suspect there are going to be a lot of people in Congress and outside that feel exactly the same way. I am a little bit irritated by it—more than a little bit. I just think it is rewarding the violators of the law.

You are saying the way to get by in this country even as you come in the gates, is by illegal actions.

Mr. NELSON. I appreciate, Mr. Rogers, your comments and there is certainly strong backing for that. I would say the whole thrust of this immigration law is to avoid the problem you just addressed.

If we can get the appropriation we request here to enhance the Border Patrol, enhance interior enforcement, keep illegals off of benefits to which they are not entitled, identify and remove criminal aliens from the United States plus improve inspections, we can accomplish what you want and what we all want, which is to cut down the illegal flow into this country and regain control of our borders.

I think the legalization fees are balanced. I think we have to recognize that, as you know, the debate in Congress was very emotional and heated.

I think another thing, in our defense, is that we have to try to follow the guidelines of Congress also in saying that the fee should cover the cost of the program. That really wouldn't authorize us to try to gain more than the cost. We think that is another factor.

Mr. ROGERS. Also, have you considered the part of the law affirming that the guidelines for setting the fee should be consistent with what we charge legal applicants?

Mr. NELSON. Yes.

Mr. ROGERS. Do you agree that there has been a prejudice here in favor of the illegal applicant in the rates for a child application and the family unit that doesn't exist for legal applicants?

Mr. NELSON. You used the word "prejudice." I maybe would use the word "benefit." Yes, there is some benefit to the illegal alien family group. For the individual, no benefit.

We don't think there are going to be all that many family groups. We think there is an equity factor, that needs to be balanced with the statutory mandate to cover the cost of the program. The flip side of that is that we certainly should not be charging more than the cost of operating the program.

There are several somewhat competing rationales. We had to do a balancing act. We think it is proper.

Mr. ROGERS. Does it not violate, though, that guideline that applicants for illegal aliens should be the same as legal aliens? There is a difference, isn't there?

Mr. NELSON. There is no special guideline for the charge. It was our decision that we ought to charge a comparable fee for legal and illegal aliens.

The legislative history basically, indicates that we should charge comparable fees. There are other fees that are in the low one hundred dollars, for example, so I think we did a fair job and I think it is a balanced one that we feel is proper.

APPLICANT SCREENING

Mr. ROGERS. What kind of enforcement can we expect, that is in terms of screening of applicants, to be sure that we are not getting some people coming in in violation of the time required to be here before the expiration? What kind of screening are we going to get to be sure we don't get a double illegal, that is a person who is here illegally and then illegally states his or her tenure?

Mr. NELSON. The procedures, of course, will include a fairly thorough application to be filled out with the payment of the fee. It is up to the alien to have the back-up documentation that would verify his or her status, and that that can be checked.

We will routinely run fingerprint checks and criminal record checks. We will make contact with state and local agencies regarding the public charge issue.

Each person will be interviewed. There will be appropriate follow-up checks. We will be as thorough as we can.

Obviously, if somebody is guilty in our mind of using fraudulent documents, there are provisions to penalize them. They will be in-

eligible for legalization. They are also subject to other penalties, which we will pursue.

Mr. ROGERS. I understand that the presses are already running?

Mr. NELSON. I am sure they are.

Mr. ROGERS. It is going to take some pretty tough investigative techniques. You are dealing with, you say, upward of two million people here, and you are already understaffed in terms of personnel.

I am just not very satisfied we are going to get a really good screening of the people who are applying to become citizens of this country who came in here illegally.

Mr. NELSON. Our intention is to do just that. If we can get the approval of Congress for the requested appropriation, we think we have the investigative positions, the intelligence positions and the inspections positions that will allow us to do just that.

Mr. ROGERS. Here is one member who is going to be keeping a real close eye on you.

Mr. NELSON. Very good. We welcome it.

Mr. ROGERS. I hope to see that you dot every "i" and cross every "t" three times.

Mr. NELSON. We welcome that, sir.

DETROIT STAFFING

Mr. DWYER. Mr. Carr?

Mr. CARR. Thank you, Mr. Chairman.

Mr. Commissioner, I have a few questions that zero in on Detroit. Have you got somebody there with a book who can tell me the number of positions currently at Detroit?

Mr. NELSON. I don't have that with me, Mr. Carr. I don't know if our other staff do or not. We will happily provide it to you. We have a district office, as you know, in Detroit that covers all of Michigan.

Mr. CARR. I am most interested in the inspector slots that you have there. I am told, and this is just a ball park figure, that for the tunnels and the bridges there you have about 30 inspectors. Some of my information may be a bit outdated, but I am also told that you have no permanent inspectors at the airport.

That probably was a good way to operate for a long time, because the international flights out of Detroit, the non-stop internationals, were pretty limited, but now with the merger of Northwest Airlines and Republic Airlines, the fact that both airlines have hubs at Detroit and now are in the process of creating a huge hub, in fact while the new Northwest Airlines is headquartered in Minneapolis, the largest hub in this system is now Detroit.

I am told that they are going to be commencing, on April 17, non-stop Detroit-Tokyo Service three times a week, and starting June 1st there is going to be daily flights to Tokyo. In addition, I believe they are commencing Frankfurt operations out of Detroit. I think we need some permanent slots at Detroit metro international terminal.

Can you tell me anything about what is going on up there?

Mr. NELSON. Let me speak generally, if I may, because I don't have the breakdown of positions in Detroit or any other location as

indicated, we will be pleased to provide those to you. Speaking of the airport first, we use both permanent and temporary inspectors. I think this is a proper use of manpower, because obviously you do get summer peaks and other times when you can use additional staff at other times we don't need them so much.

That is a good way of using your dollars and your resources. I would be very surprised if it is correct that we have no permanent positions at the airport.

Mr. CARR. You may now. We are shooting at a moving target here. A few months ago, I was told that whenever an international flight came into Detroit, they were borrowing people off of the bridge and the tunnel.

Mr. NELSON. We will have to check that.

Mr. CARR. You may have recently moved some permanent slots to metro, but we are going to have a big log jam there if we don't do something.

Mr. NELSON. Normally we, of course, have a balance of permanent and temporary staff in our supervisory levels, and so forth where there are permanent people. Another aspect, Mr. Carr, that you touched on, is that with this user fee and the funds we expect it to generate, we will be enhancing our inspections at airports nationwide. I don't know, again, what the breakdown is regarding Detroit, but I am sure there will be additional positions coming there as there are to almost all major international airports.

The bridge and tunnel issue has always been a difficult one. Again, we have, as we have been able to, added staff there to deal with the issue. I know I have had extensive discussion with Senator Levin and others in the past. Overall, I know there can be some problems, but I think we are doing the best we can. Again, hopefully, although there could well be some additional positions funded through the user fee receipts.

Mr. CARR. I would like you to give us a breakdown for the record, and perhaps you and I can agree to meet later to discuss the adequacies of the staffing out there. I don't want any delays occasioned by the Federal Government for an already very congested airport that is suffering under the strain of this huge growth that it has undergone in the last six months with this merger, and the commitment of Northwest Airlines, and I think that we are probably lagging there. I want to make sure that we have enough inspectors to handle the job.

If you could supply that for the record, I would appreciate it.

Mr. NELSON. We will be pleased to do that.

[The information follows:]

INS INSPECTOR STAFF AT THE DETROIT AIRPORT

The INS inspector staff at Detroit currently is comprised of forty-five full-time permanent officers and twenty part-time temporary employees. Six of the forty-five permanent positions were recently assigned to Detroit, under the Inspectors user fee provision, to perform air inspection work in anticipation of expansion in the international inspection activity in Detroit.

INFORMATION SYSTEMS TECHNOLOGY

Mr. CARR. Last year the computer upgrade contract known as hardware acquisition II was a subject of concern for us here. In

view of the importance of this, has the service neglected a rate ceiling with regard to the GSA price list on this contract?

Mr. NELSON. I will let Mr. Everson respond.

Mr. EVERSON. As you probably remember, in 1986 the Service was precluded from purchasing any additional equipment under that contract. We concurrently went outside to FEDSIM, which is a study group associated with GSA to do a long-term look at our architectural needs Service-wide. Those studies have just recently been completed, and we are in the process of assessing options on how we would go in terms of the long-term computer configuration for the Service. But even in fiscal year 1987, we have made no purchases under that act to the contract you referred to.

We have appointed a new Associate Commissioner for Information Systems after a long and extensive search. We think we are making real progress in this area. The instructions are, in the words of Mr. Rogers, to dot the I's and cross the T's three times in that area in particular.

Mr. CARR. When do you expect hardware delivery?

Mr. EVERSON. We are going to be getting hardware now under separate procurements in connection with the legalization offices. We are going to be getting a large number of personal computers. We are going to have some machines in regional processing facilities. But the Service-wide big acquisition, if we go in that direction, (1) and there are some questions based on the Federal system study, whether we should go out with some grandiose scheme, perhaps better to go just on individual targeted areas (1) that will follow on, I would say in fiscal year 1988, by the time you would see any real acquisitions taking place.

HARDWARE ACQUISITION FORECAST FOR 1989

Mr. CARR. So you are anticipating a request for fiscal year 1989 for some hardware?

Mr. EVERSON. We have an ongoing budget in the information systems area. It has now been supplemented to some degree through this user fee account. One of the things we are going to be doing is upgrading our ability at the airports through that user fee, the monies that are available that way. I think it is too early to say whether there will be a big blip, if you will, in 1989, solely because of hardware.

Mr. CARR. Whatever you can do to keep us informed to forecast these things. We intend to roll along with studies here, there and everywhere. If we can have advance notice, it helps our committee to understand the numbers.

Mr. EVERSON. I understand.

Mr. CARR. Do you have any idea what a supposed hardware acquisition contract would mean in terms of reducing the number of positions, say, for border patrol?

Mr. EVERSON. I don't think you would see an impact on the Border Patrol, per se. We follow a strategy of trying to localize as many of the systems as we can. We have something called CADRE, which is a system that runs off of PC's. It is a sensor system. The drug seizures that the Commissioner mentioned earlier were in large part a result of sensors being tripped down along the border.

We then radio deploy agents who determine in these instances that there were criminals going across. But you are not necessarily talking about a big, huge sensor system. These are localized systems. They don't run off of main frames. Sure we will be going out with a need to improve all our technology. That is one of the things the Commissioner stressed to me. The Attorney General said we need to be increasing the people, for the hands-on work, but trying to upgrade the sensors in the other technical areas, too, to limit that personnel increase.

Mr. CARR. I understand that hardware acquisition to contract did include some sensor monitoring equipment.

Mr. EVERSON. I think we have some of that put in place. I have seen some out along the border, but as we say, a lot of that acquisition was stopped in its tracks.

A-76 EVALUATIONS

Mr. CARR. In view of the past management of information processing in the Service, have you performed an A-76 evaluation for contracting for your data processing operation?

Mr. EVERSON. We look at every application, particularly with these new programs to determine whether we can contract out. We followed such a strategy in relation to legalization program. In this program we are going to have 100 plus offices that will receive applications, and then interviews will take place. The applications, for instance, will be forwarded first to a data entry center, which will be a contract facility at this facility all the keying will be done by a contractor. The applications will then be sent to a regional processing facility. There will be one facility in each of our four geographic regions paralleling what we have done with regional service centers, to date, to process some of our existing applications. A combination of officers and contract personnel will be working there.

At every turn we are trying to use contractors in these new programs. When you are building something new, it is sometimes easier to bring the contractor in right up front than it is to make a change elsewhere.

Mr. CARR. Thank you.

INSPECTIONS PROCESSES

Mr. SMITH. I want to ask you about something I have had on my mind for several years. If one is coming from Europe to Dulles and the plane touches down at Boston first, as quite a number of flights do, what are the requirements for the showing of papers and so forth in Boston?

Mr. NELSON. Let me answer and others can correct me.

Normally the inspection takes place at the first location flights enter the United States. I believe that is the normal situation. If you are a returning citizen or an alien, you go through the inspection line, both for immigration and for Customs, and show the appropriate documentation.

The immigration inspector reviews it, determines whether it appears to be valid. If aliens have the appropriate visas they are then admitted.

Mr. SMITH. They would go through Customs also in Boston?

Mr. NELSON. Yes, normally that is the case. If they are transiting through without getting off the plane, they might not, but normally they would be inspected at their first location.

ON PLANE INSPECTION SUGGESTION

Mr. SMITH. This is a little experience I had and 40 other people had in Boston that has always stuck in my mind, our final destination was Dulles. It was raining. There was a woman with two or three children, there were three or four elderly and disabled people. They made everybody get off the plane that was coming to Dulles and go into the airport where an official sat there at a desk and made them line up, showing their papers, and then go back through the rain to get on the plane. I have never seen a worse case of public relations in my life. Is that required?

Mr. NELSON. It is hard to say from your example. Most of the international flights arrive at the end destination, where people are getting off.

Mr. SMITH. Why do they have to get out? Couldn't they go up the aisle?

Mr. NELSON. Again, it is hard to give a reason in some cases on that. Normally, of course, people are getting off and are leaving. Let me come back on your question. If that leg from Boston to Washington is a domestic flight, at Dulles they wouldn't be alert to inspect those people. Someone who was an illegal alien in that circumstance might stay on the plane and never be inspected.

Mr. SMITH. But if they went up the aisle and asked for papers, if somebody didn't have proper papers they could take that person off.

Mr. NELSON. The airlines might want to comment on this one, too. Again, in the normal situation people are getting off in any event. Obviously it is much easier to inspect off the plane than on board.

INSPECTION OF LUGGAGE

Mr. SMITH. Is it a normal situation to stop in Boston on the way to Dulles in a lot of these flights?

Mr. EVERSON. We are on the line jointly with the Customs people in many instances. They are obviously looking for some different things, but if you haven't left the plane, you don't have your luggage. Clearly operationally, at least, it is easier to have everybody go through the one place. As the Commissioner is saying, on the flight down to Washington, you would have no idea whether somebody was a domestic passenger not subject to inspection or in fact had been on-board all the way from Europe.

Mr. SMITH. Their luggage isn't unloaded there anyway, so it is not going to make any difference to Customs.

Mr. EVERSON. You are saying that luggage doesn't get checked?

Mr. SMITH. No.

Mr. EVERSON. That is interesting.

Mr. SMITH. It is not unloaded in Boston.

Mr. NELSON. Let us look into that. I am not aware of that circumstance happening very often, because normally they would offload the luggage at the first point for inspection.

[The information follows:]

INSPECTIONS AT LOGAN AIRPORT REQUIRING DEPLANING

It is a matter of law that, on international flights arriving at a U.S. port of entry, all passengers aboard the arriving flight must deplane and be inspected for admission to the United States. In these cases, the flight is considered domestic from that point forth, and this is usually arranged in advance because many domestic airports do not have federal inspection facilities. When the onward airport is equipped to handle international arrivals, the carrier may request that those passengers continuing on be cleared at the second stop in the United States. (This is called "Progressive Clearance".)

Absent the carrier's request and Federal approval, all passengers must be inspected at the first U.S. port of arrival.

COURTESY AND PUBLIC RELATIONS

Mr. SMITH. It is the kind of thing that should never happen. I could tell by looking, in fact I talked to them about it. The official was about three years from retirement. He was at the point where he thought he owned the place and he was doing them a favor to sit there and look at their documents.

Mr. NELSON. That might have been a Customs officer.

Mr. SMITH. Public relations is a part of your job.

Mr. NELSON. Absolutely, Mr. Chairman. One thing we just adopted this last year, which I think is appropriate given that it is the 100th anniversary of the Statue of Liberty, is a new arm patch. It is a chevron, which has the Statue of Liberty superimposed on a diagram of the U.S. Each of our four regions have stressed the courtesy and service aspects of our mission. We deal with 328 million people, as I said, coming in.

I think if you look at the record, even the number of allegations of discourteous behavior are pretty small. Obviously, those are the ones that get the attention. We are working this issue. We have made a real effort in the last number of years. I can say from my personal experience, having worked in State, private government and industry, that generally INS employees do a good job.

Mr. SMITH. I haven't seen very many cases of discourtesy, but it is important especially with this enlarged program.

Mr. NELSON. Absolutely.

Mr. SMITH. On the other hand, with Customs, I have seen very few planes unloaded, where there wasn't at least one discourteous employee handling Customs. But it is important, I think, that you make a conscious effort, to handle with courtesy all these matters under this enlarged responsibility.

Mr. NELSON. We are very aware of that, and we appreciate the inquiries from not only Congress, but from outside, because obviously it is important that we do. We are public representatives of the United States, and it is important that we do a good job. I'd like to address the issue of lines that you touched upon, if I could just digress a minute.

The present inspection program that has gone on for many years in Canada, and very successfully, was recently expanded to Ireland last year. That worked extremely well in cutting down the wait.

We hope to expand that program. I think that is not only a good service, but also a good security measure. We hope we can get more of those programs going.

Mr. SMITH. Why did you start in Ireland? Because they are so patient?

Mr. NELSON. They were interested in it. One of the issues we have had, of course, is a sovereignty question. People question how we can put American officials on their territory. I think the Irish recognized that this was a good program. It also enhances tourism, so they were willing to try it. It went as an experiment, once they tried it, they really liked it.

EMPLOYER SANCTIONS

Mr. SMITH. The employer sanctions provisions require you to survey employers. Have you established some kind of a priority list as to what employers will be surveyed first?

Mr. NELSON. Basically, Mr. Chairman, of course, the law covers all employers. All employers hiring any new employee must go through the process of filling out the form, and asking the questions. We think that is fair. As I think I mentioned, we will want to concentrate a great deal in working with employers.

Obviously, there are caseloads and man-power restraints. We are doing as much as we can with employer associations, labor unions and others to stress the positive aspect of this. As far as the enforcement side of that question, again we told all our people to be alert for the blatant violators, the pattern and practice types. Those are the ones that we will concentate our efforts on.

Mr. SMITH. Are there certain industries, or are there certain locations where you think they are more apt to have violations?

Mr. NELSON. Historically there have been certain industries that have been more dependent on illegal labor than others. Certainly the garment industry, construction, some agriculture, but it does cut across the board. I think a misconception of many people is that illegal aliens are all in the sun belt and so forth.

Certainly they are in large cities all over the country, and in many other areas there are illegal aliens.

Mr. SMITH. You are not going to limit it then, to certain areas?

Mr. NELSON. No, sir.

Mr. SMITH. Nor concentrate necessarily.

Mr. NELSON. No. Of course, again, we think it is our mandate to be fair and balanced and to cover the whole country. Obviously we will use our resources in the best way, and as we get indications of patterns, concentrate our enforcement efforts there.

REIMBURSEMENT OF STATE INCARCERATION COSTS OF ILLEGAL ALIEN FELONS

Mr. SMITH. Now, this legislation authorizes the Federal Government to reimburse states for their costs of incarceration of illegal aliens that are convicted of a felony. What kinds of resources are we talking about and what kind of problems do you anticipate?

Mr. NELSON. That provision is not funded in either the 1987 or 1988 budget other than some assistance relating to the Mariel Cubans. We are proceeding with a supplemental for that. We do

have approximately $39 million relating to criminal offenders, in terms of working with States and local governments for more prompt deportation there. There will be more efforts in investigations in that area.

There no resources requested for direct funding of detention costs for alien felons. I am hoping we can work out a lot of that by these other enforcement approaches.

Mr. SMITH. What kind of funding would that require?

Mr. NELSON. That is one of the questions and problems. I don't know the answer to that, Mr. Chairman, but it could be very, very, expensive.

Mr. SMITH. Do you have any estimate?

Mr. NELSON. I don't at this point.

Mr. EVERSON. It would be well in excess of $100 million at a very very low floor. It would be probably up in the hundreds of millions, the way it was written, which is very broad.

DEPORTATION OF ALIENS FROM AIRPORTS

Mr. SMITH. Any other questions?

Mr. DWYER. Yes, I would like to ask a question or two, Mr. Chairman. Your statement indicates you deported 720,000 illegal immigrants. I suppose most of those are interdicted on the southern border, but what happens when you catch someone coming off an airplane, say at JFK? Do they get right back on the next airplane?

Mr. NELSON. Mr. Dwyer, I think the 720,000 were people in that category that were intercepted at airports or at land borders, during the inspection process. In addition to that, of course there are about 1.7 million people that we apprehended coming across the border illegally.

Basically, yes, if we apprehend somebody at the airport trying to come in, and they don't have the proper papers, there are procedures with the airlines that they take them back to the country from whence they came. Sometimes they will turn around immediately.

Other times they might have to stay a night or so and then go back, but that is the normal procedure.

Mr. DWYER. The airline has to foot that expense.

Mr. NELSON. Correct.

Mr. DWYER. I guess on the premise that they should have examined documents before they put the person on board.

Mr. NELSON. Basically correct, yes.

Mr. DWYER. Where do you hold them? Do you hold them right at the airport?

Mr. NELSON. Usually at a hotel, unless there are security questions. Sometimes they will be put in detention facilities, but if they are not they would be at hotels, motels usually in the airport area.

Mr. DWYER. Seven hundred twenty thousand just at airports and seaports that fit into that category?

Mr. NELSON. That's correct, and of course many of them would voluntarily return. You don't have to detain them. You deny admission, and they recognize they cannot enter the U.S. So, they make arrangements and return.

Mr. DWYER. That is very costly to the airlines. You would think that they would be very, very sure.

Mr. NELSON. We work very closely with the airlines. I think this user fee ties into that. Again, that can cover some of the detention costs in addition to the inspectional services and others. We think it is a good concept, and I think overall the airlines agree with that.

Mr. DWYER. The important thing is that it is not costing us any money.

Mr. NELSON. Correct, yes.

SAVE PROGRAM

Mr. DWYER. You mentioned the SAVE Program, and that 16 States cooperate. Have you had difficulty in getting the other States to cooperate?

Mr. NELSON. It is like any marketing job. It takes time. We have done that in a matter of the last three years. We had three States involved initially— California, Illinois and Colorado. We have gone to 16 States. We have started a number of programs with New Jersey. Generally it takes a little time, but in fact we have gotten another 13 or 14 States on in a couple of years.

We think there has been good progress, and we are talking to several more, we would expect more to get involved.

Mr. DWYER. There may be some States that have very few illegal immigrants, I would think.

Mr. NELSON. Some States say that, and again we all know it is very difficult to estimate the numbers, but I think one thing we have learned is that there is probably no State that doesn't have some illegal population. The SAVE system is so simple because it merely says that if you are an alien and you apply for benefits, you get your status checked. If you are here legally you are entitled to the benefits for which you otherwise qualify.

If you are not here legally, normally you are not qualified unless it is emergency help. It is a very simple system, and easy to do. You can say it is a very nice program, but you don't need to worry about it because you have no illegals. We say if you have none, it will be a very simple thing to check, and it will have no impact.

We think it is a solid program and it makes good sense. It is clearly a welfare reform proposal. We are, of course, aware that Congress and the Administration are interested in significant welfare reform. The SAVE Program fits right into that category.

Mr. DWYER. One hundred million dollars is no small accomplishment.

Mr. NELSON. That's right.

RELIGIOUS ORDER VISA PROCEDURES

Mr. DWYER. What is the difference between the regulations concerning the immigration, a visa issuance rather, for a priest or a nun? I asked the question because I had some nuns in my district office a couple of weeks ago, who are members of the Order of Little Seruant Sisters. It is a Polish nursing order. They basically staff a long-term nursing home in my district, and also provide a

lot of home care for people who are restricted to their homes because of long-term illness.

It takes a long time for these people to get visas, and they tell me that it is a lot easier for a priest to get a visa. Is this true?

Mr. NELSON. I don't know that, Mr. Dwyer. I know we have certain categories for people in religious orders to enter the U.S. I also know that a number get processed through those special visa categories. Like many areas, of course, you hear of the cases where there seems to be some problem.

We will certainly look at it. I won't say there is automatically any special arrangement for a priest or a nun or anything like that. If they are clearly in a religious mode, it might be a little clearer that they are coming in under that category than if they are doing some other type of work. That could raise some questions, and that might be the reason.

Mr. DWYER. The inference was that there was a difference. This is what they stated, but they rotate some of these nuns who are at the long-term nursing unit for three, four or five years, and they may go to Africa or maybe back to Poland or maybe to Canada, but they will go to some other country, and they run into problems bringing the replacements in.

The visas become very, very necessary, because they have to be able to drive a car, especially with the responsibility for home care. I would like to get some information from someone.

Mr. NELSON. Let us get in touch with you.

Mr. DWYER. I appreciate that.

Mr. NELSON. I will be happy to do it.

Mr. DWYER. Thank you, Mr. Chairman.

[The information follows:]

TREATMENT OF RELIGIOUS PERSONNEL ENTERING THE UNITED STATES

Under the Immigration and Nationality Act no distinction is made in the requirements for admission—either as visitors or for permanent residence—of various members of religious orders. During routine inspections at U.S. ports of entry, there is no policy or procedure directive which would require the inspector to treat a nun differently from a priest or, in terms of nonimmigrant admissibility to the U.S., there is not directive that would compel the inspector to treat either nuns or priests differently than lay people.

TERRORIST ACTIVITIES

Mr. ROGERS. Just a couple of questions, Mr. Chairman. On page 15 of your justifications you refer to increases in the number of people suspected of having terrorist involvement, and I wonder if you might elaborate on the trend you are seeing in that respect.

Mr. NELSON. I might answer it generally, Mr. Rogers. First, obviously, we must all have a concern about terrorism. Certainly there have been threats that terrorist activities could be brought to the United States. We have worked closely with the other intelligence agencies and other enforcement agencies here in dealing with that.

In order to gain entry into the United States terrorists have to come into the country through airports or over land borders. We are, again, a major factor in trying to either deter them, trying to identify them and so forth. Largely, I think what I am relating to is the need for better coordination and intelligence exchange with the other investigative agencies, so we get the names and informa-

tion and we are alert to these problems. We have been successful in the past in apprehending and identifying either known or expected terrorists, largely in that area.

I don't have any figures or numbers. I don't know that those are even necessarily available for proper distribution externally. Clearly this is an area, as with the areas of narcotics, where there is an increased need for our participation. The Immigration Service is needed to work along with the other agencies involved.

Mr. ROGERS. And you started what is called the Alien Border Patrol Committee to coordinate anti-terrorist efforts with Customs, FBI and the intelligence community.

Mr. NELSON. That is correct. There are a number of subcommittees and working groups with all of the different agencies involved evaluating procedures. We are strictly in the early stages of planning.

SMUGGLING ACTIVITIES

Mr. ROGERS. And quickly switching gears here and finally, let me ask you about these anti-smuggling efforts; that is, smuggling of people across the border. I wonder if you can describe the kinds of smuggling activities we are seeing today in numbers, whether it is an organized system, organized crime or what have you.

Mr. NELSON. Again, let me take a crack, and if someone else wants to elaborate it is fine. I think that smuggling operations, Mr. Rogers, encompass everything from the solo operator who just has a car, or leads somebody across on foot, to some very organized rings which are often involved in other criminal activity—narcotics, particularly.

As our enforcement picks up, sometimes we are seeing what you expect—more sophistication, more organization by some of these smuggling rings. We have all heard some of the horror stories of people being raped, murdered, robbed, and abandoned in the desert to die. This happened obviously, in some cases. It is really some of the worst examples of human behavior towards other humans you can find.

We believe our efforts have been productive. I might note we have had good cooperation with the Mexican Government in this area. I think there is recognition that smugglers are really hurting everybody. As a result, we have had some good cooperation, some investigations, some prosecutions and some interdiction activity there.

Mr. ROGERS. My numbers indicate that in 1985 you had 3,400 smuggling principals apprehended; in 1986, 3,000; and you are estimating in 1987, 3,500 smuggling principals. I assume that is smugglers.

Mr. NELSON. Right.

Mr. ROGERS. What kind of a prosecution and conviction rate have you had on those people?

Mr. NELSON. It has been very good. I will see if I can find it in my testimony here. I know that the percentages have increased significantly in terms of the cases brought, those convicted and the sentences served. According to our data, last year there were 22,000 arrests of alien smugglers, 8,000 prosecutions and 6,500 con-

victions. As indicated, the severity of sentences for smuggling convictions continued to increase in 1986. Sentences in major felony convictions averaged over 17 months.

Again, as indicated, there is a great increase in seized vehicles. This has been helpful in deterring the smugglers to some extent, and also making use of these vehicles for government use under the new laws.

Mr. ROGERS. I would suspect now, with a system where there is a legal way to get into the U.S., that you are probably going to see an organized crime effort to get a package deal.

Mr. NELSON. Yes.

Mr. ROGERS. Entry, papers, jobs and the whole bit, because it is going to take that kind of expertise to run the gamut here, and I hope you build a gamut large enough to snare the perpetrators.

Mr. NELSON. Thank you, sir. We certainly intend to. We have an excellent fraudulent and document laboratory, and I would invite any members of the Committee or staff out there. It is located near Tysons Corner. We have moved it from our own facility to get more room. I think we have enhanced our ability to investigate and detect fraudulent documents.

We have also done a lot. For example, the Justice Minister of Belgium met with the Attorney General. I met with him. We have had some good cooperation, particularly with the European countries, Canada, and Australia in sharing information.

Document analysis is increasing. We have been also active there. We won't catch them all, but we certainly are going ourselves to make every effort to apprehend the major smugglers, to investigate and prosecute individuals using this. It is similar to the drug business, where the individual using these documents is also not exempt.

But in the earlier question, to deal with those applications for legalization, if we get indication they are using fraudulent documents, we will take as strong a stand as we can.

Mr. ROGERS. As you embark on implementation of the Act and all the difficulties you are going to encounter, we wish you the luck of the Irish.

Mr. NELSON. Thank you, sir. We appreciate that. We can use it.

Mr. DWYER. May the wind be always at your back. Thank you, Mr. Nelson.

Mr. NELSON. Thank you, Mr. Chairman.

Mr. DWYER. We will have some questions that we will submit to you, and you will supply it for the record.

Mr. NELSON. Yes, sir.

Mr. DWYER. We will recess until 2:00 p.m. this afternoon at which time we will take up Federal Prisons.

[The questions for the record and the answers submitted thereto, follow:]

QUESTIONS FROM MR. SMITH

Immigration and Naturalization Service

Immigration Reform

Question:

Your agency is at the center of considerable controversy concerning implementation of the immigration reform legislation. In your personal and professional opinion, do you believe that the Administration has applied sufficient resources to adequately implement the provisions of the Immigration Reform and Control Act of 1986?

Answer:

I am confident that the amount included in the President's budget request will be sufficient to carry out the new mandates of the immigration bill. In 1987, the Administration is requesting supplemental appropriations of $137,843,000 for enhanced enforcement programs and the Special Agricultural Workers program authorized by the Immigration Reform and Control Act of 1986, $9,000,000 for the detention of Mariel Cuban criminals, $11,136,000 for increased costs of the Federal Employee's Retirement System and uncontrollable Federal Telecommunications System increases; and $5,588,000 for the Federal pay raise that took effect in January of this year. Congress did not take action on a $24,598,000 rescission proposal to offset certain costs previously funded through appropriations that will now be paid with inspections user fees. A proposal involving reprogramming of funds in several programs, as well as other adjustments in resources, has been developed and is under review. The result is an appropriation of $731,969,000 in this fiscal year. However, this will be augmented by $148,540,000 to be collected from applicants who register under the Legalization program in 1987, and by $70,389,000 to be drawn from the inspections user fee account to pay associated Immigration and Naturalization Service (INS) expenses. Thus the total amount of program funds available to the agency will be $950,898,000 in 1987--a 56 percent increase over the initial Continuing Resolution.

For 1988, our requested appropriation of $838,828,000, which will be augmented by $180,692,000 to be collected from Legalization program applicants and $74,000,000 to be drawn from the inspection user fee account, will provide a total of $1,057,273,000 in program funds available to implement immigration reform.

With respect to the major provisions of the Immigration Reform Act:

- For the Legalization program, INS has promulgated a fee structure that is adequate to reimburse the costs incurred related to the Legalization activities of the INS and the Federal Bureau of Investigation (FBI).

- While the Special Agricultural Workers program is not self-funding, we believe our planning assumptions are sound and that our budget request is adequate.

- For improved enforcement, our planning assumptions reflect what we can reasonably expect to accomplish in 1987 and 1988, in view of the time that will be required to recruit and train large numbers of personnel without making any concessions that will lessen the high quality and professionalism of our officer corps.

Question:

Concerns have been raised that the demands of immigration reform may adversely affect the delivery of ongoing naturalization services in 1987. Have you, in fact, been forced to decrease normal services because of your large reform workload, and, if so, what impact does it have? What was the backlog in naturalization processing in 1986 and what will it be for 1987?

Answer:

The Service does not intend that Reform Act activities adversely affect ongoing naturalization activities. Legalization offices will not be placed at current Service locations where naturalization applicants are processed; therefore, there will be little increased traffic to disrupt routine activities.

There is no naturalization backlog when considered on a national scale. Allowable processing time is four months from receipt to initial interview. The statistics reflect less than four months of pending workload. However, there are several instances of backlogged offices, the most dramatic being Los Angeles. Ongoing efforts have been and are being conducted to bring about currency at all locations. Our projections indicate no increase in backlogs through the end of 1987.

Question:

These organizations also express that the proposed amount of "up-front" funding to be provided by INS for staff, equipment and other expenses for application processing is much too low. Does the INS now plan to provide more than the proposed three percent of projected reimbursement?

Answer:

In response to requests from the national organizations, the Service is studying the feasibility of increasing the "up-front" funding so that they can maximize their organizational efforts. The Service has also taken under advisement the feasibility of allowing ancillary expenses and extensive counseling related to documentation retrieval to be exempted from the $75 counseling fee cap. The Service has published a revised version of the cooperative agreement in the Federal Register.

Question:

Concerns have also been raised that INS has not done enough to provide public information on the basic citizenship and English language skill requirements of the legalization program. What are you doing to publicize this aspect of the legislation and could it be improved?

Answer:

As an initial phase of the public information program pertaining to the citizenship and basic English language skills required in the legalization process, INS is developing a taped telephone message to be included in the initial phase of the new 800 telephone number system scheduled for operation on April 17, 1987.

The second phase of the public information program will involve inclusion of the requirements in a brochure which is now at the copy and design stage. We will also consider their inclusion when we develop public service announcements for television and radio in the near future.

Legalization Application Fees

Question:

How do you envision the fee to work, will there be an initial fee for temporary status to be followed later with another fee when permanent status is sought?

Answer:

The fee structure that has been established is designed to cover INS' and FBI's costs for the temporary residence phase of the legalization program. It assumes that the costs will be covered if only 2 million aliens (of the 3.9 million we originally estimated) apply. Should a surplus occur, the excess funds can be used to offset our expenses for the permanent residence phase of the program.

We will in the future establish a fee for adjustment to permanent residence that will cover the costs of that phase of the program.

Question:

Isn't that $185 fee actually made up of a $150 fee for temporary status and $35 for permanent status?

Answer:

No, it is not. The $185 fee is for processing applicants for temporary residence. The fee for permanent residence will be established once we know how many people do, in fact, come forward and we have better information on the total cost of the program.

Question:

Do you believe that the comparable fee for the initial legalization application fee is the $150 temporary fee or the $185 total fee?

Answer:

The comparable fee for a temporary residence applicant is $185. With regard to the existing fees for one to immigrate to the United States legally, the $185 represents $35 for the fee for the relative petition filed with INS and $150 for the immigrant visa issued by the State Department.

Question:

If it turns out that you have collected more from fees than you require, do you plan to refund those amounts back to the applicants?

Answer:

No, we do not. We plan to apply them toward the program costs for adjustment from temporary to permanent residence.

Funding the Legalization Program

Question:

We understand that you have some preliminary estimates of possible applicants that you have received from some of the voluntary agencies. Would you provide those estimates by area?

Answer:

Traditional national voluntary agencies have estimated that they will prepare from 1.5 to 2 million applications during the temporary residence program. Since these projections are preliminary, they have not broken down the figures by area. However, one voluntary agency, Catholic Charities of Los Angeles, had registered 230,000 potential applicants as of March 13, 1987.

Immigration User Fee

Question:

Public Law 99-500 established an Immigration User Fee account designed to alleviate the imbalance between available resources and workload demand for inspections at air and sea ports. Have you begun to collect these fees, and what are your total planned collections for 1987 and 1988?

Answer:

Immigration User Fee collections started on December 1, 1986. Based upon planning estimates INS anticipates user fee collections of $120,000,000 in 1987 and $150,000,000 in 1988.

Question:

Are you experiencing any difficulty in collecting the fees?

Answer:

Yes, we are. However, we feel that the initial difficulty is the direct result of a rapid start up and experience limited only to the month of December, 1986. December is historically a slow foreign travel and ticket sales month. Many of the passengers traveling in that month purchased their tickets in advance and did not have to pay the user fee. The first remittances for December were received in February 1987. The next remittances for January through March 1987 are due on April 30, 1987. At that time, a more comprehensive evaluation of the collection process can be made.

Question:

How many inspectors did INS have at air and sea ports prior to enactment of this legislation, and how many do you plan to have by the end of 1987 and 1988?

Answer:

The Service had 557 full-time-permanent inspectors performing air and sea inspectional duties prior to enactment of the user fee legislation. This number is being increased to 857 with the hiring of 300 reimbursable positions for 1987 provided for in the legislation. Following full deployment of the new inspectors, plans will be drafted to increase airport staffing for 1988, if operationally required.

Question:

Are you confident that collection of these fees will correct the delay problem being experienced at these ports of entry?

Answer:

The addition of the new inspectors should allow INS to facilitate the inspection of all passengers arriving by air and sea. Undue delays should be essentially eliminated at all major facilities.

Question:

Will funds be available from those fees for INS pre-inspection activities overseas?

Answer:

User Fee resources will be used to cover both the cost of our current preinspection activities at ten facilities overseas, and to provide for expansion of the concept to new sites.

Border Patrol

Question:

There are those who contend that the meat of the immigration reform legislation is employer sanctions and not increases in the Border Patrol. How would you respond to the contention that increasing the Border Patrol by 50 percent is a waste of money because they still won't be able to close off the border?

Answer:

We believe that Congress intended, as stated in the Immigration Reform and Control Act of 1986, that an essential element of the program of immigration control is "an increase in the Border Patrol and other inspection and enforcement activities of the Immigration and Naturalization Service and of other Federal agencies in order to prevent and deter the illegal entry of aliens into the United States and the violation of the terms of their entry." While employer sanctions are one element in the deterrence of illegal immigration, Congress also recognized the fact that illegal entries are being made for purposes other than seeking jobs in the United States.

These purposes include persons illegally entering the country for the sole purpose of perpetrating criminal acts. The real waste of taxpayer's money is in the form of stolen property losses, the expense of incarcerating criminal aliens, and the hospitalization costs of both criminals and their victims, all of which are unnecessary financial burdens to U.S. citizens. The Border Patrol's mission is to prevent the illegal entry of these criminals, to detect and apprehend both alien and narcotics smugglers, and to secure the Nation's borders against potential terrorist aggression.

With the 50 percent increase to the Patrol, there will be a stronger, more comprehensive and effective border enforcement program to safeguard against the wasteful destruction associated with the criminal activities operating across and along the border. In addition, the Border Patrol's enhanced presence is essential for ensuring that a large illegal alien population which exists in this country today does not recur and increase in the future simply because of a lack of commitment to controlling our Nation's borders.

Question:

Of course there are others who are staunch believers in the 50 percent growth in the Border Patrol and they claim that the Administration is not complying with increases of 1,800 agents called for in the legislation. What will be the net increase in the number of Border Patrol funded positions in 1987 and then 1988?

Answer:

The Reform Act mandated a 50 percent increase in the Border Patrol. Our planning for this substantial growth includes 1,608 additional Border Patrol Agents and 240 support personnel which will accomplish the required increase. The number of full-time equivalent workyears funded for these Border Patrol positions is 135 workyears in 1987 and 630 workyears in 1988. By the end of 1987, 620 positions will be filled. By the end of 1988, 1,068 positions are expected to be filled.

Question:

We have received reports that the anticipated number of graduates from your training facility at Glynco for both 1987 and 1988, will be approximately 850, and that when normal attrition from the Border Patrol is considered, you will in fact have added fewer than 600 personnel. Are these figures accurate, and how can you justify such a number when the legislation calls for 1,800 new agents?

Answer:

The legislation authorizes an additional 1,848 Border Patrol positions. Of the total, 1,608 are Border Patrol Agent positions and 240 are support positions. The Patrol estimates that by the end of 1988 there will be an additional 828 Border Patrol Agents on duty, either in the field or at the academy. This on-duty figure also factors out the loss of about 276 agents from either the academy or the non-trainee officer workforce. The hiring of new agents will be accomplished on a schedule which considers both the financial aspects and operational requirements of the Border Patrol program, including specialized equipment and office space and facilities, as well as increased staffing levels. By the end of 1988 INS expects to achieve the hiring levels supported by this budget request.

Question:

When does the INS plan to have the full authorized level of 5,541 for the Border Patrol onboard?

Answer:

The Border Patrol onboard strength has historically been less than the total authorized staffing level. The on-duty strength will usually be less than the authorized level primarily because of the loss of technical support personnel who are difficult to recruit and hire in certain areas of the country and the associated lapse time in filling those positions. The Border Patrol anticipates that by the end of 1988, nearly 85 percent of the authorized force will be on board.

Question:

If you are committed to the growth mandated by the legislation, why are you planning to run only nine classes of 48 students in 1987 and 14 classes in 1988?

Answer:

The Service is committed to strengthening border enforcement through growth not only in agent staffing but also through the increased use of technology, such as the use of night vision detection devices, sensor equipment, and with additional aircraft support to increase the overall effectiveness of border enforcement activities. The number of classes which will be conducted in 1987 and 1988 will be based on a continuous assessment of agent attrition both at the academy and in the field, and limitations on the availability of training space at the Federal Law Enforcement Center in Glynco, GA.

Questions:

Isn't it true that you ran 24 classes through Glynco in 1985, which could provide approximately 865 new agents a year?

Answer:

The Border Patrol Academy did conduct 24 classes in 1985 which resulted in an additional 690 agents on board at the end of the fiscal year. At that time, however, INS was not training large numbers of other officers, i.e. detention, investigations, inspections, etc., through Glynco simultaneously with large numbers of Border Patrol Agents, as is currently the case with the Immigration Reform and Control Act of 1986.

Question:

Considering that the number of authorized positions for INS enforcement increases by over 36 percent from 1980 to 1988, how can you justify an increase in your training budget of less than half of that amount for the same period.

Answer:

Training resources are also provided within the "base" budgets of all programs receiving new personnel. These funds are added and remain in each program's budget to meet entry level and future training needs.

Employer Sanctions

Question:

Reform legislation makes the hiring of undocumented workers illegal. What plans has INS developed to insure that employers comply with the sanctions requirement?

Answer:

The Service presently is developing a national strategy for implementing the employer-verification and authorized-worker hiring provisions of the new law. Essentially it is composed of three elements, noted below:

- Education and public awareness. A critical element in the successful implementation of "sanctions" is a thorough and ongoing program which ensures that employers, recruiters and referrers become aware of their responsibilities under the law. This program places an affirmative responsibility upon INS. In order to make the most effective use of our resources in carrying out this responsibility, INS will emphasize educational contacts with (1) large forums encompassing many groups, such as the Chamber of Commerce, manufacturing associations, etc.; (2) major employers with large numbers of employees such as the Marriott Corporation; and (3) employers with whom the Service has had contact in the past due to their hiring of undocumented workers, in order to assist them in correcting past deficiencies, with no stigma attached.

- Compliance site visits. Sites will be randomly selected, using statistical sampling techniques, from the entire population of employers. This technique, by its very nature, ensures maximum voluntary compliance on the part of employers, similar to the Internal Revenue Service (IRS) audits or Occupational Safety and Health Administration (OSHA) workplace site visits. This technique has been ruled upon by the Supreme Court (in the context of OSHA) as an acceptable method of ensuring statutory compliance with limited resources.

- Targeted suspected violators. Suspected violators will be investigated on the basis of articulable facts, investigative leads, contacts with reliable informants, information received from other agencies (such as the Department of Labor), and other substantive information.

Question:

Is INS focusing on employers who in the past have hired large numbers of undocumented aliens?

Answer:

As noted in our response to the preceding question, INS will focus on this category of employer primarily for our eductional efforts, to attempt to work cooperatively and stress the importance of voluntary compliance by the employer.

Our interpretation of the pattern-and-practice penalities indicates that past employers of undocumented aliens are not to be treated discriminately in the enforcement of the sanctions laws. It is our intention to avoid focusing solely on such employers simply by virtue of practices which were not in the past violations of law.

Question:

How many employers does INS expect to survey in 1988?

Answer:

That question cannot be answered at this time. It is highly dependent upon two factors: (1) the resources available to our enforcement programs with which to monitor compliance; and (2) the further development of our national strategy of education, compliance site audits by sampling techniques, and investigations of specific employers on the basis of articulable facts indicating violations.

Question:

How long will it take before each large employer is surveyed?

Answer:

There are some constraints that may inhibit surveys or compliance checks of every large worksite in the United States in 1987. This may be compensated for by using a random sampling approach in the same manner as it has been used by other federal agencies with similar responsibilities, such as OSHA, the Department of Labor, the Bureau of Motor Carriers, the Pharmaceutical Diversion and Compliance Division of the Drug Enforcement Administration, etc. This is a viable alternative to attempting to visit every site, which encourages compliance and also makes efficient use of resources.

Question:

What types of employers will be surveyed?

Answer:

In a site compliance strategy which incorporates an element of validly constructed statistical sampling of the population of employers, almost every type and size of employer will receive some level of compliance audit and enforcement checks, although each particular employer would not necessarily be surveyed.

Question:

How many personnel will you have onboard for enforcing sanctions in 1987, and how many in 1988?

Answer:

The enforcement component which will have primary sanctions enforcement responsibilities within INS is the Investigations Division. We do not anticipate establishing separate entities within that division with sanctions responsibilities. Our officers will continue to exercise responsibility over other critical areas, such as the alien criminal and narcotics investigations, and anti-fraud measures also encompassed within the Immigration Reform and Anti-Drug Abuse Acts.

Because the Investigations Division is hiring personnel to fill positions later in the year, by the end of 1987 there will be approximately 200 additional persons on duty, including all managers, supervisors, special agents and support personnel.

By the end of 1988 we expect to have the full complement of 500 positions on board to enforce employer sanctions.

Question:

Won't these investigators also be responsible for investigating fraud and securing warrants to enter open agricultural fields?

Answer:

Yes, they will. However, given present on-duty levels of approximately 900 positions of all types, this is roughly a doubling in size for the Investigations Division.

Question:

Do you believe the growth in investigators that you request is sufficient to handle the workload?

Answer:

We believe that the increase in the Investigations Division is substantial. With management and productivity improvements, our agents will be able to assume their new responsibilities in a professional and efficient manner. It should also be noted that the Border Patrol will also have responsibilities for enforcement of the sanctions and open-fields warrants provisions, and thus share the workload. In view of this, we feel that the growth is sufficient at this time.

Detention and Deportation

Question:

It has been reported that INS has not been able to detain aliens who are subject to deportation because of lack of facilities. The budget shows that almost 50 percent of the 1988 detention days will be in non-INS facilities. Is this true? If so, what actions are planned to reduce the problem?

Answer:

Yes, it is true to some extent. INS has requested fifteen million dollars in the 1987 supplemental budget request for detention facilities to help alleviate the problem. Another major effort which will also reduce the problem of detention in non-INS facilities is being pursued by INS, the Executive Office for Immigration Review (EOIR) and State and local officials. This program will identify incarcerated criminal aliens for the purpose of conducting hearings

in identified State and/or local facilities in order to remove these individuals from the United States expeditiously upon completion of imposed sentences. INS and EOIR are also formulating a program to conduct expeditious hearings for other aliens released to INS custody. This will help free up existing detention space.

Question:

How many additional aliens would have been detained in 1986 if sufficient facilities had been available?

Answer:

Additional aliens, in direct proportion to the number of additional available funded beds, would have been detained; i.e., if 20% more funded beds had been available, 20% more aliens would have been detained. Due to lack of beds and funds to pay for such space, significant numbers of aliens (other than Mexican) were released on their own recognizance.

Questions:

What is the range of costs INS pays for non-INS facilities?

Answer:

In 1986, the average daily detention cost for non-INS facilities ranged from $20.33 to $41.95 per day.

Question:

What actions (such as deporting convicted illegal aliens) can INS take to reduce the costs of this provision?

Answer:

In a joint effort with State and local officials and EOIR, INS will formulate a program to identify incarcerated criminal aliens, and arrange to conduct hearings in identified State and/or local facilities remove criminal aliens from the United States expeditiously upon completion of imposed sentences. Final plans are under way for the implementation of this program in California and New York. On February 26, 1987, INS and EOIR officials met with Florida officials to discuss implementation of this program. INS and EOIR are still negotiating with the State of Florida and hope to reach an agreement in the future. In the meantime, a program is being formulated by INS and EOIR to conduct expeditious hearings after these aliens are released to INS officials.

Question:

Does INS know if State courts will agree to suspend incarceration if the illegal alien agrees to be deported?

Answer:

INS does not know at this time whether any State courts will agree to suspend incarceration if an alien agrees to be deported.

Question:

If funds are made available, will INS reimburse States for incarceration of illegal aliens convicted of a felony who may not be considered deportable?

Answer:

Illegal aliens convicted of a felony are normally considered deportable. However, if funds were made available, for this purpose reimbursement to the states would be handled by the Bureau of Justice Assistance.

ADP Modernization

Question:

Does the 1988 budget request reflect the ADP resources INS expects to acquire to support the modernization program, or is a supplemental request anticipated when the review is completed?

Answer:

The Immigration Reform and Control Act funding has provided a sound foundation on which to build a modernization effort through 1988. The Federal Computer Performance Evaluation and Simulation Center (FEDSIM) is conducting a long-range analysis to determine INS' future needs.

Question:

The 1986 and 1987 budget requests contained $7.5 million and $7.8 million respectively for the purchase and lease of ADP equipment. Since INS was prohibited from additional acquisitions during this same timeframe, how were these funds used, and what amounts have been carried over?

Answer:

INS' obligations in 1986 and 1987 support the lease and maintenance of the original inventory of equipment acquired under the Acquisition II contract. INS is also continuing to lease equipment that was installed prior to the acquisition of equipment under this contract. INS was phasing out the lease of that equipment when it was stopped from acquiring additional equipment.

Motor Vehicles

Question:

In your 1987 program supplemental you requested an additional 1,300 motor vehicles above the number required for replacements. In 1988 you request an increase of nonreplacement vehicles of 1,180 for a total over two years of 2,480. Why do you require so many new vehicles?

Answer:

The Service requires a large number of new motor vehicles in 1987 in order to implement the provisions of the Immigration Reform and Control Act of 1986. For example, the Border Patrol expansion will result in the addition of 635 new police-type sedans and four-wheel drive special purpose vehicles. The employer sanctions program and new efforts directed against criminal aliens require increased Investigations personnel and the vehicles to support their operations. The request for 1987 includes vehicles essential to implementation of the Reform Act.

At this time the Service does not anticipate purchasing additional new vehicles in 1988 to support Reform Act implementation activities.

Question:

What is the total net increase in the number of funded positions for INS in 1987 and 1988?

Answer:

The net increase in the number of funded positions in 1987 is 1,837. These are related to the implementation of the Immigration Reform and Control Act of 1986. In 1988, the net increase will be 3,681, if the INS budget request is approved.

Question:

What funds are requested in 1988 for motor vehicles?

Answer:

The 1988 budget request includes $13,342,000 for the purchase of all types of vehicles. Only replacements will be purchased according to current plans.

Naturalization

Question:

It is my understanding that in many regions, permanent residents who have passed their naturalization exams may face waits of five months to a

year in order to be sworn in as U.S. citizens. Could you please give us an update on the progress of Service negotiations with the courts on this matter?

Answer:

The Districts and suboffices are maintaining liaison with local court officials to facilitate the expeditious naturalization of qualified permanent residents. In several instances, the results have been remarkable. The Federal District Court in Newark has increased the number of naturalization hearings from two per month to three per week. It has also scheduled a mass hearing on April 16, 1987, for 2,000. Special hearings were held in New York at the Statue of Liberty and several other cities on July 3, 1986. New York also arranged for another special hearing at the Statue of Liberty on October 3, 1986 and a large hearing in Battery Park on September 3, 1987. The most ambitious and successful schedule of mass hearings has been arranged with the U.S. District Court of Central California in Los Angeles. During 1986, the following schedule was completed in Los Angeles:

Date	Persons Naturalized
March 28	1,534
April 4	2,896
June 3-4-5-6	9,139
July 8-9-10-11	8,685
August 26-27-28-29	9,630
September 17	4,217
December 10-11-12	15,000

The following hearings have been scheduled in Los Angeles for 1987:

Date	Persons Scheduled For Naturalization
April 17	4,500
April 29	7,600
July 9-10, 29-30-31	7,600 each day
September 21-22-23	7,600 each day
November 17	3,600 each day
December 7-8-9-10, 14-15-16-17-18	3,600 each day

Question:

Please provide for the record a district-by-district statistical analysis showing current waiting times for a court hearing in pending naturalization cases.

Answer:

Question:

Has the Immigration and Naturalization Service obtained a formal legal opinion regarding the legality of collecting fees from applicants in order to recoup the costs of the Legalization Program?

Answer:

A legal opinion has not been obtained. The Immigration Reform and Control Act of 1986 is very clear regarding the collection and use of fees. In Section 201(c)7(A) the Act states "The Attorney General shall provide for a schedule of fees to be charged for the filing of applications for adjustment. . . ." Section 201(c)7(B) requires the Attorney General to deposit fees collected ". . . in a separate account and amounts in such account shall be available, without fiscal year limitation, to cover administrative and other expenses incurred in connection with the review of applications filed. . . ."

In view of the explicit nature of these sections of the Reform Act, we do not feel that a formal legal opinion regarding the collection and use of fees is necessary.

QUESTIONS FROM MR. EARLY

Immigration and Naturalization Service

Question:

How does the INS view the March 9, 1987, Supreme Court decision regarding political asylum and what efforts will the INS make to protect those that the court finds will be politically persecuted or killed if deported to certain Central American countries?

Answer:

We have been awaiting the opinion of the Supreme Court in this case, which we hoped would provide a clear decision as to what the standard of proof was in asylum determinations. Although the Court did not provide as much clarification as we would have preferred, the following is clear from their holding:

- that Congress intended a different standard in establishing eligibility for relief under the asylum provision (section 208) than under the witholding of deportation provision (section 243 (h));
- that the standard for asylum is less than the clear probability or "more likely than not" standard required in withholding cases; and
- that in conjunction with the lesser standard, the granting of asylum remains a discretionary decision by the Attorney General and his delegatees.

Assuring that no one with a well-founded fear of persecution is returned to a country where he or she would face persecution is a prime consideration for Service officers. The Service has devoted significant resources and provided specialized training to the immigration examiners who interview applicants and prepare cases for the decision of Service district directors. Likewise our trial attorneys who are present when immigration judges consider asylum claims are also well versed in refugee and asylum law.

This new decision of the Supreme Court will be transmitted to all of our field offices. The practical effect should be the approval of a somewhat higher proportion of asylum claims. (The approval rate for asylum claims during the past four years has been 20-30 percent.) The Court did not set forward a test of how the well-founded fear test should be applied. Instead, it states that the ambiguity in the term "well-founded fear" can only be given concrete meaning through a process of case-by-case adjudication. In keeping with the opinion of the Supreme Court, precedent decisions of the Board of Immigration Appeals can be expected to provide further guidance in applying the lesser standard of proof in asylum determinations. The Board and our districts have already been applying a distinct and lesser standard in cases arising within the jurisdiction of the

Second, Fifth, Sixth, Seventh and Ninth Circuit Courts of Appeals. This is due to prior rulings of those circuits. A recent General Accounting Office study of asylum adjudications found that 24 percent of the asylum applications which they reviewed did not fall under any of the five categories within the refugee definition and instead feared harm based upon conditions of internal civil or military strife. The change in the standard of proof would not affect any of these claims.

Question:

There is considerable concern that resource needs of the legalization program will drain resources from ongoing services such as naturalization. What steps is the INS taking to ensure the timely processing of naturalization applications since all position increases requested for 1988 are earmaked for the Special Agricultional Workers program?

Answer:

Reform Act activities will not adversely affect ongoing naturalization activities. Legalization offices will not be placed at current Service locations where naturalization applicants are processed; therefore, there will be little increased traffic to disrupt routine activities.

There is no naturalization backlog when considered on a national scale. Allowable processing time is four months from receipt to initial interview. The statistics reflect less than four months of pending workload. There are, however, several instances of backlogged offices. Ongoing efforts have been and are being conducted to bring about currency at all locations. Our projections indicate no increase in backlogs through the end of 1987. Careful monitoring of workloads and available resources should allow INS to continue controlling backlogs in 1988.

Question:

What steps has the INS taken to inform legalization applicants of the Basic Citizenship Skills requirement for adjustment to permanent resident status? What administrative procedures is INS planning to implement to inform applicants for temporary residence of the requirements to adjust their status to permanent residence?

Answer:

INS is currently preparing a public information campaign regarding the legalization provisions of the Reform Act. This campaign will include information on language and civic knowledge requirements. We will also rely on the qualified designated entities to inform potential applicants of the requirements of this legislation.

Question:

How will the INS determine whether a legalization applicant has a minimal understanding of ordinary English and history and government of the U.S. in order to adjust their status to permanent residence?

Answer:

Although our planning efforts are aimed mainly toward setting up the temporary residence program, our early thinking on this issue is that we will use the standards used for naturalization proceedings.

Question:

Will the INS provide legalization applicants with lists of those English and citizenship courses that are recognized by the Attorney General?

Answer:

We are in the early stages of our planning regarding the language and citizenship knowledge requirements for legalization. Lists of currently certified programs may be provided. In addition, participating qualified designated entities using our texts may also be included.

QUESTIONS FROM MR. DWYER

Immigration and Naturalization Service

Question:

Attorney General Meese told this committee in 1985 that the Administration was working on an exchange with the Cuban government to return these criminal elements that were among the Mariel population. In fact, you said that if the exchange did not happen for some reason, "we will take the necessary measures such as you suggest so that the burden doesn't remain with the states."

Are there any efforts being made to resume this exchange program with the Cuban government?

Answer:

The original "Mariel Agreement" negotiated by representatives of the Department of Justice and the Department of State was unilaterally terminated by Fidel Castro upon the airing of Radio Marti in May of 1985. Since that time we have continued to communicate with the Government of Cuba with regard to a reinstatement of this agreement. In July of 1986 our delegation met with representatives of the Cuban Government in Mexico City in an attempt to seek reinstatement, but found their representatives to be unreceptive to our proposals. We have remained willing to meet with the Cuban Government on this issue, and have communicated that to them on several occasions. When the Cuban Government is willing to discuss this matter we are ready to meet with them.

Question:

Once again, you have requested no funds to reimburse States housing Mariel prisoners. Are you confident that this is strictly a State and local issue with no national repercussions?

Answer:

The Department of Justice believes that anyone, including Mariel Cubans, who is convicted of a State crime and sentenced to prison, is the responsibility of the State where the crime was committed. In addition to Mariel Cubans, there are other groups of immigrants in this country who commit crimes at the State and local level for which the Federal Government does not assume fiscal responsibility. It is a State and county responsibility to define violations of State and county law and to prosecute individuals who are convicted. While the Federal Government is responsible for enforcing immigration laws, it is not responsible for incarcerating those individuals who violate State or county laws.

Question:

How many Mariels are currently in State and local facilities serving sentences for crimes?

Answer:

The Immigration and Naturalization Service has detainers placed on 3,038 Mariel Cubans currently serving criminal sentences in State and local facilities.

Question:

How many Mariel Cubans are being held by the Federal Government (detained by INS and also for crimes)?

Answer:

The Federal Government is presently holding 3,361 Mariel Cubans who have served their sentences. In addition, there are 482 Mariel Cubans serving criminal sentences in Federal facilities.

Question:

How many Mariel prisioners were actually moved out of State and local prison facilities in 1986?

Answer:

Approximately 650 Mariel Cubans were moved out of State and local prison facilities into Federal custody in 1986.

Question:

The Justice Department has requested a $9 million supplemental to fund contract detention of certain Mariel Cuban criminal entrants who are returned to the Attorney General's custody after completing sentences in State and local prisons.

This would seem to indicate that the Mariel problem is indeed a Federal problem. Would you provide for the record the number of Mariels that these funds will be used to house, and from what States or localities they are being released?

Answer:

Based on our calculations, these funds will be sufficient to house approximately 475 Mariel Cubans being released from State and local facilities in Alabama, Alaska, Arizona, California, Colorado, Connecticut, District of Columbia, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, Nebraska, Nevada, New Jersey, New Mexico, New York, North Carolina, Ohio, Oklahoma, Oregon, Pennsylvania, Rhode Island, South Carolina, Tennessee, Texas, Utah, Virginia, Washington, West Virginia, Wisconsin, and Wyoming.

QUESTIONS FROM MR. ROGERS

Immigration and Naturalization Service

Mariel Cubans

Question:

What is the total 1988 level of resources requested for the detention and care of Mariel Cuban criminals? Please provide a complete breakdown of how these funds are allocated.

Answer:

If the 1987 supplemental appropriations request is approved, our base budget by 1988 will provide $13 million for the detention of Mariel Cubans. The allocation of resources will be made to fund the cost of non-Service detention of Mariel Cuban criminals who must be detained after completing sentences for State and local law violations, in anticipation of eventual exclusion and removal of these aliens from the United States. Detainers have been placed on 3,038 Mariel Cuban criminals serving State and local prision sentences, while the Cubans in Service detention now number over 3,300.

Question:

Under the Continuing Resolution for 1987, INS was required to charge fees for inspection services. These fees were added on to sea and airline tickets for international travel, excluding Canada and Mexico. What is the total level of revenues you expect to derive in 1987 from the current provision of law? What additional revenues would be derived if the exclusions for Canada and Mexico were eliminated?

Answer:

The Immigration User Fee was implemented on December 1, 1986. Based upon planning estimates, revenues of $120,000,000 should be collected for the 1987 period of December 1986 through September 1987. Of this amount $70,389,000 is expected to be obligated by INS to cover its expenses. If all exclusions were eliminated it is estimated that collections would be $134,000,000 higher for 1987 and about $161,000,000 higher for 1988.

Question:

The new immigration act calls for the nationwide expansion of the SAVE (Systematic Alien Verification for Entitlements) program. How many States are currently participating in this program? What is the timetable for the nationwide expansion? What savings have resulted from the current program and what savings do you anticipate under the nationwide expansion?

Answer:

Currently, California, Colorado, Florida, Guam, Idaho, Illinois, Indiana, Montana, Puerto Rico, and the Virgin Islands are participating in the SAVE Program under signed, formal agreements. New Jersey, New Mexico, and Texas are expected to sign formal agreements in the near future.

Under the Immigration Reform and Control Act of 1986, SAVE is required to be operational and available nationwide by October 1, 1987. The INS expects that benchmark testing of the SAVE system being developed at this time will commence in May 1987. Full participation by the five entitlement agencies (Departments of Health and Human Services, Housing and Urban Development, Labor, Agriculture and Education) affected by the new legislation is not required until October 1, 1988.

The current SAVE Program has been operational since 1983. Through this cooperative effort, Federal and State benefit programs have avoided paying ineligible aliens approximately $332,000,000 in benefits over the last four years. When fully implemented by all Federally subsidized benefit programs, the INS estimates a potential savings of $2.8 billion. This figure should diminish gradually due to SAVE's strong deterrent effect.

QUESTIONS FROM MR. KOLBE

Immigration and Naturalization Service

Question:

Congress mandated a 50-percent increase in 1,848 additional positions to the border patrol by the end of 1988, yet the Administration is only requesting funding for about 800 additional positions, a 22 percent increase. Why?

(If response is that the INS cannot train more agents and get them on line in this amount of time, cite that they were able to run twice the number of border patrol classes in 1985. In fact, during this one year period (1985), the INS trained and put on-line over 1,000 agents and are now claiming that they can only train about 800 in a two-year period. Please explain this disparity.)

Answer:

The legislation authorizes an additional 1,848 Border Patrol positions. Of the total, 1,608 are Border Patrol Agent positions and 240 are support positions. The Patrol estimates that by the end of 1988 there will be an additional 828 Border Patrol Agents on duty, either in the field or at the academy. This on-duty figure also factors out the loss of about 276 agents from either the academy or the non-trainee officer workforce. The hiring of new agents will be accomplished on a schedule which considers both the financial aspects and operational requirements of the Border Patrol program, including specialized equipment and office space and facilities, as well as increased staffing levels.

It is also important to consider the major Reform Act generated expansions in the Investigations and Detention and Deportation programs which place considerable demands on INS's ability to recruit personnel and provide training at Glynco.

QUESTIONS FROM MR. ROYBAL

Immigration and Naturalization Service

Question:

Regarding the implementation of employer sanctions, how much does INS plan to expend for outreach and public education? How much does it plan to expend for those functions with regard to the legalization program, and with regard to the remedies available for discrimination that may result from the Act?

Answer:

Assuming that funds requested are appropriated as requested, planned resources for public education of all phases of the new employer verification and compliance provisions (Section 274A of the Immigration and Nationality Act) are slightly in excess of $7 million.

Because INS has planned the educational and public awareness effort as an integrated process, encompassing all phases of the law there is no separate funding of the anti-discrimination provision. We do not see discrimination as an inevitable outcome of the sanctions provisions. Public education of employers will include efforts to ensure that, to the maximum extent possible, employers are advised that their affirmative responsibilities include not only compliance with the paperwork requirements, but also the commitment to the principles of equal opportunity to all lawfully entitled job applicants. We perceive our educational responsibilities to extend beyond the specifically appropriated monies for advertising campaigns and similar efforts. It is our intent to include continuing educational efforts in our compliance checks, to ensure a rational balance between impartial enforcement of sanctions against repeated offenders, and the willingness to work with employers who do not comply out of ignorance or misunderstanding of the law's standards.

Question:

Does the Service plan to coordinate implementation of employer sanctions enforcement with the entities responsible for remedying immigration-related employment discrimination, that is, the Department of Justice, the Office of Special Counsel, and the EEOC? If so, how is that to be done?

Answer:

There is no doubt as to the desirability and necessity of Service coordination with the entities responsible for anti-discrimination enforcement. Our efforts to coordinate have already begun through liaison with the Department of Justice and the EEOC on such matters as the development of regulations governing all phases of the employer law. We intend to incorporate anti-discrimination educational efforts in our broader public awareness campaign.

Question:

Is the Service aware of the interim policies those entities have established, and whether a remedial scheme of some type will be in place before employer sanctions are enforced on June 1? What is the Service's current understanding of how potentially actionable allegations of discrimination are being handled?

Answer:

During our regulatory and policy development phase in the last several weeks, the Service has had the opportunity to engage in discourse with officials from the EEOC, the Department of Justice and with newly nominated Chief Administrative Law Judge William Tyson, whose office will be responsible for conducting hearings under the employer laws, including sanctions penalties and anti-discrimination. These discussions have been extremely useful in ensuring that all parties involved in various phases of the law's provisions are acting in concert with one another. The Service intends to pursue a deliberative process in the implementation of the employer verification laws. We do not intend to abandon public education in favor of compliance/sanctions efforts on June 1. We anticipate that the initial hearings before the administrative law judges will not be sanctions-related, insofar as our efforts with employers will not concentrate on penalties, but rather on cooperative amendment of paperwork or hiring deficiencies. With respect to allegations of discrimination, those which fall within the jurisdiction of the EEOC should be filed with the EEOC. Charges of discrimination following within the jurisdiction of the Special Counsel may be sent to the Civil Rights Division, which will turn them over to the Special Counsel when the latter official is in place.

Question:

Is INS aware of whether other entities now have procedures in place to monitor discrimination related to employer sanctions?

Answer:

We are aware of the activities of the EEOC, the Office of Special Counsel, and the Office of the Chief Administrative Law Judge. All are pursuing strategies for the processing and handling of job discrimination-related complaints within their respective areas of jurisdiction.

Question:

What is INS's role in monitoring discrimination?

Answer:

We believe that monitoring activities do not appropriately rest with INS in the sense of legal or investigative procedures, either by statute

or jurisdiction. However, we intend to pursue public awareness of the anti-discrimination provisions aggressively through our education campaign and to establish formal procedures for the routing of complaints to the appropriate entities (Office of Special Counsel, Civil Rights Division and the EEOC). We hope to obtain the cooperation of those entities in establishing training for our personnel who will be visiting employment sites, so that they will be able to detect possible hiring discrimination problems for referral to those entities, should the occasion arise.

Question:

It is my understanding that complaint forms will be made available at INS offices. How does INS plan to assist in broadly disseminating these forms and providing personal assistance to complainants?

Answer:

The Service has not planned for the development of any complaint forms which relate to the anti-discrimination provisions of the Reform Act. The Office of Special Counsel is charged with both investigation and prosecution of such complaints. We expect that any forms developed for the purpose of anti-discrimination complaints must be developed by that office. The law requires INS officers to (1) receive and forward such complaints, and/or (2) file such complaints upon discovery of a discriminatory action. We expect to fullfill that statutory obligation completely. In the interim, complaints forwarded by INS will be in accord with the language of the Act, which prescribes that they shall be under oath. For that purpose, standard INS affidavit forms may be utilized.

Question:

Are cooperative efforts with other entities being made at the regional and district levels with regard to outreach and public education?

Answer:

Yes, they are. The service has developed a new Office of Employer and Labor Relations which is primiarily responsible for all educational awareness activities. At the Central Office, that organization is headed by an Assistant Commissioner. At each of the four regions, there are dedicated resources reporting to the Deputy District Directors. These parties are responsible for dissemination of information over all aspects of public education, including the anti-discrimination provisions.

Question:

In view of the fact that the legalization program must begin in May of this year, and especially because it is a one-time 12-month program, isn't it critical that there be sufficient budgetary resources to cover the full costs of the program, and especially the start-up costs this year?

Contrary to the Administration's view, many in Congress, including the Chairman of the House Judiciary Committee, hold that Congress never intended the fees to cover the entire cost of the legalization program. Does the Service believe that Congress intended that any intended beneficiary of the legalization program should be denied legal status simply because the fee is not affordable?

Apart from the issue of Congressional intent, however, isn't setting a fee as high as $185 going to act as a disincentive for families with limited financial means, for example, those who could meet the public charge exclusion that applies to application for permanent residency but who face financial hardship in their day-to-day lives now? Isn't limiting eligibility on the basis of ability to pay contrary to the whole intent of establishing a generous legalization program?

Answer:

We believe we have requested a sufficient apportionment to start up and cover the costs for the remainder of 1987.

We do not believe that the fee charged will prevent any legitimate applicant from coming forward. Rather, we see it as a reasonable charge for the service provided and the benefits gained. Additionally, with a $50 charge for minors living at home and a $420 cap for a family, we do not forsee qualified applicants as being unable to pay these fees, which are necessary to support the costs of the program. We do not see it as fair for present citizens and taxpayers to have to pay for these people's benefits.

Question:

How much does INS plan to expend for public information in 1987 and 1988?

Answer:

The Service plans to spend $8,000,000 for public information related primarily to the Legalization Program in 1987, with a small amount devoted to publicizing the Agricultural Program ($800,000).

In 1988, the Service plans to spend $4,000,000 for public information, $3,320,000 related to the Legalization Program and $680,000 related to the Agricultural Program.

Question:

How much is requested for 1987 and 1988 for reimbursement of the costs of qualified designated entities? How were those figures arrived at?

What does the Service now plan for a reimbursement rate and can qualified designated entities be assured that they will receive reimbursement for assistance to all those seeking it?

Answer:

The Service has budgeted approximately $26 million in 1987, 1988 and 1989 to pay the Qualified Designated Entities (QDEs) for submission of approximately 1.6 million temporary residence applications from national organizations and their affiliates and independent direct service providers. The national organizations will be paid $16.00 for each fee-supported application submitted by their affiliates; the direct service providers will be paid $15.00 for each fee-supported application the entities submit. Based on a time study, the Service calculated it would take an INS contact representative $15 to perform the information and assistance tasks required of the QDEs under the cooperative agreement. Thus, the agency determined to pay $15.00 for each fee-supported application submitted by QDEs. The extra (or "16th") dollar paid to national organizations is to cover tasks involving training, technical assistance, dissemination of information, monitoring, and coordination for their field affiliates. The legalization program will be an overall success if the QDEs submit more than 1.6 million applications.

Question:

The authorization for increased funding for INS mandated that the Attorney General "provide for improved immigration and naturalization services and for enhanced community outreach and in-service training of personnel of the Service."

Will the requested amount for ongoing activities of the Service fund these expanded efforts called for in the immigration bill?

Exactly how much of the request is for service-related activities and enhancement of the Service's ongoing responsibilities to provide immigration services to the public?

Answer:

The 1988 budget request includes adequate funding for the expanded efforts called for in the Reform Act. The resource level, combined with continuing efforts to improve the management of public service operations, is sufficient to meet the requirements of the law and Congressional intent.

The INS request for 1988 contains $48,365,000 for service-related activities and the enhancement of the Service's public service responsibilities.

TUESDAY, MARCH 17, 1987.

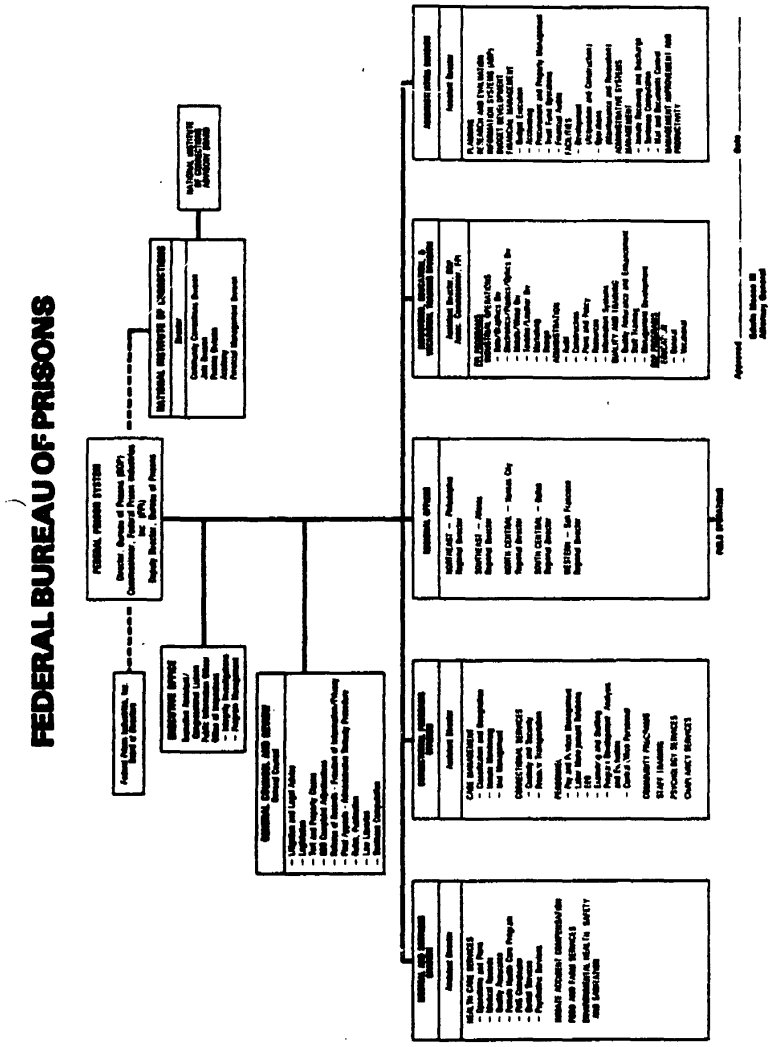
BUDGET JUSTIFICATION

Mr. EARLY [presiding]. The Committee will come to order. Continuing with our review of the Department of Justice, we will now hear testimony of the Federal Prison System. The Prison System requests $981,694,000 in fiscal year 1988, an increase of 12 percent over fiscal year 1987.



We will insert in the record at this point the Federal Prison System fiscal year 1988 budget justifications.

[The justifications follows:]

Federal Prison System

Salaries and expenses

Summary Statement

Fiscal Year 1988

The Federal Prison System is requesting for "Salaries and expenses" for 1988, a total of $760,851,000, 12,043 permanent positions and 11,328 1/ workyears. This request represents an increase of 786 positions, 413 workyears and $112,511,000 from the 1987 appropriation anticipated.

The mission of the Federal Prison System is to carry out the judgements of the courts for sentenced Federal offenders, provide detention services for persons serving short sentences, provide for humane incarceration of offenders and encourage offenders to participate in programs and activities that can impact positively on their capability for achieving a crime-free life. The Federal Prison System philosophy recognizes that incapacitation, retribution, deterrence and rehabilitation are all valid aims of corrections.

This appropriation will provide for the custody and care of an average of 44,878 offenders and for the maintenance and operation of 50 penal institutions, 5 regional offices, 3 staff training centers, a central office, and contracts with over 400 state and local correctional institutions, 30 juvenile facilities and 350 community treatment centers. An average of 5,820 Federal prisoners will be in contract state, local jails and community residential facilities in 1988. (On page 5 is a geographical display of the Federal Prison System by region.)

The appropriation "Salaries and expenses" contains four budget activities which incorporate ten programs. The budget activities are: Inmate Care, Custody and Programs, Institution Administration and Maintenance, Contract Confinement and Program Direction.

Inmate Care, Custody and Programs

This activity includes the costs of all food; medical care (including salaries of Health Resources and Services Administration commissioned officers); clothing; welfare services; security; release clothing, transportation and gratuities; housing unit furnishings; academic, social and occupational educational courses; leisure time programs; and religious and psychology services, and staff salaries. To carry out its mission in this activity, the Federal Prison System conducts the following programs:

The Inmate Care program includes the responsibilities for providing Federal inmates with a nutritionally adequate, palatable diet; conducting farm operations at two institutions for the production of beef and milk; providing adequate, accessible and quality health care for each incarcerated offender; and providing all inmates with an adequate supply of clean clothing, footwear, linens, toiletries and writing supplies. In addition, this program includes the costs of the clothing/laundry and commissary trust fund operations.

1/ Excludes reimbursable workyears.

The Institution Security program consists of the correctional staff whose responsibility is to maintain security, control and supervision consistent with human dignity.

The Unit Management program is a system of inmate management that decentralizes an institution by breaking the population down into groups of 50 to 150 offenders. It provides administration, case management services, drug/alcohol treatment programs and other needed services to the smaller groups.

Inmate Programs offer the inmates opportunities to develop or enhance their academic and vocational skills, to involve themselves in constructive leisure-time activity, to participate in religious programs of their choice and to receive individual or group counselling to deal with mental health problems.

Institution Administration and Maintenance

This activity covers all costs associated with the general administration, operation and maintenance of facilities. Included are functions of the warden's office, legal counsel, personnel, financial management, records office, safety, staff training, mechanical services, motor pool operations, power house operations, and other administrative functions.

Institution Administration finances the costs of the institutions' executive staff (warden and staff), legal counsel, personnel and financial management, records office and safety programs.

The Staff Training program provides training to all staff in all spheres of corrections. It assures that the latest policies, procedures and correctional techniques are communicated to staff. Staff training consists of programs in each institution, training at the three Federal Prison System staff training centers, and external training through contracts.

The Institution Maintenance program finances the costs of repairs to buildings and facilities, purchase of utility systems and steam power plants, telecommunications and transportation services. Services are provided through direction of the technical facilities management staff.

Contract Confinement

This activity/program finances the costs of care of Federal offenders in contract state, local and community residential facilities. Community Programs Managers (CPM's) develop and manage resources for the confinement of offenders in non-Federal facilities. This includes contracting with State and local correctional institutions to board certain types of Federal offenders, such as juveniles, offenders with short sentences and protection cases and contracting with State, local and private agencies who provide residential resources for institution releasees, direct commitments and persons requiring closer supervision than can be provided by U.S. Probation Officers. The Bureau is responsible for ensuring that these facilities meet Bureau standards and that inmates housed in these facilities receive adequate services. CPM's also provide liaison between the Federal Prison System, and the U.S. Marshals Service, U.S. Probation Service, U.S Parole Commission, Federal Courts, and state and local law enforcement officials.

Program Direction

This activity covers the costs of regional and central office executive direction and management support functions such as the executive staff, regional and central office program managers, research and evaluation, program analysis, budget development, policy development and implementation, system support, financial management, personnel, ADP, space management, and legal services.

Executive Direction and Control provides the resources for overall policy and program development, implementation, direction and evaluation to assure the effective conduct of the Federal Prison System's business. In addition, resources are included to provide the Federal Prison System and the Federal Prison Industries, Inc. with adequate legal counsel.

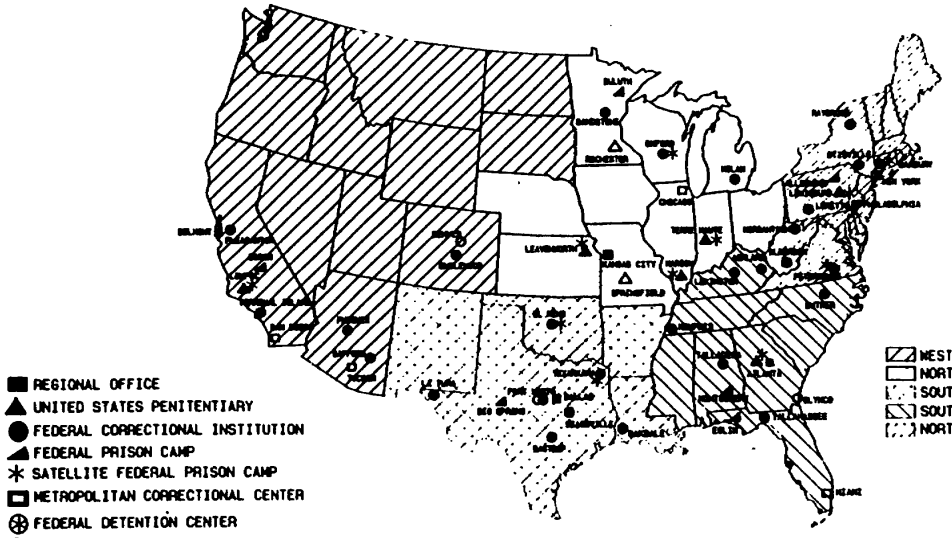
The Administrative Services program finances the central and regional office functions of personnel management; maintenance of equal employment opportunity; medical services; financial management, including procurement and property management; and ADP services, records management, mail, printing, reproduction, and space management.

The highly successful execution of this Administration's law enforcement initiatives, especially those directed at major drug trafficking and organized crime has resulted in a 75 percent increase in the Federal prison population - from 23,783 to approximately 41,500 inmates. Notwithstanding substantial recent increases in the capacity of the Federal Prison System through the expansion of existing facilities and activation of new institutions, the Bureau of Prisons' facilities are today overcrowded by almost 50 percent.

Prison overcrowding coupled with the continuing rapid growth of the inmate population has the potential for creating a "gridlock" in the Federal criminal justice system. This crisis would threaten the safety of staff, inmates, and the general public while at the same time seriously impairing the Department's ability to achieve its high priority law enforcement objectives.

During 1988, the Federal Prison System projects that the average daily population will continue to grow from 42,432 in 1987 to at least 44,878 in 1988. The 1988 budget request includes $10,322,000 for subsistence and related support costs for the projected increase of 2,446 in institution average daily population.

In addition, 786 positions, 304 workyears and $34,495,000 is requested to activate two new Federal Correctional Institutions in Marianna, Florida and Fairton, New Jersey; the Los Angeles, California Metropolitan Detention Center; and new housing units at three existing institutions. These new facilities will provide an additional capacity of 2,328 beds for the Federal Prison System.



1281

The request also includes $10,291,000 to further expand contract confinement programs including expansion of the Contract Community Treatment Center (CTC) program from an average daily population of 3,050 to 3,775 offenders and a proposal for a private sector firm to house 500 short-term sentenced illegal aliens for six months in FY 1988. A benefit of contracting for the confinement of Federal prisoners in non-Federal facilities, provided that space is available, is that contract based population results in a reduction to FPS institution based population and thus reduces overcrowding.

The request also includes $2,917,000 to continue important ADP automation activities; $1,378,000 to replace vehicles that exceed Federal Property Management Regulations replacement criteria; and $400,000 to expand medical training.

During the last five years, the Bureau of Prisons basic workload "input" -- Federal offenders -- has increased by 75 percent while staffing levels have grown by only 23 percent. This achievement has only been possible by major increases in staff productivity achieved through automation, utilization of security technology and a general management philosophy of "work harder and smarter."

Salaries and expenses

Justification of Proposed Changes to the Appropriation Language

The 1988 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For expenses necessary for the administration, operation, and maintenance of Federal penal and correctional institutions, including purchase (not to exceed [forty, of which thirty] one hundred forty-two of which one hundred six are for replacement only) and hire of law enforcement and passenger motor vehicles; [$598,807,000]: Provided, That there $760,851,000 may be transferred to the Health Resources and Services Administration such amounts as may be necessary, in the discretion of the Attorney General, for direct expenditures by that Administration for medical relief for inmates of Federal penal and correctional institutions [:Provided further, That uniforms may be purchased without regard to the general purchase price limitation for the current fiscal year].

(18 U.S.C. 3050, 3059, 3651, 4001, 4002, 4007, 4008, 4011, 4041, 4042, 4081, 4082, 4253, 4281, 5015; Department of Justice Appropriations Act, 1987; as included in Public Laws 99-500 and 99-591, section 101(b) additional authorizing legislation to be proposed.)

[For an additional amount for "Salaries and expenses", $28,000,000.]

Omnibus Drug Supplemental Appropriations Act of 1987.

Explanation of Changes:

The 1988 proposed authorization language provides for a general purchase price limitation for uniforms, eliminating the need for similar appropriation language.

Explanation of Analysis of Changes from 1987 Appropriation Request

Congressional Appropriation Actions

The Congress provided $28,000,000 for Salaries and Expenses in the Omnibus Drug Supplemental Appropriation of 1987. Of this amount, $21,000,000 is for the care and custody costs associated with the increase in the number of inmates in Federal penal institutions and $7,000,000 is for 400 additional correctional officer positions to handle the substantial increase in the number of inmates in Federal prisons expected as a result of the additional investigative and prosecutive resources provided.

Supplementals Requested

1. The supplemental for $548,000 is for increased Federal Telecommunications System costs.

2. The Pay MERS request provides $3,932,000 to meet fifty percent of the increased pay requirements pursuant to P.L. 99-500 and $17,053,000 to implement the Federal Employees Retirement System Act of 1986, P.L. 99-335.

This budget activity includes the cost of all food; medical care; clothing; linens; security; welfare services; release clothing, transportation and gratuities; housing unit furnishings; academic; social and occupational education courses; leisure time programs; and religious and psychology services. Also included are the salaries and other expenses of Health Resources and Services Administration commissioned officers stationed in FPS facilities.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Inmate Care	1,621	1,615	$147,313	1,621	1,615	$156,890	1,726	1,654	$171,323	105	39	$14,433

Long-Range Goal: To provide offenders incarcerated in the Federal Prison System with a nutritional diet; comprehensive, accessible high-quality health care services; clean clothing, footwear, linens, toiletries and stationery; and to properly manage the Inmate Trust Fund.

Major Objectives:

Continue providing three nutritional meals daily including provisions for medical and religious diets.

Continue cost-effective farm operations to supplement food purchased from local sources.

Maximize the use of surplus foods from the Commodity Credit Corporation.

Professionally analyse food service programs for nutritional adequacy.

Continue to provide current level health care services in all institutions, which include promotion of good health practices, prevention of diseases and disability, inpatient and outpatient treatment, medical rehabilitation services and health education.

Continue to provide 24-hour or 16-hour (camps require 16-hour coverage) medical coverage, as appropriate.

Meet and/or maintain other medical accreditation requirements in all institutions.

Acquire an adequate supply of clothing, footwear, linens, toiletries and stationery items for distribution to the inmate population.

Maintain laundry and clothing issue/return operations.

Maintain the Inmate Trust Fund.

Base Program Description: Institution food menus are prepared on a 35-day cycle, balanced for variety and adequate nutrition. The basis for the menu is the "standard ration" which consists of appropriate levels of the fifteen major food categories including beef, pork, and other meats; fats; starches; milk and cheese; eggs; sweets; beverages; potatoes and other roots; leafy green and yellow vegetables; tomatoes; dried beans; peas or nuts; fresh, canned and dried fruits; and adjuncts. Special medical and religious diets are included in the menu. Meal preparation is accomplished primarily by inmate workers under the supervision of trained civilian staff. Nearly 10 percent of the total inmate population work in the food service program.

Farm operations are conducted at two institutions. The Federal Correctional Institutions at Lompoc, CA and El Reno, OK utilize available land resources in the limited production of beef and milk. Farm products are consumed at the producing institution and are also shipped to nearby institutions to offset their need to purchase some products on the open market.

Medical services are delivered at the institution level by a variety of professional and para-professional health care personnel including physicians, physician assistants, nurses and dental staff. Within 14 days of admission, all inmates receive a complete physical examination including a chest x-ray and, if indicated, a psychiatric evaluation. This physical examination provides an accurate physical, dental, and mental appraisal of the inmate. Medical staff conduct sick call five days a week which includes examination of

1290

patient complaints, ordering and assessment of diagnostic tests and implementation of a medical treatment plan. Inmates in segregation units are seen at least once during each 24-hour period by a physician assistant. Inmates with complaints during other than normal working hours or on weekends and holidays are seen by medical staff on-duty or on-call. If an inmate has a health condition which is beyond the professional capability of the institution's medical staff, the inmate is referred to a contract physician or hospital in the community or one of the Bureau's medical referral centers.

The Medical Center for Federal Prisoners (MCFP) at Springfield, Missouri is the major medical referral center for the Federal Prison System. Four additional regional medical referral centers within the FPS health care delivery system are:

1. FCI, Butner, NC - referrals are male psychiatric cases mainly from the Northeast and Southeast Regions.
2. FCI, Lexington, KY - referrals are female medical and psychiatric cases nationwide and male medical cases primarily from the Northeast and Southeast Regions. Also, selected chronic (disabled, handicapped, geriatric) cases are referred to Lexington on a nationwide basis.
3. FCI, Terminal Island, CA - referrals of both male and female medical, surgical, and psychiatric (for male inmates) cases are made primarily from the Western Region.
4. MCFP, Rochester - referrals are medical and psychiatric cases nationwide.

The U.S. Public Health Service (PHS) provides personnel in support of the FPS medical program. In addition, agreements with the Veterans Administration (VA) provide for the utilization of VA medical facilities on a referral basis. Medical, surgical, and rehabilitative services which were not available in FPS hospitals, are provided to inmates through contract arrangements with community hospitals and/or governmental health facilities.

The Federal Prison System maintains an inventory of clothing, footwear, toiletries, linens and writing supplies for issue to all inmates during incarceration. Clean clothing and linens are issued weekly in exchange for clothing and linens to be laundered. A laundry operation is maintained to clean all clothing and linens. All services are performed with inmate labor under staff supervision.

In addition, FPS maintains an Inmate Trust Fund account for all monies on deposit for each inmate. Monthly inmate earnings received for work with Federal Prison Industries, performance pay, and money from family, friends or other sources during visits or via the mail are deposited directly to each inmate's account. Inmates can withdraw funds when needed to make purchases from the commissary, send money to family members, pay for legal services or pay for supplies to participate in programs such as college courses or leisure activities.

Accomplishments and Workload: Actual and estimated accomplishments of the Inmate Care Program are presented in the following tables:

Item	1985	1986	Estimates 1987	1988
Food and Farm Services:				
Total cost in thousands	$44,207	$49,759	$59,059	$67,267
Meals provided	101,502	117,024	127,296	134,634

Inmate Trust Fund collections ($ in 000's)	$35,676	$56,968	$61,981	$65,513
Inmate Trust Fund disbursements ($ in 000's)	$29,020	$54,486	$59,281	$62,659

The Federal Prison System (FPS) continues to provide three nutritional meals daily. These meals are certified for nutritional adequacy by registered dieticians and are well within the Recommended Dietary Allowances of the Department of Agriculture's National Research Council. The cost per inmate per day decreased in 1986 by $.08 from $3.57 in 1985 to $3.49 in 1986.

In addition, FPS continues to provide offenders with adequate, comprehensive, accessible, and high quality health care services. The FPS has 24-hour or 16-hour medical coverage, as appropriate, at all of its institutions and the MCFP, Springfield, Missouri, and the FCI's Lexington, KY, Butner, NC and Terminal Island, CA have maintained accreditation by the Joint Commission on Accreditation of Hospitals. With funding approved in 1985, the FPS acquired the former state mental hospital in Rochester, Minnesota for use as a medical/psychiatric referral center. The facility is now 67 percent operational.

The FPS also continues to provide inmates with clean clothing, footwear, toiletries, linens, writing supplies during incarceration and continues to maintain the Inmate Trust Fund. During 1986, the Inmate Trust collected $56,967,575 for deposit in inmate accounts and disbursed a total of $54,486,029, an increase of 60 and 88 percent respectively over the 1985 level.

Program Changes: The request includes $5,015,000 to provide for a projected increase in the average daily population of 2,446 from 42,432 in 1987 to 44,878 in 1988. Within this amount, $2,417,000 is for food supplies, $2,048,000 is for medical services and supplies and $550,000 is for clothing, footwear, bedding, toiletries, etc. In addition, 105 positions, 39 workyears and $9,418,000 are included in this level to provide resources to activate new facilities in 1988 as follows:

Facility	Estimated Activation Date	Food and Farm Service Pos.	WY	Amount (in 000's)	Medical Services Pos.	WY	Amount (in 000's)	Other Inmate Services Pos.	WY	Amount (in 000's)

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Institution Security	5,019	4,723	$144,125	5,019	4,828	$160,839	5,368	4,971	$166,411	349	143	$5,572

Long-Range Goal: Provide institution security, inmate control, and inmate supervision to assure maximum protection for the community, staff, and inmates consistent with program requirements in all FPS facilities.

Major Objectives:

Reduce or minimize the situations and opportunities which can lead to prohibited acts such as escapes, homicides, assaults, suicides, and drug transactions.

Maintain an effective transportation system for prisoners in conjunction with the U.S. Marshals Service.

Meet correctional standards in all institutions.

Base Program Description: All institutions are assigned a security classification based in part on the physical design of each facility. There are six security level classifications, number one being the least restrictive and number six the most restrictive. Offenders are assigned a custody status which relates to the degree of supervision needed, and from a security and custody standpoint, are assigned to an institution. The result is a grouping of offenders with similar custodial needs in an institution.

Within each institution, correctional officers are assigned to security posts which are primarily established on the basis of structural/visual considerations. Supervision of inmates is provided in living units, visiting areas, dining halls, recreation areas, and any other area where inmates may be located or have access to. The two basic categories of security are perimeter security and internal security. Perimeter security consists of a walled or fenced perimeter supplemented by manned gun towers, razor tape concertia wire strung between a double fence, high mast lighting to illuminate the perimeter, perimeter patrols and highly technical equipment such as alarm systems and video surveillance. Entrances through the perimeter are controlled by a series of gates, both electrical and manual, supplemented by metal detection systems and search procedures for weapon and contraband control.

For all practical purposes, all other security measures, processes and activities can be called internal security, which commences when an inmate is committed and terminates upon his/her release. Included within this process are both metal detection and physical search procedures and intake screening to insure the safety of newly committed offenders within the general population. Medical screening is also accomplished to protect the general population from disease and health hazards.

To monitor inmates, regularly scheduled counts are conducted several times a day in all institutions. Work supervisors and program personnel are held strictly accountable for all inmates under their supervision. Violations of institution regulations are dealt with through the Inmate Disciplinary Process. Correctional staff investigate the incident, prepare a report and submit it to the Unit Discipline Committee, which usually consists of a unit manager, case manager and a correctional counselor. Depending on the seriousness of the charge, the Unit Committee may hear and decide the case or refer it to the Institution Discipline Committee for hearing and decision. There is an administrative remedy process for appealing decisions of the Committee.

Administrative Detention/Disciplinary Segregation are programs for separation from the general population of offenders who require special protection and for those who pose a serious escape risk or threat to the security and orderly operation of the institution. Disciplinary Segregation provides segregation of offenders who have committed serious prohibited acts within the institutional setting. Inmates are held in segregation only after a due process hearing where the inmate is given the opportunity to rebut the charge against him.

Much staff time is consumed in the monitoring of identified members of prison "gangs" such as the Mexican Mafia, Aryan Brotherhood, Nuestra Familia, Black Guerilla Family and Texas Syndicate, organizations whose constitutions advocate violence, drug trafficking, sexual activities and theft. If these groups can be controlled, then they will be unable to realize their goals within the institution.

In coordination with the United States Marshals Service, the Federal Prison System maintains a prisoner transportation system including the transportation of Witness Security inmates.

Assaults, escapes and other prohibited acts are normally a violation of Federal statutes requiring FBI investigation and referral to the U.S. Attorney's Office for a determination whether or not to prosecute. Prosecution of these incidents enhance staff, inmate, and public safety. Successful prosecution frequently hinges on the initial response and handling of the crime scene and subsequent procedures by institution staff. This requires a highly trained, educated, and professional team of correctional officers.

1294

Accomplishments and Workload: Actual and estimated accomplishments of the Institution Security program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Average daily population	33,834	39,008	42,432	44,878
Successful confinement rate	98.4%	98.4%	98.5%	98.5%
Incapacitation rate	99.3%	99.4%	99.5%	99.5%
Security staff coverage rate	85.6%	93%	100%	100%
Overcrowding	33%	40%	46%	44%

The successful confinement rate is the percent of those inmates who will not be involved in assaults, homicides and suicides. The incapacitation rate is the percent of inmates confined who will not escape. As illustrated in the above table, FPS continues to minimize the situations and opportunities which lead to prohibited acts. In 1986, only one percent of the FPS average daily population were involved in assaults, homicides, suicides and escapes.

To minimize opportunities for the commission of prohibited acts, FPS has established staffing guidelines for its facilities as a result of an ongoing full-field review which considers the institution's security level, posts and rated capacity. The security staff coverage rate is the percent of institution posts such as front entrance, control room, housing units, segregation/detention, visiting room, perimeter security activities areas, etc., that can be covered with available staff (workyears). Covering all posts improves security and is a factor in reducing the incidents of negative inmate behavior. The Omnibus Drug Supplemental Appropriation of 1987 included funding for 400 additional correctional officer positions, which will satisfy current staffing guidelines. However, it should be noted that the current staffing guidelines and security staff coverage rate are based on an institution operating with an inmate population at or substantially near the capacity for which the facility was designed. FPS facilities are expected to be 44 percent over designed capacity in 1988.

In order to improve our ability to properly classify offenders and protect staff and inmates alike, FPS developed and implemented a new security designation and classification system. Since 1980, when the system was fully implemented, there have been declining rates of inmate on inmate as well as inmate on staff assaults. This system results in a security level classification of every inmate and institution from security level one, the lowest security level, to level six, the highest. The purpose of the system is to send inmates to the least restrictive facilities that provides appropriate security. This significantly reduces the mixing of predatory and non-predatory offenders.

During 1986, the prisoner transportation system handled approximately 82,000 moves. In addition, 198 Witness Security cases were relocated without incident.

Program Changes: The request includes $377,000 to provide for security supplies associated with a projected Federal inmate population increase of 2,446 from 42,432 in 1987 to 44,878 in 1988.

The request also includes 349 positions, 143 workyears and $5,193,000 to provide resources to activate new facilities in 1988 as follows:

Facility	Estimated Activation Date	Resources Pos.	WY	Amount (in 000's)
Marianna, FL FCI (750 beds)	5/88	106	44	$1,672
Fairton, NJ FCI (550 beds)	9/88	91	8	611
Los Angeles, CA MDC (588 beds)	5/88	101	42	1,422
Oakdale, LA Cuban Unit (250 beds)	10/87	38	38	1,104
Englewood, CO Detention Unit (90 beds)	10/87	8	8	250
Marion, IL Camp Expansion (100 beds)	3/88	5	3	136

Notwithstanding the critical level of overcrowding, this budget requests no additional staff for the institution security program at existing institutions.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Unit Management	1,261	1,216	$47,921	1,261	1,218	$52,686	1,345	1,254	$57,378	84	36	$4,692

Long Range Goal: To establish a safe, humane environment which minimizes to the extent possible, the detrimental effects of confinement; and to provide a variety of counseling programs which are most likely to aid inmates in a successful adjustment to the institution and, upon release, a successful return to the community.

Major Objectives:

Subdivide the inmate population into small well-defined and manageable groups whose members develop a common identity from close association with each other and their unit staff.

1296

Increase the frequency of contacts and improve relations between staff and inmates resulting in: a) better communication and understanding between individuals; b) more individualized classification and program planning; c) more valuable program reviews and program adjustments; d) better observation of inmates, enabling early detection of problems before they reach critical proportions; e) development of common goals which encourage unit cohesiveness; f) a more positive living and work atmosphere for staff and inmates; and g) more efficient accountability and control of inmates.

Ensure that decisions regarding inmates are made by staff most closely associated with those inmates, increasing the quality and swiftness of the decisions.

Provide program flexibility so that programs promote behavorial changes.

Provide opportunities for individual and group counseling in each unit.

Provide drug abuse programs for inmates who have the need and motivation to participate.

Base Program Description: The purpose of the Unit Management program is to improve inmate control and establish healthy relationships between staff and inmates by dividing the large institution population into smaller, more manageable groups. A team of multi-disciplinary staff who have administrative and supervisory authority in most institutional aspects of programming and living are permanently assigned and located in the unit to work with the inmates. This places services closer to the users and permits decision-making by those who are most knowledgeable of the inmates and their programs. The increased interaction between inmates and staff enhances communication and understanding of inmate needs to a level not possible in a centralized correctional environment. The program is carried out through the proper classification of inmates and development of inmate programs on the basis of need and motivation.

Accomplishments and Workload: Actual and estimated accomplishments of the Unit Management program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Average Daily Population	33,834	39,008	42,432	44,878
Number of Units	168	182	186	199
Counseling Hours	436,208	451,584	461,629	478,561
Initial Classification Studies	18,307	19,327	19,807	22,374
Study & Observation Reports	677	708	733	770
Transfer Reports	11,694	12,106	12,406	12,586
CRC Referral Reports	7,480	7,744	7,936	8,697
Furloughs Processed	17,189	17,795	18,236	18,724
Releases	23,266	24,802	26,172	27,327

The Federal Prison System has virtually met its goal of establishing functional unit management in most of its major facilities. Recently, however, it has become necessary in some instances to return to a centralized management system or to administratively combine two units into one larger unit under the supervision of one unit manager. This action results from a system wide security staff shortage due to increasing population levels. There are a total of 182 functional units in FPS institutions including 28 drug abuse programs.

FPS continues to use the Security Designation System to place each individual inmate in an institution with the Security Level most appropriate for that inmate. Institutions are rated from Security Level 1 (minimum security) to Security Level 6 (maximum security). Once an inmate is placed in the proper institution, the Unit Management system provides further opportunity for an even more refined inmate classification scheme, which places an inmate in a specific unit which has security and programs most appropriate for that inmate.

Program Changes: The request provides an additional $408,000 for contract services and supplies associated with the projected population increase of 2,446 from 42,432 in 1987 to 44,878 in 1988. In addition, this level includes 84 positions, 36 workyears and $4,284,000 to activate or expand this program at the following facilities scheduled for completion during 1988:

Facility	Estimated Activation Date	Resources Pos.	WY	Amount ($ in 000's)
Marianna, FL FCI (750 beds)	5/88	28	12	$1,493
Fairton, NJ FCI (550 beds)	9/88	22	2	896
Los Angeles, CA MDC (588 beds)	5/88	19	8	995
Oakdale, LA Cuban Unit (250 beds)	10/87	7	7	488
Englewood, CO Detention Unit (90 beds)	10/87	5	5	245
Marion, IL Camp Expansion (100 beds)	3/88	3	2	167

	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Inmate Programs	645	644	$34,784	645	644	$37,879	710	668	$40,370	65	24	$2,491

This budget activity finances the costs of academic, social and occupational education courses, leisure time activities and religious and psychology services.

Long Range Goal:

Provide general and occupational education opportunities to all inmates desiring or required to participate;

1298

Provide Federal offenders with a full range of recreation and leisure activities to improve their physical and mental health and promote the development of personal, interpersonal and social skills to better enable them to cope with the psychological and physical impact of their incarceration;

Provide all prisoners with reasonable and equitable opportunities to pursue individual religious beliefs and practices within the constraints of confinement and;

Provide immediate and long-term psychological care for Federal inmates with mental health problems and assist in the decision making of the courts, prison administrators and parole officials.

Major Objectives:

Provide education programs designed to meet inmate needs for functional literacy, high school equivalency, continuing education, and personal growth and to enhance their employability upon release.

Maintain education program certification or accreditation by regional Associations of Colleges and Schools or other appropriate accrediting agencies.

Expand institutional library services to meet ACA standards by establishing inter-library loan agreements; by utilizing mobile or rotating library collections; and/or by directly providing adequate library services.

Increase involvement of institution-based psychology staff in identifying learning disabled inmates and assist instructional staff to select the appropriate teaching methods and techniques to be used.

Provide a variety of indoor and outdoor physical, cultural, and related leisure activities with opportunities to belong to social and other groups.

Increase the number of institutions which have Artists-In-Residence.

Make available the appropriate worship services of the various religious disciplines represented within the inmate population.

Provide a variety of non-worship religious program options.

Provide psychological screening for every inmate admitted to the FPS.

Establish base rates of incidence of the different types of mental health problems found in the inmate population.

Provide psychotherapy to all inmates who desire and need it.

Provide crisis intervention counseling to every inmate in crisis.

Provide psychological evaluations requested by the courts, parole officials, and prison administrators.

Continue special treatment programs in drug abuse and alcohol abuse units.

1299

Base Program description: Inmate programs include general and occupational education courses, leisure time activities and religious and psychology services.

General education programs are designed to meet specific inmate needs for functional literacy, high school equivalency, continuing education, and personal growth. There are five major components of the general education program: Adult Basic Education (ABE), General Education Development (GED), Adult Continuing Education (ACE), Postsecondary Education (PSE) and Social Education.

The ABE component is designed for the 25 percent of the inmate population having less than an eighth grade education. The GED component is for the nearly 50 percent of Federal offenders who lack a high school diploma and consists of high school equivalency courses and general equivalency diploma examinations. ACE Courses are designed for inmates who have a desire to "brush up" in a special area or enroll in a special interest program, e.g., speed reading, English, mathematics, contemporary issues, history and foreign language. PSE courses are for inmates who have successfully completed high school and want to further their education, e.g., drafting, real estate, data processing, and dental technology. The Social Education component helps inmates develop a positive self-image and adequate social skills.

Occupational education programs serve to enhance the employability of offenders upon release, particularly those who either lack a solid employment history or a saleable skill. The majority of Federal offenders are unskilled at the time of commitment to prison. Federal offenders can choose a vocation, through instruction, work experiences, and career orientation; acquire or improve productive work skills and habits; and gain practical knowledge essential to working and functioning in a complex industrial-technical world of work. Approximately 15,000 Federal offenders will have the opportunity to participate in these training activities through the following five major components of the occupational education program: Exploratory Training, Pre-industrial Training, Vocational Training, On-the-Job Training and Apprentice Training.

Exploratory training involves study of industries and occupations for a general knowledge of the world of work rather than specific skill development. Pre-industrial training is short-run training for a targeted job in prison industries. Vocational training includes instruction and training in specific entry-level or advanced skills. On-the-Job training consists of organized instruction and training under actual working conditions in institution service and maintenance shops and Federal Prison Industries' factories. Apprentice training provides journeyman level instruction and training through structured apprenticeship programs approved at the state and national levels by the Bureau of Apprenticeship and Training, U.S. Department of Labor.

A wide variety of leisure time activities are offered at each Federal prison including indoor and outdoor individualized (weightlifting, jogging, etc.) and group (basketball, touch football, volleyball, etc.) athletic activities and arts and crafts (ceramics, painting, drama, leathercraft, music, etc.). Chess and bridge clubs are organized in many institutions; inmate drama groups put on plays and, at times, write their own plays; and inmate bands in country, rock and soul music perform concerts for the inmate population. Movies and invited guest performances are scheduled as frequently as possible.

Chaplaincy personnel within FPS are responsible for personally delivering the religious services of their particular faith group and for arranging the delivery of religious services of other faith groups. FPS annually issues approximately 250 contracts for the delivery of services of the smaller faith groups and other related religious services. FPS Chaplains also recruit, train, supervise, and sustain approximately 2,500 volunteers from the community who regularly visit the institution to participate in the religious programming. FPS

staff Chaplains, contract Chaplains and volunteer clergy routinely conduct over 12,000 religious worship services each year representing the various religious disciplines within the prisoner population. In addition to worship services, chaplaincy personnel offer numerous other religious program options including counseling services for family crises, marriages, deaths, illnesses, pregnancies, abortions and marital problems. Bible and Koran studies, moral growth seminars, group counseling, retreats, revivals, choirs, marriage enrichment programs, parenting seminars, cursillos, etc., are offered weekly. In an average institution, there are usually about 325 non-worship meetings annually.

Staff Chaplaincy visit at least once weekly inmates who are confined without freedom of movement in areas such as segregation and the hospital. In addition, visits are made to the visiting room, housing units, work assignment areas, and to prisoners confined to community hospitals and jails. Staff Chaplaincy coordinate numerous community-based religious activities for prisoners which include furloughs and day trips for seminars, retreats, workshops, religious education courses, prayer meetings, religious holiday observances, and special worship experiences.

Psychology staff are an integral part of correctional treatment administering programs of group and individual psychotherapy, crisis intervention, personal development classes, and staff consultation/training. Policy requires that every inmate admitted to a FPS facility be given an initial psychological screening which consists of psychological testing, psychological interviews, social history review, and behavorial observation. The purposes of the screening are to identify special treatment and/or referral needs; provide information useful in future crisis-counseling situations; identify strengths as well as potential adjustment problems to imprisonment; and discuss possible program needs with the inmates and provide information about them. The Minnesota Multiphasic Personality Inventory (MMPI) is the psychological screening test used. The results of the screening are summarized in a report placed in both the inmate's central file and the psychological file.

Both individual and group psychotherapy is offered on a voluntary basis to those inmates who express a desire and evidence need for it. Training and orientation programs are also offered for developing "life competency skills". These have proven successful in improving personal skills and knowledge including communication, assertiveness, self-image, interpersonal relationships, conflict resolution, problem solution and work skills. Short-term crisis counseling has only recently been acknowledged by mental professionals as a powerful, viable skill. Not only have FPS psychologists gained expertise in this area, but they also have provided training and consultation to staff in all institutions. FPS psychologists have traditionally provided the courts, parole officials and prison administrators with quality psychological evaluations. Many of these presentence evaluations have resulted in the diversion of offenders from the institution to the community.

Accomplishments and Workload: Actual and estimated accomplishments of this program are presented in the following table:

			Estimates	
Education:	1985	1986	1987	1988
Enrollments				
Adult basic education	10,241	11,229	12,217	12,913
Adult continuing education	10,519	11,228	12,216	12,912
General education development	5,538	5,322	5,790	6,120
Social education	13,092	15,086	16,414	17,349
Post secondary education	12,809	11,510	12,523	13,237
Occupational education	15,254	20,687	22,507	23,790

	1985	1986	Estimates 1987	1988
Completions:				
Adult basic education	5,267	5,209	5,667	5,990
Adult continuing education	5,786	6,054	6,587	6,962
General education development	2,648	2,320	2,524	2,668
Social education	9,561	10,395	11,310	11,954
Post secondary education	7,377	5,948	7,559	6,840
Occupational education	8,090	11,366	12,366	13,071
Religious Services:				
Worship	12,000	12,000	12,000	13,000
Non-worship programs (represent monthly totals)	15,500	15,500	15,500	16,500
Psychology Services:				
Court evaluations	1,628	1,877	2,042	2,159
Routine evaluations	32,064	36,970	40,208	42,517
Individual therapy sessions	31,300	36,089	39,250	41,504
Group therpy sessions	9,008	10,386	11,296	11,945
Participants in group therapy	26,017	29,998	32,625	34,499
Crisis intervention sessions	24,580	28,341	30,823	32,593
Staff training sessions	4,110	4,739	5,154	5,450
Unit team meetings	9,210	10,619	11,549	12,212

All inmates except those specifically exempt, e.g., detained aliens, who function below the 8.0 grade level are now enrolled in an ABE program. In addition, the total number of GED tests administered during 1986 was approximately 3,800. PSE programs continue to have one of the highest retention rates of all education programs in the Federal facilities and completion rates in college courses are in excess of 50%. In 1985, Federal prisoners earned approximately 133 college degrees, 113 AA's and 20 BA's (data not yet available for 1986).

Education services at the Federal Correctional Institutions (FCI's) Alderson, WV; Danbury, CN; Lompoc, CA; Milan, MI; Morgantown, WV; Oxford, WI; Pleasanton, CA; Sandstone, MN and Terminal Island, CA, Terre Haute, IN; the Federal Prison Camp, Boron, CA and Safford, AZ; Tallahassee, FL; United States Penitentiaries (USP) Lewisburg, PA and Leavenworth, KS; and the Medical Center for Federal Prisoners at Springfield, MO are now accredited by the regional commissions of colleges and schools. In addition, accreditation procedures are in progress at several other institutions.

Apprenticeship programs have been expanded to 310 training units in 79 different trade classifications at 32 institutions. In 1986, 725 inmates enrolled in apprenticeship programs and 276 completed the institution-scheduled portion of the program. Uniform curriculum performance standards were established for Adult Basic Education, machine shop and welding vocational courses. Computer assisted instruction was implemented at the FCI's Ashland, KY; Ft. Worth, TX; Oxford, WI; Seagoville, TX; Terminal Island, CA and USP Lewisburg, PA. A total of 16 institutions now have computer assisted instruction.

FPS continues to provide 100 percent of the psychological screening for every inmate admitted to FPS, the psychological evaluations requested by the courts, and the crisis intervention counseling. In addition, the base rates of incidence of mental health disorders have been established using a centralized MMPI scoring and data collection system.

Program Changes: In 1988, FPS projects an average daily population of 44,878, an increase of 2,446 over the 1987 estimate of 42,432. Included in the request level is $699,000 to provide supplies and contract services for the increased population as follows: Education, $387,000; Leisure Activities, $191,000; Religious Programs, $75,000; and Psychology Services, $46,000.

In addition, 65 positions, 24 workyears and $1,792,000 are requested to permit the activation of new facilities scheduled in 1988 as follows:

Facility	Estimated Activation Date	Education Program			Leisure Program			Religious Program			Psychology Program		
		Pos.	WY	Amount (in 000's)	Pos.	WY	Amount (in 000's)	Pos.	WY	Amount (in 000's)	Pos.	WY	Amount (in 000's)

This budget activity covers all costs associated with the general administration, operation and maintenance of facilities. Included are functions of the warden's office, legal counsel, personnel, financial management, records office, safety, staff training, mechanical services, motor pool operations, power house operations and other administrative functions.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Institution Administration.....	1,328	1,317	$80,356	1,328	1,318	$86,439	1,446	1,360	$95,222	118	42	$8,783

Long Range Goal: To continue to provide effective and innovative administration at all institutions and continually seek ways to improve existing administrative practices and procedures.

Major Objectives:

Provide executive direction and control at each institution.

Manage each institution's financial resources.

Assemble and maintain an effective workforce and administer personnel policies.

Maintain effective procedures for the processing and disposition of Federal offenders.

Maintain standards for safe and healthy working/living conditions.

Base Program Description: The Institution Administration program consists of an institution's executive staff, financial management office, personnel office, administrative systems office and safety office.

The executive staff at each institution including wardens, associate wardens and executive assistants provide overall direction and implement policies.

The financial management office is charged with the management and control of all allotted funds with responsibility for procurement, property management, warehousing, issuing supplies, equipment, contracting for services, disbursement and collection of monies and collection and input of all data for the automated accounting system and employee payroll.

The personnel office in assembling and maintaining an effective workforce, advertises all vacancies, collects applications, establishes promotion boards and prepares a list of eligibles. The personnel office ensures that all position descriptions are current and accurate. It serves as the management representative to the union, develops manpower plans for institutions and plays a major role in recruiting minorities to meet Equal Employment Opportunity goals.

The administrative systems office is responsible for the processing of detainers and the admission, transfer, sentence computation for and discharge of all Federal prisoners. The admission process entails the identification of inmates, review of court documents, fingerprinting, photographing, and disposition of personal property. Following admission, the administrative systems office performs sentence computation, which involves adjustments due to U.S. Parole Commission action, Institution Disciplinary Committee actions and good time. This office also maintains relationships with Federal, state and local law enforcement agencies, including the courts and parole boards regarding the criminal status of incarcerated and released inmates. Administrative systems staff work with the U.S. Marshals Service and Federal Prison System bus and airlift personnel to coordinate prisoner transfers and consolidate all inmates' records.

In addition, the administrative systems office provides paralegal services such as answers to show cause orders; determinations in sentence computation problems; interpretations of court orders; representation of the institution in court matters pertaining to inmate records; and providing expert testimony regarding sentence computation. The office is also responsible for the processing of all institution mail.

The safety program involves the inspection of institutions for sanitation, rodents, unsafe working conditions and presence of hazardous chemicals. The safety officer is responsible for processing accident reports and compensation forms for employees.

Accomplishments and Workload: Actual and estimated accomplishments for the Institution Administration program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Purchase Orders	95,614	98,482	101,437	104,480
Accounting Transactions	1,686,208	1,736,794	1,788,898	1,842,565
Payments	295,461	304,325	313,455	322,858
Commitments Processed	22,968	27,836	28,461	29,244

Safety Inspections	2,900	2,900	2,900	2,900
Accident/Injury Investigations	2,250	1,800	1,800	1,800
Fire Investigations	289	290	290	290

FPS continues the use of the Financial Management Information System (FMIS) which provides management instant information with regard to funds and established limitation levels.

The merit promotion plan is being revised to identify knowledge, skills, and abilities for each position. Applicants will be measured against the established requirements prior to selection. Action has been taken to align employees with position standards. Also, urinalysis testing and height/weight standards have improved vouchering techniques for the selection of new employees. A urinalysis program for FPS employees is being developed and will be implemented during 1987. New procedures have been implemented to improve and to add consistency to the interviewing process. Affirmative action continued at a vigorous rate. The FPS work force at year end was 41 percent minority including 22 percent female.

Administrative systems workload (number of new commitments, releases, bus runs, airlifts, etc.) continue to remain at a high level with no decrease projected in the near future.

Program Changes: This request provides $272,000 for the additional inmate record supplies and equipment resulting from a projected population increase of 2,446 from 42,432 in 1987 to 44,878 in 1988. This request also includes 118 positions, 42 workyears, and $8,511,000 to activate or expand this program at the following facilities scheduled for completion during 1988:

Facility	Estimated Activation Date	Resources Pos.	WY	Amount (in 000's)
Mariana, FL FCI (750 beds)	5/88	41	17	$2,888
Fairton, NJ FCI (550 beds)	9/88	33	3	2,270
Los Angeles, CA MDC (588 beds)	5/88	37	15	2,671
Oakdale, LA Cuban Unit (250 beds)	10/87	3	3	359
Englewood, CO Detention Unit (90 beds)	10/87	3	3	195
Marion, IL Camp Expansion (100 beds)	3/88	1	1	128

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Staff Training	63	68	$8,227	63	68	$8,995	66	68	$9,890	3	...	$895

Long-Range Goal: To communicate current policies and procedures to all staff and to teach them the skills and techniques necessary to maintain a safe, secure and productive correctional environment.

Major Objectives:

Provide three weeks introductory and correctional training for all new staff and advanced correctional classes for experienced employees.

Provide job specialty training including executive/management classes.

Instruct trainers.

Provide institution-based operations training for all staff.

Base Program Description: Staff training is being provided on site at each of the institutions; at three residential training centers; through external training provided by the Office of Personnel Management and other Federal agencies; by colleges and universities; and by private agencies.

The Federal Prison System operates a training academy at Glynco, Georgia which provides three weeks of introductory correctional training for all new employees. This modern facility accommodates up to forty-eight students. The training academy facilities include housing for the students, rifle ranges, and adequate space for firearms, self-defense, and disturbance control training. Course materials are organized and written and provide instruction on abnormal behavior, community programs, counseling systems, the dynamics of prejudice, equal employment opportunity, employee conduct and responsibility, employee stress management, escapes, fire prevention, first aid, correctional practices, inmate discipline, interpersonal communications, and legal issues.

Most of the FPS's meetings, workshops, and conferences are held at the management and specialty training center in Denver, Colorado.

This center can house thirty-five students at costs substantially less than they would be at a motel. The center conducts a wide range of courses for supervisors and program managers and also trains trainers for the institutions' locally conducted courses. These include courses for equal employment opportunity counselors, unit managers, correctional counselors, correctional supervisors, medical records technicians, hospital administrative officers, case managers, and industrial mid-managers. The training center offers courses for required instructor certification in firearms, self-defense, disturbance control, and interpersonal communications.

The Federal Prison System also operates a Food Service and Trust Fund Training Center at the Federal Correctional Institution (FCI), Fort Worth, Texas.

Of necessity, most training must be conducted on site at the institutions. Each institution has a Training Coordinator who plans, manages, and organizes the institution's training programs. Certain institution-conducted courses are required by national policy. For example, each new employee must be given one week of orientation training immediately upon entry on duty. Each experienced employee must be given correctional refresher training each year in such subjects as self-defense, disturbance control, firearms, fire protection, and inmate supervision. Each new case manager and unit manager must complete a self-study course in case management operations within sixty days of appointment. Each new employee of Federal Prison Industries attends an industrial familiarization course on the first day of duty. In addition, new employees must complete an industrial operations course within thirty days after entry on duty; a quality improvement course within four months and an introduction to Federal Prison Industries course within six months.

Accomplishments and Workload: Actual and estimated accomplishments for the Staff Training program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
External Training Provided	2,403	2,455	2,492	2,700
STC Training Provided	2,445	2,449	2,473	3,473
MSTC Training Provided	1,323	1,400	1,500	1,550
Internal Training Provided	27,704	28,523	29,093	30,293

Program Changes: In 1988, the request includes 3 positions and $495,000 to provide training at the following facilities scheduled for completion during 1988.

Facility	Estimated Activation Date	Resources Pos.	WY	Amount (in 000's)
Marianna, FL FCI (750 beds)	5/88	1	...	$146
Fairton, NJ FCI (550 beds)	9/88	1	...	130
Los Angeles, CA MDC (588 beds)	5/88	1	...	140
Oakdale, LA Cuban Unit (250 beds)	10/87	...	...	42
Englewood, CO Detention Unit (90 beds)	10/87	...	...	16
Marion, IL Camp Expansion (100 beds)	3/88	...	...	19

The request also includes $400,000 for Continuing Medical Education (CME). CME includes studies and training activities designed to enable professional and paraprofessional medical personnel to maintain the skills and knowledge to stay current with the rapid advances in medical science. The request covers approximately one-third of the Bureau's total CME requirement.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Institution Maintenance	846	814	$89,154	846	815	$94,493	908	835	$104,222	62	20	$9,729

Long-Range Goal: Continue preventive maintenance program, provide continuous service of all utilities in the most energy efficient manner, and provide transportation services in support of institutional operations.

Major Objectives:

Purchase utilities or maintain and operate utility systems and central power plants.

Maintain and operate telecommunication and transportation services.

Maintain the interior of all buildings such as plumbing, electronics, masonry, mechanics, carpentry and painting.

Maintain the exterior of all buildings including landscaping, gardening, fence repair and painting.

Base Program Description: The Institution Maintenance Program addresses the problem of maintaining and operating the physical plants of the Federal Prison System (FPS).

These facilities vary in age from 100 years to buildings recently constructed. Over fifty (50) percent of the facilities are more than 30 years old which is the expected life of buildings without major repairs.

The facilities are situated on approximately 31,000 acres and the buildings contain approximately 16 million square feet of floor area, all of which must be maintained and furnished utility services. Additionally, this program provides maintenance and operation of approximately 900 vehicles.

These facilities contain complex heating and air conditioning systems, large, high pressure steam power plants, large quantities of sophisticated hospital equipment, emergency electrical power systems and fire protection and life safety systems. Each institution maintains communication systems including complete private automatic branch exchange telephone systems, radio systems including base station and mobile units and several electronic detection and control systems.

Institution maintenance requirements are identified through facilities inspections conducted as part of the on-going preventive maintenance program; through formal semi-annual inspections; and through requests for specific needs identified by institution staff members. This program provides for maintenance projects estimated to cost $4,000 or less. Maintenance requirements in excess of $4,000 are included in the "Modernization and Repair" program of the "Buildings and Facilities" appropriation.

The work within this program is accomplished almost entirely by inmate crews under staff supervision. Each work crew consists of a staff foreman and between five and fifteen inmates. Each institution must have staff with experience and training in each phase of construction and maintenance work. Highly skilled work foremen are required in several trades such as steamfitters, air conditioning mechanics and electronics repairmen. A few specific jobs are contracted out because special skills or equipment items are required, or because the work may be extremely dangerous. Examples of these jobs are elevator inspection and repair, radio frequency alignment, and water tower painting.

Accomplishments and Workload: Actual and estimated accomplishments of the Institution Maintenance program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Major maintenance projects completed ($200-$4,000)	903	929	933	952
Minor maintenance projects completed ($200 or less)	130,739	134,465	135,054	137,927
Power plants operated	30	30	30	32
Energy Consumption:				
Electricity (KWH)	242,514,391	249,426,051	250,517,366	256,028,748
Natural Gas (cu ft)	1,813,315,802	1,882,508,302	1,873,155,223	1,914,364,638
#2 Fuel Oil (gal.)	1,358,073	1,396,778	1,402,809	1,433,671
#6 Fuel Oil (gal.)	503,860	518,220	520,487	520,487
Coal (Tons)	13,008	13,379	13,438	13,438
Propane (gal.)	1,143,724	1,176,549	1,181,702	1,181,702
Purchased Steam (lbs.)	4,327,420	4,451,616	4,471,114	4,471,114
Purchased Chilled Water (Ton Hours)	912	938	942	942
Vehicle miles driven	8,723,884	8,974,259	9,013,566	9,205,344

Program Changes: The request includes an increase of $3,551,000 for utilities, trash removal, and maintenance supplies commensurate with a projected population increase from 42,432 in 1987 to 44,878 in 1988. The request also includes $1,378,000 to replace vehicles. Past budgets have contained only minimal funding for vehicle replacement and have not permitted the Bureau to establish a program of regular systematic vehicle replacement. As a result, the Bureau has come to rely unduly on acquiring vehicles through surplus property listings. The result is frequently uneconomical and the practice should be abandoned. Currently, the Bureau has a fleet of 943 vehicles, 106 of which meet or exceed Federal Property Management Regulations replacement criteria. The request will fund the purchase of 106 replacement vehicles or 15 percent of the total fleet. (This compares with the allowable GSA replacement rate of 25 percent providing replacement criteria are met.)

In addition, this level includes 62 positions, 20 workyears and $4,800,000 to activate or expand this program at the following facilities scheduled for completion during 1988:

Facility	Estimated Activation Date	Resources Pos.	WY	Amount ($ in 000's)
Marianna, FL FCI (750 beds)	5/88	22	9	$1,882
Fairton, NJ FCI (550 beds)	9/88	22	2	892
Los Angeles, CA MDC (568 beds)	5/88	16	7	1,417
Oakdale, LA Cuban Unit (250 beds)	10/87	1	1	349
Englewood, CO Detention Unit (90 beds)	10/87	1	1	146
Marion, IL Camp Expansion (100 beds)	3/88	...	...	114

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Contract Confinement	69	76	$56,886	69	76	$59,145	69	76	$69,436	...	...	$10,291

This budget activity provides for the care of federal offenders in contract facilities. Funds for this activity also support the contract development and monitoring activities of the Community Program Managers.

Long Range Goal: To provide, through contract, high quality and diversified state, local and private facilities to house all offenders requiring confinement outside the Federal Prison System (including Community Treatment Centers).

Major Objectives:

Place all offenders committed under the provisions of the Juvenile Justice and Delinquency Prevention Act of 1974 in appropriate non-federal juvenile facilities.

Place juveniles near their homes and in community-based facilities wherever possible.

House those offenders who are in danger in Federal institutions, in state correctional institutions or other facilities.

House offenders with sentences of up to 180 days or less in local detention facilities.

Provide community residential resources to all FPS releasees deemed eligible and appropriate for release to a Community Treatment Center (CTC).

Monitor contract Community Treatment Centers annually.

Provide training for all contractors annually.

Provide accurate and timely information to the Central Inmate Monitoring and Witness Protection tracking system.

Keep the Federal law enforcement agencies aware of changes in FPS policy, sentencing alternatives and other areas of concern.

Maintain close relationships with state and local correctional agencies to exchange information and manage resources.

Provide individual case management services to inmates confined in contract facilities.

Base Program Description: While FPS has a large number and variety of correctional institutions in which to provide for the care and custody of Federal offenders, there are certain categories of offenders who are confined in state, local and private facilities. These include persons committed under the Federal Juvenile Justice and Delinquency Prevention Act, who must be separated from adult offenders as well as placed in community-based facilities near their residence whenever possible; adult offenders, whose lives might be endangered in Federal facilities (protection cases); and offenders with short sentences (generally 180 days or less) who are placed in local detention facilities (jails) for service of sentence.

In addition, FPS contracts with State, local and private community treatment centers for community residential bedspace for offenders; who are eligible and need a pre-release transition program at the end of their sentences before returning to the community; who the Federal courts determine need more than probation and less than full institution confinement and services; who are under probation or parole supervision but need more intensive services and/or programs than can be provided under the "street" supervision of the U.S. Probation Officer; and who are committed directly from court generally serving short sentences. Contract CTCs provide services to inmates attempting to establish themselves as fully functioning citizens while still under supervision. Available services include individual and group counseling, supervised living quarters, employment and placement assistance.

Community Programs Managers (CPM's) negotiate and monitor contracts for the boarding of Federal offenders in State and local institutions and in private residential community treatment centers.

The CPM's also make recommendations for designation of newly sentenced offenders and are responsible for the placement of direct commitments to non-Federal facilities. They provide case management services to all Federal inmates placed in non-Federal institutions and serve as technical consultants to contractors on FPS Policy.

In addition, CPM's serve as the FPS liaison with members of the U.S. Marshals Service, U.S. Probation Service, U.S Parole Commission, Federal courts, other Federal agencies, state and local government agencies and local community agencies. There are presently 41 CPM's stationed in 31 major cities throughout the United States.

72-995 O—87——42

Accomplishments and Workload: Actual and estimated accomplishments for this program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Number of contracts with juvenile facilities	36	30	30	30
Number of contracts with adult facilities	39	40	40	40
Number of contracts with jails	340	335	375	385
Number of contracts with community treatment centers	330	340	350	360
Contract monitoring:				
Major use facility	56%	65%	65%	65%
Minor use facility	82%	80%	80%	80%
Designations	28,417	33,730	36,000	39,000
Average daily population:				
Juveniles	95	87	90	90
Adult Offenders	172	126	110	110
Short Termers	834	1,240	1,500	1,750
Contract Community Treatment Centers	2,754	3,046	3,050	3,775
Number of Federal inmates admitted to non-Federal facilities:				
Juveniles	60	57	58	58
Adult Offenders	110	134	100	100
Short Termers	5,130	8,409	10,000	12,075
Number of Federal inmates admitted to Contract Community Treatment Centers:				
Pre-Releasees Admitted	7,635	8,405	8,450	9,100
Court Referrals Admitted	1,408	1,466	1,470	1,575
Probation/Parole Referrals Admitted	2,546	2,568	2,600	2,800
Average Length of Stay in CTCs (days)	100	100	105	105
Resources by Program Element:				
Community Program Management	$3,040	$2,887	$3,929	$4,362
Contract State and local institutions	$14,674	$18,293	$20,019	$23,408
Contract Community Treatment Centers	$29,180	$32,579	$32,938	$41,666

Since 1977, with only minor exceptions, the FPS has been able to place all juveniles in non-Federal juvenile facilities. During 1986, FPS contracted for the confinement of an average daily population of 87 juveniles. Roughly 24 percent of the juveniles are placed in community-based facilities and 27 percent are confined in their state of residence which enhances the opportunity to use available community resources and increases opportunities for visits from relatives and friends. In addition, FPS used adult state correctional institutions to house an average daily population of 126 adult Federal prisoners who needed protection and those who had special needs. We believe this action has prevented some deaths and assaults and has allowed these inmates to live in the general population and participate in programs. This program also allows approximately 8,409 short term offenders (or an average daily population of 1,240) to remain in their home community, near families and friends. It also saves the Government transportation expenses to and from a Federal institution.

Since January 1982, the FPS has increased the number of inmates confined in contract CTCs from 948 to approximately 3,200 today. To maintain this average daily population throughout 1987 will require additional resources. FPS is currently reviewing funding alternatives. Currently the FPS is providing community residential programs to 84% of all FPS releasees deemed eligible and appropriate for release to a CTC for an average length of stay of 100 days. Community Programs Managers continue to closely monitor CTC placements to insure maximum utilization of CTC bed space within funds available.

In early 1986, FPS initiated the Special Curfew Parole Program. Inmates still serving their sentences in a CTC have their parole advanced up to 60 days, and are released with a special supervision of home curfew. There are currently 150 people in this program.

During 1987, FPS will implement a pilot project called the Community Control Program in two districts, Southern Florida and Central California. Inmates who are CTC eligible will have their parole date advanced up to 120 days and will go directly into the community from the institution, where they will be monitored electronically by the U.S Probation Office.

An added benefit of contracting for the confinement of Federal prisoners in non-Federal facilities is that contract based population results in a reduction to FPS institution based population and thus reduces overcrowding. For example, in 1986, confinement of Federal prisoners in contract facilities reduced institution based population by 10.3 percent.

Program Changes: The request includes $7,591,000 to increase the average daily population in contract Community Treatment Centers from 3,050 to 3,775 offenders, an increase of 725 (the equivalent of one Federal Correctional Institution with a satellite camp). To further expand the use of the private sector, the request includes $2,700,000 to contract to house approximately 500 short term sentenced aliens for six months in FY 1988.

Activity: Program Direction	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount

Total.....	405	442	39,574	405	442	43,682	405	442	46,599	...	...	2,917

This budget activity covers the costs of regional and central office executive direction and management support functions such as the executive staff, regional and central office program managers, research and evaluation, program analysis, budget development, policy development and implementation, system support, financial management, personnel, ADP, space management, and legal services.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Executive Direction and Control....	223	247	$11,817	223	247	$13,083	223	247	$13,083	...	...	...

Long Range Goal: To continue providing effective, comprehensive direction and leadership to the Federal Prison System (FPS) by coordinating, initiating and evaluating planning and operational activities through the various central office branch chiefs, regional office program managers and the executive staff.

Major Objectives:

Establish and enunciate policy.

Provide legal counsel on correctional issues.

Plan, develop, coordinate, and evaluate FPS programs and activities.

Investigate alleged employee misconduct.

Maintain capabilities to respond effectively to public and congressional inquiries.

When necessary and appropriate, assist state correctional systems, the District of Columbia Department of Corrections, the U.S. Marshals Service, the Immigration and Naturalization Service and other jurisdictions experiencing difficulty by housing their offenders.

Assist state and local governments in their efforts to acquire surplus Federal property for correctional use.

Have all Federal institutions as well as Central and Regional Offices accredited by the Commission on Accreditation for Corrections.

Base Program Description: The overall administration of the Federal Prison System is located in the central office and five regional offices. The following describes the organization and functions of these offices.

The Executive Staff which plays a major role in FPS management and operations, includes the Director, all Assistant Directors, Medical Director, Associate Commissioner for Federal Prison Industries, and all Regional Directors. The Executive Staff reviews all major issues and determines major policy for the FPS.

The General Counsel provides legal assistance and advice to the Federal Prison System including adjudication of grievances and appeals filed under the FPS's EEO program; review of FOIA requests; final appeal on Administrative Remedy Procedures; coordination of litigation; interpretation of laws and directives; review of policy and procedures for legal implications; and other legal assistance as necessary.

The Assistant Director for Correctional Programs is responsible for programs for the care, custody and correction of inmates including institution security, inmate custody, case management, unit management, chaplaincy and psychology services, staff training and community programs. He is also responsible for the function of personnel management.

The Director of the Medical Services Division is responsible for establishing a systemwide health care program. The Medical Director is also responsible for the FPS's farm operations, food services, inmate compensation programs, and safety and sanitation.

The Assistant Director for Administration is responsible for the Bureau's construction and mechanical services activities for new and existing facilities; program planning and evaluation; research; budget development; financial management; and information systems.

The Associate Commissioner for Federal Prison Industries, Inc. (FPI) reports directly to the Director and to the Federal Prison Industries Board of Directors. The Associate Commissioner is responsible for FPI Industrial Operations and Corporate Management and educational and leisure programs.

The Office of Inspections is responsible for investigating violations of standards of professional conduct by employees and officers of the Federal Prison System, for providing overall guidance in program auditing and for monitoring the correctional standards/accreditation review process.

Accomplishments and Workload: Actual and estimated accomplishments for the Executive Direction and Control program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Policy Statements Issued	50	52	54	57
Change Notices	75	75	75	75
Operations Memoranda	315	320	320	323
Public Affairs Reports and Requests	4,725	5,000	5,000	5,100
Congressional Inquiries	5,000	5,250	5,250	5,350
Tort Claims	2,000	2,150	2,250	2,340
FOIA/Privacy Act Cases	5,175	5,675	6,175	6,500
Administrative Remedy Cases	20,000	20,000	20,000	20,250
EEO Cases	90	95	95	96
Investigations of Alleged Violation of Standards of Professional Conduct	178	169	180	182

Accomplishments: Since January 1981, FPS has experienced a dramatic 75 percent growth from 23,783 inmates to approximately 41,500 inmates. This current population is housed in facilities which are rated for a capacity of 27,785, resulting in a 13,715 bed deficit or an overcrowding rate of almost 50 percent. While the population has grown by 75 percent, staff grew by only 23 percent indicating significant productivity gains systemwide.

The FPS continues to lend assistance to many state correctional systems experiencing difficulty by housing their offenders. Currently, there are approximately 650 state offenders in FPS facilities. In addition to state prisoners, there are approximately 2,500 from the District of Columbia and approximately 250 territorial prisoners serving sentences in Federal Prisons. To assist the U.S. Marshals Service in housing unsentenced Federal prisoners due to their inability to renew or negotiate contracts with state and local jails because of overcrowding, the FPS has established or expanded jail units for pre-trial detainees at several institutions including the Bastrop, Terminal Island, Memphis, Milan and Talladega Federal Correctional Institutions and the Metropolitan Correctional Centers at Chicago, Miami, New York, San Diego and Tucson. There are approximately 2,600 pre-sentence detainees in FPS facilities. In addition, at the request of the Immigration and Naturalization Service, the FPS also is housing approximately 2,100 Cuban refugees.

Re-accreditations of several institutions were postponed during 1986 due to the effect of the Gramm-Rudman-Hollings reductions. To date, 38 institutions have been accredited by the Independent Commission on Accreditation for Corrections for three year terms. The re-accreditation process is to resume early in 1987.

During 1986, the Office of Research and Evaluation completed major reports on the impact of the Youth Corrections Act on the Bureau, recidivism among federal offenders, the impact of a low security institution on the surrounding communities, issues facing correctional officers at a federal penitentiary, recent modifications of the Bureau's inmate classification system, and a program-oriented study of the female population at Morgantown. Studies continued on post-release employment and its relation to institution training, measuring the social climate in institutions based on surveys of inmates and staff, and substance abuse program evaluation. Projects were initiated on the effectiveness of three different roles for disciplinary hearing officers, the quality improvement process in prison industries, evaluation of the model of imprisonment at Rochester, and the effects of incarceration on inmates.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Administrative Services.....	182	195	$27,757	182	195	$30,599	182	195	$33,516	...	...	$2,917

Long Range Goal: Provide for effective personnel administration including equal employment opportunity; an efficient and responsive financial management system including procurement and property management; and systems support administration and oversight.

Major Objectives:

Increase the rate of hiring minorities and women to ensure their representation in the workforce.

Increase the number of minorities and women promoted to management and supervisory positions.

Review local labor contracts as they are negotiated assuring compliance with master agreement prior to approval.

Complete analysis of all Merit System Protection Board and arbitration decisions of the past 12 months to determine patterns and identify potential problems.

Provide current and accurate financial management information.

Place more emphasis on cost center management (primarily through training) to ensure greater program manager involvement in the management of funds.

Conduct financial management reviews at all institutions.

Continue to implement SENTRY multi-terminal systems as required.

Improve system-wide service and teletype telecommunication system.

Base Program Description: The central and five regional offices are responsible for the functions of personnel management; maintenance of equal employment opportunity; medical services; financial management, including procurement and property management; and ADP services, records management, mail, printing, reproduction, and space management.

Personnel administration is largely regulated by the government-wide merit system and requires considerable planning and coordination with both the Department of Justice and the Office of Personnel Management. Coordination is necessary with colleges, high schools, civic groups, public and private groups and organizations in order to recruit an efficient work force. Increased hiring of minorities and women is accomplished through recruitment campaigns, visits to colleges and universities and other similar programs. EEO specialists have been placed in each region in order to help carry out this program.

Training is provided to appropriate personnel in labor/management relations and arbitration. Provisions of newly negotiated Master Agreements and local supplemental agreements are communicated widely to increase employee involvement, particularly field employees, in the process. Merit System Protection Board and arbitration cases are reviewed and analyzed to provide more thorough insight into labor/management policy problems.

Financial Management provides for the design, development, and implementation of financial systems and the maintenance and continuous analysis, evaluation and modification of existing systems to ensure compliance with statutory and regulatory requirements and to meet the administrative needs of the FPS. Financial Management establishes property accounting, cost-based budgeting practices and suitable internal control procedures; and develops and provides financial reports on the fiscal status, financial results of operations, and the cost of the FPS's operations. Financial Management is also responsible for the development of the FPS's financial operating plans and the administration of funds appropriated to the FPS. Financial audits are conducted to ensure field compliance with policies and regulations. These audits are scheduled to accomplish a financial review of each field location every 18 months.

The Property Management and Procurement functions are also the responsibility of Financial Management. This includes procurement responsibility for all services and supplies; the administration of regulations for all procurement and personal property and administrative legal claims matters; and the review and interpretation of statutes and regulations of other government agencies relating to all phases of property management and procurement.

In addition, Financial Management is responsible for special inmate services (including commissary, inmate trust fund, and laundry). Commissary operations provide opportunities for inmates to purchase items above the necessities of life. Inmate trust fund operations account for all monies on deposit for each inmate. Laundry operations provide all inmates clean clothing, footwear and linens. Other inmate services include provisions for toiletries and writing supplies.

The FPS's batch inmate information system provides a variety of demographic information on the inmate population, but is of limited use because the information is not timely. For the past few years the FPS has been involved in the implementation of the SENTRY system, an on-line system which performs up-to-the minute locator status information on all individuals under the custody of the Attorney General. It provides population counts and refined inmate demographic statistics; interagency and intra-institution population movement, schedules, notices, and statistics; and it will automatically compute and update sentence computations. It will also provide base program data for other information modules under development or to be developed.

Accomplishments and Workload: Actual and estimated accomplishments for the Administrative Services program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Personnel Surveys	25	30	30	30
EEO Recruitment Activities	88	100	120	130
Representation of Women in the FPS Workforce - year end	47.3%	22%	24%	26%
Representation of Minorities in the FPS Workforce - year end	34.7%	41%	43%	45%
New Hires - Women	68.5%	35%	37%	39%
New Hires - Minorities	60.8%	44%	46%	48%
Promotion - Women	63.3%	23%	25%	27%
Promotions - Minorities	41.3%	28%	30%	32%
Arbitration Cases	85	80	80	80
Financial Management Reviews	16	28	30	32
SENTRY Average Daily Transactions (in thousands)	35	110	125	165

The most significant enhancement to the SENTRY System in 1986 was the installation of 40 circuits and two new front-end communications processors. Response time nationwide was improved significantly to an average of seven seconds and the SENTRY System grew to over 1,600 terminals. Minicomputers were installed in the Central Office and one institution to provide word processing and other office automation functions as well as access to the SENTRY System. A contract will be awarded in 1987 to install similar systems at other BOP locations.

FPS is currently developing an on-line Integrated Financial Management System. The system will replace the current batch system and will include accounting, procurement, and the Trust Fund operations.

FPS negotiated a new master contract between BOP and AFGE. The Correctional Officer Register continues to be operated by BOP based on delegation of authority from the Office of Personnal Management. Training was conducted for all field personnel offices in the recently developed workforce utilization program which utilizes the management of both workyears and positions.

Program Changes: Phase I of the Bureau's long range ADP plan to establish a distributive data processing system was funded in the 1987 Appropriation. The 1988 request will enable the Bureau of Prisons to complete the replacement of obsolete computer terminals from existing resources. New equipment will have local intelligence and multiple function capabilities including local programming and computing, local area network control of data forwarded and retrieved from the central data center, word processing, electronic mail, graphics, spreadsheets, etc.

Additional ADP support will be required in order to gain the full benefits and increased efficiencies of the new system. For 1988 we are requesting contract funds ($268,000) as follows:

- To support the new software capabilities associated with the mini-computers to provide end-user office automation capabilities and applications which run locally at each facility, but are common to all facilities. Some of these applications may require interface with SENTRY.
- To support the financial management applications to be added to SENTRY.
- To support operation of the mini-computers located in the Central Office and to provide diagnostic and remedial assistance to mini-computer users throughout the Bureau.

The increasing volume of SENTRY transactions (an 83 percent increase since 1984, from 90,000 to 165,000 daily transactions) will require an increase of $2.649 million for reimbursement to the Department of Justice Data Center.

Population Increase. The 1987 appropriation enacted provides for a population of 42,432. The 1988 request includes an additional $10,322,000 to support the projected 1988 population level of 44,878 (an increase of 2,446 over what is provided for at the base level).

Activate Marianna, FL FCI. Construction of the 750-bed Federal Correctional Institution in Marianna, FL, which includes a 150-bed satellite camp, a Witness Security Unit and a Drug/Chemical Abuse Unit, is scheduled for activation in May 1988. This request will finance the activation and operation of the facility for five months during 1988.

Activate Fairton, NJ FCI. Construction of the 550-bed Federal Correctional Institution in Fairton, NJ is scheduled for completion in September 1988. This request will finance the activation and operation of the facility for one month during 1988.

Activate Los Angeles, CA MDC. Construction of the 388-bed Metropolitan Detention Center in Los Angeles, CA, which includes a 100-bed psychiatric unit, is scheduled for completion in May 1988. This request will finance the activation and operation of the facility for five months during fiscal year 1988.

Activate Oakdale, LA Detention Unit. Construction of the 250-bed Oakdale Cuban Unit is scheduled for activation in October 1987. This request will finance the activation and operation of the facility for twelve months during 1988.

Activate Englewood, CO Detention Unit. Construction of the 90-bed Englewood Detention Unit is scheduled for activtion in October 1987. This request will finance the activation and operation of the facility for twelve months during 1988.

Activate Marion, IL Camp Expansion. Construction of the 100-bed Camp Expansion is scheduled for activation in March 1988. This request will finance the activation and operation of the facility for seven months during 1988.

Other Requirements. The request includes $10,291,000 to increase contract confinement. Within this amount, $7,591,000 will enable the Bureau of Prisons to increase the average daily population in Contract Community Treatment Centers from 3,050 to 3,775 offenders, an increase of 725 and $2,700,000 will be used to to house approximately 500 short term sentenced aliens for six months.

The request also includes $400,000 for Medical training; $1,378,000 for vehicle replacement of 106 vehicles that exceed Federal Property Management Regulations replacement criteria; $268,000 for additional ADP support services; and $2,649,000 for Justice Data Center costs.

Transfer of the Financial and Administrative Systems Support Group	...	...	$210

This represents the transfer of the Financial and Administrative Systems Support Group from the General Administration to the Working Capital Fund. The transfer of this group will place all of JMD financial, administrative systems support services on a user-reimbursable basis.

Uncontrollable increases:

1. Annualization of the 1987 pay increase	...	...	7,837

This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 68 paid days (October 1, 1986 through January 3, 1987) which were not included in the pay raise amount of $3,932,000. Additionally, $3,461,000 of the 1987 pay requirement was absorbed. Total annualization required is $7,837,000.

68/261 x pay raise amount for 1987	$4,376,000
1987 absorption of pay	3,461,000
Total annualization	2,837,000

2. Annualization of additional positions approved in 1987	...	109	2,836

This provides for the annualization of 21 additional positions approved in 1987 for activation of new housing units at the Federal Correctional Institution, El Reno, OK and the Federal Prison Camp, Montgomery, AL and annualization of 400 correctional officer positions added by the Congress.

	Approved 1987 increase	Annualization required
Annual salary rate of 21 approved positions	$7,801	
Less lapse (46%)	-2,044	$2,044
Net compensation	5,757	
Associated employee benefits	1,108	362
Other object classes	1,360	430
Total costs subject to annualization	8,225	2,836

3. One additional compensable day	...	...	1,187

The annual salary rate for Federal Employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). $280,454,000 divided by 261 days = $1,075,303 plus $111,697 for benefits.

Justification of Adjustments to Base (Con't)
(Dollars in thousands)

	Pos.	Work-years	Budget Auth.
4. Within-grade increase	...	...	$3,077
This request provides for an expected increase in the cost of within-grade increases. This increase is generally consistent with increases experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment. (Personnel compensation $2,770,000 and benefits $307,000 = $3,077,000).			
5. Federal Employees' Compensation Act (FECA) - Workers' Compensation	...	...	564
This increase reflects the billing provided by the Department of Labor for the actual costs in 1986 of employees' accident compensation. The 1987 amount will be $564,000 over the 1987 base of $5,962,000.			
6. Annualization of Federal Employees' Retirement System Costs	...	...	28,931
This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula.			
7. Locality based per diem	...	...	389
Public Law 99-234 authorized a new locality-based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $389,000 is required to meet the expected 6 percent increase to total travel funds.			
8. GSA rent	...	...	507
In 1987 the Rent System replaces the Standard Level User Charge (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $507,000 is required to meet our rental commitment to GSA.			
9. GSA recurring reimbursable services	...	...	12
Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard service. GSA has estimated a 4.3 percent increase of $12,000 over 1987 charges of $278,000.			
			50

Justification of Adjustments to Base (Con't)
(Dollars in thousands)

	Pos.	Work-years	Budget Auth.
10. Federal Telecommunications System (FTS)	...	...	$292

The General Services Administration has advised of a 16 percent increase in Federal Telecommunications System (FTS) Intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and FY 1985 costs which were not billed by GSA last year. An increase of $292,000 over the 1987 base of $1,825,000 is requested.

11. Telephone Service	...	...	32

On February 25, 1986, the District of Columbia Public Service Commission (PSC) issued its final order in the Chesapeake and Potomac telephone company (C&P) rate case. The PSC, in its order, allowed C&P to increase its rates by $31 million and set the rates for C&P's intrastate services. The PSC order affects the rates the Federal Executive Agencies will pay for basic exchange service, CENTREX services, service connections, direct inward dialing services and channel services. These changes will increase the FY 1987 cost of operating the Justice Telecommunications Service (JTS) by an estimated $552,000. An increase of $32,000 over the 1987 base is requested.

12. GPO Printing costs	...	...	8

The Government Printing Office (GPO) is currently projecting a 3 to 4 percent increase over the 1987 printing cost of $273,000. An additional $8,000 will be required in 1988.

13. Employee data and payroll services	...	...	424

Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems maintenance and payroll accounting are based on the number of records maintained. The rate of $145.64 per record in FY 1986 will be raised to $155.76 per record for FY 1988. The charge is based on anticipated uncontrollable cost increases of 6.9 percent for the operation of the Justice Employee Data Service.

An additional increase of $312,000 has been included to improve the Human Resources Management Information System (HRMIS). This improvement will enhance the productivity of all Department components as well as the support units of accounting, budgeting and procurement. This retooling of support systems will allow the Department to operate an efficient, effective and businesslike operation.

			51

	Per.	Work-years	Budget Auth.
14. General pricing level adjustment	...	...	$8,542
This request applies OMB pricing guidance as of July 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.5 percent against those sub-object classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1988 estimates.			
Total uncontrollable increases	...	10	$1,838
Decreases (economic non-policy)			
1. Nonrecurring facilities activation costs	...	...	-246
This decrease represents the nonrecurring costs for equipment, supplies, and change of official duty station associated with the 1987 activations.			
2. Reduction for change in hourly rate	...	...	-737
Public Law 99-272, the Consolidated Omnibus Budget Reconciliation Act of 1985 required that the computation of annual salary rates be based on 2,087 hours rather than 2,080. The same amount that was reduced in 1984 and restored in 1986 is requested for reduction in 1988.			
3. Reduction in health benefits costs	...	...	-1,355
The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased approximately 13.6 percent due primarily to reduced carrier rates. The requested decrease includes $1,355,000 for decreased rates over the 1987 budgeted base.			

Justification of Adjustments to Base (Con't)
(Dollars in thousands)

	Pos.	Work-years	Budget Auth.
4. Reduction in per page cost of the Federal Register and the Code of Federal Regulations	...	...	-$2

The Legislative Branch Appropriation Act of 1978 (P.L. 95-941) amended the Federal Register Act to require Federal agencies to reimburse the Government Printing Office for costs of printing, binding and distributing the Federal Register (FR) and the Code of Federal Regulations (CFR). The current cost estimates from GPO indicate a per page cost of $390 for the FR and $55 for the CFR for 1988. This represents an $18 per page decrease for the FR and a $5 per page decrease for the CFR.

Total uncontrollable decreases	...	...	-2,340
Total adjustments to base level estimates	...	109	$2,708

Federal Prison System

National Institute of Corrections

Summary Statement

Fiscal Year 1988

The Federal Prison System is requesting for the National Institute of Corrections (NIC) for 1988, 41 positions, 41 workyears and $10,509,000. This represents an increase of $1,345,000 over the 1987 appropriation anticipated.

The mission of the NIC is to work with state and local governments to assist them in developing and training their corrections staff, to conduct and support research regarding ways to improve correctional programs and to serve as a clearinghouse for information on improvements in corrections. Given that the nation's prisons and jails are critically overcrowded, the functions which NIC perform become even more crucial.

Recognizing the critical overcrowding in the Federal Prison System, the Attorney General has set a 1988 priority of increasing prison capacity to house the growing number of Federal offenders. In direct support of this priority, NIC's training and technical assistance activities lessen the likelihood that state and local prison populations will "spill over" into the Federal prison system.

Without NIC's continuing assistance and leadership in providing relevant training and responsive intervention, the deficiencies (i.e., training of staff) which plague state and local correctional agencies will be exacerbated during a period when prisons and jails are experiencing unprecendented growth, crowding and diminishing resources with no apparent relief in sight for the foreseeable future.

The services performed by the NIC are extensive, and at a comparatively low cost to the Federal Government. In fact, a large part of the resources made available to NIC is used for the delivery of services to the corrections community. This is possible because NIC has in place cost saving initiatives. For example, NIC contracts with a private vendor to operate its clearinghouse function and certain accounting activities; enters into agreements with state and local governments through the Intergovernmental Personnel Act (IPA) and uses consultants to deliver technical assistance and provide training. The use of the IPA and consultants provide NIC flexibility to expand or decrease its staff as program requirements dictate, without the attendant long-term fiscal commitment.

In 1988, the NIC is again requesting no program increases; however, an increase of $1,345,000 is required to cover uncontrollable increases.

National Institute of Corrections

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

National Institute of Corrections

For carrying out the provisions of sections 4351-4353 of title 18, United States Code, which established a National Institute of Corrections, [$9,000,000] to remain available until expended. $10,509,000

(18 U.S.C. 4351-4353; Department of Justice and Appropriation Act, 1987 as included in Public Laws 99-500 and 99-591, section 101(b); additional authorizing legislation to be proposed.)

1987

Explanation of Changes

No substantive changes proposed.

Explanation of Analysis of Changes from 1987 Appropriation Request

Congressional Appropriation Actions

The Congress did not approve the policy requiring State and local governments to fund certain costs of travel, food, and lodging related to NIC-sponsored training. However, the Congress believed that the appropriation enacted along with unobligated carryover balances would be sufficient to continue services at previous levels.

Supplementals Requested

1. The supplemental for $15,000 is for increased Federal Telecommunications System costs.

2. The Pay/FERS request provides $20,000 to meet 53 percent of the increased pay requirements pursuant to P.L. 99-500 and $129,000 to implement the Federal Employees Retirement System Act of 1986, P.L.99-335.

Authorization for this program is contained in the Juvenile Justice and Delinquency Prevention Act of 1974. The primary purpose of the National Institute of Corrections (NIC) is to offer assistance through grants and contracts to state and local correctional agencies. Improving correctional practices at all levels continues to be a national need. NIC helps to ameliorate this need through its training, technical assistance, research and standards development activities. The Institute offers information and clearinghouse services to the correctional community and helps state and local correctional agencies build the capacity to do their own research.

Long Range Goal: Provide leadership in moving corrections toward greater professionalism; develop national policies from the guidance and coordination of Federal agencies and initiatives affecting corrections; serve as a national center to which state and local correctional agencies can turn to receive many different types of assistance; and serve as a source of correctional information and knowledge to provide immediate and accurate information about a wide variety of correctional programs, policies, planning standards, and practices.

Major Objectives:

To assist in the improvement of jail operations nationwide so they may become humane, fair, efficient, and effective and comply with legal requirements.

To strengthen correctional programs by effective and efficient utilization of staff and organizational resources.

To increase the effectiveness of correctional programs by expanding the use of alternatives to incarceration and promoting a safe, humane, and constitutional environment for those offenders who must be incarcerated.

To develop the capacity to respond quickly, accurately, and informatively to a wide variety of inquiries on correctional programs, policies, standards, and practices.

To provide training to the correctional community to upgrade skills of personnel.

Base Program Description: The program consists of three elements. The technical assistance element provides specialized assistance to state and local correctional agencies in response to specific requests within selected programmatic areas and supports the collection and dissemination of relevant correctional policies, programs, practices and resource documents. The research, evaluation and policy standards element provides assistance to jurisdictions attempting to develop and implement correctional standards. The training element advances correctional organizational performance through a systematic staff development program.

In an effort to increase coordination, reduce duplication, and upgrade state and local corrections, the National Institute of Corrections has initiated several activities, including developing memoranda of understanding between Federal agencies, placing representatives of several Federal agencies on the NIC Advisory Board, and conducting frequent meetings with representatives from the entire spectrum of correctional practice. An annual plan is approved by the Advisory Board, after which the NIC staff develops a program strategy utilizing training, technical assistance and clearinghouse, policy/program development and evaluation to accomplish the objectives in the plan.

Accomplishments and Workload: Accomplishments of the National Institute of Corrections program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Application papers processed	356	244	350	350
Grants and contracts awarded	150	145	135	135
Technical assistance provided	810	702	760	760
Training participants	2,770	3,051	2,700	2,700
Training requests	12,000	12,000	12,000	12,000
Information requests	7,355	7,500	7,500	7,500

During fiscal year 1986, the National Institute of Corrections awarded 145 grants and contracts to state and local correctional agencies, organizations and individuals to carry out its mission. The Institute responded to 702 requests for technical assistance from state and local agencies in all 50 states, the District of Columbia and Puerto Rico. Training was provided to over 3,000 managers, administrators, and staff trainers working in corrections. The provision of training to over 3,000 participants includes the participation of 980 staff trainers from state and local agencies in NIC sponsored programs at their agency site. These trainers subsequently provided similar training for nearly 22,500 correctional staff in their agencies. The NIC Information Center responded to over 7,000 information requests from federal, state and local practitioners.

72-188 O—87——43

Federal Prison System

National Institute of Corrections

Justification of Adjustments to Base
(Dollars in thousands)

Uncontrollable increases:	Amount
1. One additional compensable day..... The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation $1,510,000 divided by 261 = $6,000 plus $1,000 for benefits = $7,000.)	$7
2. Annualization of Federal Employees' Retirement System costs..... This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula. Additionally, $23,000 of the 1987 requirement was absorbed. Total annualization required is $212,000.	212
3. Annualization of 1987 pay increase..... This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 68 paid days (October 1, 1986 through January 3, 1987) which were not included in the pay raise amount of $20,000. Additionally, $18,000 of the 1987 pay requirement was absorbed. Total annualization required is $31,000.	31
68/261 x pay raise amount for 1987..... $13,000 1987 absorption of pay..... 18,000 Total annualization..... 31,000	
4. Within-grade increases..... This request provides for an expected increase in the cost of within-grade increases. This increase is generally consistent with increases experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment. (Personnel compensation $14,000 and benefits $1,000 = $15,000.)	15
5. Locality based per diem..... Public Law 99-234 authorized a new locality-based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $60,000 is required to meet the expected 25 percent increase to total travel funds.	60
6. GSA rent..... In 1987, the Rent System replaces the Standard Level User Charge (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $183,000 is required to meet our commitment to GSA.	183

1944

	Amount
7. Federal Telecommunications System (FTS)..... The General Services Administration has advised of a 16 percent increase in Federal Telecommunications System (FTS) Intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and FY 1985 costs which were not billed by GSA last year. An increase of $8,000 over the 1987 base is requested.	$8
8. General pricing level adjustment..... This request applies OMB pricing guidance as of December 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.7 percent against those sub-object classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1988 estimates.	339
9. Restoration of Congressional reduction..... This restoration adjusts for the lower than anticipated unobligated balance available and is required to provide sufficient funds to maintain most services at current levels.	495
Total uncontrollable increases.....	1,350
Decreases (Automatic non-policy):	
1. Reduction for change in hourly rate..... Public Law 99-272, the Consolidated Omnibus Budget Reconciliation Act of 1985 required that the computation of annual salary rates be based on 2,087 hours rather than 2,080. The same amount that was reduced in 1984 and restored in 1986 is requested for reduction in 1988.	-4
2. Reduction in Health Benefits..... The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective the first full pay period after January 1, 1986, the Department's actual contribution to health insurance decreased approximately 6.6 percent due primarily to reduced carrier rates. The The requested decrease includes $1,000 for decreased rates over the 1984 budgeted base of $15,000.	-1
Total decreases.....	-5
Total, adjustments to base.....	1,345

Federal Prison System

Buildings and Facilities

Summary Statement

Fiscal Year 1988

The Federal Prison System is requesting for 1988, a total of 129 permanent positions, 122 workyears and $210,334,000 for the Buildings and Facilities appropriation. This request reflects an increase of 45 positions and 51 workyears and a decrease of $8,915,000 from the 1987 appropriation anticipated.

A major objective of the Federal Prison System (FPS) facilities development program is to provide offenders with a safe and humane environment which affords an acceptable level of privacy and is located, where possible, close to the offenders' area of residence. Towards this end, the FPS believes in the construction of smaller, modern institutions which in design and structure accommodate the offering of a complete range of programs and activities for improving offenders' capabilities to achieve crime-free lives.

Current prison overcrowding coupled with projected increases in the Federal inmate population continues to be the major challenge facing the Federal Prison System. Since January 1981, the FPS has experienced a dramatic 75 percent growth from 23,783 inmates to an all time high of almost 41,500 inmates, an average growth of about 13 percent per year. This population growth is primarily the result of law enforcement and prosecution efforts against drug trafficking and organized crime.

During this period of rapid population growth, the FPS has taken every possible action within available resources to reduce institutional overcrowding to manageable proportions to ensure that Federal inmates continue to serve their sentences in a safe and humane environment. These actions include increasing utilization of contract Community Treatment Centers and contract State and local facilities, expanding existing institutions, acquiring surplus facilities, and constructing new facilities.

The Federal Prison System's current population of approximately 41,500 is housed in facilities which are rated for a capacity of 27,785 in accordance with standards developed by the Commission on Accreditation for Corrections. This results in a 13,715 bed deficit or an overcrowding rate of almost 50 percent. Based on analyses of current inmate population trends, prosecution and court statistics and workload projections of the FBI and the DEA, the FPS projects that the inmate population will continue to grow and will be at least 44,878 in 1988 and that it will reach 55,200 by 1993. Moreover, the Comprehensive Crime Control Act of 1984 and the Anti-Drug Abuse Act of 1986 will, in all likelihood, further increase the inmate population.

The Buildings and Facilities appropriation contains three budget activities: Planning and Site Acquisition, New Construction, and Modernization and Repair of Existing Facilities.

The activity Planning and Site Acquisition provides resources for the identification and location of suitable sites for the acquisition or construction of new correctional facilities. It also provides for the design of these facilities in a manner consistent with security and program requirements and architectural innovation. The activity New Construction provides the resources required to construct new correctional institutions.

In 1986, the construction of the Federal Detention Center in Oakdale, Louisiana was completed. However, this 1,000-bed facility is for alien detainees under the control of Immigration and Naturalization Service.

In the northeast, the FPS has acquired sites in Fairton, New Jersey and in Bradford, Pennsylvania. Preliminary site work has begun at both locations and major construction should commence in the Spring of 1987. Other potential sites in Pennsylvania and New Jersey are being considered for the construction of one additional Federal Correctional Institution.

In the southeast, preparation of the Marianna, Florida site was completed and construction of the facility is in progress. FPS is also in the process of acquiring a site for the construction of a medium security facility in Jesup, Georgia.

In the west, a Metropolitan Detention Center in Los Angeles, California is under construction and scheduled for completion in 1988. In addition, a site was acquired in Sheridan, Oregon and construction construction should commence in 1987.

The activity Modernization and Repair of Existing Facilities provides the resources to undertake essential rehabilitation, renovation or replacement projects at existing institutions to ensure that structures, utilities systems, and other plant facilities are kept in a good state of repair. Proper maintenance, modernization and repair of our existing institutions is essential, particularly since 50 percent of our facilities are over 30 years old. Failure to adequately maintain structures and utilities systems erodes capital investment and multiplies the costs in future years for accomplishing the required maintenance and repair. This activity also provides for the expansion of capacity at existing institutions.

To expand Federal prison capacity to keep pace with projected increases in the Federal inmate population and to simultaneously reduce prison overcrowding continues to be the major challenge facing the Federal Prison System. In 1988, 21 positions, 15 workyears and $130,200,000 is requested to construct two new Federal Correctional Institutions (FCI's) (one in the northeast and one in the southeast); to construct a new Federal Detention Unit;

Summary Statement (Con't)

to construct new satellite camps at the Ashland, KY, Memphis, TN, and Talladega, AL, FCI's; to construct new housing units at the Morgantown, WV and Oxford, WI FCI's; and to expand the satellite camp at the U.S. Penitentiary, Atlanta, GA. These new facilities will add 2,400 beds to FPS's capacity.

The 1988 request also includes $30,000,000 to complete the construction of the Sheridan FCI (the Sheridan facility was partially funded in 1987); 7 positions, 7 workyears and $10,725,000 to maintain investment in plants through an adequate program of institution renovation and repair; 18 positions, 18 workyears and $7,504,000 to continue fire safety and environmental improvements and 5 positions, 5 workyears and $17,000,000 to modernize antiquated U.S. penitentiaries at Atlanta, GA and Leavenworth, KS.

Federal Prison System

Buildings and Facilities

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Buildings and Facilities

For planning, acquisition of sites and construction of new facilities; purchase and acquisition of facilities and remodeling and equipping such facilities for penal and correctional use, including all necessary expenses incident thereto, by contract or force account; and constructing, remodeling, and equipping necessary buildings and facilities at existing penal and correctional institutions, including all necessary expenses incident thereto, by contract or force account, [$122,511,000] to remain available until expended: Provided, That labor of United States prisoners may be used for work performed under this appropriation. $210,334,000

(18 U.S.C. 4003, 4009, 4010, 4042 4125; Department of Justice Appropriations Act, 1987, as included in Public Laws 99-500 and 99-591, section 101(b); additional authorizing legislation to be proposed.)

[For an additional amount for "Buildings and Facilities", $96,500,000, to remain available until expended.]

Omnibus Drug Supplemental Appropriations Act of 1987, as included in Public Laws 99-500 and 99-591, Title II.

Explanation of Changes:

No substantive changes.

1953

Explanation of Analysis of Changes from 1987 Appropriation Request

Congressional Appropriation Actions

The Congress reduced the 1987 request by $30,000,000 due to anticipated delays in the construction of three Federal Correctional Institutions proposed in the request and approved by the Congress. Also, a $6,489,000 reduction resulted from a 5.03 percent cut brought about by the Prenzel Amendment. A $152,000 reduction was attributed to rounding.

The Omnibus Drug Supplemental Appropriations Act of 1987 provided an additional $96,500,000 for "Buildings and Facilities". Of this amount, $90,000,000 is for the design and construction of two new Federal prisons to relieve the severe overcrowding that exists in the Federal Prison System. The remaining $6,500,000 offsets the $6,489,000 which resulted from the 5.03 percent cut and partially offsets the rounding reduction.

Supplemental Requested

The request provides $30,000 to meet fifty percent of the increased pay requirements pursuant to P.L. 99-500 and $208,000 to implement the Federal Employees' Retirement System Act of 1986, P.L. 99-335.

Federal Prison System

Buildings and Facilities

Justification of Program and Performance

Activity Resource Summary
(Dollars in thousands)

Activity: Planning and Site Acquisition	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Planning and Site Acquisition.....	2	2	$10,000	...	...	...	2	2	$9,000	2	2	$9,000

This budget activity provides for the identification, location and acquisition of suitable sites for, and design of new correctional facilities to be constructed. Suitable sites may include surplus government property or non-government property.

Long-Range Goals: To provide safe, humane environments for both inmates and staff, which meet the basic human needs for privacy and dignity, which support voluntary programs of self-improvement that prepare inmates for their eventual release into the community, and which minimize the often corrosive effects of institutional confinement. To locate sites as near as possible to large metropolitan areas in order to maximize the use of community resources, enhance staff recruitment and place inmates close to their release destinations.

Major Objectives:

Review FPS capacity requirements.

Locate and acquire suitable, surplus facilities as an alternative to prison construction.

Locate and acquire suitable sites for new construction.

Prepare design programs and concepts for new facilities, including new housing units.

Base Program Description: Planning involves the initial identification of increased capacity needs, as well as the geographical location of these needs. FPS continuously reviews capacity requirements, considering the inmate population level, the geographic origin of the confined population, and the age and condition of present facilities. If projected inmate population levels exceed capacity, FPS makes a determination of whether to: increase capacities of existing institutions; acquire suitable surplus property; increase the utilization of Community Treatment Centers; or construct new facilities.

The FPS has always emphasized alternatives to the construction of new facilities and the most cost-effective approaches to expansion of prison capacity. However, if no suitable alternatives to new prison construction are available, FPS must plan for the construction of new facilities. A suitable site must be located and acquired. The site acquisition process also includes notification of the public, preparation of the Environmental Impact Statement, coordination of the legal procedures necessary for acquisition of the properties and some site preparation work.

In addition, the design of the new facility outlining the function, size, type and relationship of the various spaces as well as a general philosophy of operation must be proposed. Architects and engineers are hired to prepare preliminary concepts, designs and recommendations which are reviewed by FPS staff. Final contract documents are then monitored for correctness, completeness and cost effectiveness. The project is then bid for construction provided that construction funds have been appropriated. This planning and site acquisition process takes from between 12 to 18 months and usually overlaps the construction process by three to six months.

It should be emphasized that within the base program the Federal Prison System (FPS) will not have sufficient resources to satisfy its capacity requirements. Efforts to date to increase capacity by adding housing units at existing institutions, acquiring surplus property, increasing the utilization of contract facilities and constructing new institutions still leave the FPS significantly short of capacity.

The FPS inmate population recently reached an all-time high of approximately 41,500. This population is currently being housed in facilities with a total rated capacity of 27,785, a system overcrowding rate of almost 50 percent. Research studies on prison overcrowding indicate that the normal tensions of institutional living become magnified and can result in increased violence. In addition, changes in prosecution policies over the past several years have resulted in a more criminally sophisticated and violent Federal inmate population.

Since January 1981, the Federal inmate population has increased from 23,783 to 41,500. This dramatic 75 percent increase is the result of the law enforcement initiatives taken by this Administration, particularly the emphasis on drug trafficking and organized crime. Based on long-term trends, short-term projections are that the annual average daily population will be at least 44,878 in 1988 and that it will reach 55,200 by 1993.

The enactment of the Comprehensive Crime Control Act of 1984 will, in all likelihood, further increase the inmate population. The addition of several new Federal offenses in the area of drug trafficking, violent crime, terrorism and computer fraud may all contribute to this increase. The Armed Career Criminal provisions of the legislation provide for a minimum mandatory sentence of 15 years for offenders with prior robbery/burglary convictions. Additionally, the Act establishes a minimum mandatory five year sentence for use of a firearm in a Federal crime of violence. Such provisions have the potential for generating significant inmate population increases. In addition to the creation of several new Federal offenses, the legislation's provisions for the elimination of good time and parole and the establishment of sentencing guidelines by the new Sentencing Commission may have a significant impact on the resource requirements of the FPS. The Marshals Service has estimated that the Bureau of Prisons's detention population has already increased by 25-30 percent as a direct consequence of the Bail Reform Act provision of the Comprehensive Crime Control Act. Moreover, the recent enactment of the Anti-Drug Abuse Act of 1986 and the Administration's border drug law enforcement initiatives will also increase the inmate population.

The FPS also sustained a large increase in its population in 1980 as a result of the illegal entry of Mariel Cubans into the United States. Again in 1986, the Cuban population grew from 1,800 to over 2,100 due to criminal convictions in state and local courts and eventual revocation of the Cubans' immigration parole status.

The indefinite postponement of the agreement to return the excludable Mariel Cubans and the Department of Justice agreement to accept all D.C. Code felons and misdemeanants sentenced to prison and jail promise larger future populations in the Federal Prison System than previously projected.

The FPS has traditionally assisted other correctional systems by accepting non-Federal inmates in Federal facilities on a contract reimbursement basis. Within the current Federal prison population, approximately 3,388 offenders are non-Federal inmates. The largest single group is approximately 2,500 District of Columbia Code violators. In addition, there are 634 state and 253 territorial prisoners serving their sentences in Federal prisons. It should be noted, however, that the rapidly increasing Federal inmate population and current overcrowding precludes any increase in this assistance. Conversely, the FPS maintains contracts to house some Federal offenders in state and local facilities. Currently, 1,475 Federal offenders are being housed in state and local facilities. Contractual housing arrangements enable Federal and non-Federal correctional systems to better manage inmates with special needs and those who pose other management problems.

In addition to constructing new facilities to reduce overcrowding, the FPS has pursued other options.

The Federal Judiciary and the Federal criminal justice community have traditionally made extensive use of alternatives to confinement. In 1986, two out of three Federal offenders under supervision were in alternatives to confinement. The FPS has also sought to minimize overcrowding of its facilities through using Contract Community Treatment Centers and contract state and local facilities, expanding existing institutions, and by acquiring surplus facilities.

During the past four years, the FPS has increased the Community Treatment Center population from 1,400 to approximately 3,200 inmates. This 128 percent increase has reduced significantly the potential institution based population.

Another alternative to construction of additional capacity is the use of contract confinement facilities. Presently, the FPS contracts with state and local governments for both short and some long-term confinement. Any substantial increases in this program, however, are not possible at the state level due to overcrowding. We will continue to seek out local capacity options as they become available.

From a cost perspective, the expansion of existing institutions is the least expensive technique for increasing FPS capacity. The FPS is currently building additional housing units at facilities where program space can absorb further population increases. However, where major program areas, such as food service and utilities are already saturated, expansion may approach the cost of newly constructed facilities.

The FPS continually reviews Federal surplus and other property for possible acquisition and conversion to a correctional facility. The acquisition and conversion of existing property and structures is much less expensive than new construction and such facilities can be brought on-line in a much shorter period of time. The FPS has had excellent success in the conversion of surplus Air Force Bases to minimum security Federal Prison Camps such as those which exist at Big Spring, Texas and Boron, California. In the last four years, the FPS has acquired and activated a surplus Air Force facility in Duluth, Minnesota as a Federal Prison Camp; a former state mental hospital in Rochester, Minnesota for conversion to a facility for inmates requiring general medical/surgical and psychiatric treatment; and a former Seminary in Loretto, Pennsylvania for conversion to a Security Level 1 institution.

1357

While conversion of facilities to minimum security institutions is usually feasible, it generally is not cost-effective to convert most surplus properties to higher security level institutions because appropriate physical security must be designed into the facility. Converting existing non-correctional properties to medium and maximum security facilities is frequently more expensive than design and construction of new institutions.

The prediction of future events is no less difficult in the prison setting than in other areas of social phenomena. Future policy and discretionary decisions throughout the Federal criminal justice system will significantly affect inmate population levels. It has been the experience of the FPS that highly accurate long-range population projection methodologies simply do not exist. While there are often factors that have statistically valid correlations with prison populations, such as Federal court activities, a basic difficulty arises when one attempts to forecast those variables in order to project prison populations, or when other non-court related variables like INS or D.C. government policies come into play.

It should be understood that the FPS population projections traditionally have been conservative in order to insure that funds are not needlessly expended in constructing unnecessary prison capacity. The inmate population increase projected is not over estimated but rather represents the minimum level of increase which is likely to occur during the next five years. As discussed above, this conclusion is based on four facts: 1) the historically conservative nature of the FPS inmate population projections; 2) the exclusion, at this time, of the impact of the Comprehensive Crime Control Act of 1984; 3) the unknown future of D.C. prisoner housing and (4) the exclusion of the impact of the enactment of the Anti-Drug Abuse Act of 1986.

Factors considered in the population estimate include:

- Continuation of the Administration's law enforcement initiatives.
- Long-term inmate population trends.
- Long-term admission and release trends.
- Limited availability of state and local correctional space.

The FPS is projecting a 41.5 percent increase for the seven year period 1986 to 1993. This is an annual rate of growth of 6 percent per year.

In 1986, a 1,000 bed Alien Detention Center in Oakdale, Louisiana became fully operational. The Oakdale facility, however, is for alien detainees under the control of the Immigration and Naturalization Service, and will not reduce FPS overcrowding.

Currently, a Metropolitan Detention Center in downtown Los Angeles and a Federal Correctional Institution in Marianna, FL are under construction and in 1987, the FPS will begin construction of new institutions in Bradford, PA, Sheridan, OR and Fairton, NJ. The FPS is also in the process of acquiring a site in Jesup, GA and is considering sites in Pennsylvania and New Jersey for the construction of one more FCI.

These new facilities combined with previously approved capacity expansion at 14 existing institutions and the 1988 request to construct two new Federal Correctional Institutions (FCI's); to construct a new Federal Detention Unit; to construct new satellite camps at Ashland, Memphis and Talladega FCI's; to construct new housing units at the Morgantown and Oxford FCI's and to expand the satellite camps at the U.S. Penitentiary Atlanta, GA will increase the rated capacity of the Federal Prison System by 9,195.

1858

Accomplishments and Workload: The following table compares projected population levels through 1993 to capacity changes:

Item	Actual						Estimated						
	1981	1982	1983	1984	1985	1986	1987	1988	1989	1990	1991	1992	1993

In 1986, the FPS acquired three sites, one in Fairton, New Jersey; another in Bradford, Pennsylvania; and a third in Sheridan, Oregon. Construction should commence during 1987. The FPS is also in the process of acquiring a site in Jesup, Georgia and considering potential sites in Pennsylvania and New Jersey for the construction of one additional Federal Correctional Institution.

Program Changes: In 1988, FPS is requesting 2 positions and 2 workyears and $9,000,000 for the planning and site acquisition of two new Federal prisons - one in the northeast and one in the southeast.

Activity: New Construction	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
New Construction.....	36	25	$183,895	38	38	...	51	45	$124,500	13	7	$124,500

The Bureau's long-range construction program was undertaken specifically to (1) reduce institutional overcrowding, (2) close or modernize large antiquated facilities, and (3) develop smaller, more humane facilities that will offer programs designed to provide inmates an opportunity to achieve a crime-free life.

Long Range Goal: To construct safe, humane environments for both inmates and staff, meeting the basic human needs for privacy and dignity.

Major Objectives:

To expand the capacity of the Federal Prison System to keep pace with projected increases in the Federal inmate population and to simultaneously reduce prison overcrowding.

Base Program Description: After the need for new construction has been established, a site is acquired and a design is completed. Resource requests within this decision unit provide for the construction of new facilities. Essentially, the FPS oversees construction projects that have been contracted out to private construction firms. Coordination is developed with all necessary agencies to assure that all Federal regulations are followed, e.g., the Environmental Protection Agency, General Services Administration, Department of Justice, etc. Coordination is also maintained with state and local jurisdictions. Quality control of all projects is maintained by FPS staff to assure the most productive use of resources and the timely completion of all projects.

Accomplishments: In 1986, the construction of the Federal Detention Center in Oakdale, Louisiana was completed. Congress provided funds for the construction of the Oakdale facility in the Supplemental Appropriations Act of 1982 (P.L. 97-257).

From funds provided in the "Jobs Bill" of 1983 (P.L. 98-8), Congress in November 1983 approved a reprogramming to construct a Metropolitan Detention Center in Los Angeles, California. The facility is under construction and scheduled for completion in January 1988.

In addition, the FPS began construction of a new institution in Marianna, FL during 1986. The FPS temporarily reprogrammed funds provided in the 1985 Appropriation (P.L. 98-411) for the construction of a Northeast FCI (Fairton, NJ) in order to begin construction of the Marianna facility. The 1987 Appropriation (P.L. 99-500) provided full construction funding for the Marianna facility.

During 1987, FPS plans to begin construction of new prisons in Fairton, NJ; Bradford, PA; and Sheridan, OR. Funding was provided in the 1987 Appropriation for the Bradford and Sheridan facilities. However, $30,000,000 will be required in the 1988 budget to complete the Sheridan construction.

The FPS has full funding for two additional facilities which are currently at the planning and site acquisition stage. Construction should begin on these facilities during 1988.

Program Changes: In 1988, FPS is requesting 6 positions, 3 workyears and $46,500,000 to construct a 700-bed Northeast Federal Correctional Institution (FCI); 6 positions, 3 workyears and $41,000,000 to construct a 700-bed Southeast FCI; 1 position, 1 workyear and $7,000,000 to construct a 150-bed Federal Detention Unit; and $30,000,000 to complete funding of a Sheridan, Oregon FCI which was partially funded in 1987. The need for these facilities is based on our current and projected level of overcrowding through 1993 which is discussed in more detail in the "Base Program" section of the decision unit "Planning and Site Acquisition".

Activity: Modernization and Repair of Existing Facilities	1987 as Enacted			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Modernization and Repair of Existing Facilities	46	44	$25,454	40	39	$14,905	76	75	$76,834	36	36	$61,929

This activity provides resources for major rehabilitation, renovation or replacement of structures and utilities systems, and minor repair projects at existing institutions.

Long-Range Goals: To protect capital investment in facilities. To provide safe, efficient, and adequately sized and equipped facilities for the operation of correctional programs within Federal Prison System (FPS) institutions.

Major Objectives:

Repair and renovate facilities as required.

Make all facilities energy efficient in accordance with Department of Energy Life Cycle Costing method.

Comply with all pollution control requirements.

Comply with all requirements of the Joint Commission on Accreditation of Hospitals (JCAH).

Comply with all requirements of the National Fire Protection Association (NFPA), 101 Life Safety Code pertaining to penal facilities.

Modernize the United States Penitentiary, Leavenworth, Kansas.

Modernize the United States Penitentiary, Atlanta, Georgia.

Increase the capacity of existing FPS facilities, where possible, to reduce overcrowding.

Base Program Description: Because prisons operate on a 24 hour a day, 7 day a week basis, buildings and grounds are subjected to heavy use. Therefore, there is a continuing need to upgrade and repair areas damaged and worn by conducting normal activities and during emergency situations. In addition, the normal expected useful life of buildings without major repair and renovation is 30 years. Because 50 percent of the institutions are over 30 years old, a program for the replacement and/or rehabilitation of obsolete structures and plant facilities is required.

The Chief Executive Officer of each institution initiates a modernization and repair program considering the FPS's long range goals and major objectives. To assist him, regional office facilities staff perform space utilization studies at each institution on a 2-year cycle. These studies involve examining space available at each institution, assessing its use, and developing an overall plan to be followed in space utilization and renovation of the institution.

In part, objectives are accomplished using inmate labor crews supervised by FPS staff. Using inmate crews to do nearly all of the work requires considerably more time and staff supervision but is cost effective and provides inmates with meaningful work experience and training. Many of the larger projects, as well as those projects requiring special skills or equipment, are accomplished by contracting with local construction firms which allow for faster completion of the work with minimal supervision.

Most work in this decision unit is identified by two specific categories of projects: Major line item requirements (projects valued over $100,000) for which funds are specifically requested by project in appropriations requests; and repair and improvement (R&I) requirements (projects valued at $4,000 to $100,000). R&I projects address immediate needs resulting from routine repairs, emergencies, correctional program changes, etc., and are considered the base requirements for this program. All projects are closely monitored by the regional facilities staff for quality and timeliness of completion.

Coordination with regulatory agencies is required for pollution abatement and energy programs. The Environmental Protection Agency is consulted for guidance in the design of sewage treatment plants, acceptable fuel for heating and cooling, disposal of wastes and other pollutants. The Department of Energy is consulted with regard to availability and allocation of energy sources. Coordination with the General Services Administration is required for the procurement of certain materials and equipment. Repairs and improvements to buildings and facilities are accomplished within FPS in accordance with existing occupational safety and building legislation.

1983

Accomplishments and Workload: Accomplishments of the program Modernization and Repair of Existing Facilities are presented in the following table:

Item	1985	1986	Estimates 1987	1988
New repair and improvement projects established	190	251	250	250
New line item projects established	15	24	16	20
Projects completed and closed	211	250	250	300
Projects active	422	447	463	433

In 1986, FPS completed the lease/purchase of the Federal Correctional Institution, Oxford, Wisconsin, negotiated with the State of Wisconsin in Fiscal Year 1973. FPS made an annual payment of $1.5 million through 1986 which totaled $20,912,247 at completion.

In 1983 FPS embarked on a program to expand inmate housing capacity at existing institutions as one of the most economical alternatives of adding capacity and reducing overcrowding. To date, nine of these projects, which added 1,007 beds, were completed (Memphis Housing Unit, Petersburg Camp Housing Unit, Boron Housing Unit, Oxford Satellite Camp, Tallahassee Housing Unit, Butner Housing Unit, Ashland Housing Unit, La Tuna Housing Unit, and Lexington Housing Expansion). In addition, 14 projects, which will add 1,582 beds are scheduled for completion during the period 1987 - 1989 (Milan Housing Unit, Miami Housing Unit, Texarkana Housing Unit, Seagoville Housing Unit, Allenwood Housing Unit, Tucson Housing Unit, three Montgomery Housing Units, Boron Housing Unit, Eglin Housing Unit, Marion Camp Expansion, Phoenix Satellite Camp, and Englewood Detention Unit).

From 1979 through 1985, projects totalling approximately $4,000,000 were completed throughout FPS to bring housing units into compliance with certain aspects of the NFPA 101 Life Safety Code and requirements set by FPS. These projects include installation of proper exits, emergency lights, smoke detection systems, standpipes and hose cabinets and removal of combustible building materials. This represents the initial phase of bringing the institutions into compliance with all requirements of the 101 Life Safety Code. To date, 30 institutions were surveyed by outside professionals for Life Safety Code Compliance. Results of these surveys indicate that the cost to bring institutions into total compliance with the Life Safety Code will approximate $1 million per institution. Ten of the highest priority projects identified, totalling $702,400, were funded from the 1985 repair and improvement budget. The 1986 appropriation provided $1.5 million to continue this effort.

Energy conservation is an ever increasing program requiring a large investment of staff and funds. Since 1981, approximately $2 million was obligated to accomplish retrofit projects such as roof insulation, steamline insulation, lighting changes, electrical load demand controllers and heating, ventilating and air conditioning renovation.

A long-term multiphase project to convert USP Leavenworth from an outdated inside five tier cellhouse to a modern correctional institution with individual closed front cells began in 1982. The first phase, which was to modernize "B" cellhouse from a 5-story unit to 330 inside cells on one 2 story unit and one 3 story unit was completed in February 1985. Since completion of "B" cellhouse, FPS has decided that a much better design would be to create three 2 story units of outside cells in each cellhouse. This would provide approximately 400 cells in "A" cellhouse and 150 cells each in "C" and "D" cellhouses and provide outside windows in each cell. Work is now proceeding on the new design for the remaining cellhouses. The interior of "A" cellhouse has been completely removed and the construction work is proceeding with completion scheduled for the fall of 1987.

Construction of a 98-bed minimum security camp at the USP at Atlanta, Georgia began in 1983 and was completed in July 1984. This is the first phase of the renovation of the penitentiary to a modern correctional institution. In addition, a conceptual design to convert the 5 tier cell blocks to three 2 story housing units has been completed. Due to the continued presence of Marielito Cubans, the emphasis for the modernization has been shifted to utility and non-housing areas.

The renovation of the deactivated Air Force Base at Duluth, Minnesota, which began in 1983, and a former seminary in Loretto, Pennsylvania were completed in 1986. These facilities added 711 and 415 capacity respectively to the Federal Prison System. In addition, renovation of the former state hospital in Rochester, Minnesota continues with completion expected in 1987. This facility will eventually have a capacity of 475.

Program Changes: In 1988, FPS is requesting 36 positions, 36 workyears and $61,929,000 to accomplish important major modernization and repair projects; to continue fire safety and environmental improvements; modernize U.S. Penitentiaries; and to construct new inmate housing at existing institutions increasing capacity by 850 beds.

Facility Improvements. The request includes 7 positions, 7 workyears and $10,725,000 to maintain investment in plant through an adequate program of institutional renovation and repair. Following are the proposed projects:

1. Convert FCI Terminal Island to a Security Level 3 Facility. This request includes 1 position, 1 workyear and $2,287,000 to relocate sensitive functions to outside the perimeter fence.

2. Construct a Segregation Unit at FCI Tallahassee. This request includes 1 position, 1 workyear and $2,856,000 to construct a new 75-bed segregation unit and receiving and discharge facility.

3. Renovate Food Service at FCI El Reno (Phase 2). This request includes 1 position, 1 workyear and $1,200,000 to complete the renovation of food service facilities.

4. Expand Housing Unit at FCI Sandstone. This request of 1 position, 1 workyear and $140,000 is required to modify existing space into dormitory style living quarters and provide space for an additional 60 beds.

5. Repair Roofs at FCI Englewood. This request of $700,000 is required to replace existing roofs and insulation.

6. Construct Sewage Treatment Lagoon System at FCI La Tuna. This request includes $485,000 to design and construct a sewage system to provide for present and projected future needs.

7. Replace the Inner Fence at FCI Ray Brook. This request of 1 position, 1 workyear and $500,000 is required to construct a new inner fence to correct security problems.

8. Improve Perimeter Security at FCI Tallahassee. This request totalling 1 position, 1 workyear and $451,000 is required to install a microwave detection system, man barrier wire and razor ribbon around the perimeter and cameras at the rear gate.

9. Renovate "A" Cellhouse at FCI El Reno (Phase 2). This request includes 1 position, 1 workyear and $2,106,000 for the renovation of 120 cells.

1985

Fire Safety/Environmental Improvements. This request includes $7,504,000, 18 positions and 18 workyears to continue fire safety improvements and to clean up and remove hazardous materials from FPS institutions.

Modernization of Antiquated U.S. Penitentiaries. The Congress has directed the Bureau of Prisons to renovate the U.S. Penitentiaries at Leavenworth, Kansas and Atlanta, Georgia. Some work has been accomplished at both of these institutions. This request for $17,000,000, 5 positions and 5 workyears would allow continuation of these projects as follows:

1. Continue Modernization at Leavenworth Penitentiary. The Congress directed the Bureau in November 1979 (P.L. 96-132, Department of Justice 1980 Authorization Act), to begin the renovation of the U.S. Penitentiary, Leavenworth, Kansas for conversion to a modern correctional facility by 1985. The project was begun with inmate labor but it was later determined necessary to contract for the majority of work, at additional cost. Rereview and further cost analysis showed that continuation of the project remained more cost effective than new construction of comparable capacity. Approved funding through 1986 totals $21.2 million. Renovation of Cellhouse "E" has been completed and Cellhouse "A" renovation is underway. No new funds were provided in the 1987 budget. The requested funding for 1988 of 2 positions, 2 workyears and $7,000,000 will provide for the renovation of "C" and "D" Cellhouses and will complete the renovation of all cellhouses at Leavenworth.

2. Continue Modernization at Atlanta Penitentiary. In February 1982, Congress approved the Department's request to cancel the plan to close the U.S. Penitentiary, Atlanta, Georgia in order to provide housing for the Mariel/to Cuban detainees. At the same time, the Congress directed that Atlanta also be converted to a modern correctional facility. Funding approved through 1986 totals $12,378,000. No new funds were provided in the 1987 budget. Renovation of the cellhouses has not begun because of the Cuban detainee population. Work thus far has involved renovation of support facilities such as utilities systems, warehousing and recreation areas, etc. This request of 3 positions, 3 workyears and $10,000,000 provides the funds needed to begin renovation of inmate housing.

Expand Capacity at Existing Institutions. To reduce overcrowding and to minimize the construction of new institutions, FPS continues to review the opportunities for expansion of existing facilities. This request for $26,700,000, 6 positions and 6 workyears would increase capacity at existing institutions by a total of 850 beds. The projects are as follows:

1. Construct a Satellite Camp at FCI Ashland. This request includes 1 position, 1 workyear and $5,900,000 to construct a 150-bed minimum security camp.

2. Construct a Satellite Camp at FCI Memphis. This request of 1 position, 1 workyear and $5,900,000 is required to construct a 150-bed minimum security camp.

3. Construct a Satellite Camp at FCI Talladega. This request totals 1 position, 1 workyear and $5,900,000 to construct a 150-bed minimum security camp.

4. Expand Camp at Atlanta Penitentiary. This request of 1 position, 1 workyear and $3,000,000 is required to construct a 150-bed addition to the existing satellite camp.

5. Construct a New Housing Unit at FCI, Morgantown. This request provides 1 position, 1 workyear and $3,500,000 to construct a 150-bed housing unit.

6. Construct a New Housing Unit at FCI Oxford. This request totals 1 position, 1 workyear and $3,700,000 to construct a 100-bed housing unit.

1988

Federal Prison System

Buildings and Facilities

Justification of Adjustments to Base
(Dollars in Thousands)

Uncontrollable Increase:	Perm. Pos.	Work-years	Amount
1. One additional compensable day..... The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261).	...	...	$8
2. Annualization of additional positions approved in 1987..... This provides for the annualization of the positions approved in 1987. Funds are available from unobligated balances.	...	11	...
3. Annualization of Federal Employees' Retirement System Costs..... This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula. Additionally, $42,000 of the 1987 requirement was absorbed. Total annualization required is $335,000.	...	...	335
4. Annualization of 1987 pay increase..... This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 261 compensable days in 1987 and 68 paid days (October 1, 1986 through January 5, 1987) that were not included in the pay raise amount of $30,000. Additionally, $30,000 of the 1987 pay requirement was absorbed. Total annualization required is $64,000.	...	...	64
5. Within-grade increases..... This request provides for an expected increase in the cost of within-grade increases. This increase is generally consistent with increases experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment.	...	...	19
6. Locality based per diem..... Public Law 99-234 authorized a new locality-based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $64,000 is required.	...	...	64

Justification of Adjustments to Base (Con't)
(Dollars in Thousands)

	Perm. Pos.	Work-years	Amount
7. Federal Telecommunications System (FTS)..... The General Services Administration has increased the 1986 FTS budgeted figure by approximately 16 percent to reflect unanticipated cost increases. In their development of the 1987 and 1988 estimates GSA used the increased 1986 base and included projected tariff increases and costs savings from projects underway. The result is an increase of 32 percent for 1987 and 34 percent by 1988. An increase of $18,000 is requested.	...	...	18
8. General pricing level adjustment..... This request applies OMB pricing guidance as of December 1986 to selected expense categories. The increased costs identified result from applying a factor of 4.0 percent against those sub-object classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1988 estimates.	...	...	545
Total uncontrollable increases.....	...	11	1,053
Decreases (Automatic non-policy):			
1. Positions and workyears associated with closed projects.....	-6	-5	...
2. Nonrecurring costs associated with projects approved in 1987.....	...	...	-205,369
3. Reduction in Health Benefits..... The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased approximately 13 percent due primarily to reduced carrier rates.	...	...	-8
Total decreases.....	-6	-5	-205,397
Total, adjustments to base.....	-6	-6	-204,344

Federal Prison System

Federal Prison Industries, Incorporated

Summary Statement

Fiscal Year 1988

The Federal Prison System is requesting for Federal Prison Industries, Incorporated for 1988, a total of 1,047 permanent positions and 997 workyears. This request represents an increase of 85 positions and 40 workyears from the 1987 level.

Federal Prison Industries, Incorporated, was created by Congress in 1934 and is a wholly owned Government corporation. The Corporation is authorized to operate industries in Federal penal and correctional institutions and disciplinary barracks (18 U.S.C. 4121-4128). Supervision is provided by the Director of the Federal Prison System who has jurisdiction over all Federal penal and correctional institutions. Profits from the Corporation's industrial activities are used to fund activities which benefit Federal inmates by providing vocational training and for compensating inmates performing in work details in institutional support functions.

Administrative expenses - A board of six directors, appointed by the President and serving without compensation, controls the policies of the Corporation. General management of the Corporation is presently performed by a staff of 29 employees located in Washington, D.C. Expenses of this function are subject to Congressional limitation.

Vocational training expenses - The vocational training expenses limitation provides funds for active educational and vocational training programs that are designed to prepare inmates for productive and meaningful employment upon release. Efforts are being made to explore an increasing range and variety of vocational training opportunities. Expenses of this function are subject to Congressional limitation.

Industrial manufacturing program - Approximately 13,500 inmates will be employed during 1988 in 46 locations in the manufacture of such items as furniture, clothing, electronics, metal and canvas products. They also work in service industries such as furniture refinishing and data processing. All products of the Corporation are sold to Federal agencies. The Department of Defense, the Postal Service, and the General Services Administration are the largest customers. In 1988, an increase of 85 positions and 40 workyears is requested to provide supervision and training for an additional 1,500 inmate employees through the expansion of factories at several institutions and the establishment of new factories at four institutions.

Federal Prison System

Federal Prison Industries, Incorporated

Justification of Proposed Language Changes

The 1988 budget estimates include proposed changes in appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Federal Prison Industries, Incorporated

The Federal Prison Industries, Incorporated, is hereby authorized to make such expenditures, within the limits of funds and borrowing authority available, and in accord with the law, and to make such contracts and commitments, without regard to fiscal year limitations as provided by section 104 of the Government Corporation Control Act, as amended, as may be necessary in carrying out the program set forth in the budget for the current fiscal year for such corporation, including purchase of not to exceed five (for replacement only) and hire of passenger motor vehicles, except as hereinafter provided. (18 U.S.C. 4121-4128; Department of Justice Appropriation Act, 1987 as included in Public Laws 99-500 and 99-591, section 101(b); additional authorizing legislation to be proposed.)

LIMITATION ON ADMINISTRATIVE AND VOCATIONAL TRAINING EXPENSES FEDERAL PRISON INDUSTRIES, INCORPORATED

Not to exceed [$2,157,000] of the funds of the corporation shall be available for its administrative expenses, and not to exceed [$7,208,000] for the expenses of vocational training of prisoners, both amounts to be available for services as authorized by 5 U.S.C. 3109, and to be computed on an accrual basis and to be determined in accordance with the corporation's prescribed accounting system in effect on July 1, 1946, and such amounts shall be exclusive of depreciation, payment of claims, expenditures which the said accounting system requires to be capitalized or charged to cost of commodities acquired or produced, including selling and shipping expenses, and expenses in connection with acquisition, construction, operation, maintenance, improvement, protection, or disposition of facilities and other property belonging to the corporation or in which it has an interest. (Department of Justice Appropriation Act, 1987 as included in Public Laws 99-500 and 99-591, section 101(b); additional authorizing legislation to be proposed.)	$2,347,000 $7,371,000

Explanation of Changes

No substantive changes proposed.

Federal Prison Industries, Incorporated, was created by Congress in 1934 and is a wholly owned Government Corporation. Its mission is to employ and train Federal inmates through a diversified program providing products and services to other Federal agencies. These operations are conducted in such a manner as to offer a minimum of competition to private industry and labor. Employment provides inmates with work, occupational knowledge and training and experience. New industries which will utilize skills in demand in the labor market are developed, where possible, to replace industries providing less valuable training.

Long Range Goal: Employ all inmates available for work in industries; provide inmate opportunities to acquire work knowledge, skills, training and apprenticeship programs to develop entry level skills.

Major Objectives:

Operate 82 industrial factories and shops with inmate labor.

Provide eventual employment for 45 percent of inmates available for work.

Provide on-the-job training to 13,900 inmates in all industrial factories in 1988.

Provide classroom-type industrial training in electronics.

Provide apprenticeship programs for acquiring trade skills, such as printing, metal working and tool making.

Sell products and services to other Federal agencies at a profit consistent with the goal of remaining financially self-supporting.

Provide pre-industrial training projects to enhance factory operations and provide increased training opportunities.

Fund vocational training projects to enhance and analyze expanded vocational training opportunities for inmates.

Continue to fund inmate performance pay.

Continue implementation of a fully automated management information system.

Base Program Description: Federal Prison Industries, Inc., is entirely self-sustaining. No appropriations are required. Revenues are derived entirely from the sale of products and services to other Federal agencies. Operating expenses are applied against these revenues, resulting in operating income or loss.

Currently, Federal Prison Industries (FPI) addresses the problem of inmate idleness by providing a full-time work program for 41 percent of the total inmate population available for work. More than 50 percent of the inmate population do not have marketable skills. FPI provides a program of constructive industrial work wherein job skills can be developed and work habits acquired.

Institution factories and shops are operated by cadres of civilian supervisors and managers, training and overseeing the work of inmates. The factories utilize raw materials to produce finished goods which are shipped to Government customers, primarily the Department of Defense, the Postal Service and the General Services Administration. Institution factories manufacture such items as furniture, clothing, electronics, metal and canvas products, and provide such services as data processing and furniture refinishing. Orders for goods and services are obtained through marketing and sales efforts by civilian staff. Prices are usually established in negotiation with customer agencies at or near to, but not exceeding, current market prices. A portion of the profits realized by these operations is reinvested to improve facilities, purchase new equipment, maintain state-of-the art capability and provide working capital.

To operate modern factories and shops and produce products that must meet Government specifications requires extensive inmate training because most of the inmates have had no previous training, experience or skills. Much of the needed training occurs on-the-job, with civilian supervisors and experienced inmates explaining and demonstrating the work to newly assigned inmates. Where skills require more formal training, such as computer programming, classroom instruction is provided. Production Training Units, a special type of industry concentrating on training more than production, utilizes a combination of both classroom and on-the-job training to offer a unique and effective method of skill development. Also, registered programs of apprenticeship are in operation and approved by the U.S. Department of Labor's Bureau of Apprenticeship and Training and local unions.

As a manufacturing concern, the Corporation makes capital investments in buildings/improvements, machinery and equipment as necessary in the conduct of its industrial production. Federal Prison Industries currently funds part of the vocational training program within the Federal Prison System.

Other expenses charged to the industrial manufacturing program include inmate accident compensation and Meritorious Service Awards (MSA) to inmates.

Accomplishments and Workload: Actual and estimated accomplishments for Federal Prison Industries, Inc. are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Average inmate employment	9,480	11,455	12,000	13,500
New facilities established	2	1	1	3
Sales	239,230,527	238,342,239	296,677,000	355,100,000
Industrial net earnings retained in the corporation	12,071,223	18,100,000	26,500,000	34,900,000
Use of earnings:				
Vocational training	6,391,000	6,775,562	7,344,000	7,571,000
MSA (performance awards, pay)	5,600,000	6,000,000	6,400,000	6,720,000
Accident compensation	222,000	300,000	300,000	300,000
Retained earnings	9,100,000	5,024,000	9,090,000	14,160,000
Number of shops/factories	77	77	78	82

During 1986, an average of 11,455 inmates were employed at 43 institutions in 77 factories. This represents 41 percent of the working inmate population. Sales exceeded $238 million with net income of $12 million. While maintaining self-sufficiency in its industrial operations, the Corporation increased funding of inmate performance pay from $5.6 million to $6 million. Sales in 1986 also financed modernization of equipment ($12.1 million) and plant facilities ($13.9 million). The raw material inventory module of the MIP system was installed and programs are being tested for production control, inmate payroll and customer order processing. A project team is continuing to develop and implement the automated accounting system.

Also during 1986, a new laundry factory was opened at FPC Montgomery. The furniture product line has been updated and the textile product line expanded. FCI Loretto opened a new factory to make electronic components.

Experimental vocational training programs including oil technology, home entertainment center repair, computer technician courses, diesel engine repair, waste water technology, commercial art and drafting were conducted and are being evaluated for possible future use.

Program Changes: The requested increase of 85 positions and 40 workyears will enable FPI to provide supervisory staff to manage industrial operations to be established at the Los Angeles, California MDC, Marianna, FL FCI and the Fairton, New Jersey FCI, which are scheduled to open in FY 1988. Resources are also requested for operation of the Oakdale, Louisiana Cuban Unit which will be opened in FY 1987 (the 1987 budget contains no activation resources for this facility). Twenty positions will be used to provide supervision for expanded industrial operations at existing institutions. With these resources, the Corporation will be able to employ approximately 1,900 additional inmates. The benefits derived are decreased inmate idleness in overcrowded institutions, increased production and increased sales and profits.

OPENING STATEMENT

Mr. EARLY. The Committee is pleased to welcome back the Director of the Federal Prison System, Mr. Norman Carlson. You may proceed with your statement.

Mr. CARLSON. Thank you, Mr. Chairman. I am pleased to be back again this year and appear before you. I am accompanied by Michael Quinlan, the Deputy Director. I thought today would be appropriate to have a Quinlan with me, a little moral support, for St. Patrick's Day. Mr. Chairman, I have a prepared statement which I would like to introduce in the record and briefly summarize, if I may. As you mentioned, we are requesting a total budget of $981,694,000, an increase of $105 million over the current fiscal year. We are requesting a total of 12,213 appropriated positions, an increase of 831 over the current year's appropriation.

POPULATION INCREASE

Without question, Mr. Chairman, the most significant issue that we face in the Federal Bureau of Prisons today is the rapid increase in population. As you know, the population has gone from 23,800 in January of 1981 to 42,106 this morning. That is an increase of over 18,000 inmates, or 77 percent in a period of six years.

Furthermore, we anticipate a continuation of this increase in the months and years ahead. We are projecting in this budget a population in 1988 of 44,800, and we project 55,200 by 1993. I emphasize that those are conservative projections. They do not take into consideration the Anti-Drug Abuse Act which the Congress passed in the last session, nor do they take into consideration the sentencing guidelines that will shortly be submitted by the United States Sentencing Commission for congressional review.

With the support of this committee, we have increased our prison capacity in recent years. The Bureau of Prisons has added 4,500 new beds since 1981. We have done so in three ways. First of all, by expanding existing institutions with additional housing units and opening minimum security camps adjacent to those institutions; secondly, by acquiring surplus facilities such as the former seminary in Loretta, Pennsylvania; the Air Force Base in Duluth, Minnesota and the mental hospital in Rochester, Minnesota; which you and the committee assisted us in acquiring; and finally, by constructing new institutions.

This year we will be adding an additional 1,200 beds at existing institutions, and we also have construction funds currently appropriated for seven new facilities, five of which are under construction. Construction of the other two will begin very soon. Those institutions will add another 4,800 beds to the system.

As you will note in our budget request, Mr. Chairman, we are asking for two additional new institutions, the remainder of the funds that were provided last session by the Congress for the construction of the institution in Sheridan, Oregon, and funds to construct a jail unit for pre-trial detainees.

In addition, we are requesting funds to expand existing institutions at six locations. We are also seeking funds to open the Los Angeles Metropolitan Detention Center all of which is now officially under construction and the Federal Correctional Institutions in

Marianna, Florida, and Fairton, New Jersey, Those institutions will be opened in 1988. In addition we are asking for funds to increase the number of inmates by 725 per day in halfway houses, and are planning a contract for the detention of 500 alien offenders, similar to the contract we operate with the Immigration and Nationalization Service in Houston, Texas.

FEDERAL PRISON INDUSTRIES ROLE

Let me conclude my brief summary, Mr. Chairman, by commenting again on the important role that Federal Prison Industries plays in the Federal Prison System. On any given day, we have over 13,500 inmates working in 79 factories that are run by Prison Industries. This year we anticipate sales of over $270 million to other Federal agencies.

As you know, Federal Prison Industries is a totally self-sustaining operation. No appropriated funds are required, and since 1983 the corporation has re-invested over $67 million back in to plant and equipment modernization. In addition, it funds over $4 million annually for vocational training programs from its profits.

We are requesting in the 1988 budget, a total of 85 additional positions. These are not appropriated positions. They require no funds from the Congress, only the authority to use our profits to fund additional staff so that we can expand the number of factories at existing institutions and establish factories at new institutions as they open.

NATIONAL INSTITUTE OF CORRECTIONS

Finally, Mr. Chairman, I want to comment on the National Institute of Corrections, a small organization which is an adjunct to the Bureau of Prisons. The institute's budget request is $10.5 million and 41 positions. Despite its small size, I believe NIC does an excellent job in providing training and technical assistance to state and local correctional agencies.

With that, I conclude my formal summary, Mr. Chairman, and will be pleased to answer any questions you or your colleagues may have.

[The statement of Mr. Carlson follows:]

DEPARTMENT OF JUSTICE

STATEMENT BY THE DIRECTOR, FEDERAL BUREAU OF PRISONS
NORMAN A. CARLSON
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON
THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE,
THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to appear before you again to discuss the Federal Bureau of Prisons' budget request for 1988.

As you will note, we are requesting a total of $881,694,000 and 12,213 appropriated positions for 1988, an increase of $104,941,000 and 831 positions above current year levels.

SUMMARY OF MAJOR REQUESTS

The major thrusts of our FY 1988 budget request include:

- Funding for two new Federal Correctional Institutions, a new Federal Detention Unit, and resources to complete construction of the Federal Correctional Institution at Sheridan, Oregon.
- Activation of the Los Angeles Metropolitan Detention Center and new Federal Correctional Institutions at Marianna, Florida and Fairton, New Jersey; additional housing at three existing institutions; and construction of minimum security camps and additional housing at six existing institutions.
- Expansion of contract confinement programs.
- Essential renovation, modernization, fire safety and environmental improvement projects.

CONTINUED GROWTH IN INMATE POPULATION

Without question, the continuing increase in the inmate population is the most critical issue facing the Federal Prison System. Since January 1981, the Federal inmate population has increased more than 76 percent - from 23,800 to 42,000 today. We project a continuation of this growth. Our FY 1988 budget projects that the population will increase to 44,878 in 1988 and will reach at least 55,200 by 1993.

I want to point out that this projection excludes the potential impact of the recently enacted Anti-Drug Abuse Act of 1986 and the sentencing guidelines to be submitted to the Congress in April this year by the U.S. Sentencing Commission. We anticipate that those two factors will further increase the Federal inmate population above current projections. The Bureau of Prisons is working closely with the U.S. Sentencing Commission to determine the impact of the proposed guidelines on future Federal inmate population levels.

EXPANDING FEDERAL PRISON CAPACITY

With the support of the Administration and the Congress, the Bureau has increased capacity by 4,500 beds since 1981 through expansion at existing institutions, acquisition and conversion of surplus properties and construction of new institutions. Approved expansions at existing institutions will add an additional 1,200 beds when completed this year.

We now have construction funds appropriated for seven major new correctional facilities which will eventually increase capacity by 4,800 beds. Currently under construction are Federal Correctional Institutions in Marianna, Florida and Fairton, New Jersey and a Metropolitan Detention Center in Los Angeles, California. Within the next several months, we will begin construction of Federal Correctional Institutions at Sheridan, Oregon and Bradford, Pennsylvania. We are now preparing the Environmental Impact Statement preliminary to acquiring the site for the sixth facility and are in the process of selecting a site for the seventh new institution.

FY 1988 CAPACITY INCREASES

Mr. Chairman, I believe we must continue efforts to expand prison capacity in order to address the critical overcrowding rate of 50 percent and keep pace with projected increases in the inmate population. Our FY 1988 budget continues this expansion with funding requests of 96.5 million dollars for the construction of two new Federal Correctional Institutions. Together with the requested expansion at existing institutions and the establishment of a detention unit for pre-trial offenders, the FY 1988 budget requests construction funds for an additional 2,400 beds. Our ultimate goal is to increase prison capacity to keep pace with the projected growth in inmate population and reduce the level of overcrowding to about 20 percent by the mid 1990's.

As new construction and housing are completed, activation funding is required to open and operate the facilities. Our FY 1988 budget requests 786 positions and 34.5 million dollars to bring on-line an additional 2,328 beds. Included are the Los Angeles Detention Center, the Marianna, Florida and Fairton, New Jersey Federal Correctional Institutions and new housing at three existing institutions. In addition, we plan to increase the average daily population in community treatment centers by 725 to 3,775 inmates and to contract for a facility to house 500 aliens serving short sentences.

Without question, prison space is a scarce and expensive resource that must be selectively used. I believe this is occurring as Federal law enforcement initiatives continue to focus on white collar offenses, organized crime and major drug-trafficking cases. For example, in just the last five years, the number of inmates confined for drug-related offenses has grown from one fourth to more than one third of the total population, a substantial increase. We have and will continue to undertake the expansion of the Federal Prison System in the most cost effective manner possible. Failure to continue efforts to provide sufficient prison capacity could lead to a "gridlock" in the Federal criminal justice system as has occurred in several state correctional systems. A recent report indicates that over 30 state prison systems are under court order for conditions of confinement and that inmate population limits have been established by the courts for most of these systems.

U.S. PENITENTIARY, ATLANTA, GEORGIA

Mr. Chairman, the Cubans confined at the U.S. Penitentiary, Atlanta, Georgia constitute the most difficult group of inmates to manage which I have encountered in my thirty years of correctional experience.

Since my last appearance before your Committee on March 10, 1986, two significant events have occurred which directly affect the conditions of confinement at Atlanta. On-going renovation plans for the facility were modified to work around the uncertainty of the status of the Cuban detainees while accomplishing other critically needed projects. Improving housing conditions is of the highest priority and we have moved our cellhouse renovation plans forward. As you will note, the FY 1988 budget requests 10 million dollars for the continuation of essential renovation projects at Atlanta.

We have continued efforts to normalize the institutional environment. For example, 630 inmates are now employed by Federal Prison Industries in the manufacture of products for other government agencies. Over 1,200 inmates are permitted movement in the institution for meals, recreation, and other activities. A process of evaluation and orientation for new Cubans arriving from state prisons will allow many of them to move into the mainstream of activities more readily.

The second item of importance affecting the Atlanta institution was the recent decision of the Bureau of Prisons and the Immigration and Naturalization Service to utilize the Federal Detention Center in Oakdale, Louisiana for the housing of Cuban detainees. As you will recall, the Oakdale facility which opened in March, 1986, was originally designated for the processing of alien detainees. In April of last year, we began the construction of a new secure housing unit for Cuban detainees which will be completed this month. This new unit will house Cubans transferred from Atlanta who require mental health programs. The remainder of the facility will house Cubans transferred from Atlanta whose behavior indicates their ability to function in a lower security setting.

We believe the conversion of Oakdale to a Cuban detainee facility is an important step which directly assists the Immigration and Naturalization Service. It will also permit the Bureau of Prisons to accelerate the major renovation projects at Atlanta.

These steps will not solve the Cuban detainee issue but rather serve to mitigate current operating problems. As you are aware, Mr. Chairman, Cubans with Immigration and Naturalization Service detainers continue to be transferred to the Service and subsequently to the Bureau of Prisons from state and local authorities on a daily basis.

Mr. Chairman, I would like to summarize, briefly, the specific increases we are requesting in 1988.

SALARIES AND EXPENSES

For the Salaries and Expenses appropriation we are requesting $760,851,000 and 12,043 positions, an increase of $112,511,000 and 786 positions. Uncontrollable increases account for $52.7 million of this increase for which $28.9 million is required to fully fund the new Federal Employees' Retirement System costs.

The Federal Correctional Institutions in Marianna, Florida and Fairton, New Jersey are scheduled to open in April and September of 1988, respectively. In addition, the Los Angeles Detention Center is scheduled to open in April of 1988. Resources totalling $28.6 million and 696 positions will be required to open and operate these new facilities in 1988.

Also scheduled for completion in 1988 are a 250-bed Cuban unit at the Oakdale, Louisiana Federal Detention Center; a 90-bed detention unit at the Englewood, Colorado Federal Correctional Institution; and a 100-bed expansion of the camp facility at the U.S. Penitentiary, Marion, Illinois. To furnish, equip and staff these new housing units in 1988 will require $5.8 million and 90 positions. Combined with the three new facilities above, all planned activations in FY 1988 will provide for a total capacity increase of 2,328 beds.

To support the projected increase in inmate population in FY 1988, we are requesting $10.3 million. This increase will enable the

Bureau of Prisons to support an average daily inmate population of 44,878, an increase of 2,446 above the level currently budgeted.

The population estimate for FY 1988 reflects an offset in institution-based population based on our proposal to expand the use of community treatment centers from an average daily population of 3,050 to 3,775. An increase of $7.6 million is requested to finance this expansion. In addition, we propose to contract with a private sector firm for the short term detention of 500 sentenced aliens for six months in 1988 at an estimated cost of $2.7 million.

Finally, we are requesting increases of $268,000 to complete the upgrading and productivity improvements to our ADP system, approved and begun in 1987; $2.6 million to finance the projected increased use of the Justice Data Services Center; $1.4 million to replace 106 over-age vehicles which exceed Federal Property Management Regulations replacement criteria; and $400,000 to finance training for approximately one third of the Bureau's medical services personnel, which is designed to advance skills and knowledge to stay current with the rapid advances in medical science and technology.

BUILDINGS AND FACILITIES

We are requesting $210,334,000 and 129 positions for the Buildings and Facilities appropriation in 1988. Of this amount,

$96.5 million is requested for the construction of two new 700-bed Federal Correctional Institutions, one to be located in the northeast and one in the southeast areas of the country. An additional $30 million is requested to provide full funding for construction of the Federal Correctional Institution in Sheridan, Oregon. In addition, we are requesting $7 million for the construction of a new 150-bed detention unit for housing pre-trial prisoners at one of several geographical areas where the absence of jail capacity has become critical.

When activated, the three new facilities requested will increase the rated capacity of the Federal Prison System by 1,550 beds. In reality, of course, we expect that some 2,000 inmates will be housed in these facilities.

In addition to new prison construction, we are requesting $26.7 million and six positions to further increase capacity at six existing institutions. These include satellite camps at the Federal Correctional Institutions, Ashland, Kentucky, Memphis, Tennessee and Talladega, Alabama; expansion of the camp at the U.S. Penitentiary Atlanta, Georgia; and new housing units at the Morgantown, West Virginia and Oxford, Wisconsin Federal Correctional Institutions. These projects combined will add 850 critically needed beds to the capacity of the Federal Prison System.

As you will recall Mr. Chairman, no additional funds were requested in FY 1987 for continuing the modernization of the U.S. Penitentiaries at Atlanta, Georgia and Leavenworth, Kansas. Work on these projects has reached a point where additional funds are required in FY 1988 to continue these modernization programs. We are requesting $17 million and five positions as follows:

- U.S. Penitentiary Leavenworth, Kansas. The request of $7 million and two positions will provide for the renovation of "C" and "D" cellhouses which will complete the renovation of all cellhouses in Leavenworth.
- U.S. Penitentiary Atlanta, Georgia. Because of the importance of improved housing, we have moved cellhouse renovation forward in our modernization plans. The request of $10 million and three positions will enable the Bureau to begin cellhouse renovaton in FY 1988.

To continue our efforts to bring all institutions into compliance with the Life Safety Code, we are requesting 18 positions and $7.5 million to accomplish fire safety improvements at ten institutions and remove hazardous materials at several locations.

Finally, we are requesting $10.7 million and seven positions to accomplish essential plant renovations at eight institutions. These include renovation and expansion of inmate housing, perimeter security improvements, roof replacement, renovation of food services facilities and other critical facilities improvements.

FEDERAL PRISON INDUSTRIES, INCORPORATED

Mr. Chairman, I would like to comment briefly on the critical importance of Federal Prison Industries to our operations. As you know, all Corporate expenses are covered by earnings and no appropriated funds are required from the Congress. There are now over 13,500 inmates employed in a variety of industrial operations in 79 factories, some of which have installed second and third work shifts to increase production and sales. The ability to keep increasing numbers of inmates employed and productive has played an extremely important role in dealing with institutional overcrowding. Since 1983, the Corporation has reinvested 67 million dollars in profits from sales to expand, add and improve facilities and equipment and upgrade and introduce new product lines. This investment has enabled Federal Prison Industries to significantly expand the number, variety and quality of inmate work opportunities.

In addition, the Corporation has increased the number of vocational training programs, established production training units and conducted a variety of experimental vocational training programs. In an innovative effort to provide inmates an incentive to advance their education, an inmate's promotion beyond entry level compensation is denied until the inmate is certified as having attained at least an eighth-grade education.

For FY 1988, the Corporation is requesting an increase of 85 positions to provide supervision for jobs and training for an additional 2,000 inmates through the expansion of industrial

operations at existing institutions and the establishment of new factories at four facilities.

NATIONAL INSTITUTE OF CORRECTIONS

Finally, Mr. Chairman, I want to note that the National Institute of Corrections continues its role as an important force for improvements in state and local correctional agencies through its training and technical assistance services. The Institute's National Academy of Corrections has trained thousands of correctional officers and administrators from all over the nation. The Institute has retained its effectiveness partly because it has remained small and is able to respond directly and promptly to state and local needs.

For FY 1988 we are requesting $10,509,000 and 41 positions for the Institute. The increase of $1,345,000 is required solely to cover the Institute's mandatory, uncontrollable increases.

That concludes my prepared statement, Mr. Chairman. I would be pleased to answer any questions you or your colleagues may have.

SITE DETERMINATION

Mr. EARLY. Mr. Carlson, we are delighted to have you here. I really think your agency faces one of the most serious problems, and it is not right if we don't prepare for what is probably going to happen in a few short years. Apart from $30 million requested to complete the construction of the Sheridan, Oregon, project, the FY 1988 budget includes $103.5 million to construct new Federal Correctional Institutions, one in the Northeast and one in the Southeast, and a new detention unit to house pre-trial offenders. Mr. Carlson, have you identified the sites for any of these facilities at this time?

Mr. CARLSON. Mr. Chairman, we have determined that the site for the pre-trial detention unit will be at Pleasanton, California, a suburb of San Francisco.

We have a critical problem finding local jails to house pre-trial detainees in that district. We were just advised last month by local officials in San Francisco that no longer will the San Francisco County Jail accept Federal prisoners, so we plan to use the $7 million requested to build a jail unit on the grounds of the institution at Pleasanton.

With respect to the two new Federal Correctional Institutions, we have not identified sites as yet for either, although this week I am making a trip and will look at three sites that have potential. Additional interest has been expressed in other communities which may well develop into sites for additional Federal Prisons.

Mr. EARLY. As you noted, this Committee has supported and encouraged your efforts in acquiring and converting surplus military facilities for prison use, as you did with the facility at Duluth, Minnesota. Do you currently have any such plans underway, and if so are they reflected in this budget request?

Mr. CARLSON. Mr. Chairman, they are not reflected in this budget request, but we do have a number of projects underway. Last week I was at Tyndall Air Force Base near Panama City, Florida, where I met with the Commanding General. The Air Force is interested in establishing a small prison camp at Tyndall similar to the one we have at Eglin Air Force Base in Florida.

That appears to be a definite prospect, and we anticipate that we may be able to open such a facility, this fiscal year, or early next year. In addition, we are looking at a former college which is being closed as a possible minimum security institution for female offenders. We hope to come to cloture on that prospect within the next several months.

INMATE POPULATION

Mr. EARLY. I notice in your FY 1988 budget request, that your projections are based on an average daily population of 55,200 inmates by 1993—six years away. In your opinion, does this estimate appear to be on the low side or is this a real estimate?

Mr. CARLSON. Mr. Chairman, I think that is an extremely conservative estimate. I fully anticipate it will far exceed the 55,200 figure, if the Anti-Drug Abuse Act produces the caseload we think it will. As you know, the Congress toughened up the narcotics legislation. They passed legislation which will provide minimum man-

datory sentences for many narcotics offenders. That, alone, I think, will make the 55,200 estimate conservative.

Mr. EARLY. Last Friday, we had Deputy Attorney General Burns in here, Mr. Carlson, and he suggested by 1990 you might have 67,000 incarcerated. What is your concern about that?

Mr. CARLSON. Mr. Chairman, I think the 67,000 figure is much more realistic than the 55,200 projected in this budget. The estimate of 55,200 was developed before the Anti-Drug Abuse legislation had been enacted, and before the United States sentencing Commission guidelines were released in draft forms. I would say the Deputy Attorney General's figure is probably much more accurate than the one I gave you.

Mr. EARLY. Mr. Carlson, you projected in your statement 44,000 incarcerated for 1988. If we go to 67,000 that will be a 23,000 increase in about three years. You have told this Committee in the past that an ideal prison, in your opinion, is what number of beds?

Mr. CARLSON. Approximately 500, Mr. Chairman.

Mr. EARLY. Approximately 500. If that is true, we are talking about—being on the conservative side—a 20,000 inmate increase from 44,000 to 67,000. That is 40 prisons. The average cost for a new prison must be running in the area of about $50 million?

Mr. CARLSON. That's correct.

Mr. EARLY. We have some serious problems.

Mr. CARLSON. There is a substantial financial commitment associated with expanding prison capacity. There is no doubt that if we provide the additional beds it is going to require substantial increases in construction money in future years.

STATE AND LOCAL JAIL CONTRACTS

Mr. EARLY. With the objective of holding down future construction costs, is there any possibility of increasing the number of contracts with state and local agencies to house Federal offenders.

Mr. CARLSON. Mr. Chairman, we continue to survey the state systems as well as local jails, and I can say without hesitation that there is simply no room at the inn. Many states are in far worse shape than we are in terms of prison capacity, and there is no way that we can house any large number of inmates in any state system in this country.

NEW HOUSING FACILITIES

Mr. EARLY. In the past the Bureau has increased capacity at existing institutions by building camps and new housing units. Does your FY 1988 budget proposes any further capacity increases at existing institutions?

Mr. CARLSON. Yes, it does, Mr. Chairman. We propose to add additional housing at six existing institutions in the 1988 budget, and we will also be opening three facilities during the year.

Mr. EARLY. Mr. Carlson, once you identify a site, how long does it take, on the average, for the facility to open its doors?

Mr. CARLSON. The earliest would be three years. That would be an optimistic estimate. Three to four years would be a more realistic timeframe.

Mr. EARLY. The probability that the inmate population will increase by 20,000 in three years, what do you think is going to happen?

Mr. CARLSON. We have a massive undertaking to provide the bed space, if we are going to keep the Federal Criminal Justice System in operation. We certainly don't want it to develop into a situation that some of the states are now facing where a gridlock exists, where there is simply no space in the state prison, and as a result the entire Criminal Justice System has to shut down, so I think we do have a monumental task of providing the beds for these additional inmates.

CURRENT PRISON CAPACITY

Mr. EARLY. What is the current capacity right now? What is the Federal Prison System bedded for?

Mr. CARLSON. Roughly 28,000.

Mr. EARLY. Roughly 28,000, and you have got 43,000. What percentage over——

Mr. CARLSON. We are about 51 percent over design capacity today.

Mr. EARLY. Does this overcrowding create some security problems?

Mr. CARLSON. Yes, it does. Obviously overcrowding tends to lead to acts of violence on the part of inmates. It is a major contributor to institutional unrest in terms of the inmate population, and it is a factor that we are concerned about.

Mr. EARLY. And in your FY 1988 budget you are requesting beds for another 2,400. In your professional opinion will that be adequate to accommodate the growing population?

Mr. CARLSON. It may take care of the anticipated increase in population, but it will not assist in reducing overcrowding.

Mr. EARLY. Can you give us an estimate of how many Federal prisoners you have with sentences of less than two years and a day?

Mr. CARLSON. I can provide that for the record. I don't have that with me, Mr. Chairman.

Mr. EARLY. Would you?

Mr. CARLSON. I would be happy to provide that for the record.

[The information follows:]

FEDERAL PRISONERS WITH SENTENCES LESS THAN TWO YEARS

There are approximately 2,800 Federal prisoners with sentences of less than two years.

POPULATION REDUCTION ATTEMPTS

Mr. EARLY. Are you considering any types of early release formulas or house arrests. I have been reading so much about electronic surveillance, in an effort to reduce the growing population.

Mr. CARLSON. Yes.

Mr. EARLY. I don't want to give the impression I want to put everyone out on the street. But I also see that we can't accommodate 20,000 additional inmates by 1990.

Mr. CARLSON. Mr. Chairman, as I commented in my summary, we are requesting funds to place an additional 725 inmates per day in halfway houses during the next fiscal year. In addition, we have a house arrest program in conjunction with the U.S. Parole Commission and the U.S. Probation Service where inmates who have been in a halfway house and adjusted well are permitted to spend the last two months of their sentence living at home under strict and regimented supervision.

In addition we are now working with the probation service as well as the U.S. Parole Commission in developing a parole regarding the use of electronic monitoring for inmates being released from custody.

Mr. EARLY. Would that be a hand-picked group? In other words, we won't be freeing anyone from Marion, Illinois, the real hardened criminals?

Mr. CARLSON. No, you are correct, Mr. Chairman. This would be for inmates who are not a threat to society. They have not been convicted of acts of violence. They are offenders we think could be adequately supervised in the community, using some of the new technologies such as electronic monitoring.

EARLY RELEASE IN FLORIDA

Mr. EARLY. Mr. Carlson, are you familiar with what the State of Florida just did with regard to early parole and releases?

Mr. CARLSON. I have read news accounts of what has happened in Florida, as well as in some of the other States.

Mr. EARLY. In your statement you said you had how many state prisons? Is it 30 states that are severely overcrowded?

Mr. CARLSON. I believe 38 states are now under some form of Federal Court intervention, where the courts have mandated population ceilings on the prison systems. That, of course, has happened here in the District of Columbia as well as in many of the states that are in this geographic area.

ANNUAL COST PER INMATE

Mr. EARLY. Mr. Carlson, what is the estimated cost per inmate annually for the Federal Bureau of Prisons?

Mr. CARLSON. It is approximately $13,100 for the current fiscal year.

Mr. EARLY. In your opinion, Mr. Carlson, what is the ideal bed capacity for maintaining and controlling the inmate population at a well-run institution?

Mr. CARLSON. Mr. Chairman, 500 is the optimum capacity for our new design, and I think 500 has proved to be an effective base line to use in terms of new construction.

OVERPOPULATION

Mr. EARLY. Mr. Carlson, at what percentage over capacity do you think the security risk increases?

Mr. CARLSON. We can tolerate, Mr. Chairman, a 20 percent level of overcrowding without any serious problems. Once it gets beyond the 20 percent level, I become concerned and particularly as it reaches 30, 40 and now 50 percent over capacity.

72-165 O—87——45

Mr. EARLY. Can you estimate what the overpopulation is at the 45 Federal Correctional Institutes.

Mr. CARLSON. We are currently 51 percent over rated capacity.

FEDERAL PRISONERS WITH AIDS

Mr. EARLY. Mr. Carlson, how many Federal prisoners have AIDS?

Mr. CARLSON. All of the AIDS cases are located in our Medical Center at Springfield, Missouri. All inmates who have actual symptoms of the disease are transferred to the Medical Center and are kept there for the duration of their sentence or until they die. We have some inmates, who tested positive for the antibody located at other institutions. Then are not transferred to Springfield until they develop symptoms of the disease itself.

Mr. EARLY. Is that a hospital?

Mr. CARLSON. Springfield is a hospital, Mr. Chairman.

Mr. EARLY. How many beds at this hospital?

Mr. CARLSON. Approximately 1,300 beds of which half are psychiatric and the other half of which are medical/surgical.

Mr. EARLY. All inmates?

Mr. CARLSON. All inmates; that is correct, sir.

Mr. EARLY. And how many have AIDS?

Mr. CARLSON. We have had a total of 65 diagnosed cases of AIDS since 1981, and 32 of those have died; 12 have been released, and 21 are still at Springfield.

Mr. EARLY. The 12 that were released, had they completed their sentences?

Mr. CARLSON. That's correct. They were released at the termination of their sentences.

Mr. EARLY. Do you know how many AIDS patients we have in state prisons?

Mr. CARLSON. No. Based on some studies at the National Institutes of Justice, the number is substantial, especially in the states of New York and California.

Mr. EARLY. It was alarming to me to see that the State of New York is going to discharge prisoners before their term expires.

Mr. CARLSON. Yes.

Mr. EARLY. I see, Mr. Carlson, the AIDS situation is getting worse. Many of the 50 states won't be able to handle it when they have a few AIDS patients—wouldn't that be a federal role? You discuss how overcrowded you are, but shouldn't we have one Federal prison hospital for all Federal, State, and local inmates that have contracted AIDS? We know the states can't handle that.

Mr. CARLSON. I hadn't thought of that before, but it is certainly something we could consider in the future.

HOSPITAL FACILITIES

Mr. EARLY. How many prison hospitals do you have, Mr. Carlson?

Mr. CARLSON. We have a total of four institutions that have accredited hospitals. Springfield is the largest.

Mr. EARLY. That is 1,300 beds?

Mr. CARLSON. Approximately 1,300 beds.

Mr. EARLY. And where are the other three located?

Mr. CARLSON. Rochester, Minnesota, the facility this Committee helped us acquire a few years ago, has approximately 500 beds. We have a hospital at Butner, North Carolina for mental health cases and a hospital at Lexington, Kentucky in the former U.S. Public Health Service Hospital, which we operate basically for geriatric cases.

Mr. EARLY. How many at Lexington?

Mr. CARLSON. It has a population of approximately 1,600.

Mr. EARLY. And how many beds in the hospital?

Mr. CARLSON. The hospital itself is probably 100 to 150 beds.

Mr. EARLY. We will discuss this later, Mr. Carlson. I will yield to Mr. Rogers at this time.

PRAISE TO CARLSON

Mr. ROGERS. Thank you, Mr. Chairman.

Mr. Carlson, it's good to see you.

Mr. CARLSON. Good to see you again, sir.

Mr. ROGERS. Let me first off compliment you on running a very fine agency. My staff tells me that they get better responses out of your agency than out of any other in the Federal Government.

Mr. CARLSON. I appreciate that.

Mr. ROGERS. I commend you. That is a sign of a good director and a sign of a good staff.

Mr. EARLY. If I can interrupt, Mr. Carlson, he doesn't say that to everybody. A lot of my colleagues say it to everybody, Mr. Rogers doesn't say that to anybody.

Mr. CARLSON. I appreciate it doubly.

CORRECTIONAL OFFICERS STAFFING RATIOS

Mr. ROGERS. Thank you, Mr. Chairman, I think.

Let me ask you about your correctional officers. What is the current ratio of officers to prisoners?

Mr. CARLSON. One correctional officer for every 8.4 inmates.

Mr. ROGERS. Since all your officers are not on duty at any given time, do you have the ratio for a single shift.

Mr. CARLSON. Yes, sir. Each institution has a master roster that is provided and approved by our office, which gives them the number of allocated positions that we believe are essential to maintain the security and safety, but as you point out, it takes five officers to fill a post for 24 hours a day, seven days a week, so that the 1 to 8.4 ratio is actually a misleading figure in terms of the number of officers that are on duty at a given time.

Mr. ROGERS. Do you know what the ratio is for a single shift?

Mr. CARLSON. It varies from institution to institution, and of course depends on the security level of the facility. Marion, Illinois, for example, has a one-for-one ratio use because it is Security Level 6. The minimum security camps have a much higher ratio because they don't require the same degree of security.

At any time during the day, the ratio is 1 to 50 and at night it is 1 to 150. That is the standard we use.

Mr. ROGERS. That is the overall average.

Mr. CARLSON. That is the overall average ratio.

Mr. ROGERS. How does that ratio compare to most state prisons, do you know?

Mr. CARLSON. The state average is one officer for every 4.1 inmates, so we, on the average, have fewer officers per inmate than most states.

Mr. ROGERS. What are your guidelines for the maximum average ratio consistent with safety?

Mr. CARLSON. I would have to supply for the record what our optimum level would be.

Mr. ROGERS. Are you under or over?

Mr. CARLSON. We are definitely under, because of the overpopulation. The Congress, as you recall last year, funded 400 additional correctional officers because of the impact of the Anti-Drug Abuse Act. We sincerely appreciate that recognition on the part of the Congress, recognizing the problem we face.

Mr. ROGERS. Over the last five years, my information is that the number of Federal offenders in the system has increased by 75 percent at the same time your staffing levels have grown only 23 percent.

Mr. CARLSON. That is correct.

Mr. ROGERS. What long-term growth in staffing levels would you need to maintain a ratio that is consistent with some degree of safety?

Mr. CARLSON. I will have to provide that for the record.

Mr. ROGERS. What kind of methods or technologies are you using in your newer facilities to allow you to operate with lower staff levels.

Mr. CARLSON. Congressman Rogers, we are using technology to a considerable extent. We have perimeter detection systems in most of our institutions that provide an electronic alarm system which is sensitive to anyone that touches the fence or comes near the fence line. We also use closed circuit television in most institutions to enhance the performance staff.

We use a variety of other technologies which supplement staff in certain positions.

[The information requested follows:]

STAFF/INMATE RATIO

It should be emphasized that there is no magic number that would ensure the safety of all staff and inmates. Safety is a relative term, dependent on a host of variables much broader than the number of correctional officers available. Our staffing guidelines, which are based on a current rated capacity of 27,889, call for a correctional staff to inmate ratio of 1:6. Further, our current staffing guidelines call for a total staff to inmate ratio of 1:3. The 1988 budget projects a 1993 rated capacity of 44,180. In order to maintain the same staff to inmate ratio, we would have to obtain about 6,200 additional positions between now and 1993. As we add new facilities and expand existing ones, we will continue to request suitable staff complements.

MARIEL CUBANS

Mr. ROGERS. Let me talk to you about the Marielitos. How many do you currently have in Federal prisons?

Mr. CARLSON. Congressman Rogers, we have approximately 2,500 in the Federal Prison System.

Mr. ROGERS. How would you assess them as a population?

Mr. CARLSON. Congressman Rogers, I have been in correctional administration now for 30 years, and there is no group that I have encountered who have been more difficult to manage than the Mariel Cubans. They are extremely dangerous, a volatile group who present a tremendous challenge to our staff.

Mr. ROGERS. Are most of them in Atlanta?

Mr. CARLSON. Yes, sir, 1,800 are in Atlanta. There are 600 more currently confined at the Federal Detention Center at Oakdale, Louisiana.

Mr. ROGERS. What kind of long-term plans do you have for the placement of these prisoners?

Mr. CARLSON. At the present time we hope to transfer 300 of the Mariel Cubans from Atlanta to the Oakdale facility. We are opening a new housing unit which is reflected in the budget request before you. That will allow us to reduce the population at Atlanta to 1,500 which is a size that we think can be operated relatively effectively.

Also, that reduction will permit us to begin a much-needed renovation program in the cell houses at Atlanta. The 300 Cubans going to Oakdale will increase the count there to 900. We have nothing futher under consideration at this time.

Mr. ROGERS. How many of them are serving in state prisons at this time?

Mr. CARLSON. Congressman Rogers, I believe the most recent estimate that I saw from the Immigration and Naturalization Service is about 4,000 who are now serving state sentences, and ultimately will be turned over to the Immigration Service for us to manage at some future date.

Mr. ROGERS. Do you know how many you are getting per year?

Mr. CARLSON. It has been running approximately 25 per month, as I recall, from state prisons.

Mr. ROGERS. So you have roughly 2,000 now, and you will have another 4,000?

Mr. CARLSON. If no other means is found to handle the Marielito problem. We are of course hopeful that at some date we can re-activate an agreement with Cuba to return them to their homeland.

Mr. ROGERS. We need some good workers on the fences down in Guantanamo Bay.

Mr. CARLSON. That has been suggested, Congressman Rogers. I don't make the decision on what to do with them.

Mr. ROGERS. Again, let me congratulate you on a fine job.

Mr. CARLSON. Thank you, sir. I appreciate it.

GUANTANAMO BAY, CUBA FACILITY

Mr. EARLY. I yield to Mr. Mollohan. Mr. Carlson, just one question. Don't we have land at Guantanamo Bay to build a prison?

Mr. CARLSON. Mr. Chairman, there is a Naval base at Guantanamo Bay, but I have no knowledge of what acreage is available there.

Mr. EARLY. They have a prison there, too, don't they?

Mr. CARLSON. I don't think the Navy maintains a brig at Guantanamo.

Mr. EARLY. I yield to Mr. Mollohan.

INMATE POPULATION INCREASE

Mr. MOLLOHAN. Thank you, Mr. Chairman. Mr. Carlson, there have been a number of questions that have explored inmate population into the future. I would like to follow up on some of the members' of the committee concerns as they have expressed them, and explore some of those possibilities.

First, why did the inmate population increase so dramatically over the past seven years?

Mr. CARLSON. Congressman, I think the answer is in two areas. First, there has been a dramatic expansion in the Federal Criminal Justice System. The Congress has provided funds for additional FBI agents, DEA agents, U.S. Marshals, Immigration Service personnel, more assistant U.S. attorneys and, of course, additional Federal judges.

The system has expanded, and I think the result of that expansion is now being felt in the prison system. Beyond that, Congressman, I think there has been a shift in the mood of this country in terms of what to do about those individuals who chronically violate the law. More people are being sent to prison by Federal judges today than in the past, and the sentences they are serving are longer than in the past.

I think both factors have played a role in the dramatic expansion in the prison population.

Mr. MOLLOHAN. Why do you expect a growth in the inmate population to slow down over the next seven years?

Mr. CARLSON. Congressman Mollohan, I have to be candid and say that I don't. I think that the impact of the Anti-Drug Abuse Act alone, as I indicated in my earlier testimony, is going to cause further growth in the prison population.

Mr. MOLLOHAN. The numbers that you relate in your testimony don't take into consideration the Anti-Drug Abuse Act.

Mr. CARLSON. Congressman Mollohan, that is correct. This budget was put together prior to the passage of that Act, which was in the last week, as I recall it, of the last session of the Congress.

PROCESS OF INSTITUTION SITE SELECTION

Mr. MOLLOHAN. What is the status of the site selection process for the seventh new institution?

Mr. CARLSON. We are now looking at a number of sites where communities have expressed an interest. We are now attempting to finalize our decision and ultimately go ahead and begin the environmental impact statement on the site.

Mr. MOLLOHAN. How is that process initiated? Do you express an interest in an area, or does an area express an interest in you, or both?

Mr. CARLSON. Both. We, of course, are not a very popular agency in many areas of the country. Prisons are not attractive, as we find out here in the District of Columbia. Whenever we find a community which does express an interest, we attempt to pursue the possibility.

Mr. MOLLOHAN. When do you project to have settled on a site.

Mr. CARLSON. Hopefully, within the next 30 days?

Mr. MOLLOHAN. That is imminent.

Mr. CARLSON. Yes, it is.

Mr. MOLLOHAN. You have got your prospect, and you are well on the way to reviewing them.

Mr. CARLSON. We have several prospects for those that are now funded. Of course, for the two requested in the 1988 budget which is before you, we have not identified any sites.

CRITICAL GEOGRAPHIC AREAS SHORT OF JAIL CAPACITY

Mr. MOLLOHAN. In connection with your request for a $7 million detention unit for pre-trial prisoners, you allude to "several geographical areas where the absence of jail capacity has become critical."

What are those areas?

Mr. CARLSON. Congressman, there are several. One, of course, is in the northern district of California, the San Francisco area, where we have decided to locate a facility. It will be built within the confines of the Federal Correctional Institution at Pleasanton, California.

We have no local jail space at all for the U.S. District Court in either San Jose or San Francisco, and the U.S. Marshals Service is now confronted with a dilemma having a caseload of 150 prisoners per day in custody, and literally no place to keep them. They are shuttling them back and forth for several hundred miles.

Other areas of the country have a similar problem. Rhode Island, in particular, has a very acute problem. Massachusetts has a problem. The Commonwealth of Puerto Rico, as well as the State of Hawaii, all have significant detention problems. At the present time, the San Francisco area is the most acute insofar as the Bureau of Prisons and the U.S. Marshals Service are concerned.

Mr. MOLLOHAN. It would be accurate for me to conclude from that that you are looking for additional capacity in those areas that you have just mentioned.

Mr. CARLSON. Yes, we are.

Mr. MOLLOHAN. That you have critical need.

Mr. CARLSON. Yes.

Mr. MOLLOHAN. Are there any other areas of the country where you need space? Tell me where you are looking in the country.

Mr. CARLSON. In the 1988 budget, as you will note, we have asked for facilities in both the Southeast and the Northeast. Our definition of the Northeast is the Virginia area and north; the Southeast is south of Virginia. We are looking at both those regions of the country for suitable sites for a prison.

Mr. MOLLOHAN. And that is for a permanent facility.

Mr. CARLSON. Yes.

Mr. MOLLOHAN. That is not for transitory confinement?

Mr. CARLSON. That is for convicted offenders who are serving a sentence.

ALTERNATIVES TO INCARCERATION

Mr. MOLLOHAN. What are the alternatives for providing custodial capacity for prisoners? When you look at meeting this dramatically

increasing need that already exists, and the trend suggests it is going to increase, what alternatives do you see to satisfy that?

Mr. CARLSON. One of the most extensively used alternatives to incarceration, which is an option at the very beginning of the system, is the judge placing a defendant on probation or some other form of community supervision.

Mr. MOLLOHAN. Non-confinement.

Mr. CARLSON. Non-confinement. However, I must point out that in the Federal Criminal Justice System there are approximately 115,000 people under some type of jurisdiction on any given day and two-thirds of that number are under some type of community alternative supervision.

Most of those are on probation. I think Federal judges are aware of the need to keep people out of prison who don't require the sanction of imprisonment.

Mr. MOLLOHAN. Have you ever considered to what extent that alternative could take care of this expected increase in the population?

Mr. CARLSON. Congressman Mollohan, I really don't think that it can substantially impact on the future growth for several reasons. One reason is that the number of narcotic violators that are now being convicted has increased substantially. At the present time, nearly 38 percent of the total Federal prison population was convicted for substantial narcotics trafficking offenses. Because of the Anti-Drug Abuse Act, the courts really have no discretion.

The Congress required that courts impose a minimum mandatory sentence for those convicted of narcotic trafficking offenses. So, in a sense, the courts are precluded in terms of the use of alternatives to confinement.

Mr. MOLLOHAN. Was that opinion you have expressed, based on any kind of a study or an analysis, or is that more your intuitive judgment on the subject.

Mr. CARLSON. I would have to agree that it is an intuitive judgment, although I do deal with Federal judges across the country on a regular basis. My assessment is that, in most areas, Federal judges are sensitive to the use of alternatives whenever possible.

Mr. MOLLOHAN. That is an expert opinion, but I am wondering if you are going to look more carefully at that alternative?

Mr. CARLSON. Congressman, there are limits. We have no control over what judges do, as you realize. When a court imposes a sentence, it is a term which we have to carry out, given the structure.

HALFWAY HOUSE USAGE

Mr. MOLLOHAN. Right, I understand. List other alternatives for me to dispose of the increased population you expect.

Mr. CARLSON. The use of halfway houses is probably the one that we use to the greatest extent. As I mentioned earlier in the 1988 budget we are requesting funds to support an increase of 725 inmates per day. This means we will have over 3,000 inmates per day in halfway houses rather than in prison.

That translates to six Federal Correctional Institutions. If we didn't have halfway houses, we would require six more prisons. We are using halfway houses for inmates during the last 120 days of

their sentence. We also have a House Arrest Program for those inmates who have been in a halfway house, have done well, have a job and a place to go, and whom the Probation Service and U.S. Parole Commission agree can safely live at home under some very tightly controlled regulations.

ELECTRONIC MONITORING

Mr. MOLLOHAN. What are the other alternatives?

Mr. CARLSON. The third is the use of the electronic monitoring devices. We are now exploring where we can use these new electronic bracelets to assist in monitoring inmates being released from custody. The idea, of course, is to insure the public is protected and the inmates are where they are supposed to be at any given time, and are not roaming the community at will.

Mr. MOLLOHAN. Any other alternatives?

Mr. CARLSON. Those are the primary ones that we have explored thus far.

ADDITIONAL PRISON CAPACITY

Mr. MOLLOHAN. You plan on building additional prisons and jails, don't you, with excess capacity?

Mr. CARLSON. Excess capacity?

Mr. MOLLOHAN. Well, you plan on building additional prison capacity, do you not?

Mr. CARLSON. Yes, we do.

Mr. MOLLOHAN. That is another alternative, is it not?

Mr. CARLSON. Certainly. These are in addition to the new construction.

Mr. MOLLOHAN. When you look at the housing of additional prisoners, to what extent do you expect to satisfy this increased demand through building additional capacity. How much additional capacity do you expect to build in the next five years.

Mr. CARLSON. I can tell you what has been submitted to the Congress, and I believe about 9,000 additional beds are now funded or are in the 1988 budget request. In future years we will in all probability ask for additional prison construction.

Mr. MOLLOHAN. How much of that will be shared with State or local governments both in the cost and use of the facility? Any of it?

Mr. CARLSON. None of the direct construction costs will be shared with States or local governments. I will point out that we house approximately 2,300 State prisoners under contract, where the States reimburse us for the actual cost of caring for their prisoners. They in turn take approximately a like number of Federal prisoners into State prisons. We have that type of relationship with a number of the State prison systems across the country.

As you probably know all female offenders that are sentenced by the State courts in West Virginia are taken into Federal custody. We have done this for a number of years.

Mr. MOLLOHAN. At Alderson?

Mr. CARLSON. At Alderson, that is correct, sir, and of course it eliminates the need for the State of West Virginia to provide a

separate female institution for the small number of female offenders that are sentenced in that State.

JOINT FUNDING VENTURE FOR FACILITY CONSTRUCTION IN WEST VIRGINIA

Mr. MOLLOHAN. What I am trying to get at, for example, is West Virginia has a problem. They are looking at regional jails, for example, and they have a problem, as does the Federal Government with pay, and I am wondering if there is any potential for the state sharing the cost with the Federal Government in building a facility, and housing federal prisoners, as well as maybe county offenders.

Is that something you have looked at?

Mr. CARLSON. We could explore it but we have never explored joint funding of construction of a facility. We have only taken State prisoners into the institution such as I have described in West Virginia.

Mr. MOLLOHAN. We have Federal prisoners housed, for example, in the county jail in Taylor County. Are you familiar with that?

Mr. CARLSON. I am not.

Mr. MOLLOHAN. In Grafton, West Virginia.

Mr. CARLSON. I know where Grafton is, but I am not familiar with the use of that jail.

Mr. MOLLOHAN. That really helps them run their operation, I know that, and evidently helps the Federal Government, too. These are nonviolent types of offenders.

Thank you, Mr. Chairman.

PRIVATE SECTOR PRISONS

Mr. EARLY. Mr. Carlson, regarding Mr. Mollohan's questions about alternatives, I read in the paper a few years back about the private sector running some prisons of their own. To me it would be a disaster, and I think you have expressed that you have reservations about that also.

If we don't do something and your population increases by 20,000, and we don't have the money to build enough prisons—you won't have many alternatives. Is that going to be one of the things we will probably do. In your opinion, would that be healthy for the country?

Mr. CARLSON. Not in my opinion, sir. As I have testified before, I have no problem with the low security risk such as the alien offenders who are about to be deported. As you will note, we have requested funding for a privately operated facility for those offenders, but these are far different than the typical convicted U.S. citizen who is serving a sentence imposed by a Federal Court.

These are people who are merely being housed until such time as they can be deported, generally back to Mexico or one of the South American countries.

Mr. EARLY. Mr. Carlson, I have about 30 questions regarding AIDS, because I think it will be a big problem in the prisons. I understand the National Institute of Justice estimated that in October of 1986 there were 784 Federal and state prisoners with

confirmed cases of AIDS. This represents an increase of 300 over 1985. Would you have reservations on that number?

Mr. CARLSON. No. I think that is a realistic number, because we have approximately a little less than 10 percent of the total Federal-State prison population, so the numbers would tend to coincide. I think that is a good estimate.

I share your concern, Congressman. I think it is a problem we are just now beginning to fully understand and appreciate, and it has far-reaching consequences not only for prisons, but obviously for society at large.

Mr. EARLY. Mr. Carlson, will you provide for the record a projection of the impact on prisons of recent legislation such as the Comprehensive Crime Control Act, the Immigration Reform and the Anti-Drug? In your professional opinion what kinds of increases and problems are we going to face?

Mr. CARLSON. Yes, sir.

[The information follows:]

PRISON IMPACT DUE TO RECENT LEGISLATION

The Bureau of Prisons' 1988 budget, which was prepared prior to the enactment of the Anti-Drug Abuse Act of 1986, projects that the average daily population in Federal prisons will reach 55,200 inmates by 1993. The Bureau's preliminary analysis of the impact of the Anti-Drug Abuse Act of 1986 indicates that the Federal inmate population could very well increase to 67,000 inmates by 1993.

We also anticipate that the sentencing guidelines to be submitted to the Congress in April by the U.S. Sentencing Commission will further increase Federal inmate population levels. The Bureau and the U.S. Sentencing Commission are working closely together to determine the impact of these guidelines. The Bureau continues to review and analyze these and other factors to assess their impact on future inmate population levels.

JOINT EFFORT WITH THE SENTENCING COMMISSION

Mr. EARLY. Are you actively working with the Sentencing Commission to determine the impact of their proposals.

Mr. CARLSON. Yes, we are, sir. We are working jointly with the U.S. Sentencing Commission and developing projections as to what the impact will be of the guidelines that have now been released.

Mr. EARLY. In your professional opinion, will the Sentencing Commission decrease, hold stagnant or increase the prison population? What is the probability the prison population will change?

Mr. CARLSON. I think there is no question they will further increase the prison population.

Mr. EARLY. Drastically?

Mr. CARLSON. I would hope not drastically. I think the Anti-Drug Abuse Act will have far more drastic impact at least in the short-term on the prison population.

PRISON CONSTRUCTION

Mr. EARLY. Prison construction. Are you requesting full funding for facilities in Fiscal Year 1988?

Mr. CARLSON. Yes, we are, and also for the completion of the Sheridan, Oregon, project that was partially funded by this committee last year.

Mr. EARLY. Is Sheridan, Oregon new construction or was that a facility?

Mr. CARLSON. No, it is new construction.

Mr. EARLY. That is new. You had such success with the Rochester, Minnesota site. That is a perfect example. Are we still searching for current construction?

Mr. CARLSON. Yes, we are. As I mentioned, there is now a college which we are actively considering and hope to come to a conclusion on shortly that may be available for a minimum security female offender institution, which we need.

VOCATIONAL EDUCATION

Mr. EARLY. I notice in your statement, Mr. Carlson, on vocational education, you say you have 79 factories.

Mr. CARLSON. Yes.

Mr. EARLY. Are those all factories on institution grounds?

Mr. CARLSON. They are, sir. They are all within the confines of an institution.

Mr. EARLY. You have 13,000 inmates working there?

Mr. CARLSON. 13,500 on any given day.

Mr. EARLY. Do you have any statistics on the ones that work in those particular factories and it's effect on their rehabilitation rate?

Mr. CARLSON. We are doing that now. We are following up to determine what does happen, particularly for those who have the experience of working in Federal Prison Industries.

OVERCROWDING

Mr. EARLY. Mr. Carlson, if you reach 44,878, prisoners in 1988, are you going to be able to house them with secure apparatus.

Mr. CARLSON. Mr. Chairman, with the support we have received from the Administration and this Committee, as well as the Senate Committee in the last several years, I am optimistic that we are going to be able to stay ahead of a real crisis. We are not going to be able to make any headway on the overcrowding problem in terms of the percentage, but at least we will be able to keep our head above water.

Mr. EARLY. You know this committee has such great respect for you, Mr. Carlson. Are you being fair to our friend, Mr. Quinlan.

Mr. CARLSON. On St. Patrick's Day, I really can't answer that.

Mr. EARLY. Let me ask Mr. Quinlan what are your reservations with regard to this overcrowding?

Mr. QUINLAN. I certainly appreciate the past support that Bureau of Prisons has received from the Administration and the Congress.

It is important that we keep our emphasis on trying to find new alternatives and to obtain the resources from the Administration and the Congress to continue the capacity expansion program.

Overcrowding is a serious problem, but if we keep our attention on it, we can find a solution.

Mr. EARLY. Mr. Carlson, are you satisfied with the Federal Prison Industries and how they are addressing the idea of competition with the private sector and labor and jobs?

Mr. CARLSON. I am very appreciative of the support we have had. From time to time that issue has been raised in the Congress, but I

think that we have tried as diligently as we possibly can to insure that we do not interfere with the private sector any more than absolutely is essential. We diversify whenever possible.

PRISON CONSTRUCTION RATE

Mr. EARLY. I have numerous questions on the Federal Prison Industries that we will submit for the record. Mr. Carlson, in your professional opinion, what number of prisons should we begin construction on this year? You say they take three years to build. Since there is no chance for a decrease in population, in your opinion. How many should we start?

Mr. CARLSON. Congressman Early, the Committee has already funded seven institutions. As you recall, we had five in the last year's budget. The Congress added two additional in the Anti-Drug Abuse Act of 1986. We have requested two more in 1988. That will give us a total of nine, which I think is about all we can handle at this point in time.

Mr. EARLY. But won't the nine be used to house the 44,700 in rates that you are projecting for 1988?

Mr. CARLSON. That is correct, but the nine institutions, Congressman Early, can be overcrowded as well, so at least we will be able to have additional facilities with which we can spread out the overcrowding. I think we are making progress in the short-term in addressing the issue.

SOLE DRUG OFFENDER PRISON

Mr. EARLY. Mr. Carlson, you have told this Committee about the numerous and unique types of problems you have had with drug-related criminals. Now, with the passage of the drug bill we will have a tremendous increase. Should we consider building a prison for just drug offenders?

Mr. CARLSON. Congressman Early, some of our major penitentaries, for example, are becoming just that. This is by far the largest offense category we deal with, and many of our higher security institutions are now accommodating a substantial number of narcotics offenders, particularly those that have histories of violence and aggressive behavior in the community. I think in a sense the system is evolving into precisely what you describe.

Mr. EARLY. Would you, for the record, provide us the feasibility of building a prison in Alaska. Members of Congress have suggested that it might be a good idea. They would probably welcome that, and for the record, show the number of prisoners we have from that state that are incarcerated other than in that state.

Mr. CARLSON. I certainly will, sir.

[The information follows:]

FEASIBILITY OF A PRISON IN THE STATE OF ALASKA

The Bureau of Prisons is continuously searching for sites on which to locate future prisons to help reduce the critical level of overcrowding. At the present time, construction of a prison in Alaska does not appear economically feasible because there are too few Alaskans in the inmate population and the majority of these are State, rather that Federal offenders. Of the total 194 inmates in Federal prisons with Alaska residence, approximately 90 percent have been convicted of State offenses. The bureau will continue to evaluate this situation in the future.

Mr. EARLY. Mr. Carlson, I want to thank you for your testimony. I echo the remarks of Mr. Rogers. I don't know of a Federal agency that is run better, and I don't know of a Federal agency that is more difficult to run. You just don't have a friend anywhere. Until you had the murder of the guards a few years ago, you were understaffed worse than you are today. I just hope we have the foresight to continue to meet your needs. We have serious problems here, and they are not going to go away.

Mr. CARLSON. Let me say thank you very much, Mr. Chairman, and Congressman Mollohan. This is as you probably know my last appearance before the Committee as Director, and I want to sincerely express my appreciation to you and the staff, and all of the members of the Committee over the years.

I go back to the time when John Rooney was Chairman of the Committee, and of course Mr. Slack, now Chairman Smith and yourself, and I sincerely appreciate all the help and support I have consistently received from this Committee in terms of recognizing the problems we face, and trying to help address those issues. I say very sincerely, thanks.

Mr. EARLY. And it has never been a partisan thing.

Mr. CARLSON. No.

Mr. EARLY. Mr. Carlson, thank you very much.

Mr. CARLSON. I appreciate it.

[The questions for the record and the answers submitted thereto, follow:]

QUESTIONS FROM MR. EARLY

Federal Prison System

Alternatives to Incarceration

Question:

Do you believe more could be done in this direction and is the Justice Department devoting sufficient resources to the study of these alternatives?

Answer:

The Federal Judiciary and the Federal Criminal Justice Community traditionally have made extensive use of alternatives to confinement. In 1986, two-thirds of the 115,000 Federal offenders were under supervision in the community. The principal alternative to incarceration continues to be probation. The Bureau of Prisons has also sought alternatives to institutional confinement of prisoners. During the past five years, the Community Treatment Center population was expanded from 948 to approximately 3,050 inmates. This 222-percent increase has reduced significantly the institution-based population. In addition, during the last year 1,168 offenders were placed on special curfew parole status and we are considering the limited use of electronic monitoring for those offenders who do not present a threat to society.

Since the Federal Criminal Justice System already makes extensive use of alternatives to confinement and the Federal inmate population is increasingly becoming more criminally sophisticated, we believe finding additional alternatives to institutional confinement will become more difficult.

Prison Construction

Question:

How many new facilities are you requesting funds for in 1988, what capacity will they provide and when will they be completed?

Answer:

Our 1988 budget includes $130.2 million for the construction of two new Federal Correctional Institutions, a new Federal Detention Unit, and housing expansion at six existing institutions. These new facilities will add a total of 2,400 beds when completed.

We expect to complete the new Federal Correctional Institutions during 1991 and the new Federal Detention Unit and expansion of existing facilities during 1989.

Question:

What is the number of facilities and related funding and inmate capacity you plan to build over the next three years?

Answer:

Our current capacity expansion plan reflected in our 1988 budget provides for the construction of six Federal Correctional Institutions, eight satellite camps and eight housing units at existing institutions. These new facilities will cost about $408 million and will increase the capacity of the Federal Prison System by a total of 7,200 beds when completed.

Question:

What alternatives exist to the construction of new prisons?

Answer:

Unlike most law enforcement activities which can exercise choice in which cases to investigate or prosecute and thus influence control over workload, the Bureau of Prisons has virtually no workload discretion and must accept all inmates sentenced to confinement by the courts. Alternatives to new prison construction available to and used extensively by the Bureau are:

- Contracting with State, local and private agencies for community treatment centers and detention services;
- Expanding capacity at existing institutions through the construction of satellite camps and/or new housing units; and
- Acquiring surplus or other properties for conversion to minimum custody correctional facilities.

Since the end of 1981, the Bureau of Prisons has increased the average daily offender population in contract community treatment centers from 948 to 3,050 offenders and plans to further increase this level in 1988 to 3,775 offenders. During the same time period, average daily Federal inmate population in local contract jails increased from 175 to 1,700 inmates. Because of severe overcrowding in local jail systems, further expansion of local contract detention of Federal inmates is unlikely at this time. We do plan to contract with a private sector firm in 1988 for the short-term detention of approximately 500 sentenced aliens.

Of the 4,500-bed capacity increase in the Federal Prison System since 1981, 3,000 beds have been added through a combination of expansion at existing institutions and the acquisition and conversion of surplus facilities to correctional facilities, such as the facilities at Duluth and Rochester, Minnesota, and Loretto, Pennsylvania. By the end of the current fiscal year, an additional 1,200 beds will have come "on-line" at existing institutions. Our request for 1988

includes funds to activate an additional 440 beds at three existing institutions and to undertake expansion at six more existing institutions which, when completed, will further increase capacity by 850 beds.

Finally, Bureau staff recently visited the Base Commander, Tyndall, Florida Air Force Base, to discuss the possibility of establishing a small minimum security camp for about 150 inmates. High mutual interest indicates that the effort should be successful.

Question:

If you were to construct new or expand old facilities to allow you to fully house your 1993 prison population with reasonable overcrowding, how much would it cost?

Answer:

Our current capacity expansion plan, which would increase prison capacity to 44,180 by 1993, requires an additional $568 million. This plan would allow the Bureau of Prisons to adhere to the goal of reducing overcrowding to about 20 percent. However, it should again be emphasized that this plan was based on a 1993 population projection of 55,200 and that projection excludes the potential impact of the recently enacted Anti-Drug Abuse Act of 1986 and the sentencing guidelines to be submitted to the Congress in April of this year by the U.S. Sentencing Commission. We anticipate that those two factors will further increase the Federal inmate population above current projections and thus will require further prison capacity expansion.

Program Expenditures and Objectives

Question:

You expect to average 44,878 offenders incarcerated in the Federal Prison System during 1988. How many of these will be in Federal prisons? How many in State or local government facilities? How many in private sector-operated facilities?

Answer:

We expect an average daily inmate population of 44,878 in Federal prisons during 1988. In addition, it is anticipated that 2,066 Federal inmates will be housed in State or local government facilities and 3,659 in private sector-operated facilities, primarily community treatment centers. The average daily population figures include only those persons incarcerated in Federally-owned or leased facilities.

Question:

Based on actual experience to date, are you still projecting 44,878 offenders in 1988?

Answer:

No. Preliminary estimates of the effects of the Anti-Drug Abuse Act of 1986 and sentencing guidelines indicate 1988 and outyear population levels substantially higher than those included in the 1988 budget.

Question:

What is the expected annual cost per Federal prisoner in 1988 (a) overall, (b) for those housed in Federal prisons, (c) for those housed in contract State and local government facilities, and (d) for those housed in private sector contract facilities?

Answer:

The overall projected average annual cost per Federal prisoner in 1988 is $15,036. The projected annual cost for those Federal prisoners housed in Federal prisons should average $15,407. For those inmates housed in contract State or local government facilities, we project an average cost of $12,809 annually per inmate. The cost of those inmates housed in private sector contract facilities is estimated at $11,777.

It should be pointed out that programs and services provided in contract facilities are significantly less than in a Federal Correctional Institution. In addition, the higher costs for Federal prisons reflect the higher custody levels of these facilities. The majority of offenders in contract facilities are minimum security offenders. For purposes of comparison, the average annual per capita cost for an offender in the Bureau's level one facilities is projected to be approximately $9,500.

Question:

How many offenders housed in Federal prisons are not Federal offenders? Are you reimbursed for the cost of caring for these offenders? If so, how is the reimbursement rate determined?

Answer:

Currently, there are 982 State and territorial prisoners, and 2,293 District of Columbia prisoners serving sentences in Federal prisons. In accordance with Title 18, United States Code, Section 5003, the Bureau of Prisons provides services to States and other jurisdictions by housing their prisoners on an "actual cost" reimbursement basis.

Rehabilitation

Question:

You state that the Bureau of Prison's mission includes encouraging offenders to participate in rehabilitation programs and activities that can enhance their capability for achieving a crime-free life.

What percentage of the inmate population participates in educational, vocational, and other rehabilitative type programs? What do you do if they refuse to participate?

Answer:

All inmates entering the Federal Prison System are required to participate in the Admission and Orientation process. They are tested and counseled at this time and urged to participate in programs that will be most beneficial to them.

The level of participation by inmates in rehabilitative-type programs varies depending on the security level of the institution. Some institutions have as low as 25 percent inmate participation while others range as high as 75 percent. Included in these percentages are programs designed to teach inmates how to use leisure time positively.

Approximately 25 percent of the inmate population who function below the eighth grade level are required to participate in the Adult Basic Education (ABE) program for at least 90 days. Those inmates who do not acquire minimum ABE skills after 90 days are ineligible for promotion above the entry level labor grade in their respective job.

Participation in all other rehabilitative-type programs is voluntary.

Another important rehabilitative program is the Federal Prison Industries (FPI). Approximately 30 percent (13,000) of our Federal inmate population is currently employed by FPI. These inmates are learning a skill and acquiring work habits which we believe contribute to a successful return to society.

Question:

What is the annual cost per inmate for rehabilitative-type programs?

Answer:

The average annual cost per inmate for educational programs is approximately $575. This includes the cost of Vocational Training programs funded by Federal Prison Industries, Inc.

Question:

How many of your inmates were functionally illiterate when they entered the Federal prison system? What percentage of them will achieve literacy before they are released?

Answer:

Approximately 25 percent of commitments function at less than 8th grade level and may be considered functionally illiterate. While we do not record how many achieve literacy before they are released,

almost 6,000 inmates completed their Adult Basic Education (ABE) requirements during 1986.

Question:

How many of your inmates lack a high school diploma? What percentage of these inmates will receive the general equivalency diplomas before they are released?

Answer:

Approximately 45 percent of our inmates lack a high school diploma at the time of their incarceration. Over 5,000 inmates enrolled in the General Education Development program during 1986 with about 3,000 successful completions.

Question:

How many of your inmates lack a marketable skill? What percentage will learn a job skill before leaving prison?

Answer:

Approximately 60 percent of Federal inmates lack a marketable skill at the time of their incarceration. Each year approximately 15,000 inmates have an opportunity to participate in the occupational education program. These programs, along with over 13,000 jobs available for inmates in Federal Prison Industries, provide an opportunity for most, if not all, inmates who lack a marketable skill to obtain such a skill before they are released.

Question:

About a year ago, you initiated the Special Curfew Parole Program. What are the advantages and disadvantages of this program?

Answer:

Since its inception, 1,168 Federal offenders have been placed in Curfew Parole Status. As a result, the Federal Prison System realized savings in the cost of caring for these offenders of almost $1.2 million. In addition, institution-based population and therefore overcrowding was reduced and during the initial period of parole the releasee has increased community supervision by a U.S. Probation Officer. On the other hand, there are only a limited number of offenders eligible for the Special Curfew Parole Program and the already large caseload of the U.S. Probation Officers is further increased.

Question:

Does the Special Curfew require electronic supervision? How reliable is this? Is this capability likely to lead to more offenders being released under supervision?

Answer:

The Special Curfew Parole Program does not require electronic monitoring. The electronic monitoring equipment on the market appears to be reasonably reliable with some types more reliable than others. The Bureau of Prisons is considering the limited use of electronic monitoring for those offenders who do not present a threat to society. However, since the Federal inmate population is increasingly becoming more criminally sophisticated and two-thirds of 115,000 Federal offenders are already under supervision in the community, it is unlikely that the capabilities will lead to a significant number of additional offenders being supervised in the community.

Question:

You note that your Research Office completed during 1986 a major report on recidivism among Federal offenders. What percentage of the inmates released from Federal prisons are subsequently convicted of new crimes and reincarcerated in Federal or State prisons?

Answer:

In recent recidivism studies, the Office of Research and Evaluation reported the percentage of released inmates who were arrested after release rather than the percentage convicted or recommitted. Arrest is used as the criterion for recidivism for two reasons: 1) arrest is presumed to be a more accurate estimate of actual criminal activity than reconviction or recommitment, and 2) rap sheets often do not contain information on the disposition of arrests; hence, reconviction/recommitment information is often unknown.

A sample of 489 inmates released in 1980 was studied and post-release arrest or warrant issued was the recidivism criterion. Nineteen percent were arrested within one year; 31 percent were arrested within two years, and 38 percent were arrested within three years.

Question:

What factors enhance an inmate's chances of living a law-abiding life upon release?

Answer:

Factors which are related to an inmate's chances of success after release include: criminal history; age; history of drug abuse; and employment. Specifically, investigations of the Salient Factor system which the U.S. Parole Commission uses to assess an inmate's risk of recidivating, have demonstrated that older inmates with no criminal history, no history of drug dependence and a verified history of employment have the best chances for "success".

Question:

Do inmates who participate in your rehabilitative-type programs have a lower recidivism rate than those who do not participate?

Answer:

Generally speaking, rehabilitative program participation is not found to reduce recidivism rates. For specific subgroups of inmates, however, rehabilitative-type programs have been shown to be more effective than no treatment at all. One example is a Bureau of Prisons study which found that halfway house placement reduced recidivism for minority offenders, but had no impact on the recidivism rate for white offenders. In an attempt to clarify the issue further, the Bureau of Prisons has initiated the Post-Release Employment Project (PREP). This study will determine if participation in prison industries, industrial or vocational training, or participation in other prison programs is related to post-behavior (including recidivism).

Question:

Is there any evidence to show that an inmate who achieves literacy, obtains the equivalent of a high school diploma, or develops a job skill is less likely to recidivate?

Answer:

Questions relating recidivism to education and training of inmates will be addressed in the Post-Release Employment Project described in the previous response.

Federal Prison Industries

Question:

What share of the Federal procurement market do you have for each of your major product lines? To what extent are you displacing small business or minority-owned firms?

Answer:

Federal Prison Industries (UNICOR) is unable to obtain total Government procurement data for Government services organized in a manner which parallels the corporation's four product divisions. However, a comparison with the total Government procurement market is helpful. That market is in excess of $200 billion annually. UNICOR's annual sales for 1986 were $250 million, thus constituting less than one-eighth of one percent of the total Government procurement market.

There are no aggregated figures available to indicate the extent to which UNICOR might be displacing small business or minority-owned firms. However, from 60 to 80 percent of all UNICOR procurement

activity is returned to the private sector. A significant percentage of UNICOR's own purchasing is diverted to small business or minority-owned firms, thus further reducing any presumed impact on these firms.

Question:

Federal Prison Industries prices are usually established in negotiation with customers at, or near to, current market prices. How many of your products are based on current market prices?

Answer:

UNICOR establishes prices in negotiation with customers for non-stock items, but also maintains a large number of cataloged items at fixed prices, which are all priced in relation to the current market. These prices are established through market checks conducted by product divisions. Negotiated prices are used for non-cataloged, custom production items, and all customers are still free to request a waiver of UNICOR purchase if the corporation cannot produce the item or service at a competitive price.

UNICOR has experienced very few pricing appeals by customers. The General Accounting Office (GAO), in a November 1985 report on UNICOR products, reviewed UNICOR's pricing policies. The report noted that "UNICOR's clearance practices and the lack of arbitration cases indicate few pricing disputes."

Question:

Do you charge higher prices than what a Federal agency would be required to pay if the agency was allowed to procure competitively from the private sector?

Answer:

UNICOR's policy is to grant clearances when UNICOR's price is found to exceed the market price, and when that price discrepancy cannot be resolved in discussions between UNICOR and agency officials. That practice is in accord with the Federal Acquisition Regulations. The GAO study cited above indicated there were few pricing complaints and their survey of UNICOR customers indicated "UNICOR's prices were reasonable or competitive with other sources of supply".

Question:

When current market prices are available for products identical or similar to those FPI produces, where in the market price range do you set your price? How often do you exceed the lowest market price? How is this justified, given that your operations are quite profitable and that the Federal agencies are required, whenever possible, to buy at the lowest possible market price? How much would your anticipated 1988 profits be reduced if FPI adopted a policy of pricing at the low end of the market price range?

Answer:

UNICOR sets prices quite differently throughout its hundreds of product lines. There is no one set point of reference for choosing a particular place in the market range. In many cases, pricing is driven by the inmate employment environment, rather than the product's relative position in the market's price range. In some product lines, UNICOR actually manufactures products at a loss in order to keep inmates busy, while matching the price of private-sector competitors who are more efficient in their operations.

This lowered efficiency in FPI production stems from the fact that prison industries are necessarily labor intensive, rather than automated. Moreover, there is an unusually high amount of security, search and inmate accountability activity associated with prison industrial operations. These activities include inmate searches, inmate counts, extremely detailed tool control and inventory controls, as well as thorough search of all incoming and outgoing materials for contraband. Taken together, these factors significantly offset UNICOR's lower labor costs, and in many cases make it closely competitive with private-sector manufacture. For that reason, the wide variance in our product lines makes it impossible to commit to any one posture with regard to pricing.

UNICOR operations are not highly profitable when viewed against the program costs which are added to the security constraints that limit efficient production. These include using retained earnings for funding non-appropriated educational and vocational training programs in support of industrial production, payments to non-industrial workers in support of institutional operations, provision of special funding for experimental vocational training programs, and expansion/renovation of UNICOR's capital plant.

Question:

Are agencies charged the same price for the same item? Do some customers pay more than others because they accept your price and do not insist on negotiation? If so, given your position as a mandatory procurement source, shouldn't you either advise all customers that your prices are subject to negotiation or avoid charging different prices for the same item?

Answer:

Customer products or services are negotiated on a per-job basis by the individual product divisions. These negotiation options are available to all customer agencies. With regard to items with established prices on our schedule of products, all agencies pay the same price.

Question:

Federal Prison Industries sells products and services to other Federal agencies at a profit, consistent with the goal of remaining

financially self-supporting. Do you have any policy regarding the amount of the profit the Corporation considers reasonable for overall operations, for an individual product or service, or for a customer order?

Answer:

There is no overall policy regarding the amount of profit the Corporation considers reasonable at any level. Because of our overall goal of employing inmates, products are sometimes produced which, while selling at a fair market price, actually result in an overall loss for the Corporation. Product divisions are expected to contribute to overall Corporate profitability in proportion to their sales, but even within divisions, different products produce varying degrees of profit.

Question:

Recognizing that earnings can always be used to benefit the Corporation or the Federal Prison System, what policies or criteria exist for determining the extent to which earnings will be allocated to such uses, passed on through price reductions as savings for FPI customers, or returned to the U.S. Treasury to achieve overall budgetary savings?

Answer:

The retained earnings of the Corporation are used to fund vocational training and education programs for confined inmates, to fund a supplementary pay program for non-industrial inmate workers, to fund experimental vocational training programs within the scope of our legislation, and to maintain, upgrade and expand our capital plant. This latter category is quite important, as the Corporation is presently undergoing a major construction program. This construction program has been necessary to keep pace with the rapid expansion of the Federal Prison System. Its continuation will be equally important, inasmuch as inmate employment is expected to continue its growth in response to the addition of a large number of new Federal prisons in the next decade.

By using the Corporation's retained earnings to fund these inmate programs and the expansion necessitated by the construction of new Bureau of Prisons' institutions, UNICOR alleviates the need for higher appropriations for the Bureau of Prisons. Moreover, since the Corporation operates in a competitive business environment, retention of earnings across fiscal years enables flexible adaptation to customer needs as well as the ability to respond to the inmate employment needs of the Bureau of Prisons.

AIDS in the Federal Prison System

Question:

How many inmates in the Federal Prison System currently have AIDS?

Answer:

Twenty-one.

Question:

How many in the State and local prisons have AIDS?

Answer:

As of October 1, 1986, there were 1,232 confirmed AIDS cases reported by responding correctional systems to a National Institute of Justice (NIJ) inquiry. Of this number, the Federal Prison System had 65 cases. Since only a limited number of correctional systems responded to the NIJ inquiry, and since the number of confirmed cases only included those who were symptomatic at the time, we assume the actual number of AIDS cases would be higher.

Question:

How many prisoners in each of the Federal, State and local systems have tested positive for the AIDS antibody (HIV)?

Answer:

The Bureau of Prisons does not keep track of the number of Federal prisoners who have tested positive for AIDS antibody (HIV) and are not aware of any report which would include the number of the State and local prisoners who have tested positive for HIV.

Question:

I understand that the National Institute of Justice estimated in October of 1986 that there were 784 Federal and State prisoners with confirmed cases of AIDS and that this represents an estimated increase of over 300 since 1985. Do you agree with these estimates or do you think it is higher?

Answer:

The National Institute of Justice (NIJ) estimate regarding AIDS in correctional settings is based upon a limited number of responding correctional systems. Thus, we have concluded that the actual number of AIDS cases would be higher.

Question:

I also understand that the AIDS problem is particularly acute in the New York-New Jersey and Florida areas, probably due to drug abuse. I also understand that New York State has paroled 50 prisoners early within the last two years because they had acquired AIDS and other States have also followed suit. Have you done this at the Federal level at all? Do you plan to?

Answer:

Dr. Raymond Broadus, Assistant Commissioner of Health Services, New York State Department of Corrections, reports that a large number of their AIDS cases are drug abusers. However, he states that the New York Department of Corrections has not paroled nor granted early release because of the disease AIDS.

In regards to the Federal Prison System, the court has ordered one male released from our custody due to AIDS. In addition, the Federal Prison System petitioned the U.S. Parole Commission and was granted permission to release one female because of AIDS. These decisions are made on a case-by-case basis, taking into consideration community planning. Inmates must meet the criteria for release based upon a terminal illness. Because of the nature of this disease, inmates who meet this criteria are normally too ill to be released to the community. If they are released, they must have a community plan that includes the availability for payment for the medical and personal care they require. Communities and many families are reluctant to assume this responsibility. The final decision to approve release does not rest with the Federal Prison System, but with the U.S. Parole Commission.

Question:

How does the Bureau administratively deal with housing inmates with AIDS or the HIV antibody? Are you relying on the single cell housing?

Answer:

All inmates with AIDS are transferred to one of our medical centers, primarily the medical center for Federal prisoners in Springfield, Missouri. However, inmates who have tested positive with HIV antibody are not transferred to a special facility. Consideration is given to providing inmates who have HIV antibody with a single cell or multiple cell housing with other inmates who have had a positive test result.

Question:

If so, is this creating additional overcrowding problems for you?

Answer:

No, since it does not result in an absolute population increase.

Question:

I also understand that several different types of lawsuits and cases have already been filed regarding health violations and AIDS prisoners? Would you care to comment on this and the projected costs involved?

Answer:

Judgment has not been entered against the Bureau of Prisons concerning AIDS. Some litigation is now pending but does not significantly involve treatment of persons with the disease AIDS.

Question:

Wouldn't the Federal Government be liable in these types of cases?

Answer:

This, of course, will depend on the obligation and individual case circumstances. In general, we do not foresee a great deal of government liability.

Question:

Are all housing and treatment decisions determined on a case-by-case basis or is the Bureau developing guidelines for hospitalization and/or early release of AIDS patients such as in New York?

Answer:

The Bureau of Prisons has issued guidelines to all facilities which basically outlines the handling of all inmates with the HIV infection including those requiring hospitalization. We make the housing and treatment determination on a case-by-case basis.

Question:

What kinds of careful evaluation and ongoing monitoring of inmates suspected of having ARC and AIDS is the Bureau conducting?

Answer:

We evaluate each inmate on a case-by-case basis and provide or monitor care as clinically indicated.

Question:

What kind of mass screening is done for the HIV antibody?

Answer:

The Federal Bureau of Prisons does not mass screen; however, we do test for the HIV antibody when clinically indicated.

Question:

How often do you test for AIDS? Are prisoners randomly sampled or are all periodically tested for AIDS and, how often?

Answer:

The Federal Prisons System only tests for AIDS when clinically indicated.

Question:

What kind of costs are involved in testing?

Answer:

The cost of a basic Elisa test ranges from $3.50 to $40.00 with the average between $20.00 and $30.00. However, if any individual has a positive test, additional testing must be done for the HIV antibodies with this cost ranging from $32.50 to $125.00. Those with symptoms require additional laboratory testing involving a cost up to $600.00.

Question:

How do you view the growth or spread of AIDS in the prison population as compared to the general population?

Answer:

Initially, symptomatic cases seemed to have acquired the infection before incarceration; however, as time goes on the pool of incarcerated HIV-infected individuals will increase. As this occurs, we anticipate a more rapid rise of the disease in the prison population compared to the general population. Of course this is speculative at the present time and is being monitored closely.

Question:

Are any prisoners who have contracted AIDS participating in experimental testing programs with drugs such as AZT, DDC or HPA-23?

Answer:

Five individuals were candidates to receive AZT. Two of those participated and are receiving the drug and three refused. AZT is the only drug presently being used.

Question:

Have any Federal prisoners been "paroled" for that purpose? If so, does this depend on their original sentence? In other words, is their threat to society taken into consideration as well as their medical condition?

Answer:

No Federal prisoners have been paroled for experimental testing programs.

Question:

Has the Department of Health and Human Services or CDC yet commented on early release of AIDS prisoners?

Answer:

No they have not, nor is it expected that they will take an official position on this subject.

Question:

Do we know of any incident of recidivism among released AIDS patients?

Answer:

The Federal Prison System had one case return to date. However, the likelihood of recidivism of true AIDS is less likely to occur because of the serious illnesses incurred with this disease and short life expectancy.

Question:

What does the Bureau do with prisoners who contract AIDS or get cancer, heart disease or other serious diseases, in general? How many FCIs currently have adequate hospital facilities to care for the seriously ill?

Answer:

Prisoners with serious illnesses are transferred to one of the Bureau's medical centers, or hospitalized in a community hospital as their condition permits.

Question:

What kind of costs are involved?

Answer:

Those with AIDS or other types of serious diseases increase not only the direct cost but cause a drain on personnel time available to

provide care to other individuals. This includes physicians, paraprofessionals and security personnel.

Question:

How often are you forced to house seriously ill prisoners in regular hospitals near FCIs? If so, how does the hospital or general population feel about this? And, what kind of security costs are we talking about?

Answer:

During 1986, we housed 1,668 Federal offenders in local community hospitals. All of these required medical care beyond the capabilities of our institutions. While there are some hospitals that may not prefer to house prisoners, so far this has not become a major problem. Additional security cost amounted to almost $2.6 million during 1986.

Question:

Due to the growing incidence of AIDS in the Federal, State and local prison systems, particularly in certain geographic areas (i.e., New York State, New Jersey and Florida have almost 75 percent of correctional AIDS cases in the State prisons), has the Bureau been working with any of the State systems on the idea of constructing or renovating an existing building to be used as a hospital for AIDS patients and/or other seriously ill prisoners?

Answer:

The idea has been discussed at various meetings, but action has not been taken at this time. It is not expected that action in this direction will be taken.

Question:

Can you identify any potential sites for such a hospital? Or cost estimates?

Answer:

Although this has not been looked into in-depth, one certainly would have to consider sites in large metropolitan areas where there is an availability of supportive medical care and other services. Such a facility would be extremely difficult to staff and the cost is projected to be extremely high.

Question:

Are you currently conducting any staff and inmate education programs related to AIDS?

Answer:

All newly committed inmates receive training about the HIV infection and AIDS information pamphlets during the admission orientation program at the institution. All new institutional staff receive a similar program that is updated on a yearly basis.

THURSDAY, MARCH 12, 1987.

OFFICE OF JUSTICE PROGRAMS

WITNESSES

RICHARD B. ABELL, ACTING ASSISTANT ATTORNEY GENERAL, OFFICE OF JUSTICE PROGRAMS

VERNE L. SPEIRS, ACTING ADMINISTRATOR, OFFICE OF JUVENILE JUSTICE AND DELINQUENCY PREVENTION

JAMES K. STEWART, DIRECTOR, NATIONAL INSTITUTE OF JUSTICE

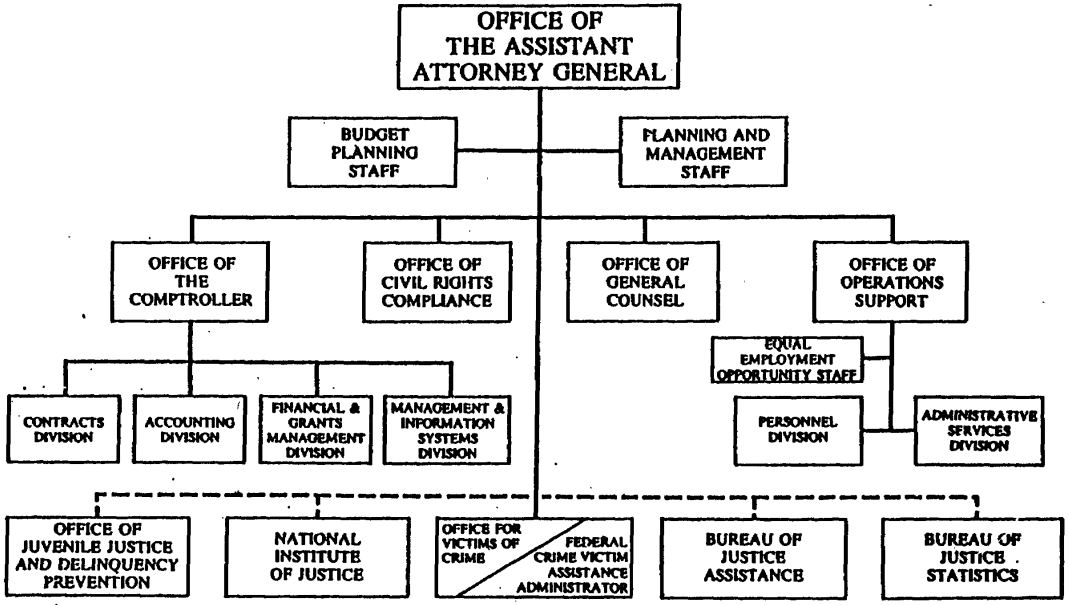
STEVEN R. SCHLESINGER, DIRECTOR, BUREAU OF JUSTICE STATISTICS

ALLEN J. VANDER-STAAY, BUDGET OFFICER, OFFICE OF JUSTICE PROGRAMS

MICHAEL J. ROPER, DEPUTY COMPTROLLER FOR BUDGET

Mr. DWYER [presiding]. Good morning. Continuing our review of the Department of Justice, we shall now hear testimony from the Office of Justice Programs. The Office of Justice Programs requests $78,303,000 in fiscal year 1988, a decrease of 81 percent from fiscal year 1987 amounts adjusted for proposed supplementals.

We will insert in the record at this point the Office's fiscal year 1988 budget justification.



[The justification follows:]

Office of Justice Programs

Justice Assistance

Summary Statement

Fiscal Year 1988

The Office of Justice Programs is requesting for 1988 a total of $78,303,000, 267 permanent positions, and 301 workyears. This request represents a decrease of $337,756,000 and a decrease of 36 positions and 30 workyears from the 1987 anticipated appropriation of $416,059,000, which provides for 323 positions and 331 workyears.

Budget authority is requested to continue five missions: Research, Evaluation and Demonstration programs which conduct research into all aspects of the criminal justice system; Criminal Justice Statistical programs which provide statistical information dealing with crime and the operation of the criminal justice system at all levels of government; Public Safety Officers' Benefits which provides death benefits to the survivors of public safety officers killed in the line of duty; Missing Children to combat the criminal and sexual exploitation of children; and Emergency Assistance to respond to situations which exceed the capacity of local law enforcement resources. The discontinuation of the Juvenile Justice, State and Local Assistance, Anti-Drug Abuse, Regional Information Sharing System, and Mariel Cubans programs is proposed.

Research, Evaluation and Demonstration Programs

The National Institute of Justice (NIJ) is the principal sponsor of research on crime and the criminal justice system in the United States, and has broad responsibility for developing improved methods of dealing with major criminal justice problems. NIJ currently administers: 1) a core program of research aimed at the causes and control of crime and the improvement of criminal justice practices, 2) a development program designed to translate policy-relevant research findings into practical programs and policies for use by criminal justice agencies, 3) a field test program which provides for on-site experimentation with newly devised crime control strategies, 4) an evaluation program to provide an early assessment of the effectiveness of novel State and local approaches to criminal justice problems, and 5) a dissemination program which uses a variety of strategies to get important research findings and criminal justice program information to practitioners and policy-makers as quickly and completely as possible. The requested amount of $22,094,000 provides a program increase of $2,700,000 for three initiatives to control the supply and demand for illegal drugs.

Criminal Justice Statistical Programs

The Bureau of Justice Statistics (BJS) is responsible for all of the major national statistical series and other sources of data concerning crime and criminal justice with the sole exception of the FBI's Uniform Crime Reports. The mission of the Bureau is twofold: to provide senior officials of the Justice Department, the White House, the Congress, the Judiciary, and the public with valid and timely justice data and analyses relevant to policy decisions, and to support the emerging capacity of State and local governments to use data as a cornerstone of their criminal justice programs. The Bureau of Justice Statistics is requesting for 1988, a total of $20,300,000 in program funds. The request provides an increase of $750,000 for a white-collar crime statistical series initiative.

State and Local Assistance

The Bureau of Justice Assistance (BJA) administers the financial and technical assistance program for State and local criminal justice. Eighty percent of the funds appropriated for State and local assistance are available for the block grant program. Block grants are awarded to the States with each receiving a base amount of $250,000 and the remainder allocated according to relative population. Block grant funds are intended for programs which have a high probability of improving the criminal justice system, with emphasis on violent crime and serious offenders. These funds must be matched on a dollar for dollar basis to assure that the recipient jurisdictions share in the cost of the projects. States and localities are to assume full project costs after three years. Twenty percent of the funds appropriated for State and local assistance are available for the discretionary grant program. Discretionary funds are for training and technical assistance to criminal justice personnel and national or multi-State projects and demonstration programs related to the priority objectives authorized for formula grants. No budget authority is requested for 1988. This program has been funded for three years during which time the States and localities have had an opportunity to implement a number of suggested programs to achieve increased efficiency, reduced costs, or improved services. The States should be willing to pick up their costs from the increased revenues they will be receiving in 1987 and beyond as a result of the Tax Reform Act of 1986.

Emergency Assistance

The Justice Assistance Act of 1984 authorizes the provision of funds, equipment, training, intelligence information and personnel to a requesting State, in the event of a law enforcement emergency. The Act envisions a Federal response to situations which exceed the capacity of local law enforcement resources. Upon request by a Governor, assistance may be provided when the Attorney General, after consultation with appropriate members of the Federal law enforcement community, determines that a law enforcement emergency does exist. The requested amount of $1,200,000 provides a small increase of $52,000 to maintain the program at an adequate level.

Juvenile Justice Program

This program provides funds to States and localities for juvenile justice and delinquency projects in the areas of education, training, research, prevention, treatment, and rehabilitation. The major thrust of the program is to attain deinstitutionalization of status offenders and the separation of juvenile and adult offenders at the State and local levels. Since 1975 almost one billion dollars has been made available for the various programs authorized by the Juvenile Justice and Delinquency Prevention Act. The Administration believes that much has been accomplished in the past 13 years but that it is now time for the States and localities to fund these programs. Therefore, no funds are requested for 1988.

Missing Children

This program was first authorized and funded by Congress in 1985. Funds are used to combat the criminal and sexual exploitation of children by assisting families, citizen groups, law enforcement agencies and government institutions in a national effort to ensure the safety and protection of children. The request for $4,000,000 will continue the program at the same level as 1987.

Public Safety Officers' Benefits Program

The Public Safety Officers' Benefits Program provides a $50,000 death benefit to the eligible survivors of Federal, State and local public safety officers whose death results from a traumatic injury sustained in the line of duty. Public safety officers covered by the program include but are not limited to police, corrections, probation, parole and judicial officers and firefighters. The request of $10,000,000 for 1988 is a slight decrease of $650,000 under 1987 and results from the reduced number of eligible claims paid over recent years.

Mariel Cubans

In 1985 Congress appropriated $5,000,000 to reimburse States for part of the costs of incarcerating Mariel Cubans who had been originally paroled by the Federal Government. No funds are requested for this purpose in 1988.

Regional Information Sharing System

This activity provides funds to maintain seven regionally based information sharing centers throughout the United States which service some State and local criminal justice agencies. Federal funds exceed ninety percent of the cost of maintaining the centers which benefit only a small portion of the law enforcement community. No funding is requested for 1988.

Anti-Drug Abuse Program

This is a new program authorized by the Anti-Drug Abuse Act of 1986 to assist State and local governments in their drug control and enforcement efforts. Types of programs eligible for funding include the apprehension, prosecution, adjudication, detention, and rehabilitation of drug offenders, in addition to drug eradication, treatment for drug offenders, demonstration projects of new and effective drug control techniques and a pilot prison capacity program. Since no funds are requested for 1988, the funds appropriated and awarded in 1987 will permit the States to increase their efforts in reducing the drug abuse problem. The cost of such program increases can be funded by the States from the increased revenues they will receive as a result of the Tax Reform Act of 1986.

Management and Administration

This activity provides for executive direction and control of the National Institute of Justice, the Bureau of Justice Statistics, the Bureau of Justice Assistance, the Office of Juvenile Justice and Delinquency Prevention, the Office for Victims of Crime, and the Office of Justice Programs, as well as the full range of support services. The request of $20,709,000, 287 positions, and 301 workyears provides a decrease of 32 positions, 26 workyears, and $972,000 due to the termination of funding for Juvenile Justice, State and Local Assistance, Anti-Drug Abuse, Mariel Cubans, and the Regional Information Sharing System programs. Included in adjustments to base is a reduction of four positions, four workyears, and $100,000 representing management and productivity savings.

Office of Justice Programs

Justice Assistance

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in the appropriations language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Justice assistance

For grants, contracts, cooperative agreements, and other assistance authorized by the Justice Assistance Act of 1984, Runaway Youth and Missing Children Act Amendments of 1984, and the Missing Children Assistance Act including salaries and expenses in connection therewith, $78,303,000

[$115,368,000; and of the unobligated funds previously appropriated for the Juvenile Justice and Delinquency Prevention Act, other than funds subject to provisions of sections 222(b), 223(d), and 228(e) of title II of such Act, $3,500,000 shall be made available for programs authorized under parts D and E of the Justice Assistance Act of 1984, all funds appropriated herein to remain available until expended; and for grants, contracts, cooperative agreements, and other assistance authorized by title II of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, including salaries and expenses in connection therewith, $70,282,000] to remain available until expended. [In addition, $5,000,000 for the purpose of making grants to States for their expenses by reason of Mariel Cubans having to be incarcerated in State facilities for terms requiring incarceration for the full period October 1, 1986 through September 30, 1987, following their conviction of a felony committed after having been paroled into the United States by the Attorney General: Provided, That within thirty days of enactment of this Act the Attorney General shall announce in the Federal Register that this appropriation will be made available to the States whose Governors certify by February 1, 1987, a listing of names of such Mariel Cubans incarcerated in their respective facilities: Provided further, That the Attorney General, not later than April 1, 1987, will complete his review of the certified listings of such incarcerated Mariel Cubans, and make grants to the States on the basis that the certified number of such incarcerated persons in a State bears to the total certified number of such incarcerated persons: Provided further, That the amount of reimbursements per prisoner per annum shall not exceed $12,000.] 1988

Not to exceed [$64,000,000, shall be obligated during fiscal year 1987] for victim compensation and $35,000,000 assistance programs, notwithstanding section 1402, 1403, or 1404 of the Victims of Crime Act of 1984 (Public Law 98-473).

(Department of Justice Appropriation Act, 1987, P.L. 99-500 and 99-591, section 101(b)).

[For an additional amount for "Justice assistance", $225,000,000, to remain available until expended, for grants for drug law enforcement programs, to be used only to carry out provisions of title I of the Omnibus Crime Control and Safe Streets Act of 1968, as amended by H.R. 5484 as passed the House of Representatives on October 8, 1986 or similar legislation if enacted into law: Provided, That $2,000,000 shall be available only to carry out a pilot prison capacity program.]

(Omnibus Drug Supplemental Appropriation Act of 1987 as included in P.L. 99-500 and 99-591, Title II).

Explanation of Changes

1. The first change deletes language for the Juvenile Justice program.
2. The second change deletes language for the Mariel Cuban program.
3. The third change deletes language for the drug law enforcement and pilot prison capacity program.

Congressional Appropriation Actions

Congress restored $67,600,000 for the Juvenile Justice program and increased resources for administration of the program by $550,000 and 22 positions. Congress also restored $40,000,000 for the State and Local Assistance program and $422,000 and 10 positions for administration of the program. Increases of $5,000,000 for the Mariel Cuban and $9,900,000 for the Regional Information Sharing System programs were also provided. Funding was reduced for the Research, Evaluation and Demonstration program, Criminal Justice Statistical program, Emergency Assistance, and the Public Safety Officer's Benefits program. Congress passed the Anti-Drug Abuse Act of 1986 in which $225,000,000 was appropriated to assist state and local governments in the war against drugs.

Supplementals Requested

1. The supplemental request for $27,000 is for increased Federal Telecommunications system costs.
2. The pay request provides $382,000 to meet increased pay requirements pursuant to P.L. 99-500.

Research, Evaluation and Demonstration Programs.....	...	...	$18,566	...	...	$19,394	...	...	$22,094	...	...	$2,700

Long-Range Goal: To increase knowledge about the causes and control of crime, and the efficiency, effectiveness, equity and responsiveness of the nation's law enforcement and justice administration systems and to disseminate such knowledge to Federal, State and local governments.

Major Objectives:

To advance the cumulation and synthesis of knowledge about the causes and control of crime and to improve State and local criminal justice systems through continued support of justice research programs.

To use research findings to prevent and reduce crime.

To evaluate the effectiveness of justice programs and to make recommendations for improving their operations at the three levels of government.

To develop model programs for improving justice practices and procedures.

To disseminate the results of research, development, evaluation and technology transfer programs to criminal justice audiences.

Base Program Description: The National Institute of Justice is the nation's largest and most comprehensive criminal justice research and development center. As the major national resource for policy-relevant information regarding crime and criminal justice in the United States, the Institute's programs are designed to improve society's ability to control crime and to assist criminal justice practitioners and policymakers in selecting the most effective solutions to their urgent crime problems. The policy options developed through Institute research serve as an inexpensive means of providing Federal criminal justice assistance to States and cities. Institute research products provide policymakers with a range of alternative strategies for improving their crime control efforts without imposing rigid and burdensome Federal requirements.

Each year, the Institute develops a program plan which outlines the critical policy issues which will be addressed by Institute research and development activities. This plan results from extensive consultation with State and local governments, related Federal agencies, criminal justice professional associations and academic researchers. At the request of such organizations as the National Governors Association and the U.S. Conference of Mayors, the Institute Director presents new policy-relevant research findings at national meetings, and uses that opportunity to discover which criminal justice problems are most pressing at the State and local level. In this way, the Institute's research agenda is driven by the practical demands of policymakers, the principal market for research products.

The critical areas which currently are receiving priority attention include: controlling the supply of and demand for illegal drugs; alleviating jail and prison crowding; assisting victims of crime; enhancing involvement of community resources and the private sector in controlling crime; reducing violent crime and apprehending the career criminal; reducing delay and improving the effectiveness of the adjudication process; assessing the impact of probation and parole on subsequent criminal behavior; and enhancing Federal, State and local cooperation in crime control.

Most of the Institute's research projects are implemented by various experts in their particular fields through grants, contracts and cooperative agreements. Moreover, the Institute has established a small in-house research capability to provide quick-response research on important topics of immediate policy-relevant interest. Institute studies on the impact of the exclusionary rule, the economic and social costs of crime as compared to prison construction costs, the effects of changes in drunk driving legislation, and patterns of public safety officer deaths are products of this recent innovation.

Institute research projects conducted by external researchers with grant funds are selected primarily through a competitive solicitation process which uses peer review. For all Institute projects, a staff project monitor works closely with the researcher to assure successful completion of the project and to feed project findings back into the planning process. The Institute's visiting fellowship program provides an opportunity for qualified criminal justice practitioners to undertake research of their own design at the Institute's offices, thereby providing staff with an occasion to draw on the researcher's field perspective and operational experience.

Based upon research and evaluation findings, syntheses and program models are developed which detail the advantages and limitations of a variety of programmatic options in a given topic area. These products are aimed specifically at practitioners to assist them in deciding which research-based innovations may be appropriate for their jurisdiction. Selected model programs are field tested and evaluated to determine the likelihood of success if replicated and institutionalized by State and local government agencies, the private sector, or community organizations. National conferences and training workshops also are conducted in selected areas to acquaint senior officials with new programs or new research findings with significant implications for the management of their agencies. In response to requests from the field, the Institute also produces and disseminates brief policy papers for use by Governors, State legislators, chief justices, court administrators or local executives on topics of particular concern.

Finally, in accordance with its statutory authorization, the Institute operates the National Criminal Justice Reference Service which serves as the principal national and international clearinghouse for the exchange of information on criminal justice issues.

1450

Accomplishments and Workload: Following are recent major accomplishments of the National Institute of Justice categorized by major program area:

Narcotics Enforcement and Prevention: To protect the community, judges who are deciding to release defendants awaiting trial need information on a suspect's drug status. In 1986 NIJ-sponsored researchers used advanced urinalysis technology to: 1) determine the extent of drug use among arrestees and 2) to examine whether urinalysis of users released on bail was more effective than other means of monitoring users. NIJ found that drug use is much higher among arrestees than anticipated. In New York City over 50% had used an illicit drug other than marijuana within 48 hours of arrest. The findings showed that criminals on drugs commit four to six times as much crime as do those same offenders when they are drug free. Finally, the results showed that periodic testing of arrestees is more effective than traditional drug treatment programs or routine pretrial release supervision.

Drugs and Criminal Careers: NIJ and the National Academy of Sciences issued a major report in 1986 which described the role of early and heavy drug involvement in the identification of serious and persistent offenders and in the prediction of future risk.

Prison and Jail Improvements: NIJ initiated three new activities in 1986 to disseminate information on innovative methods to expand the Nation's capacity to incarcerate while reducing the time and/or cost of prison and jail construction. Construction Bulletins are summaries of individual construction projects where time and cost savings have been achieved through better management. The Corrections Construction Directory provides profiles of the 200 construction projects completed since 1978, and the Construction Information Exchange is a computer data base permitting exchange of plans and cost information on facility types. In response to the AIDS epidemic, NIJ and the American Correctional Association published AIDS in Correctional Facilities: Issues and Options.

Less than Lethal Weapons: NIJ sponsored a conference in June 1986 at which the State of the research on nonlethal alternatives to firearms was presented to high-level policy makers, researchers, and police executives. Less than lethal weapons have applications for policing when deadly force is not required as well as for anti-terrorist procedures. Further research and development activities were agreed upon and are being implemented.

Family Violence: NIJ disseminated the results of its experiment evaluating the effectiveness of different police responses to spouse assault. The principal finding was that arrest of the offender was more effective in reducing recidivism than on-scene police counseling or separating the couple for a few hours. NIJ also detailed state-of-the-art procedures involving the police, prosecutors, and courts in Confronting Domestic Violence: A Guide for Criminal Justice Agencies.

Victims: In a study, NIJ found that inadequate notice to victims of crime prevented more than half of the study group from being informed that they could give their views on sentencing or parole decisions for offenders. More than 200 judges participated in a conference on Courts and Victims. NIJ also funded the first comprehensive victim services program at a California hospital which will be a model for other jurisdictions.

Sentencing: Several research projects were funded on the use of incarceration, fines, community service, and community based programs to provide more effective punishment as well as control. NIJ is also intensively investigating the rapidly increasing use of electronic monitors as an aid to probation officers. Using data from NIJ research, the Institute has been advising the Federal Sentencing Commission in its deliberations.

Organized Crime: NIJ sponsored research on drug trafficking, money laundering, and organized crime infiltration of legitimate businesses. The Institute held a symposium to synthesize knowledge of organized crime operations and to establish new research priorities.

Police-Prosecutor Coordination: Six experiments are being conducted to test the impact of a variety of police-prosecutor coordination strategies on reducing felony case attrition and on increasing prosecutorial effectiveness. A project underway in Newport News, Virginia is implementing a new crime analysis concept called prosotive policing. NIJ offered training to municipal police departments on differential police response which classifies calls for service to improve the match between the nature of the call and wide range of potential responses to minimize unwarranted dispatch of police cars, thus saving time and money.

Immigration Enforcement: In cooperation with the INS, two methods of automation are being investigated to reduce the labor costs of monitoring illegal immigration across the U.S./Mexico border. One is the use of a buried cable in Arizona to detect illegal immigrants; the other is the use of artificial intelligence to scan the border with cameras and alert a staff person when the monitor detects someone crossing illegally. NIJ is also funding research into the extent and costs of undocumented alien crime in San Diego and El Paso.

National Criminal Justice Reference Service (NCJRS): NIJ operates NCJRS, the largest national and international information center on criminal justice policy and issues. Over 180,000 documents were distributed, by issue and upon request, to practitioners and researchers in 1986. NCJRS operates on a fee-for-service basis. The net income from the sales offset operating expenses. Sales increased from $260,000 in 1984 to $360,000 in 1986, and growth is anticipated to continue.

Program Change: An increase of $2,700,000 is requested for initiatives to control the supply and demand for illegal drugs. Funds will be used to implement a drug use "early warning" system ($1,350,000), conduct research into the effectiveness of intensive crackdowns on street-level drug dealers ($600,000), and disseminate public service announcements targeted for youngsters and teenagers ($750,000).

The drug use "early warning" system would consist of a pre-trial drug testing program in 25 American cities from which urine samples of 200 persons each would be drawn from the arrestee population. The sample groups would be tested once each quarter to determine if they were engaging in illicit drug use. Test results and analysis would be supplied to law enforcement authorities, treatment/medical systems, and the Drug Enforcement Administration. It is anticipated that the drug use index developed from this activity would allow quick notice of changes in drug use patterns and of variations in regional use. There is increasing evidence that drug users commit fewer crimes while on pre-trial release, probation and/or parole when they abstain from drugs. Recently completed research in the District of Columbia and New York City has established that urinalysis is a particularly effective means of identifying and controlling drug use among defendants released pending trial. The District of Columbia has assumed the full cost of the adult pre-trial drug testing program because: 1) it identifies the worst risks for pre-trial releases; 2) it reduces pre-trial crime by closely monitoring user releases to ensure they remain drug free; 3) it identifies the current drug of choice among the user population, permitting the city to allocate its prevention, investigation and treatment resources accordingly. (For example, in D.C. the most commonly used drug is PCP, while in New York it is cocaine.) In both New York and D.C., urine testing has established that drug use among arrestees is far more prevalent that previously estimated.

While relatively expensive, urine testing is nevertheless a cost-effective technology. Currently, jail and prison crowding has resulted in higher risk offenders being released to the community. Periodic urine testing, which is far cheaper than the daily cost of incarceration, reduces the risk to the public by identifying drug-using arrestees and notifying them that they will be reincarcerated if they do not abstain.

In Washington, arrestees who were monitored and sanctioned for drug use had a rearrest rate 50% lower than arrestees whose drug use was not being monitored.

The street drug-dealer crackdown research would be replicated in eight cities, permitting variation in city size, targeting strategy, and intensity and duration of enforcement. Recently completed studies of local drug enforcement strategies suggest that targeted enforcement against street dealers might have not only a deterrent effect but also disrupt vital information on where to make buys. These strategies range from sustained enforcement of targeted areas to intensification of enforcement at random intervals. The enforcement methods used were vigorous arrest and prosecution of offenders in the targeted neighborhoods. Initial research also showed a significant reduction in property crime when the crackdown technique was used. Local law enforcement agencies would contribute the necessary manpower for this effort. The Institute's evaluation would track the extent of enforcement whether dealing was displaced and the effect on property crime rates. Findings from the replication would then be disseminated to local law enforcement agencies to make their interdiction activities more effective.

The public service announcement campaign would follow NIJ's successful "Report, Identify, Testify" campaign, focusing on the production of drug prevention announcements targeted at teenagers. Recent tragic deaths of young athletes underscore the need for a nationwide drug education program that spells out the dangers of drugs like cocaine. High quality public service announcements developed by professional advertising personnel will bring messages that spell out the dangers of drugs like cocaine to young people throughout the country. The cost of this program will be split with private sector donors and will include evaluation of its effectiveness.

The National Institute of Justice has responsibility for a broad range of research, development and dissemination activities directed at reducing crime and improving the criminal justice system. These three projects, pioneered and pilot tested by the Institute, will be expanded to aid in measuring the extent to which our policies have an impact on reducing drug use and drug related crime. While we need to spend resources on operations to reduce the supply and demand for drugs, we also need to support experimental programs and measure their results to assure that we are allocating resources to the most effective programs.

Activity: Criminal Justice Statistical Programs	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Criminal Justice Statistical Programs.....	...	...	$16,002	...	...	$19,550	...	...	$20,300	...	...	$750

Long-Range Goal: To assist policy and decision makers at the Federal, State and local levels of government by providing for the collection, analysis, publication and dissemination of comprehensive and accurate statistical information concerning crime and the operation of this nation's criminal justice systems.

Major Objectives:

To collect, analyze, publish and disseminate statistical information on crime and the operation of justice systems to the President, the Congress, the Judiciary, the Department, State and local executives and officials, and the public.

To maintain and develop an analytic program which will address the implications of national criminal justice statistics for Departmental policy and legislative initiatives.

To recommend national standards for justice statistics and to ensure the inter-State comparability, reliability and validity of justice statistics.

To conduct and support evaluations to improve the quality of justice statistics and to implement the recommendations therefrom.

To encourage the development, maintenance, and utilization of State and local governmental organizations and facilities responsible for the collection and analysis of criminal justice data and statistics.

To ensure compliance with requirements relating to confidentiality and security of data.

Base Program Description: The Bureau of Justice Statistics (BJS) is responsible for all major national statistical series and other data sources concerning crime and criminal justice except the FBI's Uniform Crime Reporting (UCR) Program. The mission of the Bureau is twofold: to provide senior officials of the Justice Department, the White House, the Congress, the judiciary and the public with valid, timely, and policy relevant justice data and analyses, and to support the emerging capacity of State and local governments to use data as a cornerstone of their criminal justice programs.

BJS maintains a number of major statistical series, the data from which are used in answering requests for information from Congress, the White House, the judiciary, the Department of Justice, criminal justice agencies and organizations, academic researchers, the media, and the general public. BJS also publishes a regular series of bulletins and special reports which disseminate data from the series.

The National Crime Survey (NCS), the largest BJS series, is the Nation's principal source of information on crime victimization and the victims of crime, and the third largest survey conducted by the Federal Government. Under the NCS program, interviews are conducted with 135,000 persons in 60,000 households in order to obtain data on the impact, frequency and consequences of criminal victimization on the American public. The BJS corrections statistics program provides systematic information on correctional populations and facilities gathered from Federal, State, and local governments, and covers the major aspects of the corrections system - probation, jails, prisons, and parole. The overall program consists of five components: (1) annual National Probation Reports; (2) annual Uniform Parole Reports; (3) annual National Prisoner Statistics; (4) annual counts and characteristics of persons sentenced to death; and (5) quinquennial surveys of national samples of prison and jail inmates and censuses of State and local correctional facilities.

Most criminal justice activities in the nation take place at the State and local levels of government. A primary objective and legislative mandate of BJS is to support the States in the accurate and timely collection, aggregation, and analysis of State-level criminal justice data. This objective is accomplished primarily through the support of Statistical Analysis Centers (SACs) which analyze and disseminate statistical information, coordinate State criminal justice statistical activities among State, county and city agencies, and provide improved State data for BJS analyses; support is also given to State UCR programs which compile and analyze local law enforcement data and forward it to the FBI. Through extensive Federal funding over the years, BJS has created 44 SACs and has supported the development of approximately 45 State-level UCR systems.

Accomplishments and Workload: Accomplishments of the Bureau of Justice Statistics are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Statistical series perennially maintained	10	10	11	12
Statistical series intermittently maintained	2	2	2	3
Statistical and related reports prepared for BJS by grantees and contractors and published by BJS	14	10	10	9
State statistical projects supported	57	58	79	79
Number of requests for data sets and documentation filled by criminal justice data archive	600	600	625	625
Number of information and technical assistance requests filled under BJS supported programs	1,002	1,080	1,120	1,120

The Bureau of Justice Statistics has established itself as an independent and objective national center to provide basic information on crime and criminal justice to the President, the Congress, the Judiciary, State and local governments, the general public, and the media. In meeting its statutory mandate, BJS maintains more than two dozen data collection series using a variety of methods that include household interviews, censuses and sample surveys of criminal justice agencies and of prisoners and jail inmates, and compilations of administrative records. Using the data collected, BJS prepared and disseminated 34 reports and data releases during 1986. These reports include annual Bulletins, which present in a nontechnical format the latest statistics from BJS' data series on particular aspects of crime or the administration of justice, and Special Reports, also written in nontechnical language, which provide data on topics of current public interest and policy debate. During 1986, work continued on the second edition of Report to the Nation on Crime and Justice. The first edition won a number of national awards and was the first publication to provide a comprehensive portrait of crime and the justice system in a nontechnical format.

During 1986, BJS began implementation of the redesign of the National Crime Survey. Modifications judged to be nonrate affecting were made to provide needed improvements quickly, while still maintaining comparability with previous years' data. These changes included an expansion of questions on the victim's use of self-protective measures, the addition of a question about drug use by offenders, and the addition of questions about the victim's contacts and experience with the criminal justice system. Planning for major modifications to be made during late 1988 continued throughout 1986 and resulted in the selection of proposed design package. In addition to questionnaire revisions, BJS has also been investigating the use of Computer-Assisted Telephone Interviewing (CATI) technology for NCS data collection.

In 1986, major steps have been taken towards establishing a statistical series dealing with the management and administration of law enforcement. In July 1986, a report was issued which described the content and timing of the series, as well as draft questionnaires. In November, BJS convened a meeting of representatives of the major police professional organizations and produced a draft final questionnaire, prepared an OMB clearance package, and made plans for a May 1987 mailing to a nationally representative sample of police departments. Survey results will yield the first truly comprehensive statistical profile of law enforcement agencies in terms of sworn and civilian personnel, their salaries, the full range of police functions, equipment, expenditures, policies, and operations. Another potential use of the data will be for comparison purposes, i.e. an agency can compare itself to other agencies or groups of agencies with like characteristics.

BJS took several steps to launch a new national crime reporting system by beginning implementation of the Uniform Crime Reporting (UCR) Redesign, in cooperation with the FBI. In 1987, BJS received an increase to its appropriation of close to $3 million for this purpose. During 1986, specific data element definitions, coding instructions, and incident reporting form revisions were developed; an award was made to the State of South Carolina to test a major overhaul of its system to capture and report the expanded data elements; the BJS Director wrote a letter to each Governor, describing the effort to make the first change in UCR in over 50 years and indicating the availability of Federal support; a full program announcement describing the availability of 1987 grant funds was sent to each State UCR program in August 1986 with a deadline for applications in October 1986; and awards were made to establish a computer laboratory to assist local police departments in acquiring new management information systems, including a UCR component, as well as to detail specific analytic benefits of the new data elements in the experience of 25-30 identified police agencies.

The BJS Adjudication Program is undergoing a major expansion to increase its comprehensiveness by establishing a national court statistics series. Once established, the series will provide information never before reported about justice administration in the nation. Significant progress toward the series was made in 1986 with the completion of a national survey of trial courts. Approximately 3,500 trial courts participated by completing a questionnaire designed to document such facts as the number of felony convictions and the number of acquittals in 1986. The survey is preliminary to a more extensive one planned for 1987 that will provide data on the outcomes of key court actions such as arraignment, disposition, and sentencing. Also during 1986, data collection began for a major expansion of the number of jurisdictions involved in the project that produced Felony sentencing in 18 local jurisdictions (BJS Special Report, June 1985). That project used court and prosecutor records to collect data on the type and length of sentence received by felony defendants for seven offenses. The expansion is expected to provide data for as many as 35 jurisdictions with publication of the data in fiscal 1987. An additional project is collecting data on case processing characteristics and other relevant variables from a sample of 10,000 defendants charged with robbery or burglary. In 1986 data collection was completed in three sites. Data collection in seven others is planned for 1987. The study will examine the impact different policies and practices have on the disposition and correctional outcomes of robbery and burglary cases.

Program Change: An increase of $750,000 is requested in 1988 for a white collar crime initiative. This initiative will provide the first empirical estimate of the number of white collar crime incidents reported, investigated, prosecuted or otherwise handled by Federal and State government agencies and responds directly to continued interest of the Department of Justice, Congress, the States, and the public as evidenced through Congressional hearings, State legislation, establishment of Federal and State fraud units, and ongoing media concern. Such data are particularly relevant as media coverage of recent securities, banking and government program frauds may have distorted public perceptions of white collar crime rates and may well have given the public inadequate understanding of the level of Department of Justice efforts in this area. The data will facilitate long-term cost savings by permitting evaluation of alternative crime control strategies, will provide empirical data to support legislative, budget and correctional strategies at the Federal and State levels, and will more accurately reflect the full extent of the government's commitment to white collar crime control. Program costs would be minimized by using data already collected by different agencies and by incorporating the analysis effort into the already existing Federal data analysis program.

The current initiative proposes the collection and analysis of Federal data and the review of State data resources. Under the Federal data component, data (both manual and automated) maintained by Federal regulatory agencies, operating departments, and offices of Inspectors General will be collected and analyzed. Preliminary analyses of small data samples will also be conducted at the State level. Efforts will be made to identify relevant units of State government in order that future attempts to obtain State data can be made. It is anticipated that at a later time, State data will also be integrated with Federal data to produce the first overall description of white collar crim

Over the long term the proposed white collar crime series will provide cost-cutting benefits to all agencies engaged in white collar crime control activities. Specifically, data on the nature, cost and extent of white collar crimes will allow such units to target resources more efficiently and to evaluate the effectiveness of various regulatory and enforcement strategies. The proposed initiative will also establish liaison with businesses and other private sector organizations engaged in white collar prevention activities. Comprehensive indicators of white collar crime data will provide a basis for development of more effective and fiscally sound strategies to control white collar crime losses. Additionally, since statistical attention to data has been directed almost exclusively to violent and other "street" crimes, the data series would fill a current void in criminal justice knowledge and, for the first time, permit the development of a more comprehensive outline of criminal activity in the nation. Over time, the availability of trend data will also permit evaluation of alternative strategies so as to ensure the most cost effective use of resources. The initiation of this new series represents a clear commitment by the Federal government to the implementation of more effective white collar crime control strategies and the enforcement of white collar crime legislation.

Activity: State and Local Assistance	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
State and Local Assistance	...	...	$40,000	...	...	$44,400	...	...	...	...	...	-$44,400

Long-Range Goal: To provide financial and technical assistance to State and local jurisdictions and organizations to enable them to execute programs with a high probability of improving the operations of the criminal justice system, with emphasis on violent crime and serious offenders; and to provide assistance to public and non-profit agencies for the purpose of conducting education and training programs, providing technical guidance, carrying out national or multi-State projects, and demonstrating new programs.

Major Objectives:

To assist, via formula grants, States and units of local government in carrying out specific programs which offer a high probability of improving the functioning of State and local criminal justice systems.

To undertake educational and training programs for criminal justice personnel.

To provide technical assistance to recipients of formula and discretionary grant funds.

To develop and implement national or multi-State programs which address violent crime, serious offenders, narcotic enforcement impact and victims of crime.

Base Program Description: This program deals with the problems of crime -- particularly violent crime -- and its effects on the victim. The Justice Assistance Act of 1984 established two new grant programs: a criminal justice formula grant program for State and local governments and a discretionary grant program for public and nonprofit agencies.

The Act enumerates eighteen purposes for State and local formula grant programs that have a high probability of improving criminal justice functions, with emphasis on violent crime and serious offenders. Formula funds are awarded for various programs such as crime prevention programs which join the community and law enforcement in cooperative anti-crime efforts; career criminal programs that focus on repeat offenders; court delay plans that help expedite prosecution; victim/witness assistance programs; prosecution management support systems; "STING" programs that intercede in the illicit commerce of stolen goods and property; programs that enhance police operations such as the Integrated Criminal Apprehension Program (ICAP); and several other programs that meet the purposes and criteria of the Act. Moreover, as much as ten percent of a State's formula grant funding may be designated for innovative programs. States that elect to participate in the formula grant program receive a base allocation of $250,000. Thereafter, funds are allocated among the States based upon population. States disperse to local governments a portion of their allocation equivalent to the local share of total State and local criminal justice expenditures. Federal formula funds are matched dollar for dollar by State and local funds appropriated for criminal justice improvement.

The Justice Assistance Act also established a discretionary grant program intended to enhance the formula grant program. Discretionary grants may be awarded to both public and nonprofit agencies for: (1) technical assistance, education, and training; (2) national and multi-State projects; and (3) demonstration programs. Grants may be awarded for up to 100 percent of total project costs.

Accomplishments and Workload: Following are recent major accomplishments achieved with State and Local Assistance grant funds, separated by Block and Discretionary grant programs.

Block Grant Program: Over 1,200 State and local criminal justice projects were funded during the past fiscal year. Four program areas were identified by the States as high priorities, accounting for more than 50% of the funds: Jail/Prison Capacity (15%), Community Crime Prevention (14%), Career Criminal/Court Delay (13%), and Information Systems (10%). A performance appraisal system was developed and implemented which will provide information during the next year to assess the effectiveness of the program. Examples of anticipated impact in two program areas include: organized crime/drug trafficking programs in 17 States are expected to result in the disruption of at least eight organized crime operations and 30 drug trafficking organizations and the recovery of over $30 million in contraband; and an estimated 35,000 to 40,000 serious crimes per year will be prevented by the prosecutions and sentencing of offenders under career criminal prosecution projects in 18 States.

Discretionary Programs: Demonstration programs, which test and implement new program strategies and approaches for improving the criminal justice system, include Family Violence Intervention, Police/School Drug Use Prevention, Organized Crime/Narcotics Trafficking Enforcement, Detection and Monitoring of Drug-Using Arrestees, Child Abuse Prosecution, Law Enforcement Crime Prevention and Intensive Probation Supervision Programs. The Police/School Drug Use Prevention Program places uniformed police officers in elementary and middle school classrooms delivering a seventeen part curriculum which equips students with drug information, methods to enhance self-esteem, analytical and decision-making skills and the motivation to employ the skills. The Detection and Monitoring of Drug-Using Arrestees Program is a Demonstration program, based on research performed by the National Institute of Justice, which uses drug detection technology to identify drug users and monitor drug use as a condition of release. Unmonitored drug users are at least 70% more likely than non-users to be rearrested before trial, while monitored users have the same rearrest rate as non-users. The Child Abuse Prosecution Program, funded in eight jurisdictions, is designed to improve the screening, handling and effective prosecution of child abuse cases and emphasizes the use of interagency child abuse teams, vertical prosecution, specially trained prosecutors and sensitive treatment of child victims. The Intensive Probation Supervision Program, with projects in five sites, provides highly structured, non-custodial supervision as an alternative to or in conjunction with incarceration, so that penalties are both punitive and rehabilitative.

Training and Technical Assistance is provided to block grant and demonstration program recipients to assist with program development, implementation strategies, and transfer of information on new programs. For example, under the Adjudication Technical Assistance and Training Program, over 400 individuals, representing 110 separate State and local jurisdictions, received formal training to implement court delay, jail capacity and career criminal prosecution programs. Approximately one-third implemented programs using block grant funds. The balance implemented programs using in excess of $3 million in State and local revenues. Training was also provided to local law enforcement and prosecutors in the following areas: 1) methods of using asset removal and forfeiture in drug cases; 2) creative new strategies for prosecuting complex arson for profit cases; and 3) methods for targeting law enforcement resources on repeat offenders.

Programs of national scope initiated or continued with discretionary funds include the Law Enforcement Accreditation Program, National Crime Prevention Campaign, Crime Stoppers International, Alternatives to Deadly Force Model Policies Program, Drug Control Strategy Development, and Victims Assistance Programs. The Crime Prevention Campaign provides an example of the impact of these programs. In the past year, 10,000 teens in 62 high schools became involved in crime prevention programs. New McGruff Public Service Announcements ($75 million of free T.V. time) were viewed by 200 million people. A crime prevention puppet program was initiated in 60,000 schools. McGruff teamed up with "Webster" (T.V.show) in front of 11 million viewers. Technical assistance was provided to over 300 crime prevention programs in all 50 States and 22 million citizens were actively involved in crime prevention and neighborhood watch programs.

Program Change: No budget authority is requested for this program in 1988. In view of the budget deficit and the requirements of the Balanced Budget and Emergency Deficit Control Act of 1985, many difficult budget decisions had to be made. One of these decisions resulted in an Administration policy that the States or localities which receive program benefits should pay for them. In 1988, the States will be in a good position to pick up programs no longer funded by the Federal government. The Tax Reform Act of 1986 reduces the Federal rates of income taxes but eliminates many provisions of the previous tax code which will increase the adjusted gross income of most individuals. Since most State tax rates have not yet been adjusted downward and since they use the Federal definition of adjusted gross income, States will be receiving greater tax collections beginning in 1987. This increased level of State income taxes will permit the States to continue programs such as this.

In addition, the three years of funding which have been provided by this program, have given the States and localities ample opportunity to find out if the projects they have funded with Federal funds have resulted in increased efficiency and/or reduced costs. If they have, then the States and localities should be willing to use their increased revenues to continue these projects.

Activity: Emergency Assistance	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Emergency Assistance	...	...	...	...	...	$1,148	...	...	$1,200	...	...	$52

Long-Range Goal: To provide financial and technical support to assist States in responding adequately to law enforcement emergencies.

Major Objectives:

To assist States in providing an adequate response to uncommon law enforcement situations which are, or threaten to become, of serious or epidemic proportions, when State and local resources are inadequate to protect the lives and property of citizens or to enforce the criminal law.

To provide a rapid and coordinated Federal determination of State eligibility for assistance.

To assure a coordinated law enforcement response to emergencies and to avoid unnecessary Federal involvement in matters primarily of State and local concern, including planning activities and the enforcement of laws associated with scheduled public events.

Base Program Description: Natural disasters and crime epidemics strike States and localities arbitrarily and without warning, often exceeding the capacity of law enforcement resources to protect life and property, and to enforce the law. Over the past few years, Federal law enforcement assistance has been required by many States and localities, including: Seneca County, New York, to provide adequate law enforcement during the demonstrations at the Seneca Army Depot; Atlanta, Georgia, to provide an adequate response to a series of child murders; the State of Florida to provide an adequate response to the South Florida drug problem; the State of Washington to provide an adequate response to the devastation of Mt. St. Helens; Miami/Dade County, Florida, to provide an adequate response to the major civil disturbance following the "MacDuffie" case; the State of Alabama to provide an adequate response to the situation created by Hurricane Frederick; and the State of New Mexico to provide an adequate response to the riot at the State prison.

Assistance, in the past, has included technical assistance, training, personnel, equipment, intelligence information, and funding. Grant awards have varied in size, in accordance with the scale of the emergency.

It is clear from the Justice Assistance Act of 1984 and its legislative history that certain situations are viewed as appropriate for emergency law enforcement assistance. Equally clear is the firm intention to avoid unnecessary Federal involvement or intervention in matters which are primarily of State and local concern. To this end the Act excludes assistance for planning or other activities related to crowd control for general public safety projects and assistance for a situation requiring the enforcement of laws associated with scheduled public events. Thus, the high law enforcement costs associated with political conventions and international sporting events should be borne by the localities that sought them.

The Act authorizes the Attorney General to receive requests from State chief executives for designation of a State or local jurisdiction as a law enforcement emergency jurisdiction. Once submitted, the application is to be approved or disapproved within 10 days. The Attorney General will make his determination to approve or disapprove the application, after consultation with appropriate members of the Federal law enforcement community. If the Attorney General approves the application, the Federal law enforcement community will proceed to provide appropriate equipment, training, intelligence information, and personnel.

Accomplishments and Workload: In 1986, three requests for emergency assistance were received. One grant was awarded for $57,000 to the State of West Virginia for flood damages incurred by excessive rain.

Staff work required to administer the program includes: assistance in application preparation; application review; recommendations to the Attorney General and Assistant Attorney General; grant administration; financial administration; and, assistance coordination.

The Attorney General can make Federal assistance available in the form of equipment, training, intelligence information, personnel or funds. The use of funds will only be made where other forms of assistance are insufficient to assist the State.

Program Change: An increase of $52,000 is requested in 1988 for the Emergency Assistance program in order to maintain the program at an adequate level of funding. In 1987, funding for this program was provided from available unobligated balances carried over from 1986.

Activity: Juvenile Justice Programs	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Juvenile Justice Programs	...	...	$67,600	...	...	$67,600	...	...	...	...	...	-$67,600

Long-Range Goal: To aid in the prevention, reduction, and treatment of juvenile crime and delinquency and to improve the administration of juvenile justice by providing financial and technical support to State and local units of government, public and private agencies, organizations and institutions.

Major Objectives:

To facilitate, through provision of technical/financial resources and national leadership:
a. A 75% reduction in the number of status offenders and non-offenders held in secure detention and correctional facilities within three years from the date that each State/territory began participation in the Juvenile Justice and Delinquency Prevention (JJDP) Program.
b. Removal of all status offenders and non-offenders from secure detention and correctional facilities within five years from the date that each State/territory began participation in the JJDP Program.

To develop and implement a nationwide strategy for achieving by 1987, a 75% reduction in the number of juveniles held in adult jails and lock-ups in all States and territories which participate in the JJDP Program.

To facilitate separation of all juveniles found to be delinquent or status offenders from detention or confinement in any institution in which they have regular contact with adult persons incarcerated for criminal offenses.

To develop knowledge regarding juvenile delinquency and related deviant behavior including serious and violent juvenile crime among youths, which can be effectively used to prevent, treat and reduce delinquent and deviant youth behavior.

To use knowledge acquired through applied research for the development of programs which prevent juvenile crime, offer alternatives to the system and improve the administration of juvenile justice.

1491

To disseminate knowledge acquired through research, data collection, and synthesis to the juvenile justice community.

To develop and support training programs for juvenile justice and alternative system practitioners and citizens involved in volunteer efforts.

To replicate, on a nationwide basis, programs and strategies which have been proven through research, demonstration, and evaluation to be effective in the reduction and control of juvenile delinquency, including serious/violent juvenile crime.

To provide for the development and support of new approaches, techniques and methods with respect to juvenile delinquency programs, in particular violent juvenile offenders.

To provide technical assistance to State and local governments, and other service providers, on the development and implementation of programs, related to violent juvenile crime, while at the same time addressing the issues of deinstitutionalization, separation, and jail removal.

Base Program Description: The Formula Grant Program represents 64% of the total amount appropriated for Juvenile Justice and Delinquency Prevention. This program provides funds to States and territories on the basis of population under the age of 18. To receive its share of funds, a State or territory must submit an annual plan that meets the criteria of the Juvenile Justice and Delinquency Prevention Act of 1974. The law requires that the priority of expenditures for these funds must be to provide alternatives to incarceration of status offenders and separation of juveniles and adults in institutions. In 1986, 52 States and territories participated in the program. The non-participating States were: Nevada, Wyoming, Hawaii, North Dakota, and South Dakota.

The National Institute of Juvenile Justice and Delinquency Prevention (NIJJDP) within the OJJDP, awards grants and contracts implementing a broad range of applied research to add to the knowledge base regarding the causes and correlates of juvenile crime and delinquency. The data gained is used in designing and refining OJJDP's discretionary grant programs, which are also evaluated by NIJJDP. In addition, NIJJDP is authorized to develop, conduct and provide for training programs. The Institute also serves as the information collection synthesis and dissemination center for the Office and a mechanism has been established to gather information on the nature and extent of delinquency, justice system operations, and program information. The principal method of disseminating information, data, statistics, and program information is through the National Criminal Justice Reference Service.

The Special Emphasis program has been structured and funded in ways which call national attention to distinct juvenile justice issues. Specific performance standards are set for delivery of services. Each initiative has been funded as a group of projects, with emphasis on overall program goals as well as specific project objectives. Sizeable grants are made to permit comprehensive planning, and program planning, design and implementation are coordinated with the NIJJDP and the Formula Grants and Technical Assistance Divisions.

Technical assistance is provided to address major problems being experienced by juvenile justice agencies for which solutions have been found. The delivery methods that are used include structured observation at model operations, documentation, service brokering, workshops, training, cluster meetings, and consultations. In carrying out its coordinating functions, OJJDP works closely with the Coordinating Council on Juvenile Justice and Delinquency Prevention. The office provides staff assistance for the Coordinating Council. In addition, OJJDP awards grants and contracts to support activities of private nonprofit groups and interagency efforts which lead to increased coordination of Federal juvenile programs and policies.

Accomplishments and Workload: The following table represents accomplishments of the Juvenile Justice Programs.

Item	1985	1986	Estimates 1987	Estimates 1988
States and territories participating in program	53	52	52	...
States in full compliance with deinstitutionalization provisions	50	50	51	51
States in compliance with separation requirements	41	48	49	49
States with established, adequate monitoring systems	53	52	52	52
New Special Emphasis initiatives funded	3	1	4	...
Special Emphasis initiatives continued	3	6	6	...
Inter-agency agreements entered into	6	8	4	...
Number of discretionary grants awarded	95	70	70	...
Instances of delivery of on-site technical assistance	750	750	500	500

Since enactment of the Juvenile Justice and Delinquency Prevention Act of 1974, the provision of Federal technical and financial resources has enabled participating States to undertake a number of system-wide improvements. The Formula Grants Program has had a significant impact on rates of incarceration throughout the United States.

Fifty of the States participating in the program have achieved full compliance with the statutory mandate to deinstitutionalize status offenders and non-offenders. In practical terms, this means that nearly 200,000 non-criminal juveniles have been removed from inappropriate institutional confinement, leaving approximately 22,000 in confinement in participating States.

Program Change: No funds are requested for this program in 1988. The accomplishments section of this activity clearly shows that the major objectives of the Juvenile Justice and Delinquency Prevention Act have been met. One of the primary purposes of the Act was to deinstitutionalize status offenders by diverting them from the judicial system and out of secure detention facilities and into community-based non-judicial settings. To date, fifty States have achieved full compliance with this provision and 51 States and territories are expected to be in compliance by the end of this fiscal year. We believe that the States which now participate in the program will continue to deinstitutionalize without the Federal government's money, and will be able to do so more successfully without the unyielding and strict requirements of Federal law. Each State has a different set of circumstances and, without the need to comply with Federal mandates, will be able to adjust its programs to meet its own local problems and conditions. Since the funds OJJDP has provided to States over the years were insufficient to cover the full cost of deinstitutionalization, the individual States have shown a commitment to deinstitutionalize status offenders by participating in the program. With the termination of future OJJDP funding there is no reason to believe that the States will now retreat from their commitment, with the exception of perhaps amending the statutes to more nearly conform to local conditions.

The JJDP Act also provides that in order to participate in the program, delinquent juveniles shall not be held in institutions in which they have regular contact with adults, (Section 223 (a) (13)). Those States participating in the program have made sufficient progress under this section to deem these separation requirements an almost total success. Over the past thirteen years, from 1975 through 1987, almost one Billion dollars has been made available for Juvenile Justice programs and projects by the Federal government. There will always be programs and projects which can improve the Juvenile Justice System but it is now time for the States and localities to fund such projects if they are of sufficient priority locally.

The Department of Justice has been given a number of new Federal Justice responsibilities by the Congress. These new responsibilities require considerable additional resources at a time when the Federal deficit is very high. Since resources are scarce, they must be allocated to only the highest priority programs. The Department believes it must classify all its uniquely Federal responsibilities as a higher priority than financial assistance to State and local governments. Since the States will benefit from an increase in income through State income taxes as a result of the Tax Reform Act of 1986, they are in a much better position to fund juvenile projects they believe are a high priority.

Missing Children	...	...	$4,000	...	...	$4,000	...	...	$4,000	...	...	...

Long-Range Goal: To reduce the incidence of crimes against children, particularly kidnapping and sexual exploitation and to improve the criminal justice, social services and treatment systems which are responsible for dealing with these crimes when they occur.

Major Objectives:

Ensure that there is effective coordination among all Federally funded programs related to missing children.

Establish and maintain a national resource center and clearinghouse to:
a. provide technical assistance to local and State governments, public and private non-profit agencies and individuals in locating and recovering missing children;
b. coordinate public and private programs to locate and recover missing children;
c. nationally disseminate information on innovative missing childrens' programs, services, and legislation; and
d. provide technical assistance to law enforcement agencies, private non-profit agencies, and individuals in the prevention, investigation, prosecution and treatment of the missing or exploited child case.

Periodically conduct national incidence studies to determine the actual number of children reported missing each year, the number of children who are victims of stranger abductions, the number of children who are victims of parental kidnappings, and the number of missing children who are recovered each year.

Compile, analyze, publish and disseminate an annual summary of research currently being conducted on missing children.

Prepare an annual comprehensive plan for assuring cooperation and coordination among all agencies and organizations with responsibilities related to missing children.

Provide a program to establish and maintain a national toll-free telephone line where individuals may report information regarding the location of missing children.

Base Program Description: The public and the criminal justice community have become increasingly concerned about runaways and other missing children. Alarming numbers of cases of abduction, sexual abuse, sexual exploitation and murder of children, are being found. Estimates of the number of missing children vary extensively. We do not know precisely how many children are abducted, how many run away or how many are homeless. But even the most conservative estimates suggest that several hundred thousand children are missing.

The Missing Children's Act of 1984 established an Advisory Board on Missing Children. The Board is charged with: coordinating all Federal programs and activities related to Missing Children; establishing priorities for making grants and contracts funded from this activity; and approving an annual comprehensive plan for facilitating cooperation among all agencies with responsibilities relating to Missing Children. In its role of setting funding priorities the Missing Children's Advisory Board endorsed seven general funding priorities for 1986. They are as follows:

1. National incidence study to determine the numbers of missing children.
2. National study of law enforcement agencies policies and practices regarding missing children and homeless youth.
3. Assistance to the Federal Law Enforcement Training Center at Glynco for a training program for handling missing and exploited children cases.
4. Two areas of research will be explored: (1) relationship between missing and abducted children and sexual exploitation and the psychological consequences of abduction and sexual exploitation; and (2) the child victim as witness.
5. Training/public awareness program on missing and exploited children.
6. Assistance to State clearinghouses for missing and exploited children.
7. Assistance to private voluntary organizations working on the issue of missing and exploited children.

Accomplishments and Workload: The following table presents accomplishments of the Missing Children Program.

Item	1985	1986	Estimates 1987	Estimates 1988
Law enforcement and social service professionals trained	7,500	7,500	8,000	8,000
Telephone calls received requesting information (NCMEC)	150,000	150,000	80,000 *	70,000 *
Telephone calls received requesting information (State clearinghouses)	...	...	70,000	80,000
Missing or exploited children's cases investigated (NCMEC)	7,605	7,605	5,000 *	4,500 *
Missing or exploited children's cases investigated (State clearinghouses)	...	...	2,605	3,105
Brochures, manuals, and child safety guides developed, published and mailed	456,000	456,000	525,000	525,000

* Represents workload estimates for National Center for Missing and Exploited Children. Decrease in workload is due to funding of State (public) missing children clearinghouses; in accordance with Title IV of the Juvenile Justice and Delinquency Prevention Act, as amended, Section 404(b)(2)(A-D). State operated clearinghouses have a range of responsibilities: operate toll-free in-State telephone lines to accept information about sightings of missing children; assist in the investigation of missing child cases; expedite the entry of missing child information into the NCIC system; and establish a data system to collect and disseminate information that can assist agencies in recovering missing children.

Activity: Public Safety Officers' Benefits Program	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Public Safety Officers' Benefits Program.....	...	...	$9,910	...	...	$10,650	...	...	$10,000	...	...	-$650

Long Range Goal: To provide a death benefit of $50,000 to survivors of Federal, State and local public safety officers who have died as a result of personal injury sustained in the line of duty.

Major Objectives:

To pay eligible claims within two weeks of the filing of a fully documented claim.

To issue determinations on ineligible claims within four weeks of the filing of the fully documented claim.

To conduct an appeal hearing within 60 days of an appellant's request.

To issue the appeal determination within 30 days of the official close of the appeal hearing.

Base Program Description: This activity addresses death benefits for the eligible survivors of Federal, State and local public safety officers who die from injuries received in the line of duty. P.L. 94-430 (42 U.S.C. 3796) authorizes a $50,000 death benefit when a Federal, State or local law enforcement officer, fire fighter, prison guard, or judicial official dies, in a duty status, as the direct and proximate result of a traumatic injury. If a widow and eligible children survive, the widow receives $25,000 and $25,000 is apportioned among the children. If there are no eligible children, the widow receives the full $50,000. Dependent parents are eligible for the death benefit when a widow and/or eligible children do not survive the deceased public safety officer.

Generally, the PSOB program staff receives a death report within one week of the public safety officer's death, usually from the employing agency. Claims are initiated by the PSOB staff when the death report is received. Employing agencies generally take from 75-80 days to file a complete claim. Eligible claims are paid within two weeks of being filed and documented; ineligible claims are processed within four weeks of being filed and documented.

When a claim is denied, appeal instructions are provided to the claimant. Appeals are heard within 60 days of the claimant's request and decisions are rendered within 30 days of the official close of the appeal hearing. Hearing officer denials may be appealed to the Director. Once an appeal is heard by the agency and the denial affirmed, the claimant may appeal directly to the U.S. Claims Court. Claims entering the Federal court system may take from 6 months to 2 years or more to resolve, depending on how rapidly the court and the claimant's attorney respond to statutory and procedural requirements.

Accomplishments and Workload: Actual and estimated accomplishments of the Public Safety Officers' Benefits Program from 1985 through 1988 are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Claims Initiated	277	257	300	300
Claims Closed*	304	253	290	290
Agency Appeals Requested	10	12	15	15
Agency Appeals Closed*	12	12	13	13
Courts Appeals Initiated	0	0	1	1
Court Appeals Closed*	2	1	1	1

* Figures include newly initiated claims and appeals as well as active claims and appeals carried over from a previous year.

Claim processing objectives have been met in that the average eligible claim was paid within two weeks of completed filing, and the average ineligible claim was closed within four weeks of certified documentation.

The number of public safety officer death claims which were found eligible during the period 1979-1986 follows:

Fiscal Year	Claims Paid	Amount Paid
1979	258	$12.90 million
1980	234	$11.70 million
1981	269	$13.45 million
1982	217	$10.85 million
1983	214	$10.70 million
1984	188	$9.40 million
1985	226	$11.30 million
1986	180	$9.00 million

The 1985 increase to 226 paid claims at $11.3 million was generated by two factors: (1) there was an increase to 259 in reported deaths in 1984. This was reflected as an increase in 1985 payments; (2) an amendment to the PSOB statute authorized payment of the death benefit for Federal public safety officers. This broadened coverage also contributed to the increase in 1985 payments.

The following is a breakout of claims paid by type of public safety officer:

	1982	1983	1984	1985	1986
Law Enforcement Officers	152	160	134	188	130
Fire Fighters	56	43	44	61	37
Corrections Officers	7	6	8	7	5
Others	2	5	2	18	8

Program Change: Although $9.9 million was appropriated in 1987, about $10.7 million is available due to unobligated funds carried over from 1986. The requested decrease for 1988 below the 1987 base level of funding reflects a favorable reduction in the number of claims filed and paid over recent years. Based on prior experience, it is expected that about 200 claims will be paid in 1987 and that this average will continue through 1988. This projection incorporates the recent inclusion of rescue squad members under public safety officer eligibility criteria. Despite the downturn in claims paid, it is important to note that major accidents or catastrophic events can significantly increase the number of claims to be paid.

Activity: Mariel Cubans	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Mariel Cubans	...	...	$5,000	...	...	$5,000	...	...	...	...	...	-$5,000

Long-Range Goal: To provide financial assistance to those States which have incarcerated Mariel Cubans.

Major Objective: To award grants to reimburse States for expenses incurred by reason of Mariel Cubans being incarcerated in State facilities.

Base Program Description: In the 1985 appropriation act, Congress provided $5,000,000 for the purpose of making grants to States for their expenses by reason of Mariel Cubans being incarcerated in State facilities for terms requiring incarceration for the period October 1, 1984 through September 30, 1985, following their conviction of a felony committed after having been paroled into the United States by the Attorney General. In the 1986 and 1987 appropriations, Congress again provided around $5,000,000 for reimbursement of expenses to States for incarcerated Mariel Cubans for the periods of October 1, 1985 through September 30, 1986 and October 1, 1986 through September 30, 1987 respectively.

Accomplishments and Workload: In 1986, twenty-four States housing 2,363 Mariel Cubans received $208.43 per inmate month. The Governor of each applicant State provided a certified listing of Mariel Cubans requiring incarceration. The list was then verified by the Immigration and Naturalization Service. On the basis of per capita allocation of $208.43, all States received a pro rata share of the $4,785,000. For 1987, we have projected that reimbursement requests would equal and might exceed the total number of eligible verified inmates processed in 1986. In 1986, there was a verified increase of 642 additional inmates, over and above the 1985 number.

Program Change: No funding is requested for 1988 since this program benefits less than one half of the States. In the current period of scarce Federal funds this program is not of sufficient priority to command a share of the limited funds available. The Department must first use any available funds to meet its Federal Justice responsibilities.

Activity: Crime Control Programs	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Crime Control Programs	...	...	...	...	...	...	...	...	...	...	...	...

This activity provides for expenditures from programs which are not authorized by existing legislation but which were authorized by preceding legislation. The programs have been terminated and require no new budget authority in 1988. However, this activity is used to reflect outlays and adjustments to prior year obligations.

Activity: Regional Information Sharing System	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Regional Information Sharing System	...	...	$9,900	...	...	$12,000	...	...	...	...	...	-$12,000

Long Range Goal: To enhance the ability of State and local criminal justice agencies to identify, target, and remove criminal conspiracies and activities spanning jurisdictional boundaries.

Major Objectives:

To encourage and facilitate the rapid exchange and sharing of information pertaining to known or suspected criminals or criminal activity among Federal, State, and local law enforcement agencies.

To enhance coordination/communication among those agencies in addressing multi-jurisdictional crime.

To provide technical and financial resources to augment existing multi-jurisdictional enforcement resources (including specialized equipment, training, and investigative expense).

Base Program Description: The RISS Program was initially designed to establish regionally based information sharing centers throughout the United States to service State and local criminal justice agencies. Since then, the specific strategy has been to maintain the operations of the six existing regional information sharing centers: the Mid Atlantic-Great Lakes Law Enforcement Network; the Mid-States Organized Crime Information Center; the New England State Police Information Network; the Regional Organized Crime Information Center; the Western States Information Network; and the Rocky Mountain Information Network. Each of these projects is comprised of an information sharing capability, an intelligence analysis component, and a telecommunications system, and provides for investigative expenses in extraordinary situations, investigative equipment, technical assistance and training. In addition to these six information sharing projects, there is one other, LEVITICUS, which is a consortium of 18 agencies in six States committed to the investigation and prosecution of conspirators engaged in major white collar crime, primarily crimes related to energy industries. Each participating agency provides its enforcement resources, supplemented by Federal funds, and coordinates these resources with other agencies to focus on multi-jurisdictional offenses.

Accomplishments and Workload: The accomplishments of this activity are divided between the six Regional Information Sharing Systems and LEVITICUS. To date, LEVITICUS has referred over $332,000,000 in tax fraud cases to the IRS. In addition, criminal charges have been filed against 263 defendants and civil charges filed against 182 individuals and business entities. The accomplishments of the Regional Information Sharing System are shown below.

Item	1985	1986	Estimates 1987	1988
Membership	1,892	2,144	2,289	...
Inquiries	26,788	34,178	45,260	...
Hits	8,689	10,243	13,690	...
Arrests	3,498	3,476	4,370	...
Narcotics Seizures	$468,138,271	$468,000,000	$395,000,000	...
Property Seizures	$62,934,902	$16,000,000	$24,000,000	...
Civil (RICO) Seizures	$410,000	$410,000	$700,000	...

Program Changes: No funding is requested for 1988. The original RISS projects were funded by the Department of Justice in the 1970's on a demonstration basis with the expectation that financial support for these intelligence networks would be assumed by the State and local law enforcement agencies which they serve. Since the Carter Administration, the Department has urged that federal funding of RISS projects be phased out. Each year, however, the Congress has continued the funding of RISS projects through the Department of Justice appropriations acts or continuing resolutions. In the meantime, the RISS projects have undertaken no significant action toward securing a system of self-funding through contributions from the State and local law enforcement agencies which use their services. Since their inception in 1980, the Federal government has appropriated $65,609,000 for these projects. RISS projects are the only State and local law enforcement activities funded almost entirely by the United States government and they benefit only a fraction of the law enforcement community. The Department believes that if these projects are providing a useful service to their members, then the members should financially support these networks.

Activity: Anti-Drug Abuse Program

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Anti-Drug Abuse Program	...	...	$225,000	...	...	$225,000	...	...	...	...	...	-$225,000

Long Range Goal: To provide assistance to State and local units of government through the formula grant program and to public and private nonprofit agencies through the discretionary grant program for the purpose of enforcing State and local drug laws.

Major Objectives:

To assist States and units of local government in developing a State-wide drug control strategy and in carrying out specific programs to implement that strategy.

To assist States and units of local government with implementation of their drug control strategy through training, technical assistance and subsequent intensive site monitoring.

To develop and implement programs to enhance State and local drug control efforts, which are national or multi-State in scope, or which assist areas of great need.

To develop and implement demonstration programs which test new and effective drug control techniques.

Base Program Description: This activity deals with drug control efforts at the State and local levels. Responsibility for addressing the drug problems in this country are shared by Federal, State and local jurisdictions. The Federal effort is concentrated on reducing the supply of drugs brought into the country and on major drug trafficking operations. State and local responsibilities focus on local production of drugs, intra-State drug operations, street sales and crimes committed to obtain money to purchase drugs. The State and Local Assistance for Narcotics Control Program of the Anti-Drug Abuse Act of 1986 assists the States and local units of government in increasing their drug control efforts and enhancing the criminal justice system's response to drug offenders.

The Act defines seven purpose areas eligible for drug control efforts. These include the apprehension, prosecution, adjudication, and detention and rehabilitation of drug offenders. Eradication programs, treatment programs for drug offenders and demonstration programs for major drug offenders are also included. The States are required to develop a State-wide drug strategy which defines and analyzes the nature and extent of the drug problems in the State, analyzes current drug control efforts and identifies resource needs. The strategy establishes program priorities and identifies legislative and administrative actions which will have the greatest impact on the drug problem in the State.

The Act establishes a formula grant program and a discretionary grant program. States electing to participate in the formula grant program receive a base allocation of $500,000, with the balance of the funds allocated on the basis of population. Local government must receive, in the aggregate, a portion of the total State allocation that is equivalent to the local share of total State and local criminal justice expenditures. The Federal formula funds must be matched with non-Federal funds equal to 25% of the total cost of the project. The discretionary grant program is intended to enhance State and local drug control efforts in the seven authorized purpose areas. The discretionary program will be used to provide training and technical assistance, for national and multi-State efforts, to provide additional Federal assistance in areas of high need and for programs which demonstrate new and effective techniques and practices.

The 1987 appropriation made $2 million available for a pilot prison capacity program. The purpose of the program is to assist States that are confronting prison and jail crises.

Accomplishments and Workload: Since the signing of the Anti-Drug Abuse Act on October 27, 1986, the Bureau of Justice Assistance has moved rapidly to implement the program and make the funds immediately available to the States. An Implementation Plan, which outlines the activities and schedule for implementation of the program was developed by early November. The Governor in each State was immediately notified of the provisions of the Act and the availability of the Federal assistance and was asked to designate a State agency to administer the program. The Bureau also notified the Governor that the funds authorized in the Act for administration of the program would be immediately available to the States to begin the development of the State-wide strategy. Both incumbent, reelected and newly elected Governors have responded to the program with enthusiastic interest; over two thirds have designated a State agency and 13 applications for administrative funds were received by mid-December. Many States have already developed a State strategy and are expected to submit applications for program funds in 1987.

The Bureau prepared and distributed to the States a draft Program Policy and Administrative Guidance document designed to assist the States in developing drug strategy, preparing the application for funds, and administering the program. A companion "Question and Answer" document poses the types of questions about the program being asked in the hundreds of inquiries the Bureau has received, and provides a written response.

72-165 O—87——47

These documents were distributed to the States in December for review and comment. The Bureau, with assistance from the National Institute of Justice, the Drug Enforcement Administration and other Federal, State and local agencies, is developing Program Briefs, which describe effective programs and the elements found to be critical to their success. These Program Briefs will be distributed to the States for consideration for implementation as part of the State-wide drug strategy.

Recommendations for discretionary programs which would be of greatest benefit in State and local drug control efforts were solicited from criminal justice agencies throughout the country. Programs to address drug investigation and prosecution training needs, resources for undercover officers, surveillance equipment and buy money, multi-jurisdictional task forces, treatment for drug offenders and increased use of drug screening are among the types of programs recommended. This information provides valuable assistance in program development and the establishment of program priorities. The program announcement and request for proposals will be published in the Federal Register in early 1987.

The prison capacity program is currently under development. It is anticipated that it will be announced in the Federal Register during the second quarter of 1987. Grants will be awarded during the third quarter of 1987.

Program Change: No budget authority is requested for this program in 1988. The Administration believes that the $225 million made available to State and local governments in 1987 will permit these units of government to expand their efforts to enforce State and local drug laws. Since the Tax Reform Act of 1986 will result in a substantial increase in revenue for the States in 1987 and beyond, the Administration believes that the States will be in a fiscally sound position to continue efforts begun with Federal funds in 1987.

The Congress has enacted new legislation which has necessitated the Department to request a significant increase in its 1988 budget request to address these new responsibilities which are uniquely Federal in nature. However, the Balanced Budget and Emergency Deficit Control Act of 1985 requires that Federal expenditures be reduced. Since funds are limited, the Administration must first utilize available funds to meet the requirements of the Federal Justice system. This requires that State and local assistance programs formerly funded by the Federal government must now be funded by the State or local jurisdiction which benefits from the service.

Activity: Management and Administration

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount

Total	323	331	20,681	319	327	21,681	287	301	20,709	-32	-26	-972

This budget activity consists of six sub-activities for offices which provide the executive direction and control and support services for all programs authorized by the Justice Assistance Act, the Juvenile Justice and Delinquency Prevention Act, the Missing Children's Assistance Act, the Victims of Crime Act, and the Anti-Drug Abuse Act.

Long Range Goal: To administer programs in the most effective and efficient manner possible.

Major Objectives:

To provide executive direction, control and coordination over the various OJP programs.

To develop annual research, development, testing, evaluation and dissemination program plans.

To monitor all on-going research projects.

To develop a range of program models which describe effective criminal justice strategies.

To maintain an effective and efficient criminal justice reference service.

To collect, analyze, and publish statistical information on crime and the operations of the justice systems at all levels of government.

To manage major national statistical series regarding crime, its victims, and the operation of the justice system.

To develop national standards for justice statistics to ensure the inter-State comparability, reliability and validity of justice statistics.

To provide support to State and local governmental organizations and facilities responsible for the collection and analysis of criminal justice data and statistics.

To develop statistical reports, focused analytic reports, bulletins and national advisories aimed at improving the understanding of the general public concerning crime, crime prevention, and the functions of law enforcement, judicial and correctional agencies.

To provide technical assistance to eligible institutions, agencies and individuals regarding implementation and operation of programs.

To direct and administer the Federal Surplus Property Transfer Program.

To direct and administer the Private Sector/Prison Industry Enhancement Certification Program.

To administer the Mariel Cuban program.

To prepare and disseminate program solicitations; review applications, concept papers or proposals; rate applicants and award grants, contracts, and cooperative agreements.

To direct and administer the State and local assistance block grant program.

To direct and administer the Anti-Drug Abuse program of State and local assistance for narcotics control.

To direct and administer the Juvenile Justice Programs.

To direct and administer the Missing Children Program.

To direct and administer a program of Emergency Federal Law Enforcement Assistance.

To direct and administer the Regional Information Sharing System program.

To monitor all active grants, contracts and interagency agreements.

To prepare annual reports as required.

To close out grants and contracts within 180 days of their end-date.

To develop and administer a program which provides grants to eligible crime victim compensation programs of 35% of amounts awarded during the preceeding year.

To develop and administer a program which awards grants to States to provide victim assistance programs.

To develop and administer a program which provides services to victims of Federal crimes.

To provide grant review and award functions in the most economical and efficient centralized manner.

To process and determine eligibility of claims for payment of benefits under the Public Safety Officers' Benefit program within two weeks of receipt of complete claims documentation.

To provide the full range of support services to the program offices.

Base Program Description: The Office of Justice Programs consists of the National Institute of Justice (NIJ), the Bureau of Justice Statistics (BJS), the Office of Juvenile Justice and Delinquency Prevention (OJJDP), the Bureau of Justice Assistance (BJA), the Office for Victims of Crime (OVC), and the offices which provide direct program support as well as the traditional administrative support to the program offices. The functions and responsibilities of the five program bureaus and offices are described in the justifications for those programs, and therefore are not repeated here.

1474

Accomplishments and Workload: The following table reflects some of the major accomplishments of the Office of Justice Programs:

Item	1985	1986	Estimates 1987	Estimates 1988
Grants and contracts awarded by NIJ	120	120	115	149

Victim technical assistance provided to private non-profit, educational and hospital institutions	300	300	300	300
Demonstration projects funded by BJA	...	30	30	...
Training workshops conducted by BJA	50	60	50	...

Program Changes: A decrease of 32 positions, 26 workyears, and $972,000 below the 1988 base is requested for 1988. This reduction occurs in the following two sub-activities:

1. Executive Direction and Control, OJJDP -
The President's 1988 budget provides no program funds for the Juvenile Justice program. Thus, a reduction of 22 positions, 16 workyears, and $550,000 is requested in 1988. The program will require at least 42 months to close down after the last year of funding, which will be 1987. This is because formula grants are awarded for a project period of up to three years (two years plus the year of award). In

addition, discretionary grants are frequently awarded late in the fiscal year of appropriation and are normally active for an eighteen month period. The grantees and sub-grantees then have 90 days to complete expenditures and 45 days to close out the grants. Accordingly, there will be a need for an existing staff to close out the program for a period of time after the first year of termination. The requested reduction will leave a staff of 40 to administer the Missing Children program and to responsibly close out the Juvenile Justice program during 1988. In 1989, we will propose a further reduction of 15 positions for the second year of phase-out. In 1990 an additional 10 positions would be cut and in 1991 another reduction of 10 would take place. The remaining four positions would administer the Missing Children program.

2. Executive Direction and Control, BJA -
A reduction of 10 positions, 10 workyears, and $422,000 is requested in 1988 for the Bureau of Justice Assistance. This request relates to the corresponding proposed elimination of funding in 1988 for the following programs: State and Local Assistance, Mariel Cubans, Regional Information Sharing Systems, and Anti-Drug Abuse. Like the Juvenile Justice program, the formula grants for State and Local Assistance and Anti-Drug Abuse are active for a three year period. In order to terminate these programs in a fiscally responsible manner and insure complete accountability for those funds which have been appropriated to date, a gradual reduction of staff over a three year period is proposed.

Office of Justice Programs

Justice Assistance

Status of Congressionally Requested Studies, Reports, and Evaluations

1. Section 102(b) of the Justice Assistance Act of 1984 requires the Assistant Attorney General to submit an annual report to the President and Congress by March 31 of each year. The report will be submitted on time.

2. Section 810 of the Justice Assistance Act of 1984 requires the Assistant Attorney General, the Director of the Bureau of Justice Assistance, the Director of the Bureau of Justice Statistics, and the Director of the National Institute of Justice to submit to the President and the Speaker of the House of Representatives and the President of the Senate by April 1 of each year, a report on their activities from the preceding fiscal year. The annual reports for each unit will be submitted on time.

3. Section 405(c)(3) of the Missing Children's Assistance Act requires the Advisory Board on Missing Children to submit to the President and Congress an annual comprehensive plan for facilitating cooperation and coordination among all agencies and organizations with responsibilities relating to missing children. The report will be submitted during fiscal year 1987.

4. Section 204(b)(5) of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, requires the Administrator of the Office of Juvenile Justice and Delinquency Prevention to submit to the President and Congress by December 31 each year an analysis and evaluation of Federal juvenile delinquency programs. This report was submitted on December 30, 1986.

5. Section 204(c) of the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, also requires the President, within 90 days of receiving the annual report addressed in item 4, to submit a response on the report to the Congress and the Federal Coordinating Council on Juvenile Justice. This report will be submitted on time.

6. Section 609U of the Justice Assistance Act of 1984 requires the Attorney General to submit to the President and Congress by April 1 of each year, a report describing Federal law enforcement emergency assistance provided during the calendar year preceding the date the report is made. The report will be submitted on time.

7. Section 1306(b) of the State and Local Law Enforcement Assistance Act 1986 requires the Director of the Bureau of Justice Assistance to submit to Congress not later than ninety days after the end of each fiscal year a report that includes with respect to each state - (1) the aggregate amount of grants made under sections 1302 and 1309 to states for each fiscal year; (2) the amount of grants expended for each of the purposes specified in section 1302; and (3) a summary of the information provided in compliance with paragraphs (1) and (2) of subsection (a). The report will be submitted on time.

Justification of Adjustments to Base
(Dollars in thousands)

	Perm. Pos.	Work-years	Amount
Transfers to and from other accounts:			
1. Transfer of FASS group	...	...	$1
This represents the transfer of the Financial and Administrative Systems Support Group from the General Administration to the Working Capital Fund. The transfer of this group will place all of JMD financial, administrative systems support services on a user-reimbursable basis.			
Savings Due to Management Initiatives	-4	-4	-100
This request provides for a decrease of 4 positions, 4 FTE and $100,000 due to anticipated savings from consolidation of administrative support activities.			
Programs Funded from Unobligated Balances	...	...	11,640
This request represents an adjustment required in order to reflect actual base levels for certain programs. The 1987 appropriation language and Conference Committee report specified that carryover funds be added to new budget authority for several OJP programs.			

Following are the programs which require adjustment:

Criminal Justice Statistical Programs	$2,980
State and Local Assistance	4,400
Public Safety Officers' Benefits Program	740
Emergency Assistance	1,148
Regional Information Sharing System	2,100
Management and Administration	272
Total	11,640

Uncontrollable increases:			
1. One additional compensable day	...	...	40
The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation $9,450,000: 260 = $36,000 plus $4,000 for benefits.)			
			43

	Perm. Pos.	Work-years	Amount
2. Annualization of Federal Employees' Retirement System Costs..... This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983 who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were determined from an OMB approved formula. Additionally, $23,000 of the 1987 requirement was absorbed. Total annualization required is $650,000.	...	...	$650
3. Annualization of 1987 pay increase..... This request provides for the annualization of the January 4, 1987 pay increase. The calculation of the amount required for annualization is based on 68 paid days (October 1, 1986 through January 3, 1987) which were not included in the pay raise amount of $502,000. Additionally, $172,000 of the 1987 pay requirement was absorbed. Total annualization required is $330,000.	...	...	330
4. Within-grade increases..... This request provides for an expected increase in the cost of within-grade increases. This increase is generally consistent with increase experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment. (Personnel compensation $102,000 and benefits $11,000 = $113,000.)	...	...	113
5. Locality based per diem..... Public Law 99-234 authorized a new locality-based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $25,000 is required to meet the expected 5 percent increase to total travel funds.	...	...	25
6. GSA rent..... In 1987 the Rent System replaces the Standard Level User Charges (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $306,000 is required to meet our commitment to GSA.	...	...	306
7. GSA recurring reimbursable services..... Reimbursable payments are made to GSA for heating, ventilation and air conditioning provided in excess of normal working hours and for guard service. GSA has estimated a 4.2 percent increase of $8,000 in fees for these services in 1988 over 1987 charges of $180,000.	...	...	8
			44

	Perm. Pos.	Work-years	Amount
8. Federal Telecommunications System (FTS) The General Services Administration has advised of a 16 percent increase in Federal Telecommunications System (FTS) Intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and FY 1985 costs which were not billed by GSA last year. An increase of $39,000 over the 1987 base of $144,000 is requested.	...	...	$39
9. Telephone service On February 25, 1986, the District of Columbia Public Service Commission (PSC) issued its final order in the Chesapeake and Potomac telephone company (C&P) rate case. The PSC, in its order, allowed C&P to increase its rates by $31 million and set the rates for C&P's intrastate services. The PSC order affects the rates the Federal Executive Agencies will pay for basic exchange service, CENTREX services, service connections, direct inward dialing services and channel services. These changes will increase the FY 1987 cost of operating the Justice Telecommunications Service (JTS) by an estimated $552,000. An increase of $25,000 over the 1987 base of $275,000 is requested to pay these charges.	...	...	25
10. GPO printing costs The Government Printing Office (GPO) is currently projecting a 3 to 4 percent increase over the 1987 printing cost of $400,000. An additional $16,000 will be required in 1988.	...	...	16
11. Employee data and payroll services Centralized employee data and payroll services are provided to all Departmental organizations except the Federal Bureau of Investigation. Charges for these services, which include information systems maintenance and payroll accounting are based on the number of records maintained. The rate of $145.64 per record in FY 1986 will be raised to $155.76 per record for FY 1988. The change is based on anticipated uncontrollable cost increase of 6.9 percent for the operation of the Justice Employee Data Service. An additional increase of $10,000 has been included to improve the Human Resources Management Information System (HRMIS). This improvement will enhance the productivity of all Department components as well as the support units of accounting, budgeting and procurement. This retooling of support systems will allow the Department to operate an efficient, effective and business-like administrative operation.	...	...	15
12. Audio visual and media services This increase reflects proposed rate increases for various types of audiovisual services. An estimated 16.5% overall increase will be assigned to each affected organization for 1988. This equates to an increase of $3,000 over the 1987 base of $20,000.	...	...	3
			43

	Perm. Pos.	Work-years	Amount
13. General pricing level adjustment..... This request applies OMB pricing guidance as of December 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.7 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1987 estimates.	...	...	$1,418
Total uncontrollable increases.....	...	...	2,988
Nonrecurring Decreases:			
1. Reduction for change in hourly rate..... Public Law 99-272, the Consolidated Omnibus Budget Reconciliation Act of 1985 required that the computation of annual salary rates to be based on 2,087 hours rather than 2,080. The same amount that was reduced in 1984 and restored in 1986 is requested for reduction in 1988.	...	...	-32
2. Reduction in health benefits..... The Federal Employees' Health Benefits Act (P.L 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1986, the Department's actual contribution to health insurance decreased approximately 5 percent due primarily to reduced carrier rates. The requested decrease includes $18,000 for decreased rates over the 1987 budgeted base of $340,000.	...	...	-18
3. Reduction in per page cost of the Federal Register and the Code of Federal Regulations..... The Legislative Branch Appropriation Act of 1978 (P.L. 95-941) amended the Federal Register Act to require Federal agencies to reimburse the Government Printing Office for costs of printing, binding, and distributing the Federal Register (FR) and the Code of Federal Regulations (CFR). The current cost estimates from GPO indicate a per page cost of $390 for the FR and $55 for the CFR for 1988. This represents an $18 per page decrease for the FR and a $5 per page decrease for the CFR.	...	...	-1
4. Federal Employees' Compensation Act (FECA) - workers compensation..... This decrease reflects the billing provided by the Department of Labor for the actual costs in 1986 of employees' accident compensation. The 1988 amount will be $62,000, or $114,000 less than the 1987 base.	...	...	-$114
Total decreases.....	...	...	-165
Total, adjustments to base.....	-4	-4	2,823

Office of Justice Programs

Crime Victims Fund

Summary Statement

Fiscal Year 1988

The Crime Victims Fund was established by the Victims of Crime Act of 1984, as amended by the Children's Justice Assistance Act of 1986. Current legislation provides for the deposit into the Fund of Federal criminal fines, bond forfeitures, and penalty assessments up to $110,000,000. These funds are used for four programs: 1) reimbursements to States for victim compensation programs (up to 35% of their prior year expenditures); 2) each State receives an allocation for the purpose of providing services, other non-financial assistance, and limited emergency financial assistance to victims of crime; 3) training and technical assistance services to eligible crime victims assistance programs and for the financial support of victims of Federal crime by eligible crime victim assistance programs; and 4) Children's Justice/Child Abuse Prevention and Treatment grants. Any funds currently collected which exceed $110,000,000 are deposited into the General Fund of the Treasury. The request for 1988 proposes an obligation limitation of $35,000,000 which will still be sufficient to encourage development of additional crime victim programs at the state and local level. In addition, the savings gained can be used to offset the Federal deficit.

Office of Justice Programs

Crime Victims Fund

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in the appropriations language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Not to exceed [$64,000,000] shall be obligated during fiscal year [1987] for victim compensation and assistance programs, notwithstanding section 1402, 1403, or 1404 of the Victims of Crime Act of 1984 (Public Law 98-473). $35,000,000 1988

Explanation of Changes:

An obligation limitation is proposed for 1988.

Victim Compensation	$23,477	$28,296	$17,325
Victim Assistance	41,422	35,704	17,675
Total	64,899	64,000	35,000

The Crime Victims Fund was established by the Victims of Crime Act of 1984 as amended by the Children's Justice Assistance Act of 1986. Funds collected from Federal criminal fines, bond forfeitures, and penalty assessments up to $110,000,000 are deposited in the Fund. The funds collected in one year are then awarded to the states in the following year for victim compensation and assistance programs.

Long Range Goal: To ensure that victims of crime have access to compensation and assistance programs designed to reduce the emotional, financial, and physical effects of victimization and to support and facilitate the participation of crime victims in the criminal justice process.

Major Objectives:

To implement the provisions of the Victims of Crime Act of 1984, as amended.

To monitor state compensation and victim assistance programs to ensure compliance with Federal guidelines.

To provide technical assistance to the states in implementing victim assistance and victim compensation programs.

To compile and analyze data submitted by the state programs.

To prepare a report to Congress on the progress and achievements of the victim compensation program.

To monitor compliance with the Attorney General's Guidelines for Victim and Witness Assistance.

Base Program Description: The victims of crime program is funded by collections of fines, penalty assessments, and bond forfeitures from people convicted of Federal crimes. Funds are deposited on a regular basis into the Crime Victims Fund, up to $110,000,000. Funds are not obligated during the year of collection. They are allowed to accumulate for one year so that the total amount is known for computation of the amounts to be distributed to each state for compensation and assistance. Therefore, funds collected in 1986 are awarded in 1987 and funds collected in 1987 will be awarded in 1988. Approximately $62.5 million was deposited in the fund during 1986. It is anticipated that collections will increase in 1987 and that they will total $70,000,000.

Funds are targeted at four program areas. Following is the distribution of funds by program, based on the availability of up to $100 million in the Fund:

1. Crime Victim Compensation - The legislation sets aside 49.5 percent of the Fund for this purpose. These funds are distributed to the states on the basis of 35% of their victims compensation payouts during the preceding fiscal year. Money from the Fund cannot be used to pay administrative expenses of the state's victims compensation program. Any money unspent by a state within two fiscal years of receipt will be deposited in the General Fund of the Treasury.

2. Crime Victim Assistance - Forty-five percent of the Fund is set aside to be awarded to states for the purpose of providing services, other nonfinancial assistance, and limited emergency financial assistance to victims of crime. In addition, money set aside in the Fund for victims compensation that was not awarded because of the 35% cap would be added to the assistance portion of the Fund. Priority must be given to eligible crime victim assistance programs which provide assistance to victims of sexual assault, spousal abuse or child abuse. Each state has named a state official to administer the assistance funds awarded under the Act. The designated official is responsible for awarding the funds to eligible victim assistance recipient organizations in the state, administering the awards, and monitoring the fiscal and programmatic performance of fund receipts. Recipient organizations eligible for victim assistance funding would be non-profit organizations, agencies of state or local governments (or combinations of such entities) which provide services to victims of crime, including crisis intervention services, emergency aid, and assistance to victims participating in criminal justice proceedings.

3. Federal Victims Assistance - The Attorney General shall make available one percent of the total Fund for training and technical assistance services to eligible crime victims assistance programs and for the financial support of services to victims of Federal crime by eligible crime victim assistance programs.

4. Children's Justice - The legislation requires that 4.5 percent shall be made available for Child Abuse Prevention and Treatment grants. The Department of Health and Human Services is authorized to award grants to states to assist in developing, establishing, and operating programs designed to improve the handling of child abuse cases and the investigation and prosecution of cases of child abuse, particularly child sexual abuse.

If deposits in the Fund exceed $100 million, the first $5.5 million would be available for the Children's Justice program. An available amount in excess of $105.5 million and up to $110 million would be available for the Victim Assistance program for States.

Accomplishments and Workload: During 1986, the Office for Victims of Crime awarded $23,477,000 to 38 states for victim compensation programs and $41,233,000 to 55 states and territories for victim assistance programs. In 1987, the Office anticipates awarding $28,296,000 to 40 states for victim compensation and $30,772,000 to 57 states and territories for victim assistance. Four regional meetings of appropriate state officials were convened by the Office to facilitate successful implementation of the compensation and assistance awards.

The Office continued grants with the National Sheriffs' Association, the National Association of Attorneys General, the National District Attorneys' Association, and the National Organization of Black Law Enforcement Executives to further the implementation of the recommendations of the President's Task Force on Victims of Crime. The Office provided staff support for the President's Child Safety Partnership, and organized its seven public hearings and four business meetings.

A training conference concerning the treatment of victims of Federal crime for U.S. Attorneys' Victim-Witness Coordinators was held December 2-4 1985, jointly sponsored by the Office for Victims of Crime and by the Executive Office for U.S. Attorneys. Mailouts were subsequently made to all U.S. Attorneys and numerous questions have been responded to by the Office. A seminar on victim assistance guidelines development for Federal law enforcement agencies was sponsored by the Office in August 1986, and the Office has provided $171,000 to the Federal Law Enforcement Training Center to improve the training of Federal officers concerning victims of crime. Finally, preparations have been made to monitor the compliance of Federal enforcement agencies with the requirements of the Victim-Witness Protection Act of 1982.

Program Change: It is requested that an obligation limitation of $35,000,000 be placed on the Crime Victims Fund. This reduction is requested in order to reduce the negative impact on the total Federal deficit caused by expenditures from the Crime Victims Fund. The amount requested will still be sufficient to encourage development of additional crime victim programs at the state and local level. In addition, the savings realized would be used to offset the Federal deficit. A request to amend the authorizing legislation to reduce the fund limitation from $110,000,000 to $35,000,000 will be transmitted to Congress in the near future.

Office of Justice Programs

Crime Victims Fund

Status of Congressionally Requested

Studies, Reports, and Evaluations

Section 1407(h) of the Victims of Crime Act of 1984 requires that a report by the Attorney General on the effectiveness of the Act be submitted to the President and Congress on the revenue derived from each source described in section 1302 and on the effectiveness of activities supported under the Act. The first report is due on December 31, 1987.

OPENING STATEMENT

Mr. DWYER. The Committee is pleased to welcome the Assistant Attorney General for the Office of Justice Programs, Richard B. Abell.

Mr. Abell, you may proceed with your statement at your own pace.

Mr. ABELL. Thank you, sir. I would also like to quickly introduce the other witnesses that are here with me today: Mr. Verne Speirs, the Acting Administrator of the Office of Juvenile Justice; Mr. James Stewart, Director of the National Institute of Justice; Mr. Steven Schlesinger, Director of the Bureau of Justice Statistics; Mr. Allen Vander-Staay, Budget Officer; and Mr. Michael Roper, Deputy Comptroller for Budget, Office of the Comptroller.

Now sir, I am pleased to have the opportunity to appear before you in support of the 1988 budget request for the Office of Justice Programs. The request is for $78,303,000 and 287 positions, which represents a net decrease of $337,756,000 and 36 positions from the $416,059,000 appropriation anticipated for 1987.

Included in this request is an increase of $14,464,000 for various adjustments to base and program increases of $3,502,000 for Research, Evaluation, and Demonstration Programs, Criminal Justice Statistical Programs and Emergency Assistance.

Decreases totaling $354,972,000 and 32 positions are requested to terminate the State and Local Assistance, Juvenile Justice, Mariel Cubans, and the Regional Information Sharing Systems programs. A decrease of $650,000 is also requested for the Public Safety Officer's Benefits program. In addition, a reduction of four positions and $100,000 is requested for management and productivity savings.

PROGRAM INCREASES

This budget request includes an increase of $2,700,000 for Research, Evaluation, and Demonstration Programs to fund three new initiatives to control the supply and demand for illegal drugs. Of the funds requested, $1,350,000 will be used to implement a druguse "early-warning system"; $600,000 will be utilized to conduct research into the effectiveness of intensive crackdowns on street-level drug dealers; and $750,000 will fund the dissemination of public service announcements targeted at youngsters and teenagers.

For Criminal Justice Statistical Programs, an increase of $750,000 is requested for a white-collar crime statistical series initiative. This initiative will provide the first empirical estimate of the number of white-collar crime incidents reported, investigated, prosecuted, or otherwise handled by Government agencies, and responds directly to continued interest of the Department of Justice, Congress, the States, and the general public by filling the current void in our knowledge of criminal activity in the Nation. Project findings will provide empirical data to support legislative, budget, and correctional strategies at the Federal and State levels.

Our request includes an increase of $52,000 for Emergency Assistance, simply to maintain the program at its current level.

A decrease of $44,400,000 is requested to terminate the State and Local Assistance program. The three years of funding which have been provided for this program have given the States and localities ample opportunity to determine if the projects funded have resulted in greater efficiency and/or reduced costs. If results had been positive, then those States and localities should be willing to use their own revenues to continue the projects.

A decrease of $67,600,000 is requested for Juvenile Justice Programs. The Federal Government has provided about $1 billion over the past 13 years for this program. The Administration is pleased that much has been accomplished over those years with Federal funds, particularly in the areas of deinstitutionalization of status offenders, separation of adults and juvenile offenders' and jail removal, which are the major thrusts of the legislation. The responsibility for any further funding for Juvenile Justice Programs should be at the State and local government levels.

A reduction of $650,000 is requested for the Public Safety Officers' Benefits Program. The reduced level of resources requested is the result of a decline in the number of eligible claims paid over recent years and does not represent a lower program effort.

The budget requests a decrease of $5 million for the Mariel Cuban Program. As you are aware, these prisoners are incarcerated in State and local facilities because they have committed State and local offenses. Upon their release, they will be transferred to Federal custody. The Department of Justice must first utilize available funds to meet Federal responsibilities.

A decrease of $12 million is proposed for the Regional Information Sharing System Program, RISS. The original RISS projects were funded by the Department of Justice in the mid-1970's on a demonstration basis, with the expectation that financial support for these intelligence networks would, in time, be assumed by the State and local law enforcement agencies which they serve. Since 1975, when the first project was funded, the Federal Government has provided over $74 million for these projects and although the number of RISS projects has now grown to seven, only a small portion of the law enforcement community is benefited. These projects are the only law enforcement activities at the State and local level which are funded almost entirely by the Federal Government and no significant action has been undertaken toward achieving funding by the State and local agencies which are served.

The budget request also includes a decrease of $225 million for the Anti-Drug Abuse Program. This is another grant program for States and localities which should not be viewed as a permanent, ongoing source of funds. These funds were first appropriated in 1987 and can be used at the State and local levels for a three-year period. The Department of Justice is confident that this funding will help State and local governments to coordinate and improve their drug enforcement efforts. They can then continue to build upon these efforts with their own funds. The role of the Federal Government must be that of encouraging the development of, rather than sustaining, locally-based programs to deal with drug abuse.

The reduction of $972,000 and 32 positions requested for Management and Administration is due to the proposed termination of

funding for the Juvenile Justice, State and Local Assistance, Anti-Drug Abuse, Mariel Cubans, and RISS programs. The Office of Juvenile Justice and Delinquency Prevention will be decreased by 22 positions, and the Bureau of Justice Assistance will be decreased by 10 positions.

CRIME VICTIMS FUND

I also wish to address the Crime Victims Fund, which is financed by Federal criminal fines, bond forfeitures, and penalty assessments. Currently, legislation allows the deposit of up to $110 million into the Fund. In 1987 the Justice Assistance appropriation language provides an obligation limit of $64 million. Our 1988 request proposes an obligation limitation of $35 million. This level of resources will be sufficient to encourage the development of additional crime victim programs at the State and local levels, and the savings realized can be used to offset the Federal deficit.

LIMITED FEDERAL FUNDS AVAILABLE

With regard to the various program decreases requested in this budget, I wish to emphasize that these State and local assistance programs must now be funded by those jurisdictions which have been receiving the benefits over the years. Since Federal funds are not unlimited, we must first use available funds to meet the requirements of the Federal justice system. The Department's position on funding of these grant programs was perhaps best summarized by the Attorney General in his testimony before the Senate Judiciary Committee on February 4, 1987, where he said, "I think it is very important in allocating resources and in recognizing that there is a limited amount of funds available that we decide where the Federal Government ought to be spending its money. There is no doubt in my mind whatsoever that it ought to be on the Federal functions."

This concludes my statement, Mr. Chairman. I shall, of course, be happy to answer any questions.

[The biographies of Mr. Abell and Mr. Speirs follow:]

[CLERK'S NOTE.—The prepared statement was read verbatim during the hearing and will not be repeated again in the record.]

BIOGRAPHY OF RICHARD BENDER ABELL

The President nominated Richard Bender Abell to be Assistant Attorney General of the Office of Justice Programs, Department of Justice on February 24, 1987. He has served as the Acting Assistant Attorney General since October 20, 1986. Prior to that appointment he was the Deputy Assistant Attorney General, Office of Justice Programs. His previous employment includes Director, Office of Program Development, Peace Corps; Representative for Central Pennsylvania for United States Senator Richard Schweiker; Assistant District Attorney, Chester County, Pennsylvania; and Associate, Law Offices of Reilly and Fogwell, West Chester, Pennsylvania. On January 10, 1985, he was appointed by the President to the Federal Prison Industries Board of Directors serving as Representative for the Attorney General.

Richard Bender Abell was born in Philadelphia, Pennsylvania on December 2, 1943. From the George Washington University, he received both a B.A. degree in Internaitonal Affairs in 1966 and a J.D. degree in 1974. He served in the United States Army, First Air Cavalry Division, from 1969 to 1971 and received an Air Medal, the Purple Heart, the Army Commendation Medal for Heroism and the Combat Infantryman's Badge.

Richard Bender Abell is married and has three children. He currently resides in Alexandria, Virginia.

BIOGRAPHY OF VERNE L. SPEIRS

Verne L. Speirs was named Acting Administrator of the Office of Juvenile Justice and Delinquency Prevention, U.S. Department of Justice, on June 9, 1986.

Mr. Speirs also continues as Administrator of the Office for Victims of Crime in the Department's Office of Justice Programs, a position he has held since October 13, 1985, Before joining the Justice Department, Mr. Speirs was Executive Assistant to the Chairman of the U.S Merit System Protection Board from 1982 to 1985. Prior to that appointment, he held positions in a number of criminal justice agencies in the State of California, including the California State Office of Criminal Justice Planning, and work with the Sacramento County Law and Justice Agency.

For three years, from 1975 to 1978, Mr. Speirs was in charge of planning and program development with the Sacramento County Department of Probation. In that position, he was responsible for planning and managing grant programs for adult and juvenile offenders. From 1966 to 1974, Mr. Speirs served as a probation officer with the Santa Clara and Sacramento County Departments of Probation, rising to Senior Deputy Probation Officer in Sacramento County, where he was responsible for the supervision and treatment of serious adult felons and hard-core juvenile offenders.

Mr. Speirs also has held teaching positions with Golden Gate University and the Los Rios Community College District, and in 1977 he was named Golden Gate University's "Instructor of the Year."

He received a Master of Science degree in correctional counseling from the California State University at Sacramento in 1972 and a B.A. in corrections and psychology from the California State University at San Jose in 1966.

Mr. Speirs, who was born on June 10, 1942, is married and has two children.,

LAW-RELATED EDUCATION PROGRAM

Mr. DWYER. Thank you. In its report accompanying the fiscal year 1986 appropriation bill, the House and this Committee instructed that the coordinated national law-related education program be supported at a level of not less than $2.2 million. Nonetheless, the Office of Juvenile Justice and Delinquency Prevention only provided $1.5 million for the implementation of the program. And last year, in report language, the position was reiterated.

Now, how much of that $2,200,000 is going to be obligated to that program?

Mr. ABELL. Yes, sir. With your permission, I would like to ask Mr. Speirs, the Acting Administrator of the Office of Juvenile Justice, to respond to that question.

Mr. SPEIRS. Last year, I believe $1,535,000. What we have asked them to do is submit their budgets, and I do think we have the budgets coming in at about $2.2 million, and we are in the process of looking at their budgets, looking at the program, and seeing whether they are implementing the program at that level.

Mr. DWYER. What about the budgets that were submitted in the prior year, were they not up to $2.2 million? Or had you objected to some of the things that were included in the budget?

Mr. SPEIRS. I was not there. I did not look and object at that budget level, and I cannot tell you what they had submitted. I just know what the level of effort was at that period of time. I know the language this year does talk about $2.2 million.

Mr. DWYER. I wonder if you would provide for the record a report on the requests that were made in 1986?

Mr. SPEIRS. In 1986?

Mr. DWYER. Yes.

Mr. SPEIRS. Certainly.

[The information follows:]

LAW-RELATED EDUCATION PROGRAM

Grantee	Requested amount	Award amount
In fiscal year 1986 the following requests for funding were made:		
American Bar Association	$176,410	$176,410
National Institute for Citizen Education in the Law	431,082	431,082
Law in a Free Society	456,400	456,400
Constitutional Rights Foundation	336,000	336,000
Phi Alpha Delta	135,000	135,000
Total	1,534,892	1,534,892

MARIEL CUBAN PROGRAM

Mr. DWYER. You propose to eliminate funds for incarceration of Mariel Cubans and not reimburse States for the costs that they are suffering.

Mr. ABELL. Yes, sir. For fiscal year 1988.

Mr. DWYER. If the Congress decides in its wisdom to continue the Mariel Cuban funding, how much would be required for the fiscal year 1988?

Mr. ABELL. I do not know, sir. In terms of what would be required, I do not have a response.

Mr. DWYER. You don't have any idea how many Mariel Cubans are now incarcerated in the States?

Mr. ABELL. That we can supply.

Mr. DWYER. Yes.

Mr. ABELL. For 1987, it would be anticipated that there would be 12,416. Now, that number was supplied by the States requesting funds. INS and the Bureau of Justice Assistance have not yet verified those numbers.

Mr. DWYER. How many Mariels have been moved out of the State and local prison facilities in 1986?

Mr. ABELL. The Immigration and Naturalization Service would have those figures. I would be happy to supply those for the record, if I may.

Mr. DWYER. Well, would you do that, supply it for the record?

Mr. ABELL. Certainly.

[The information follows:]

MARIEL CUBANS RELEASED FROM STATE AND LOCAL FACILITIES

According to the Immigration and Naturalization Service, approximately 650 Mariel Cubans were moved out of State and local prison facilities in 1986.

MISSING CHILDREN PROGRAM

Mr. DWYER. Most of the accomplishments and workload for the missing-children program, displayed on page 25 of your justification, increased from fiscal year 1987 to fiscal year 1988, and yet your funding remains level. Why is that, even though you expect to have a larger burden?

Mr. ABELL. Yes, sir. Well, with your permission, I would like again to ask the Acting Administrator, Mr. Speirs, to respond to that.

Mr. SPEIRS. May I ask you to repeat the question? I am not sure exactly what you wanted me to respond to on that.

Mr. DWYER. Most of the accomplishments and work load for the missing-children program, displayed on page 25 of your justification, increased from fiscal year 1987 to fiscal year 1988. Yet your funding remains level. Why?

Mr. SPEIRS. So I can be accurate and give you the best information, I would like to submit that for the record.

Mr. DWYER. Okay. Thank you.

[The information follows:]

MISSING CHILDREN'S PROGRAM WORKLOAD AND ACCOMPLISHMENTS

The workload and accomplishments information on page 25 of the budget justification does not show an increase in workload in FY 1988. The information shows an increase in the workload associated with the State (public) missing children clearinghouses and a decrease in the workload estimates associated with the National Center for Missing and Exploited Children.

REGIONAL INFORMATION SHARING SYSTEM PROGRAM

Mr. DWYER. You are again recommending to eliminate the funding for the Regional Information Sharing System. Don't you believe that this program is of immense value for State and local law enforcement offices who otherwise could not afford it?

Mr. ABELL. Well, it may or may not be of value, but after some 11 or 12 years of funding, we feel that the use of $74 million for what should have originally been start-up funding has more than expired in its time. If the programs are good, the States and locals should, in fact, contribute and pick them up.

Mr. DWYER. Have you approached the States on that basis to see if they would pick up the costs?

Mr. ABELL. I understand there has been some discussion about picking up more of the cost. I have heard that between five and ten percent of the cost is being picked up this year.

Mr. DWYER. Who held those discussions with the States?

Mr. ABELL. I believe our Office of the General Counsel has had some discussions, sir.

WHITE COLLAR CRIME STATISTICS INITIATIVE

Mr. DWYER. You request an increase of $750,000 for a white-collar crime initiative.

Mr. ABELL. Yes, sir.

Mr. DWYER. Why is this required, and what benefits do you foresee coming out of the initiative?

Mr. ABELL. With your permission, I would like to ask Mr. Schlesinger, the Director of the Bureau of Justice Statistics, to respond to that.

Mr. SCHLESINGER. Mr. Chairman, the initiative would provide the first empirical estimate of the number of white-collar crime incidents which are reported, investigated, prosecuted, and otherwise handled by Government agencies.

Moreover, the data would permit evaluation of alternative procedures for controlling white-collar crime—for example, civil versus criminal versus an administrative approach—and thus would facilitate long-term cost savings in crime control programs.

Project findings will also provide data to support legislative, budget, and correctional strategies at the Federal and State levels. Program costs would be minimized by using data already collected by different agencies and incorporating the analysis effort in the already existing Federal data analysis program at BJS.

In light of recent events, especially in light of the insider-trader cases, and the continuing concern over Government integrity, we anticipate that congressional and public requests for data on white-collar crime activity will increase markedly in the future.

Finally, I would add that any effort to control white-collar crime would increase the integrity of America's work place and would enhance our competitiveness and productivity in the world trade arena.

Mr. ABELL. We could supply that for the record.

Mr. DWYER. Well, maybe you could tell us something about who came up with the idea to go into this white-collar crime initiative study?

Mr. SCHLESINGER. This is an idea that I had originally talked about with former Deputy Attorney General Lowell Jensen. He agreed that there was a real lack of data on the processing of white-collar cases both at the Federal and at the State levels addressing that void is very important.

[CLERK'S NOTE.—This more detailed information was prepared for the record subsequent to the hearing:]

PURPOSE OF WHITE-COLLAR CRIME INITIATIVE

Subsequent to the hearing, the following information was provided:

The study will also provide data on the estimated losses associated with such incidents; the nature of individual and corporate offenders involved; the extent to which such incidents are investigated and sanctioned through the criminal, as opposed to civil, administrative or regulatory process; the percent of offenders prosecuted, convicted and sentenced; the extent and impact of civil sanctions; and the nature of correctional experiences faced by convicted offenders (including, for example, time served by offenders, nature of correctional experiences faced by convicted offenders (including, for example, time served by offenders, nature of correctional institutions, etc.)

The proposed program would collect data on each of these matters, initially at the Federal level, and eventually from the States as well. Data would be obtained initially from operational records maintained by Federal agencies (e.g., the Department of Justice, the Securities and Exchange Commission, Comptroller of the Currency, Inspector General offices). At a later date, data would be obtained from sources such as State Attorneys General and state fraud units in order to develop overall national estimates of white-collar crime activity and costs.

In order to ensure that project products respond to actual needs, criminal justice, legislative, judicial and academic experts would be convened to identify the relevant crime categories and data elements which are of priority interest. An initial report would describe the general Government response to white-collar crime incidents. Later reports would describe particular subject matters, including, for example, the impact on corrections and the advantages of criminal vs. civil processing. Trend data will also be developed to evaluate the effect of changed policies and processes. The data described do not now exist. Initiation of such a comprehensive program would accurately reflect the Government's commitment to white-collar crime control.

Mr. DWYER. What purpose would it serve?

Mr. SCHLESINGER. Well, for example, one of the things that we would very much like to know is the kinds of sentences that white-collar criminals are receiving at the Federal and State levels. Once

we know the sentences, it would be very interesting to know the length of time those individuals are in fact serving in the Federal prison system.

It would also be interesting to go back to the beginning of the process both at the Federal and the State levels—what kind of prosecutorial discretion is being exercised in the prosecution of these cases, what kinds of cases are Federal and State prosecutors deciding to prosecute, and what kinds of cases are they declining to prosecute.

The purpose of this effort would be to trace white-collar crime cases at the Federal and State levels, all the way through the system, starting with arrests, then through the courts and finally into the corrections system. We would trace each stage and produce data about how the cases are being handled at each stage, so as to ultimately produce policy-relevant data that can guide policymakers like yourselves in making decisions about alternative strategies in handling white-collar crime.

Mr. DWYER. Is this engendered by the general belief that white-collar crime does not suffer the severe sentencing procedures that other types of crime does?

Mr. SCHLESINGER. I think it's fair to say that there is such a general belief, and we at BJS have tried to make some initial efforts to address that question. We have a series at BJS called "offender-based transaction statistics," which follows cases and people through the criminal justice systems of a few States, and we produced an initial report on white-collar crime in those few States. This was perhaps six months ago.

The findings, I thought, were quite interesting. The report compared the processing of white-collar felons to other kinds of felons in those States. What we found was that generally speaking white-collar felons were convicted as often and had sentences which were approximately as long as the other kinds of felons, including violent felons and public order felons. The actual stay in prison, however, was shorter.

Mr. DWYER. How about the facilities that white-collar criminals are housed in?

Mr. SCHLESINGER. That study did not address the question of what facilities they were housed in.

Mr. DWYER. It is the general impression of the public that most white-collar criminals are treated like juveniles, with short sentences and early-release programs and housed in very, very, very minimum security camps and things of that nature.

Mr. SCHLESINGER. That was not a question that was addressed in that study.

Mr. DWYER. Your study will address that question?

Mr. SCHLESINGER. It certainly will. One of the data elements we would certainly pick up would be that.

Mr. DWYER. Would your study make a recommendation?

Mr. SCHLESINGER. The Bureau of Justice Statistics never makes policy recommendations. We understand ourselves to be a statistics agency, and we supply the data for the use of the policymakers.

Mr. DWYER. Would your study, do you think, indicate that the policymakers then would make a different recommendation when it came to white-collar crime?

Mr. SCHLESINGER. Could you repeat the question, please, sir? [Laughter.]

ANTI-GAY VIOLENCE

Mr. DWYER. It's actually a statement.

I had somebody come into the office from the American Psychological Association a week or two ago who was talking about your division and wanted to know why you people were not making a study of the violent treatment of homosexuals in our society at this particular time, and in fact, is this actually happening? And I couldn't answer the question because I didn't really know. But that was the question that was asked of me.

Mr. SCHLESINGER. I am not aware that——

Mr. DWYER. Well, apparently, with the frightening increase of AIDS, people now are starting to attack the homosexuals as they meet them on the street. At least, this was the claim. I don't know whether it's true or not.

Mr. SCHLESINGER. I think I may have read in the newspapers that in some cities such studies have been undertaken. I would be more than happy to meet with individuals who are interested in such studies and we can discuss the matter.

Mr. DWYER. Fine.

Mr. Smith?

NECESSITY FOR WHITE COLLAR CRIME STATISTICS

Mr. SMITH. I am not quite clear what you are going to get, that you don't already know. We already know that when they are faced with turning out one or two criminals, they try to turn out the ones least apt to commit violence again on society. There is nothing unknown about that, is there? I mean, we know why white-collar criminals tend to be released. If they have to turn somebody out of prison, they tend to keep the one that committed violence, probably a couple of times before. I mean, that is already known, isn't it? What are we going to get that we don't already know?

Mr. SCHLESINGER. I think in some jurisdictions that is undoubtedly true.

Mr. SMITH. Well, everywhere they have a shortage of jail space don't they? And there is criticism for turning out anybody that committed violence.

Mr. SCHLESINGER. Well, I do know that States and jurisdictions vary a good deal in terms of how many individuals receive early releases. I would add in general that this white-collar crime study covers a good bit more than just corrections. It would cover the treatment of white-collar felons in the entire system.

Let me add one other thing. In gathering data at the Federal and State levels, we will be asking not only the usual criminal justice agencies to provide the data, but we will be asking regulatory agencies such as the SEC and the Comptroller of the Currency and other regulatory agencies to provide this data. This would be a much wider study.

Mr. SMITH. How much would this study cost?

Mr. SCHLESINGER. The request is for $750,000, Mr. Chairman.

TERMINATION OF JUVENILE JUSTICE PROGRAMS

Mr. SMITH. You are proposing to eliminate the shelters for runaway youth, for example, as a part of the juvenile programs. Do you think that gathering statistics is more important than providing shelters for some runaway youth?

Mr. SCHLESINGER. I don't believe that I normally address budget questions of that kind if I could——

Mr. SMITH. Well, it's in your budget, you are proposing to eliminate that program but you want money to do this. Now, I mean we are dealing with alternatives, we must determine what's the most important one. You are proposing again to cut out the juvenile justice program by $67,600,000, as you have done in the past. That's where we have the runaway youth program, and where we have a number of those types of programs. We don't have enough money for that, but we're going to spend the money for this? We are dealing with alternatives. What is the most important in our society?

Mr. ABELL. Mr. Chairman, I think I should probably respond in general to that query. The research element and the statistical element that are part of our Office of Justice Programs are seen as uniquely Federal responsibilities that only the Federal Government can address itself to. The Administration has prioritized and put the Federal elements in a superior position to those which are State and local in nature, and it's seen that the Office of Juvenile Justice in that prioritization is at the bottom of the spectrum, if you will. Therefore it comes out to a prioritization issue.

Mr. SMITH. But he was talking about statistics on what State courts do. That is a State court matter. Why is it a Federal matter?

Mr. ABELL. Well, I believe it's the Federal Government that would be able to do the cross-statistics between one State and another in terms of comparing them, in terms of analyzing them. That would be appropriately a Federal function, sir.

1988 BUDGET REQUEST TO OMB

Mr. SMITH. You are proposing to cut $337 million out of the $416 million appropriation we had last year. That is almost all of it. What did you ask in your proposal to OMB, your original proposal? What did you ask?

Mr. ABELL. That would have been essentially the same, sir.

Mr. SMITH. The same as last year?

Mr. ABELL. Yes. I think there is a small cost-of-living increase that would be included in that, and of course there would be the small increases for the $2.7 million for NIJ and the $750,000 for BJS.

Mr. SMITH. So you're asking for $416 million plus a little bit?

Mr. ABELL. No. We asked—I think last year we asked for $74 million and this year we requested $78 million.

Mr. SMITH. You had $416 million in programs last year and you then asked OMB to cut it back to $78 million, is that it?

Mr. ABELL. Yes, sir.

Mr. SMITH. Well, if you're so opposed to three-fourths of the programs that you are administering, why do you want to administer them? Shouldn't somebody be in charge of a program that at least is somewhat for the program?

Mr. ABELL. Well, programs must be managed efficiently and competently and managed well, and the position of the Administration is that those programs that were mentioned—

Mr. SMITH. I wasn't talking about the Administration's position after it had been through OMB and decided. We are talking about before the Administration had made their decision on 1988. We are talking about your proposal to OMB. Your proposal to OMB was to eliminate all these programs.

Mr. ABELL. Yes, sir, that is the complete Administration position. In fact, it is the Department of Justice's position as well as the Administration's position.

Mr. SMITH. But the first proposal is yours. First, you propose in your Office of Justice Programs.

Mr. ABELL. Yes, sir.

Mr. SMITH. You set the budget level as it goes through the process. You eventually get it back and you can't do anything about the end result. But you are telling me that your original proposal in this process was to cut it clear back to $78 million.

Mr. ABELL. Yes, sir. Our budget requests have proposed the termination of these grant programs for some years, since long before I came on board.

Mr. SMITH. Yes. I know. But here you are administering a program when you're opposed to three-fourths of the programs.

Mr. ABELL. Yes, sir. We were given guidelines in terms of what the Administration and the Department are looking for, and I know that their primary concern has been one dealing with the deficit, and therefore, prioritizing within the Department of Justice what are uniquely Federal concerns.

Mr. SMITH. On the first draft, though, each part of the Department sends up what they think they would like to have, and then you get your guidelines after that. You are not told after you do the first step that you are to cut back a certain amount.

Mr. ABELL. Excuse me. We are given some initial guidelines from the Attorney General's office, in terms of, what direction the submission should take. I know that in our own case budget submissions have been proposing termination of these grant programs for five or six years. So there is certainly an indication of what would be entertained.

[The following information was submitted for the Record, subsequent to the hearing:]

Subsequent to the hearing the following information was provided:

1988 BUDGET REQUEST

The Office of Justice Programs request to Congress was $74 million in 1987 and $78 million in 1988. However, the Department's revised request to the Office of Management and Budget was $303,804,000 which includes funding for programs enacted after the requests were transmitted to OMB.

Mr. SMITH. That's all I have.

MANAGEMENT AND ADMINISTRATION DECREASE

Mr. DWYER. You recommended, I think, a decrease in management and administration of 32 positions and $972,000 resulting from your program reduction in juvenile justice and the Bureau of

Justice Assistance programs. Should the Congress decide in its wisdom to fund those programs administered by these offices, how much would be required in fiscal year 1988?

Mr. ABELL. Well, I certainly do not want to be futuristic, but if the Congress in its wisdom should decide to make the funding about or at the same level, then I would presume that the cut in management would be inappropriate.

Mr. DWYER. How many people how many people would stay in their jobs, seeing as how they don't like the programs?

Mr. ABELL. Oh, I couldn't—I don't know, sir.

Mr. DWYER. Do you have any more questions, Mr. Smith?

DEPARTMENT OF JUSTICE 1988 BUDGET PROCESS

Mr. SMITH. Who is here from the Comptroller's Office? When this process started, when did it start, a year ago now?

Mr. ROPER. The 1988 budget process, sir?

Mr. SMITH. Yes.

Mr. ROPER. Yes. In May of last year.

Mr. SMITH. About May. What is the very first step?

Mr. ROPER. The very first step that we go through in the Department, sir, is the issuance of the spring planning call, which requests organizations to submit their estimates for the budget year. Along with that—it tends to follow slightly later—is a set of Attorney General Policy and Program guidelines.

Mr. SMITH. How definitive are those guidelines?

Mr. ROPER. They tend to be—the ones last year are more general as opposed to definitive.

Mr. SMITH. Well, in this case, what would they say to it?

Mr. ROPER. Sir, off the top of my head, I cannot recall exactly what they said.

Mr. SMITH. Did they say leave out three-fourths of the budget?

Mr. ROPER. I don't believe there was a direct statement to that effect.

Mr. SMITH. Well, do you know whether or not the guidelines were specific enough that you expected them to leave out all these programs?

Mr. ROPER. I believe as Mr. Abell testified, that the general thrust of this Administration is that there is a higher priority on the Federal mission and related programs in the Department than there is towards State and local assistance grant programs.

Mr. SMITH. Well, is that instruction in writing? Those guidelines, were they in writing?

Mr. ROPER. Again, without looking at them, I cannot recall that there was exact language on that. I would like to look at them.

Mr. SMITH. Are they in writing? Do you have a copy of that? You don't have it with you?

Mr. ABELL. No, sir.

Mr. SMITH. We would like to look at those to see what the process is down there. It's a little different than it is in some of the Departments, apparently, to set out guidelines at the very initial stage.

Mr. ABELL. Yes. I don't myself recall the specifics of the guidelines.

[The information follows:]

Subsequent to the hearing the following information was provided:

SPRING PLANNING ESTIMATES

In about May of last year, we received spring planning estimates in response to a spring planning call issued in April.

Also, we have provided the attached Attorney General's Guidance for the 1988 Project Budget Estimates.

Office of the Attorney General
Washington, D. C. 20530

May 9, 1986

MEMORANDUM

TO: HEADS OF DEPARTMENT COMPONENTS

FROM: EDWIN MEESE III
Attorney General

SUBJECT: Guidance for FY 1988 Project Budget Estimates

As difficult as it may be in the light of recent events, it is time now to begin formulating your budget estimates for Fiscal 1988. This memorandum provides guidance for your resource requests by informing you of my priorities for the future.

The fiscal picture for FY 1988 is cloudy at best. The District Court's decision that the Gramm-Rudman-Hollings automatic deficit reduction process is unconstitutional is the position we argued to that court and again to the Supreme Court. It is, however, not yet the final decision on that Act. Nor does it strike the Act's alternate deficit reduction process pursuant to which the report prepared by the Directors of the Office of Management and Budget and the Congressional Budget Office is submitted to a special joint committee of the Congress, which must report to both Houses a joint resolution setting forth the contents of the Directors' report. If the joint resolution is passed and signed by the President, it then serves as the basis for the presidential sequestration order. Therefore, the Gramm-Rudman-Hollings process may yet survive to guide us to budgets calculated to eliminate the federal deficit by Fiscal 1991.

In any event, whether via Gramm-Rudman-Hollings or some other process, all of you must remain as committed as I am to supporting the President's pledge to reduce the federal deficit. We must look closely at all of our operations with a view toward facilitating the transition to lower levels of resource increases for Fiscal 1988 and beyond.

Having said all of this, I remind you that I continue to adhere to the following priorities as basic to our mission in this Department and that I will fight for the resources required to implement them:

- Support for the Administration's national security and law enforcement initiatives in the area of foreign counterintelligence and combatting international and domestic terrorism.

- o Vigorous investigation and prosecution of those engaged in narcotics and dangerous drug trafficking and organized criminal activities, including the corruption of public officials, infiltration and control of legitimate businesses, money laundering, "white collar" crime, and the forfeiture of assets acquired through illegal activities.

- o Affirmative litigation to enforce the tax laws, protect our environment, and collect the money owed the U.S. as well as litigation essential to defend the Administration's policies and programs and to protect the federal treasury against inflated and unwarranted claims.

- o Providing the needed prison space to house the growing number of prisoners sentenced to federal institutions as a result of our investigative and prosecutive efforts.

In addition, I believe that adequate resources must be available for the wide variety of our other activities which support these specific priorities. I will continue, for example, to seek the funds required to support the important functions of the Marshals Service which are essential to the federal justice system. So, too, must we have resources to control our country's borders by enforcing present immigration laws while simultaneously seeking comprehensive immigration reform legislation.

Finally, I charge each of you to become creative managers--to ensure that all of your line, staff, and support operations are as efficient and productive as possible. Each of you should review your organization to identify areas where you can restructure your activities to better carry out your mission. I include in this a review of your field structure and privatization initiatives where benefits outweigh costs. Look at your organization and ask yourself whether or not you have the best organizational structure to accomplish what has been requested of you and the priorities and objectives I have outlined. Excessive management layering, administrative overhead and labor intensive practices must be reduced wherever possible. I want you to consider aggressive restructuring, especially of marginally productive offices and programs, to improve, consolidate, or abolish such offices and programs if necessary. I believe such restructuring will permit us to use already scarce resources in more productive ways.

It is my intention to curtail or eliminate programs of marginal value and to permit only limited real growth for well justified initiatives. I have directed the Deputy Attorney General and the other members of the Department Resources Board to operate under these guidelines in making their recommendations to me on our final Department budget request for FY 1988.

Mr. DWYER. That is all we have. We have some questions that we will give you and ask that you submit your answers for the record. Thank you.

Mr. ABELL. Thank you.

[The questions for the record and the answers submitted thereto, follow:]

QUESTIONS FROM MR. DWYER

Office of Justice Programs

National Institute of Justice

Question:

You request an increase of $2,700,000 for the National Institute of Justice in 1988. Would you briefly discuss the initiatives to be funded with this request?

Answer:

The Anti-Drug Abuse Act of 1986 appropriated funds for grants to States and communities to help them combat illegal drugs through detection, apprehension, and prosecution programs.

The Act did not, however, authorize or provide funds for research into controlling the supply of and demand for illegal drugs. The National Institute of Justice (NIJ) has funded a modest alcohol and drug research effort for several years and has funded drug-related grants in a number of our other research programs. We are requesting an additional $2.7 million in response to the urgency of the drug crisis.

The $2.7 million would fund three initiatives. First, $1,350,000 would be spent in 1988 to add 15 cities to the Drug Use Forecasting (DUF) system being pilot tested in 10 cities in 1987. Previous research has established that the type and extent of drug use varies by geographic region, which has implications for law enforcement and treatment activities in each region. DUF tests the urine of randomly selected arrestees for illicit drugs. Findings from the testing would, for the first time establish a local and regional drug use index; give judges information about the extent of arrestees' drug use to help in assessing the arrestees' danger to the community if released on bail; and allow quick notice of changes in regional drug use to be given to law enforcement, treatment facilities, and the Drug Enforcement Administration.

Second, $600,000 would be used to replicate a previous NIJ study which suggested that targeted enforcement against street dealers might have a deterrent effect as well as disrupt street information on where to make buys. The replication would be undertaken in eight cities, permitting variation in city size, targeting strategy, and the intensity and duration of enforcement. The funds requested by NIJ will be used to implement and then evaluate how street dealer crackdowns can be undertaken most effectively.

Finally, $750,000 would fund a public service announcement drug prevention campaign directed toward children and teenagers, groups particularly vulnerable to drug use. These announcements would be

developed by professional advertising personnel and would follow NIJ's recent successful "Report, Identify, Testify" crime campaign.

Question:

Will any studies or research programs be concluded in 1987? If so, what results do you anticipate?

Answer:

Yes, a number of studies will be completed this year. We anticipate funding subsequent grants in each research program to build on the findings from grants completed this year. These studies fall within the broad range of criminal justice areas that are part of the Institute's mandate. In all instances, the Institute emphasizes policy relevant research that assists State and local agencies to prevent and reduce crime. Major program areas under which studies completed in 1987 were funded include, but are not limited to: drugs and crime, drugs and criminal careers, family violence, sentencing, prison and jail crowding, court delay, less-than-lethal weapons, victims, and organized crime.

Representative examples of the types of studies and their intended use follow:

- The study on Drug Use and Pretrial Criminality involved screening arrestees through urinalysis for drug use, and placing identified users in a continuing testing program to monitor abstinence during pretrial release. Pretrial criminal behavior of drug users versus non-users was compared. The study results will be used to inform pretrial release on recognizance and bail decisions. Among the other research projects on drugs that will be concluded are: Drug Use as a Predictor of Behavior on Probation; Retail Level Heroin Enforcement and Street Crime; Drugs and Youth Violence; High Level Drug Markets; and Crime Reduction Cost Benefits of Drug Abuse Treatment.

- In 1987, NIJ funded a national conference jointly sponsored by the National Academy of Sciences to communicate to criminal justice policymakers and practitioners the results of the body of research on criminal careers, emphasizing the prediction of long-term careers of serious and frequent offenders. Several studies to be completed in 1987 have also investigated models for predicting future criminality based on individual histories of crime and delinquency. Previous research had relied on self reports of criminality to identify a number of factors associated with persistently high rates of serious offending. Building on this, the newer work has examined the power or limits of prediction devices based on information contained in official records -- the kind that typically would be available in case disposition decisions.

- Two studies involved intensive supervision of high risk probationers and parolees. A related effort was a feasibility

dy examining the use of "electronic bracelets" to monitor an offender on house arrest. These study results will be used to shape policy on controlling offenders in the community as an alternative to incarceration.

- Two studies have examined the impact on sexually abused children of testifying in criminal court against their abusers. Preliminary findings suggest that changes are needed in court policy with regard to granting continuances in these kinds of cases. A related study comparing the sentences of offenders who commit sexual crimes against children to similar offenses against adults indicates that offenses against children result in lighter sentences. These findings will inform sentencing policy in child sexual abuse cases nationwide.

- A study on Problem-Oriented Policing examined community involvement in law enforcement's approach to solving neighborhood crime problems. The police department developed bonds with local residents, organizations, businesses, and other local public agencies to identify the crime problem, gather information about it and cooperate to solve it. Specific burglary and robbery problems were dramatically reduced using these techniques.

- An Eight-Year Follow Up of Formerly Incarcerated Violent Juveniles collected extensive information on 119 former delinquents incarcerated in 1977. The study results will show the contribution of psychiatric, neurological, social, and educational factors in the etiology of violent crime.

- A study was conducted to evaluate three projects using pro bono, or pro tempore judges, two at the trial level, and one at the appellate level. The positive results of these programs suggest that pro bono/pro tempore judges can be efficient and effective in reducing case backlog.

- The Forensic Studies Program will have completed studies on the validity of polygraph examinations in criminal investigations, the development of a data base for use in identification of skeletal remains, and the analysis of genetic markers in human semen which will aid in collecting evidence in sexual assault cases.

- The Technology Assessment Program develops standards for law enforcement equipment such as bulletproof vests, and tests the equipment of various manufacturers against those standards. Fifteen documents will be published under this program in FY 1987. Examples include a standard on Courtroom Reel-to-Reel Audio Tape Recorders; an evaluation of electronic-monitoring devices; a report on police vehicles, and a standard on 12 Gauge Shotguns For Police Use.

Further details and/or publications from the Institute's completed studies are available upon request. The National Institute is also currently preparing a report on its 1986 research results. This report will be available in April, 1987.

Question:

Since you are constantly beginning and ending studies and research initiatives at the Institute every year, why do you require this $2.7 million increase? Can't this increase be offset by the cost reductions associated with studies and initiatives being transmitted in 1987?

Answer:

The Institute's authorizing statute, the Justice Assistance Act of 1984, requires not only that it fund research studies but that it also play a major role in the development and dissemination of improved criminal justice practices for use by State and local governments. Approximately 40 percent of the Institute's budget is devoted to these core functions which include:

- The National Criminal Justice Reference Service, a national and international clearinghouse for the dissemination of information on crime and criminal justice;
- The Technology Assessment Program which, in conjunction with the National Bureau of Standards, tests and develops standards for criminal justice equipment;
- The Research Assessment Program which surveys practitioners to determine which crime and criminal justice issues are of critical concern to practitioners and develops information packages in responses to these concerns; and
- The Research Utilization Program which supports training and education of State and local practitioners on new crime prevention, enforcement and other practices and programs discovered through research.

These programs are ongoing and are operated under contract by the Institute.

An additional ten percent of the Institute's budget is allocated to technical assistance, peer review, printing and publications, and other functions necessary to fulfilling the Institute's mission.

The remainder of the Institute's budget must be spread across the full range of crime and criminal justice problems of concern to State and local practitioners and critical to the Nation's understanding of and ability to deal with crime and its consequences. These span the range from prevention, through law enforcement, adjudication, corrections, private security, victims, violent offenders, and, of course, drug abuse. Very few of the issues addressed by the Institute are resolved by a single 18-month study. Many, such as classification and prediction of offender behavior, may even require multiple awards for five to ten years before any conclusive evidence is available. We have provided copies of selected Research Briefs

published by NIJ as an indication of the range of criminal justice issues addressed by our research efforts.

While adhering to the Congress' direction to maintain a balanced program of basic and applied research in a number of areas, the Institute has, over the last two years, substantially increased the amount available for studies to control drug abuse. In 1987 and 1988 an estimated $5.5 million, or 30 percent of our base budget, will be allocated to drug control research, development and dissemination.

To comply with its legislative mandate for a balanced and responsive research, development and dissemination program, as well as to undertake new, vitally needed research into illegal drug use requires additional resources.

The National Institute of Justice has not requested a budget increase in the last seven years. Cost cutting measures and productivity improvements have been initiated in a number of programs to allow for continued progress on research problems such as career criminals, problem-oriented policing, jail and prison crowding, spouse assault, etc. New initiatives such as those requested for FY 1988, which have the potential for significant advances in a short period of time, must be supported by additional funds if any immediate impact is to be achieved.

Bureau of Justice Statistics

Question:

Are there no lower priority statistics programs that could be eliminated in order to offset the additional costs of this new initiative.

Answer:

Although BJS is one of the two smallest Federal statistical agencies, our mandate covers the entire spectrum of Federal, State and local criminal activities which are of vital concern to all sectors of the American public. Accordingly, our funds are currently targeted at only those uses which have high priority among legislators, academic scholars, criminal justice practitioners, and the general public. Elimination of any existing program would, therefore, create data voids in priority areas which are currently being addressed. Additionally, in light of the extensive start-up costs associated with data series, elimination of existing programs would not be fiscally justifiable or efficient.

Specifically, BJS supports, collects and analyses data from thirteen major statistical series. In 1986 these series required the expenditure of approximately two-thirds of the BJS authorized appropriation (the National Crime Survey alone required approximately 36%). Additionally, funds are required each year for the regular evaluation of these series to determine their statistical validity and the need for any necessary system modifications. On the basis of

an indepth program analysis, it was also determined in 1986 that statistics describing the operation of State courts and the management of law enforcement activities were inadequate. The improvement of these programs is expected to require an estimated additional 5% of the BJS appropriation in 1987 and beyond. Approximately 13% of the BJS budget is also used to provide financial and technical assistance to the States for the establishment and maintenance of a criminal justice statistical capability as specifically required by statute.

The limited remaining funds are required to support, for example, the Federal statistics series, programs to insure data quality, recidivism studies, preparation of the Report to the Nation on Crime and Justice, comparative international criminal statistics, and prosecution and public defenders series.

The white collar crime initiative is a direct response to the public's need for information on this important issue. There are no discretionary funds that can be targeted to this program issue without the elimination of other priority programs currently being addressed. Additional funding will be required if any immediate impact is to be achieved in this important area.

Elimination of State and Local Assistance

Question:

Can you assure the Committee that, if these very important programs are not federally funded, they will not just cease to exist?

Answer:

No, we cannot assure the Committee that these programs will not cease to exist. However, the three years of funding which have been provided by this program have given the States and localities ample opportunity to find out if the projects they have funded with Federal funds have been successful and to determine which projects should be continued with State and local resources. Since Federal funds are limited, the administration must first utilize available funds to meet the requirements of the Federal Justice system. There simply are insufficient Federal funds to meet the needs of Federal, State and local criminal justice programs. This requires that State and local assistance programs, formerly funded by the Federal Government, must now be funded by the State or local jurisdiction.

Juvenile Justice Programs

Question:

Another program that you again propose to terminate is the Juvenile Justice Program, which you state has successfully met its objectives and is no longer required. Can you briefly state what the various objectives of the program were and how you have accomplished them?

Answer:

Through the Juvenile Justice and Delinquency Prevention Act of 1974, as amended, Congress gave the Office of Juvenile Justice and Delinquency Prevention (OJJDP) a mandate to assist the States in three specific areas: (1) deinstitutionalizing status offenders (those juveniles whose offenses would not be offenses were they adults), diverting them from the judicial system and out of secure detention facilities and into community-based, non-judicial settings; (2) separating delinquent juveniles from institutions in which they have regular contact with adults; and (3) removing juveniles from adult jails or lockups.

The most current data that we have indicates that 47 States and territories are in full compliance with deinstitutionalization; 41 of the 52 participating jurisdictions have demonstrated compliance with the separation requirement and seven additional States have been found to be making progress toward achieving compliance. Finally, the deadline for States to be in substantial compliance (75 percent) with the Congressional jail removal mandate was December 1985. States must be in full compliance with regard to jail removal by December 1988. The 1986 monitoring compliance reports, the first time that the States have been required to submit compliance figures regarding jail removal, were due in December 1986. They are currently under review.

Question:

Can you assure the Committee that no new juvenile justice problems or initiatives have arisen which would warrant the attention of this program?

Answer:

No, we cannot assure the Committee that no new juvenile justice problems or initiatives have arisen which would warrant the attention of this program, however, we believe that these problems and/or initiatives should now be funded with State and local resources.

Question:

How can you be sure that the states will continue their individual programs without Federal funds?

Answer:

The Federal Government has provided about a billion dollars during the past 13 years and as previously stated, the major thrusts of the Act have been, to a great extent, achieved. We believe that the States that now participate in the OJJDP program will continue their commitment to the deinstitutionalization, separation, and removal mandates even without the relatively small amount of Federal funding provided for these purposes. In fact, since the funds OJJDP provides to States are insufficient to cover the full cost of deinstitu-

tionalization, separation, and removal, States participating in the program already have shown their commitment to the goals of the Act and to a large extent have supported compliance with State and local funds. It is now time to return responsibility for full funding of this program to the States and localities which receive its benefits and who are paying most of the cost of the Act's mandates. The States can then decide how best to comply with the mandates without Federal interference.

Mariel Cubans

Question:

Your budget request also proposes to eliminate the funds to reimburse states for a portion of the costs of incarcerating Mariel Cubans who have been convicted of felonies under state law. How many of these prisoners are incarcerated at the present time in state institutions?

Answer:

Following is a chart for 1987 which reflects the number of Mariel Cuban inmates incarcerated in each State. The numbers, which were submitted by the States, are now being verified by the Immigration and Naturalization Service and the Bureau of Justice Assistance. Awards will be made by April 1, 1987, based on the verified number of inmates incarcerated in State facilities.

State	Number of Inmates (Reported by States)
Alaska	3
Arkansas	20
California	5
Colorado	4
Connecticut	18
Florida	889
Georgia	44
Idaho	2
Illinois	140
Iowa	6
Kansas	10
Kentucky	2
Louisiana	11
Maryland	17
Michigan	60
Minnesota	14
Nebraska	3
Nevada	42
New Jersey	210
New Mexico	7
New York	469
Ohio	11
Oklahoma	10
Oregon	4

Pennsylvania	37
Rhode Island	17
South Carolina	10
Tennessee	1
Texas	178
Utah	5
Virginia	12
Washington	35
Wisconsin	120
TOTAL	2,416

Question:

Since the Federal Government permitted these persons to enter the United States initially, shouldn't the Government help fund at least a portion of the cost of incarcerating them in State prisons when they have been convicted of serious crimes?

Answer:

The Department of Justice believes that anyone, including Mariel Cubans, who is convicted of a State crime and sentenced to prison, is the responsibility of the State where the crime was committed. In addition to Mariel Cubans, there are other groups of immigrants in this country who commit crimes at the State and local level for which the Federal Government does not assume fiscal responsibility. It is State and county responsibility to define violation of State and county law, to prosecute individuals who are accused of violating these laws, and to incarcerate those individuals who are convicted. While the Federal Government is responsible for enforcing immigration laws, it is not responsible for incarcerating those individuals who violate State or county laws.

Regional Information Sharing System

Question:

Assuming Congress determines that this program should be continued, how much would be required in 1988?

Answer:

The Department believes that since Federal funds are limited, RISS projects should be supported by the States and localities receiving the RISS services. In 1987, the Federal Government will provide $12 million to the States for the RISS projects ($9,900,000 appropriated in 1987 and $2,100,000 in carry-over funds). If the Congress intends to continue funding these projects, we suggest that the funding be at a decreasing rate so as to encourage the projects to obtain a greater share of their support from the recipients of the services. Currently, these projects only receive from five to ten percent of their funds from other-than-Federal sources.

Anti-Drug Abuse Program

Question:

Congress provided $225,000,000 to the Justice Department for a formula grant program to provide assistance to State and local governments for enforcement of drug laws. Would you briefly describe how you have implemented the program, how many States are participating and how much you plan to obligate by September 30, 1987?

Answer:

Of the total appropriated, $2,000,000 was targeted for a pilot prison capacity program, $178,400,000 was set aside for the formula grant program, and $44,600,000 was provided for discretionary grants. The Bureau of Justice Assistance (BJA) has moved swiftly to implement this program while being careful to obtain the maximum amount of input from Federal, State, and local agencies. The Anti-Drug Abuse Act was enacted on October 27, 1986. BJA sent letters to all governors or chief executives by November 7, notifying them of the new assistance program and requesting that they designate a State agency to administer the program. Each State had designated an office by February 27, 1987, even though many States were delayed in doing so due to changes in governors. In December, draft formula grant guidelines were sent for comment to all State chief executives, U.S. Attorneys, State offices administering BJA grant programs, and interested private groups. BJA is currently reviewing those comments before issuing final guidelines. Three regional workshops are being held in March 1987 both to help the States to design their drug law enforcement strategies and to administer the program effectively. Each State is required to submit to BJA the statewide strategy prior to receipt of its total formula grant award.

Ten percent of the formula grant may be used by a State to administer the program. In order to assist the States in preparing the drug strategy and in setting up the necessary administrative procedures, OJP permitted the States to apply in advance for an award of their administrative funds. To date, 32 States have received an award of their administrative funds. After the regional workshops have been held, BJA expects to receive statewide strategies and applications for full formula grant funds. Once the application is received, BJA will complete the review process and award the grant within 60 days. The first full formula grants will probably be awarded in May. To date, no applications for full funding have been received. Because each State and territory has designated an office to administer the program, they all are expected to participate. A chart representing each State's formula grant allocation is provided.

The discretionary grant program is being designed to enhance State and local efforts in drug control through national and multi-State programs. To help establish priorities for the discretionary program, BJA enlisted recommendations from more than 800 agencies, including national criminal justice associations, State and local

criminal justice agencies, and Law Enforcement Coordinating Committees. Other Federal agencies were also contacted to avoid duplication of effort and to identify drug programs likely to be successful. The program announcement identifying priorities and requesting proposals was published in the Federal Register on March 19. Applications for these funds should be received by June and grants may be awarded as early as June or July. All of the State and local drug law enforcement assistance funds, including the Prison Capacity Program, are committed to the States. However, it is possible that not all States will have their State strategies completed and applications filed by September 30,1987. Therefore, a portion of this money may not be obligated until 1988. It is too early in the process to determine exactly how many States will receive their awards in 1987, but we expect that the majority, if not all, of the funds will be awarded this year.

OFFICE OF JUSTICE PROGRAMS

Distribution of Anti-Drug Abuse Formula Grants by State - FY 1987*

State	Amount	State	Amount
Alabama	$2,996,000	Nevada	$1,081,000
Alaska	823,000	New Hampshire	1,119,000
Arizona	2,478,000	New Jersey	5,194,000
Arkansas	1,964,000	New Mexico	1,400,000
California	16,866,000	New York	11,539,000
Colorado	2,506,000	North Carolina	4,383,000
Connecticut	2,470,000	North Dakota	925,000
Delaware	886,000	Ohio	7,169,000
Florida	7,555,000	Oklahoma	2,549,000
Georgia	4,210,000	Oregon	2,168,000
Hawaii	1,154,000	Pennsylvania	7,858,000
Idaho	1,124,000	Rhode Island	1,101,000
Illinois	7,660,000	South Carolina	2,578,000
Indiana	3,913,000	South Dakota	939,000
Iowa	2,290,000	Tennessee	3,456,000
Kansas	2,021,000	Texas	10,662,000
Kentucky	2,813,000	Utah	1,521,000
Louisiana	3,282,000	Vermont	832,000
Maine	1,222,000	Virginia	4,042,000
Maryland	3,226,000	Washington	3,237,000
Massachusetts	4,114,000	West Virginia	1,702,000
Michigan	6,141,000	Wisconsin	3,464,000
Minnesota	3,103,000	Wyoming	816,000
Mississippi	2,122,000	American Samoa	522,000
Missouri	3,622,000	Dist of Columbia	889,000
Montana	1,013,000	Guam	574,000
Nebraska	1,497,000	Puerto Rico	2,530,000
		Virgin Islands	567,000
		N. Mariana Islands	512,000
		Total	178,400,000

Note: State population figures are based on Bureau of Census Provisional Estimates as of July 1, 1985 except for the territories which are based on 1980 Census.

*As of February 9, 1987.

Question:

Why have you decided not to request funds for this program in 1988?

Answer:

Available resources in 1988 must first be utilized to address new requirements at the Federal level in the Department. The Anti-Drug Abuse program funds made available in 1987 will give the States and localities an opportunity to start new programs and expand their efforts to enforce State and local drug laws.

Management and Administration

Question:

You are recommending a decrease in Management and Administration of 32 positions and $972,000 resulting from your program reductions in Juvenile Justice and Bureau of Justice Assistance programs. Should the Congress decide to fund the programs administered by these offices, how much would be required in 1988? Please provide the breakout for each office for each program you recommended for termination.

Answer:

If Congress decides to fund the Juvenile Justice and Bureau of Justice Assistance programs, full restoration of $972,000 and 32 positions would be required. The Office of Juvenile Justice and Delinquency Prevention would require an increase of 22 positions and $550,000 and the Bureau of Justice Assistance would require an increase of $422,000 and 10 positions to administer these programs.

Crime Victims Fund

Question:

The Department again recommends lowering the obligation limitation for the Crime Victims Fund from $110,000,000 down to $35,000,000. Your rationale for this action is to help reduce the deficit. In reality, is it not true that this lower limitation will only reduce the deficit if authorizing legislation is passed lowering the limitation? Do you foresee this as a reasonable possibility?

Answer:

The deficit is measured by outlays. An obligation limitation will reduce outlays and thus reduce the deficit. Collections in excess of an obligation limitation up to the legislative ceiling will remain in the fund until legislation is passed to reduce the ceiling. When the ceiling is reduced, the excess funds will go into miscellaneous receipts and will be used to reduce the deficit even further. We cannot comment on whether or not Congress will concur with the Administration's request to lower the legislative ceiling.

Question:

Can you provide the Committee with an idea of how this program has been received by the States and whether the States are contributing funds also?

Answer:

The State grant programs authorized by the Victims of Crime Act have been received extremely well. In 1986, 37 of the 38 eligible States applied for victim compensation grant funding and 55 of the 56 eligible States and territories applied for victim assistance grant funding. For 1987, it is expected that three or four additional States will qualify and apply for victim compensation funding and that all 56 States and territories will apply for their victim assistance funding.

Significant contributions of funds and resources are made by the States. Since the Victims of Crime Act does not authorize the States to utilize Federal funds for grant administration purposes, the total cost of administering both the Victim Compensation and Assistance programs is borne solely by the State agency receiving the funds. Implementing and monitoring the necessary subgrant process that channels the Federal funds to the many local community-based victim assistance programs has required a considerable investment of State resources for administrative purposes.

The Federal victim compensation grants provide a State up to 35 percent of the previous year's payment of State funds to qualifying crime victims. This formula no doubt has served as an incentive, but many States have actually put increases into effect that exceed the minimum Victims of Crime Act eligibility requirements. For example, in 1985, the total qualifying victim compensation payments submitted by the States was $80,845,593. This was a significant increase over the 1984 victim compensation payments of $67,504,484. In order to qualify for a second-year Federal grant, many State compensation programs have expanded their eligibility criteria. Therefore, more crime victims are eligible for State victim compensation benefits and individual victim reimbursements are higher.

State revenue is also being committed to victim assistance programs. Before enactment of the Victims of Crime Act, most States were providing State funding to the specific areas of spouse and child abuse with about two-thirds of the States providing support for rape crisis programs. Since enactment, more States are making a commitment of their funds to general victimization needs. While it is impossible to determine the exact amount of State and local contributions, it is clear that the Victims of Crime Act and State victims assistance funding has combined to significantly increase services available from existing programs, and often expanded victim services into previously unserved geographic areas.

We are encouraged that several States have or are contemplating adopting laws like the Victims of Crime Act which will provide fines and fees to pay for victims services.

QUESTIONS FROM MR. REGULA

Judicial Training

Question:

Can you tell me how much money from 1987 appropriations is going to be available for judicial training? How much money was made available from 1986 and 1985 appropriations for such training? To what extent are funds going to be made available for training by the National College of Juvenile and Family Court Law of the National Council of Juvenile and Family Court Judges? Please be specific.

Answer:

In 1987, there is approximately $900,000 available for the National Council of Juvenile and Family Court Judges (NCJFCJ) training grant.

In 1986, NCJFCJ received $770,725 and in 1985 $935,622.

Question:

Please provide a description of the amount of funds made available for training by the National College of Juvenile and Family Court Judges on annual basis for the past five years with specific regard to the annual grants provided to the National Council for its training program.

Answer:

For the past five years NCJFCJ received the following grants:

1986	$770,725
1985	935,622
1984	875,000
1983	794,889
1982	299,710

Question:

For 1987, do you intend to reduce from the 1986 level the annual grant to the National Council for training by the National College of Juvenile and Family Court Judges?

Answer:

No, we do not. In 1987, approximately $900,000 is set aside for NCJFCJ.

Mr. DWYER. The committee will stand adjourned until 2:00 p.m., this afternoon.

THURSDAY, MARCH 5, 1987.

DEPARTMENT OF JUSTICE

Increased Retirement Contributions

The Federal Employees' Retirement System Act of 1986, P.L. 99-335, established a new retirement system for Federal civilian employees hired after December 31, 1983, and for employees currently under the Civil Service Retirement System (CSRS) who choose to transfer to the new system. Employees hired after December 31, 1983, will be covered under the new system starting January 1, 1987. Employees who wish to transfer to the new system will be covered at the time of the transfer. Such employees may transfer between July 1, 1987, and January 1, 1988.

The two chief assumptions used in calculating our requested increase are that: 1) 20 percent of the payroll is related to post-1983 hires and 2) that 40 percent of CSRS enrolles will switch into the new system. It is our understanding that these assumptions were developed and agreed upon jointly by the Office of Management and Budget and the Congressional Budget Office.

The Department of Justice (DOJ) request may appear disproportionately, high, as a result of the large number of law enforcement personnel who are eligible for special retirement benefits, chiefly early retirement, under the new system. In addition, the new system must be fully financed by agency and employee contributions. Because employee contributions are fixed, agency contributions must make up any shortfall. This shortfall is larger for law enforcement personnel as a result of the additional retirement benefits. The final result is an agency contribution of 15.3 percent higher for law enforcement employees than for other employees.

As a result of the growing proportion of employees who will be covered by the new system, there will be increased agency contributions for retirement through at least FY 1992. These increases will show in the DOJ budget requests as uncontrollable adjustments to the base. However, there will be reductions to the amount the Treasury pays to the CSRS fund as more and more Federal employees move into the new retirement system. Estimates developed during debate on the Act show that the reductions will more than offset the requested agency increases.

DEPARTMENT OF JUSTICE

Increased Costs for Retirement Contributions (P.L. 99-335)

General Administration: "Salaries and expenses", $778,000;
United States Parole Commission: "Salaries and expenses", $155,000;
Legal Activities:
"Salaries and expenses, general legal activities", $2,213,000;
"Salaries and expenses, Antitrust Division", $430,000;
"Salaries and expenses, Foreign Claims Settlement Commission", $4,000;
"Salaries and expenses, United States Attorneys", $3,510,000;
"Salaries and expenses, Oversight of Bankruptcy Cases", $150,000;

DEPARTMENT OF JUSTICE

General Administration

Salaries and expenses

For an additional amount for "Salaries and expenses", $11,212,000.

The 1987 Appropriation Authorization has not been enacted. Public Law 96-132, the Department of Justice Appropriation Authorization Act FY 1980, was the last enacted authorization legislation for the Department. This act, including funding levels for these activities, has been extended for 1987 by Public Law 99-500 dated October 18, 1986. A 1987 authorized funding level commensurate with this request should be provided.

Presently available.....	1,011	1,089	$68,353
Revised estimate.....	1,261	1,160	79,565
Proposed supplemental.....	250	71	11,212

Explanation of Request

The requested supplement 1 would provide additional funding for:

1. The implementation of the Executive Office for Immigration Review's (EOIR) priority ADP system (ANSIR) to four additional offices by the end of FY 1987, and to address anticipated workload associated with deportable criminal aliens, convicted annually in the State and Federal court system.

   The expanded implementation of ANSIR will be a critical component of EOIR's program response to the Immigration Reform and Control Act, providing the case management and tracking capabilities required to coordinate the hearings.

2. Administrative responsibilities resulting from the passage of Public Law 99-554, "The Bankruptcy Judges, U.S. Trustees, and Family Farmer Bankruptcy Act of 1986." This act expanded the pilot U.S. Trustees program to a nationwide program.

3. To promulgate and implement regulations to collect debts owed to the United States. S.209 was enacted to amend 31 U.S.C 3718, and authorizes the Attorney General for a period of three years, to retain private counsel in five to ten judicial districts to furnish legal services including representation in negotiations, compromise, settlement and litigation.

4. Three Justice Management Division (JMD) requests to: 1) enhance the overall security of the Main Justice Building; 2) staff and operate the Department's crisis management facility and 3) support the National Security Emergency Preparedness (NSEP) program in the event of a severe national security emergency.

5. Additional GSA rental charges associated with the relocation to the Bond Building. An adjustment of $700,000, for the General Administration appropriation is required because of the method used to charge for space in the Washington, D.C. metropolitan area. In addition, $60,000 is required for shuttle services between the Bond Building and the Main Justice building. (For additional information, see the General Legal Activities supplemental request).

6. Additional GSA rental charges of $1,180,000 and Federal Telecommunication System (FTS) Intercity costs of $106,000. In 1987 the Rent System replaces the Standard Level User Charges (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services.

   Also, the GSA has advised the Department of a 16 percent increase in FTS Intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize, and FY 1985 costs which were not billed by GSA last year.

Salaries and expenses

Justification of Requirements
(Dollars in thousands)

	1987 Request			1987 Proposed Supplemental			1987 Revised Request		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Item: Immigration Reform.....	...	...	...	200	42	$5,823	200	42	$5,823

Requested resources for FY 1987 include funds to expand the implementation of EOIR's priority ADP system (ANSIR) to four additional offices by the end of FY 1987, and to address anticipated workload associated with deportable criminal aliens, convicted annually, in the State and Federal court system.

The expanded implementation of ANSIR will be a critical component of EOIR's program response to the Immigration Reform and Control Act, providing the case management and tracking capabilities required to coordinate hearings of convicted aliens in Federal and State prisons beginning in FY 1987 and to prepare for anticipated workload increases in FY 1988.

In FY 1987, EOIR's workload, based on INS' assumptions, assumes additional caseload related only to deportation proceedings for criminal aliens. The request includes headquarters positions required to coordinate and manage the criminal alien adjudications, and to recruit, hire and develop training programs for increased judge, support staff and field manager positions.

	1987 Request			1987 Proposed Supplemental			1987 Revised Request

Item: U.S. Trustees Expansion	...	...	...	16	12	$557	16	12	$557

P.L. 99-554, the Bankruptcy Judges, U.S. Trustees, and Family Farmer Bankruptcy Act of 1986, signed October 27, 1986, expands the current U.S. Trustee pilot program to a twenty-one region nationwide program encompassing all ninety-four judicial districts.

A supplemental increase of 16 positions, 21 FTE (of which 9 are reimbursable) and $557,000 is requested for the General Administration appropriation to provide the necessary administrative support for the U.S. Trustees' Nationwide program.

The Trustees are anticipating an increase in full-time staffing from 193 positions currently to 893 positions by the end of FY 1988, and an expansion from 10 offices to over 70 nationwide. This unique occurrence will not only increase the recurring demand for JMD services, but will also create special demands on JMD staffs for the next two to three years, including.

1. An intensive staffing effort will be needed to bring the Trustees' program to a full operation level involving recruitment, applicant screening, pay and position management, and employee relations services.

2. Expanded security services for planning and ensuring compliance with laws and regulations regarding storage and safeguarding of financial information, as well as the adjudication of requisite security background investigations.

3. A need to acquire, outfit, barcode and account for personal property assets for the new offices. Space management specialists will be required to coordinate the acquisition, alteration, occupancy and building management functions associated with the new space.

4. Additional procurement services due to the immediate need for major office automation and case management system procurements and the increased volume of contract activity associated with the expanded program.

5. An increase in financial and accounting support required by the opening of Trustee offices in newly certified districts, as well as the need to monitor the new Chapter 11 service fee collection process. This includes the development of financial management reports and the production of these reports on a regular basis.

	1987 Request			1987 Proposed Supplemental			1987 Revised Request		
	Perm Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Item: Private Counsel.....	...	...	...	22	11	$2,234	22	11	$2,234

A 1987 supplemental (22 positions, 11 FTE workyears and $2.234 million) are requested for the General Administration appropriation to provide the necessary administrative support for the Department's Private Counsel initiative. Specifically, the resources are needed to establish the Financial Debt Collection Unit within the Justice Management Division to implement S. 209. The resources will fund a small staff to manage the project, procure and oversee the requisite contracts for retention of private counsel, audit the results of the collections program, and to collect data needed for required reports to the Congress.

S. 209 was enacted on October 28, 1986 to amend 31 U.S.C. 3718. It authorizes the Attorney General for a period of three years to retain private counsel in five to ten judicial districts for the collection of debts owed to the U.S. Government. The Attorney General will award contracts on a competitive basis to at least four private counsel firms in each district. The specific terms and provisions of these contracts will be as deemed necessary by the Attorney General.

The Department believes that appropriated "seed money" is needed to implement S. 209 to reimburse the private counsel for fees which are required to file suits in state and local courts and to effect service on the debtors. Of the funds requested in 1987, $650,000 is requested annually for filing/service fees. The Department requests these funds for a two year period to avoid problems reimbursing counsel bills in October each year.

The Private Counsel initiative assumes that all functions will be the responsibility of the Justice Management Division, except for periodic local oversight of the private counsel which will be performed by the U.S. Attorneys. The amended 31 U.S.C. 3718 will become effective for a period of three years beginning on the date which the Attorney General's implementing regulations become effective. At the end of this three year period, the Comptroller General will audit the program to determine the results of the debt collection efforts of private counsel under contract.

In FY 1986, the U.S. Attorneys and the Department's litigating divisions collected $362.6 million in cash on debts referred by client agencies. If the private counsel program can increase cash collection by 25 percent, the funding being sought by the Department to establish the program will yield an investment return of $90.6 million. The Private Counsel initiative can be one of the best investments that the Federal Government has made.

	1987 Request			1987 Proposed Supplemental			1987 Revised Request		
	Perm Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Item: National Security.....	...	...	...	12	6	$550	12	6	$550

A supplemental increase is requested for the General Administration appropriation to provide the necessary administrative support for three proposed Security initiatives: Justice Command Center, National Security Emergency Program (NSEP) and the Visitor Center.

The Security Staff (SS) is currently responsible for two programs which have recently expanded to the point where they can no longer be supported by the existing staffs dedicated to their management. These two programs are the Justice Command Center and the National Security Emergency Preparedness (NSEP) Programs.

Justice Command Center. With the Attorney General's enhanced requirements regarding oversight of and reaction to domestic and, in limited cases, international terrorism, he has directed the establishment of an all source intelligence/information crisis management facility including data input and support by the Department's five major components (FBI, DEA, INS, USMS and BOP) and the United States National Central Bureau - INTERPOL. Staffing this facility in FY 1987 will require an additional 5 positions, 3 FTE and $112,000.

The NSEP Programs. The SS's Emergency Planning Group (EPG) is currently responsible for the planning for DOJ involvement in several NSEP programs designed to provide for a viable form of government in the event of a severe national security emergency. The EPG is also responsible for continuity of the presidency planning. Planning in regard to catastrophic earthquakes, emergency mobilization, combatting terrorism, legal advice on many novel issues that arise out of these activities must also be accomplished. Training for, planning and coordinating exercises to test these programs is also an EPG responsibility.

The National Security Council, Federal Emergency Management Agency and Department of Defense have required the DOJ involvement in virtually all aspects of NSEP programs. The EPG does not have adequate staff and related resources to meet the ever increasing demands, therefore is requesting 4 positions, 2 FTE and $103,000.

Visitor Center. The Attorney General has directed the upgrade of the present low level of security in the Main Justice Headquarters Building. In response to this directive, the Justice Management Division requires resources of 3 positions, 1 FTE and $335,000 for the realignment of Building entrances; establishment of strict access control through the use of visitor processing centers; automation of visitor verification; installation of a card key access system for employees; replacement of Federal Protective Service guards; and enhanced executive protection.

Legal Activities

Salaries and expenses, General Legal Activities

For an additional amount for "Salaries and Expenses, general legal activities," $7,786,000, of which $2,000,000 requested for independent counsel expenses shall remain available until expended.

Explanation of Request

The supplemental request would provide $2,287,000 for the Criminal Division's forced relocation to the Bond Building located at 1400 New York Avenue and $444,000 for increased telecommunications charges. In addition, $1,359,000 is included to establish a special counsel for discrimination in response to recent changes in immigration law; $2,000,000 to fund the costs of independent counsel appointed pursuant to 28 U.S.C. 591, et. seq.; $120,000 for legal documentation related to emergency preparedness; and, $1,576,000 for immigration and anti-fraud related litigation.

The 1988 Budget Appendix provides language supporting the merger of the Antitrust and U.S. Attorneys accounts with the General Legal Activities (GLA) appropriation. The Appendix also reflects Antitrust data in the 1987 column of the 1988 budget request for GLA. This supplemental request does not include the Antitrust Division; the Division's 1987 supplemental request has been submitted under separate cover.

Authorization Requirements

The 1987 Appropriation Authorization bill has not been enacted. Public Law 96-132, the Department of Justice Appropriation Authorization Act for 1980, was the last enacted authorization legislation for the Department. This Act, including funding authority for the Department's activities, has been extended for 1987 by the Department of Justice Appropriations Act, 1987 contained in P.L. 99-500 signed October 18, 1986. Additional authorization of $7,786,000 is required by this request.

Justification of Requirements
(Dollars in thousands)

	1987 Presently Available	1987 Revised Estimate	1987 Proposed Supplemental
Item: Relocation costs	...	$2,287	$2,287

Most Criminal Division personnel located in Washington, D.C. are currently housed in the Federal Triangle Building. The lease on this building expired on July 31, 1986, and the General Services Administration (GSA) has offered the Department of Justice replacement space in the Bond Building, located at 1400 New York Avenue. The Bond Building contains sufficient additional space to permit the Department to house not only the Criminal Division components that are now located in the Federal Triangle Building but also to include at the same location two other Criminal Division components, the Office of Special Investigations (now located in the poorly configured and wastefully expensive Hamilton Building at 1375 K Street, N.W.) and the DOD Procurement Fraud Unit (now located in the Dominion Bank Building in Alexandria, Virginia, too far from Fraud Section management for fully effective integration into the section). This opportunity will allow the Division to consolidate its Washington, D.C. personnel in two buildings, Main Justice and the Bond Building.

In relocating to the Bond Building, the Criminal Division will improve its office space utilization rate significantly. In its present location in the Federal Triangle building, the average office space occupied by each employee is approximately 165 square feet while the utilization rate projected for the Bond Building is only 145 square feet. There will be an even greater improvement in the office space utilization in the Bond Building compared with the Hamilton Building and Dominion Bank Building. Although there is an increase in total space attributable to special requirements such as additional library and computer facilities, some important long-term savings will accrue to the Department by housing the same number of personnel in less office space.

The General Services Administration will finance certain construction expenses, but only to the extent that they are necessary to replicate the facilities now provided to the Division at the Federal Triangle Building. Accordingly, the GSA will not pay for any expenses relative to housing the components that will be relocated voluntarily by the Department, some 10 percent of the relocation. Neither will GSA pay for the construction of facilities that are required by the Department but are not included in GSA's definition of "government standard" lease provisions. Most of these requirements owe to the nature of the Criminal Division's operations as a law enforcement agency or to the design of the Bond Building.

Some of the requirements for which the Department of Justice requires supplemental funding relate to the construction and lease standards allowed by GSA. For instance, the building owner is not required to furnish individual door locks and GSA will only provide door locks for the same number of doors as the number currently outfitted with locks in the Division's Federal Triangle Building site. Similarly, the building owner will pay only for electrical circuits and receptacles to the extent that they are required by the lease agreement with GSA, and GSA will only pay for additional receptacles to the extent that they now exist in the Federal Triangle Building. Other requirements to support the confidential character of the Criminal Division's operations include an access control system to protect the facility from intruders, document storage vaults, and a secure reception area for each floor.

In addition to special facilities that are necessary to secure the office space assigned to the Criminal Division, the Division also requires construction of certain facilities that will support the modernization of its operations. Such facilities include the construction of a computer room and several copier rooms and the installation of dedicated electrical circuits and data communication lines. The provision of such facilities will support productivity and operational improvements that are necessary to keep up with the work demands placed on the Division.

Because of the method of charging Departmental organizations for space in the Washington, D.C. metropolitan area this move will result in an adjustment to the rental charges for the other components of the General Legal Activities appropriation of $933,000. These additional rental charges break down as follows: Office of Solicitor General, $23,000; Tax Division, $198,000; Civil Division, $320,000; Land and Natural Resources Division, $161,000; Office of Legal Counsel, $22,000; Civil Rights Division, $184,000; and INTERPOL-USNCB, $23,000.

	1987 Presently Available	1987 Revised Estimate	1987 Proposed Supplemental
Item: Increase in FTS tariffs.....	...	$444	$444

The Department was notified of increased FTS costs for 1987 and 1988 by GSA in July 1986. The increase was approximately 16% greater than the amounts included in GSA initial cost estimates on which the budget was based. Notification of this increase was not timely enough to be included in the original 1987 budget estimate, however, increased 1988 costs have been included in the current budget request.

The distribution of increased cost of activity and program are provided on the preceding exhibit.

1558

	1987 Presently Available			1987 Revised Estimate			1987 Proposed Supplemental		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Item: Immigration Reform	...	...	...	43	16	$2,295	43	16	$2,295

Civil Division: The Immigration Reform and Control Act of 1986 will have an immediate impact on the Civil Division's caseload. The Division requires 13 positions and $936,000 to handle the certain influx of immigration litigation. This funding includes $450,000 for automated litigation support (ALS) services.

The enforcement and legalization provisions will trigger enormous caseload increases for the Civil Division as aliens seek to reverse deportation decisions in courts of appeals and challenge the Immigration and Naturalization Service's (INS) denials of interim relief in district courts. The employer sanctions provision will increase substantially the amount of defensive cases as employers initiate actions challenging search warrants and fine determinations. Further cases will be generated by litigation initiated against employers exhibiting a pattern and practice of hiring illegal aliens. Conservatively, we expect 175 new trial and 100 new appellate cases in 1987, representing a 200 percent rise in trial case receipts and a 20 percent rise in appellate case receipts over the existing 1986 workload.

The most significant aspect of this litigation is the statutory and class action challenges to immigration reform. One such case has been filed already -- Catholic Services v. Meese -- where plaintiffs seek a nationwide injunction that would paralyze INS' ability to control the borders. No provision of the new Act is immune to this type of attack and we can count on similar challenges to employer sanctions and the Systematic Alien Verification for Eligibility (SAVE) provisions. These attacks threaten to undermine the viability of immigration reform unless additional attorneys and support staff are provided.

In concert with the immediate and uncontrollable increase in district court and court of appeals actions, the Civil Division will face challenges expected to reach the Supreme Court. Additional resources are essential to uphold the nation's immigration laws in this final appeal stage.

Ten positions and $838,000 are needed in the Office of Immigration Litigation (OIL) to defend challenges under the new statute and to apply its provisions to existing caseload. The Appellate Staff will require 3 positions and $108,000 to handle the critical appellate litigation. These amounts include $450,000 in ALS to provide special data bases and a document center. The data bases will track individual litigants, class members and documents during the various stages of litigation and the document center will organize documents and support the attorneys in preparing for trials and appeals. Without ALS support the attorneys will be unable meet judicial demands because of the gigantic number of cases that immigration reform will generate.

Failure to approve this supplemental request will force the Division to delegate hundreds of cases to attorneys who lack knowledge of the highly specialized body of immigration law. Weakening the defense of immigration law by forcing cases onto inexperienced attorneys would be counterproductive to the comprehensive reform of the United States immigration law. Unless the required resources for the Civil Division are provided, the fundamental reforms that were 15 years in the making may be nullified.

Special Counsel: Funding is also requested for the establishment of a Special Counsel for Immigration-Related Unfair Employment Practices pursuant to the Immigration Reform and Control Act of 1986. The 30 positions and $1,359,000 will be used to investigate claims of immigration-related unfair labor practices. These claims may be presented by individuals, or by others on behalf of individuals, whose rights to equal employment have been violated. Upon investigation of these claims, the Special Counsel is authorized to file charges before an administrative law judge if such claims have merit.

	1987 Presently Available			1987 Revised Estimate			1987 Proposed Supplemental		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Item: Additional Litigation Resources.....	...	...	...	25	6	$2,760	25	6	$2,760

Civil Fraud Litigation: Three major anti-fraud enforcement proposals were recently enacted into law -- the False Claims Act Amendments of 1986, the Program Fraud Civil Remedies Act of 1986 and the Anti-Kickback Act of 1986. These laws improve and extend the Civil Division's ability to bring civil fraud suits. They necessitate an immediate enhancement of resources dedicated to fighting fraud against the Government and recovering monies inappropriately diverted from the United States Treasury. In 1987 the Commercial Litigation Branch will require 21 additional positions and $640,000 to handle the increase in litigation and investigation demands of the new laws. This funding includes $350,000 for automated litigation support (ALS) services.

The False Claims Act Amendments contain several features which will result in significant increases in the Division's civil frauds workload including a provision authorizing the Attorney General to obtain records and take testimony by civil investigative demand (essentially a subpoena) and a provision expanding the ability of private citizens to bring suit on behalf of the United States for fraud (the qui tam amendments).

Civil Investigative Demands (CID): This provision authorizes the Department to compel the production of records and take sworn testimony in order to investigate fraud allegations before deciding whether or not suit is warranted. This important advance was made necessary by the near-impossibility of using the fruits of grand jury investigations to litigate civil fraud cases. Because oral depositions and interrogatories may be used, the CID authority will prove much more useful than Inspector General subpoenas which can only compel the production of documents.

While the Act leads to significant advances in litigating against fraud, the provisions of the Act impose a tremendous workload burden on the exercise of the CID authority. Most judicial proceedings to obtain enforcement will be litigated by the Division to assure an orderly and uniform exposition of the new law in the courts. The Act places stringent custody and recordkeeping requirements on the information obtained and will require the establishment of a central depository for such materials. Implementation of the statute will be cumbersome; great care is required to avoid procedural error and every use of the authority requires the Attorney General's personal approval. Three attorneys will be needed to implement the CID authority.

Qui Tam Amendments: The Act provides new incentives for private citizens to initiate civil frauds lawsuits on behalf of the United States and makes it easier for them to do so. The Act also involves additional responsibilities for the Division. The amendments require the citizen to provide the Division with a copy of the material evidence supporting the fraud allegation. It must be reviewed by the Division and a decision must be made within 60 days as to whether the Government should take the case.

The new Act imposes great demands upon the Civil Division. Little opportunity will exist for investigation before deciding whether to enter the case. The investigations will have to be accomplished through civil discovery, a time consuming method of investigation. Even when the Department does not take the case, the Act requires that the Attorney General approve any dismissal by the initiating citizen as well as any case settlements. These requirements will necessitate that the Division monitors pleadings and discovery and assessments of litigative risk and the terms of settlements. The Act will generate more than 25 of these cases a year which, by law, must be investigated and reviewed.

The Program Fraud Civil Remedies Act will also increase the Civil Division's workload. In the past, small-dollar fraud cases have been delegated to U.S. Attorneys for consideration. Under this Act, these cases will be handled administratively by the agencies. However, the Act imposes a clearance process on the system which requires a decision by the Assistant Attorney General as to whether the case warrants action and, if so, whether the Department should litigate the case or authorize the referring agency to proceed administratively. Resources will be needed to litigate the most complex of the cases and appeals and to track and evaluate agency referrals. We anticipate that the Civil Division will litigate the expected constitutional challenges to this statute and handle the more than 300 of these cases annually.

Finally, the Anti-Kickback Enforcement Act will substantially expand the coverage of the existing statute. The former law applied only to kickbacks paid to induce contract awards and to kickbacks paid in connection with "negotiated" contracts. The new Act covers all contracts between the United States and its prime contractors and redefines kickbacks to prohibit a much broader range of activities. It also provides for increased damage and civil penalties. New positions will allow the Division to initiate litigation to recover millions for the Treasury. The strength and effectiveness of these litigative efforts will determine the extent to which fraud and misuse of government funds is deterred.

Without these additional resources, Division attorneys would be severely limited in their ability to implement the provisions of the new laws since present resources are already pursuing litigation in the growing number of civil fraud referrals. The Qui Tam and Program Fraud provisions require mandatory actions -- increasing workload and siphoning off limited Division resources. Unless the requested resources are made available the Division will be unable to utilize its new CID and anti-kickback powers, crippling the assertion of the Government's interests. Failure to provide the requested funding will lead to the forfeiture of millions in potential recoveries and will devastate the Division's efforts to combat waste, fraud and abuse of Government monies.

Legal opinions - National Emergency Requirements: The Office of Legal Counsel will require four positions and $120,000 in order to produce and publish Presidential Emergency Action Documents (PEADS) in times of national emergency.

Independent Counsel: The Department is requesting $2,000,000 to fund independent counsel whenever possible violations of Federal law are alleged against senior administration officials pursuant to the provisions of 28 U.S.C. 591, et. seq. There are currently five independent counsel in operation with costs continuing to mount. The Iranian arms investigation alone is expected to last through FY 1987 and will require substantial funding. The number and scope of independent counsel exceeds the Department's expectations and the capacity to absorb full funding for all of the counsel is limited.

For an additional amount for "Salaries and expenses, Antitrust Division", $299,000.

Explanation of Request

The 1987 Appropriations Authorizations Act (P.L. 99-500) was enacted on October 18, 1986. Additional authorizing legislation, adding $299,000 to the amount available for the Antitrust Division, is required.

	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Item: Relocation costs.....	---	---	---	---	---	$215	---	---	$215

The Department is requesting supplemental funding to support the forced relocation of Criminal Division personnel to the Bond Building located at 1400 New York Avenue. Because of the method of charging Departmental organizations for space in the Washington metropolitan area, this relocation will result in an adjustment to the GSA rental charges for the Antitrust Division of $215,000.

Item: Federal Telecommunication System (FTS) increases.....	---	---	$404	---	---	$488	---	---	$84

The Department was notified of increased FTS costs for 1987 and 1988 by GSA in July 1986. The increase was approximately 16% greater than the amounts included in GSA initial cost estimates on which the budget was based. Notification of this increase was not timely enough to be included in the original 1987 budget estimate; however, increased 1988 costs have been included in the current budget request. Funds will be charged to the communications, utilities and miscellaneous object class.

U.S. Marshals Service

Salaries and Expenses

Supplemental Estimate, Fiscal Year 1987

Table of Contents

Item	Page Number
Appropriation Language Sheet	1
Summary of Requirements	2

Department of Justice

U.S. Marshals Service

Salaries and expenses

For an additional amount for "Salaries and expenses, U.S. Marshals Service", $405,000: Provided, that in the appropriation language under this heading in Public Law 99-500, add at the end thereof "Notwithstanding the provisions of title 31 U.S.C. 3302, the Director of the United States Marshals Service may collect fees, and expenses for the service of civil process, including: complaints, summonses, subpoenas and similar process; and seizures, levies, and sales associated with judicial orders of execution; and credit not to exceed $1,000,000 of such fees to this appropriation to be used for salaries and other expenses incurred in providing these services."

Explanation of Request

The supplemental request for $405,000 would provide funding for additional costs associated with the higher than anticipated telecommunications tariff rates.

In addition, the proposed language change is intended to clarify the U.S. Marshals Service's authority to collect fees related to its service of civil process, admiralty seizures, and similar functions as provided for in Section 39 of Public Law 99-646. The change also permits up to $1,000,000 of such fees collected to be credited to this appropriation to be used for salaries and other expenses incurred in providing these services.

DEPARTMENT OF JUSTICE

Legal Activities

Support of United States Prisoners

For an additional amount for "Support of United States Prisoners", $9,630,000.

Explanation of Request

As a result of the Comprehensive Crime Control Act--especially implementation of the bail reform provisions--the Marshals Service is experiencing an increase in the number of prisoners held in contract jails and in the length of time they are in the Service's custody. The projected increases in jail days and costs will result in a requirement of an additional $9,630,000.

Authorization Requirements

The 1987 appropriation authorization bill has not been enacted. Public Law 96-132, the Department of Justice appropriation authorization act for 1980 was the last enacted authorization legislation for the Department. This act, including funding authority for the Department's activities has been extended for 1987 by the Department of Justice Appropriation Act, 1987, as included in Public Laws 99-500 and 99-591, section 101(b); additional authorizing legislation to be proposed.

Legal Activities

Support of United States Prisoners

Justification of Requirements
(Dollars in thousands)

Item:	1987 Presently Available	1987 Revised Estimate	1987 Proposed Supplemental
Care of U.S. prisoners in non-federal institutions.....	$55,000	$69,630	$9,630

A $9,630,000 increase for jail days is urgently needed. These funds will provide for additional inmate days in contract facilities. The Marshals Service is experiencing an increase in the number of prisoners held in contract facilities and in the length of time they are in the Service's custody. This is a result of the Comprehensive Crime Control Act of 1985, especially implementation of the bail reform provision.

Prisoners currently housed in Petersburg FCI and Milan FCI will be relocated to contract facilities made available in 1987 by the Cooperative Agreement Program (Alexandria City and Wayne County). These two jails will cost the Service, at the minimum, an additional $3.5 million in jail bill costs in 1987. This and the projected growth of contract jail days will result in 260,000 more jail days than originally estimated. The large increase in jail days will result in a requirement of an additional $9,630,000.

Salaries and expenses, Community Relations Service

Supplemental Estimate, Fiscal Year 1987

Table of Contents

Item	Page Number
Appropriation Language Sheet and Authorization Requirements	1
Summary of Requirements	2
Justification of Requirements	3
Program and Financing Schedule	4

DEPARTMENT OF JUSTICE

Legal Activities

Salaries and expenses, Community Relations Service

For an additional amount for "Salaries and expenses, community relations service", $41,000: Provided, That in the appropriation language under this heading in Public Law 99-500, delete $29,637,000 of which $23,266,000 shall remain available until expended and substitute the following: $29,637,000 of which $22,791,000 shall remain available until expended".

Explanation of Request

The Department was notified of increased Federal Telecommunications Systems (FTS) costs for 1987 and 1988 by GSA in July, 1986. The increase was approximately 16% greater than the amounts included in GSA initial cost estimates on which the budget was based. Notification of this increase was not timely enough to be included in the original 1987 budget estimate, however, increased 1988 costs have been included in the current budget request.

The change in appropriation language reallocates the uncontrollable increases of $541 thousand allowed to the Community Relations Service (CRS) in the 1987 Appropriation Act. The funding levels by budget activity do not accurately reflect the intent of providing funds for uncontrollable increases. Of the $541 thousand, the budget activity consisting of the prevention and conciliation of community disputes was allocated $36 thousand, and the reception, processing, and care of Cubans and Haitian Entrants budget activity was allocated $505 thousand. It appears that an error was made in the distribution of this increase between these two budget activities as the prevention and conciliation activity had requested $560 thousand, and the reception, processing, and care activity had requested $30 thousand. This redistribution would correct this error and provide the prevention and conciliation activity with an additional $475 thousand in uncontrollable increases and the reception, processing and care activity its full uncontrollable request of $30 thousand.

Authorization Requirements

The 1987 Appropriation Authorization bill has not been enacted. Public Law 96-132, the Department of Justice Appropriation Authorization Act for 1980, was the last enacted authorization legislation for the Department. This Act, including funding authority for the Department's activities, has been extended for 1987 by the Department of Justice Appropriations Act, 1987 contained in P.L. 99-500 signed October 18, 1986. Additional authorization of $41,000 is required by this request.

Department of Justice

Legal Activities

United States Trustee System Fund

In addition to amounts made available under the head "Salaries and expenses, oversight of bankruptcy cases," for the expansion of the United States Trustees program, as authorized by Sec. 115 of the "Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986," (Public Law 99-554) $16,436,000; Provided, that deposits to the Fund are available in such amounts as may be necessary to pay refunds due depositors.

Explanation of Request

Supplemental funding will provide additional program resources to begin the expansion of the U.S. Trustees from 18 federal judicial districts where the program now exists to an additional 32 federal judicial districts before August 23, 1987. This deadline was enacted in Sec. 302 of the Act. Another 39 federal judicial districts will be added to the U.S. Trustee program in 1988, and the final 6 of all 94 districts will be added no later than October 1, 1992.

The United States Trustee System Fund was established to receive new fees and charges in bankruptcy cases. Higher filing fees were established by the Act, with a portion of the fees to be deposited in the Fund. Maintenance charges in chapter 11 cases will also be paid to the Fund after a judicial district's chapter 11 cases come under the program's supervision. Once expansion is complete, the fees and charges paid to the Fund are expected to offset the entire cost of the program.

Authorization Requirements

Additional authorizing legislation, adding $16,436,000 to the amount available through the United States Trustee System Fund, is also needed.

	Permanent Positions	Workyears	Appropriation
Presently available	193	181	$11,743
Revised estimate	554	283	$28,179
Proposed supplemental	361	102	$16,436

Explanation of Request

Supplemental funding is requested for nationwide expansion of the United States Trustee program pursuant to Public Law 99-554, the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986. Of a total of 21 regions established in the Act, 11 will require resources to open during FY 1987. (Sec. 302(d)(1) of the Act). The remaining 10 regions are required by the Act to be opened no later than two years after the effective date, or October 27, 1988. (Sec. 302(d)(2) of the Act.)

Justification of Requirements
Dollars in thousands

Comparison by activity and program	1987 Presently Available Perm. Pos.	WY	Amount	1987 Revised Estimate Perm. Pos.	WY	Amount	1987 Proposed Supplemental Perm. Pos.	WY	Amount
1. Bankruptcy matters:									
Administration of cases	173	162	$10,005	500	247	$24,512	327	85	$14,507
Management and administration	20	19	1,738	54	36	3,667	34	17	$1,929
Total requirements	193	181	11,743	554	283	28,179	361	102	$16,436

In the columns showing 1987 funds presently available and the 1987 revised estimates, amounts shown include pending supplemental requests of $150,000 for the Federal Employees Retirement System and $93,000 for the 1987 pay supplemental.

This request is to provide for the nationwide expansion of the United States Trustee program. The expansion is part of Public Law 99-554, the "Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986 (the Act)." In FY 1987, the existing pilot program will expand, as will one non-pilot region, according to the schedule and certification process included in the Act. No later than 270 days after enactment, or August 23, 1987, U.S. Trustee staffs in these newly constituted regions will begin to supervise bankruptcy cases filed under chapters 7, 11, 12 and 13 of the Bankruptcy Code. Sec. 302(d) of the Act.

This supplemental includes enhanced resources for former pilot program locations as well as for the additional locations where offices will be opened to supervise bankruptcy cases in formerly non-pilot districts. Additional FY 1987 resources are requested because the existing FY 1987 budget of $11,500,000 cannot fund both the existing program and the expansion required to meet the deadline in Section 302 of the Act. Increases in pilot program locations are necessary due to the expanded role of the U.S. Trustees under the Act, most notably in the areas of geographic coverage, support of criminal investigations and prosecutions, audits, automated case management systems, and fee collections, and by increases in the number of federal bankruptcy judges and the number of bankruptcy cases filed throughout the country. For these reasons, only a very limited effort to expand beyond existing locations can be funded prior to receipt of supplemental funding. The sooner additional funding is made available, the sooner the expansion effort can attempt to meet the August 1987 deadline in the Act.

The timing of receipt of supplemental funds is critical to the success in expanding before the deadline in the Act. The table below shows the federal judicial districts covered by the former pilot program and those judicial districts added by the Act for which cases must be supervised 270 days after enactment, or August 23, 1987. The table shows that workload will nearly double, once the former non-pilot districts are annexed by the U.S. Trustee program. In two instances below (Region 1 and Region 16), the judicial

districts(s) comprising the region correspond(s) to the area covered by pilot U.S. Trustee program regions and judicial districts. In the remaining nine regions, some of the judicial districts were formerly pilot U.S. Trustee districts, and others were non-pilot districts prior to enactment of the Act.

---

* Pilot districts prior to the 1986 Act. ND AL is excluded from workload analysis because under the provisions of the Act, cases filed there revert to supervision of the Bankruptcy Courts on March 1, 1987. Sec. 302(d)(3)(H).

Resource levels to supervise cases in the non-pilot areas are justified by the number of judges assigned to each judicial district in each region, the expected caseload to be handled, the geographic area, and automated data processing needs. The Office of Policy and Planning, Justice Management Division, conducted a through analysis of the staff required to accomplish nationwide expansion of the program. The study included an analysis of the functions performed in field offices and in the Executive Office for U.S. Trustees. The study also examined workload with a primary focus on the bankruptcy cases filed over the 1981-1985 period in each judicial district. From these analyses, minimum staffing requirements were extrapolated for each new U.S. Trustee region in the nationwide plan. Although the study's recommendations addressed minimum requirements, its estimates of personnel requirements formed the basis for total staffing levels in this request. The staffing assumptions may prove to be conservative, but actual experience with the nationwide program is needed before an assessment can be made concerning the adequacy of the estimates. Other recommendations in the report concern the organization and staffing of individual field offices, types of positions required in the field offices and headquarters, and revenue potential for the United States Trustee Fund.

Staffing ratios were used to estimate the personnel requirements for the expanded program. Professional positions include the U.S. Trustees, Assistant U.S. Trustees, attorneys, bankruptcy analysts and case management specialists. The 21 U.S. Trustees and the

regions for which they are appointed were established by the 1986 Act. At least one Assistant U.S. Trustee is assigned to each region, with more if the caseload or geographic dispersion so indicate. The need for attorneys and bankruptcy analysts was estimated on the basis of expected caseload. The attorneys perform all senior legal functions including appearing before bankruptcy courts to argue motions, negotiating with creditors' committees or debtors, and monitoring cases for substantive compliance with bankruptcy laws. The bankruptcy analysts monitor the financial health of chapter 11 debtors and provide financial and accounting assistance to investigative agencies in pursuit of bankruptcy frauds, embezzlements, misappropriations and other bankruptcy related crimes. Case management specialists (one per U.S. Trustee region) are included in the request to operate the automated case management system.

Support personnel include staff assistants, legal data technicians, paralegal specialists, legal clerks and secretaries. One staff assistant position and one secretarial position were estimated for each U.S. Trustee region; the staff assistants will perform office administrative duties and be responsible for fee collection. The paralegal, legal clerk and legal data technician positions were estimated on the basis of caseload and the projected number of professional positions each would support in the regions.

The audit function will be performed on a contract basis, either by reimbursement to the Justice Management Division's Audit Staff or by a private sector concern or both. During the operation of the pilot program, audits of the books and records of private trustees have uncovered financial irregularities and led to successful prosecutions. More successful prosecutions are expected as the program ventures into areas previously supervised by the bankruptcy courts. In the non-pilot districts, it is unlikely that auditable records have ever been maintained by private trustees, and serious problems are expected.

A strengthened corps of bankruptcy analysts is included in the estimate to provide financial and accounting assistance on bankruptcy matters subsequent to referral to appropriate law enforcement authorities. Experience with the pilot program shows that prosecutors are willing to proceed with cases only when they are adequately documented. Existing investigatory resources and the prosecutors' offices often lack the accounting and bankruptcy expertise to develop cases. Also, the new priority assigned to bankruptcy related prosecutions will still compete with higher priority matters. Where audits,or financial reports required to be filed with the U.S. Trustee offices, indicate the possibility of criminal behavior, these analysts will be proficient in reconstructing bankruptcy case records to determine whether crimes have been committed and whether appropriate investigative or prosecutory agencies should be involved.

Installation of an automated case management system will be a priority project during expansion of the program. Congress included a requirement for a demonstration automated system in the 1986 Act. The pilot case management system in the original U.S. Trustee program has been operating successfully in two offices for two years. The system monitors the status of open cases, generates correspondence, drafts legal pleadings according to the case status, and assists with chapter 11 financial analysis and scheduling of meetings of creditors. The original system will be duplicated region by region as new offices open according to the expansion schedule.

High lapse rates were used because supplemental funds will not be available in time to allow for the ordinary 25 percent rate to apply. Positions in the supplemental request are lapsed at a 75 percent rate, and other lapse rates were applied to non-personnel object classes to reflect expected funding needs during FY 1987. After reduction for non-recurring decreases associated with the new positions, net annualization costs in FY 1988 are estimated to involve 261 workyears and $9,579,000.

DEPARTMENT OF JUSTICE

Federal Bureau of Investigation

Salaries and expenses

For an additional amount for "Salaries and expenses", $3,989,000: Provided, That of the funds made available under this head in the Department of Justice Appropriation Act, 1987, as included in Public Laws 99-500 and 99-591, $5,686,000 for a classified project shall remain available until expended.

Explanation of Request

Supplemental funding is requested to provide for increased FTS costs and increased rental payments to GSA. Additionally, it is requested that funding provided in 1987 for a special project be made available until expended.

1610

Authorization Requirements

The most recent authorization for this appropriation is the Department of Justice Appropriation Authorization Act, Fiscal Year 1980 (P.L. 96-132), as extended by the Department of Justice Appropriation Act, 1987 (as included in Public Laws 99-500 and 99-591).

Explanation of Request

Supplemental funding is requested to provide for increased 1987 General Services Administration (GSA) rent charges and for increased Federal Telecommunications System (FTS) costs.

In addition, the proposed supplemental would reappropriate unobligated balances to provide no-year funding for a special project.

	1987 Presently Available	1987 Revised Estimate	1987 Proposed Supplemental
Item: Rent.....	$67,501	$69,501	$2,000

Supplemental funding of $2,000,000 is being requested to meet an anticipated shortfall in funding for rent charges for FBI space holdings. Based on the actual rent charges for the first quarter of 1987 for currently held space which totaled approximately $18,750,000, an annual rent bill of $75,001,000 is projected. An additional $4,100,000 is required to pay for space expected to be acquired during 1987. The gross annual rent charges are estimated to be $79,101,000 for the FBI in 1987, reduced by $9,600,000 through the GSA chargeback. The net rent funding requirement, $69,501,000, compares to available funding of $67,501,000. Thus, a $2,000,000 supplemental increase is required to fund total rent charges to be incurred by the FBI in 1987.

Federal Bureau of Investigation

Salaries and expenses

Justification of Requirements
(Dollars in thousands)

	1987 Presently Available	1987 Revised Estimate	1987 Proposed Supplemental
Item: Federal Telecommunications System (FTS).....	$4,404	$6,393	$1,989

The FBI was notified by GSA of increased FTS costs for 1987 due to divestiture, deregulation, and the restructuring of the telecommunications industry. The increase was approximately 16 percent greater than the amounts included in GSA's initial cost estimates on which the budget was based. Notification of this increase was not sufficiently timely to permit a modification of the FBI's original 1987 budget estimate.

FTS base-level funding for 1987 is $4,404,000. FTS obligations for 1986 exceeded $4,900,000, and it is projected that 1987 FTS costs will total $6,393,000, necessitating an additional $1,989,000 in supplemental funding.

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

Salaries and Expenses

For an additional amount for "Salaries and Expenses, Drug Enforcement Administration," $776,000 for increased costs associated with the Federal Telecommunications System (FTS).

Explanation of Request

This supplemental request would provide funding for increased FTS costs. In 1986, the General Services Administration (GSA) advised agencies that lower charges could be anticipated for 1987. The 1987 budget request was reduced accordingly. However, in 1987, GSA increased FTS Intercity costs by approximately 16 percent due to the divestiture, deregulation and restructuring of the telecommunications industry. This increase was due primarily to higher than anticipated tariffs rates and prior year costs that are billed in the current year and were not included in GSA's original estimates. This combination of events left a deficit of $776,000 which this supplemental request seeks to recover. This funding would be added to DEA's ADP and Telecommunications program.

Authorization Requirements

The 1987 authorization/appropriation bill has been transmitted to Congress for approval. Additional authorization of $776,000 will be required.

Immigration and Naturalization Service
FY 1987 Proposed Supplemental

Overview

The Immigration and Naturalization Service (INS) is proposing a major program enhancement of $147,793,000 to implement the Immigration Reform and Control Act of 1986 (Public Law 99-603), to detain Mariel Cuban criminals who are turned over to INS' custody after completing sentences in State and local facilities, and to remedy a funding shortage due to a change in Federal Telecommunications System rates.

Immigration Reform

Two major areas of activity are to be funded by this portion of the supplemental request: improved enforcement and the new agricultural programs.

The Legalization program, mandated by Title II, Sections 201-204 of the Act, is a reimbursable program and is not included in this supplemental request. Under this program, aliens who entered the United States illegally or lapsed into illegal status prior to January 1, 1982, who resided continuously in the United States since then, and who are not excludable may apply for temporary resident status. The law allows those granted temporary status to apply for permanent resident after 18 months upon showing general admissibility and citizenship skills.

INS has requested the following resources in FY 1987 to provide the administrative review of applicants: 292 positions, 1,002 FTE, and $125,241,000. For the Legalization program, INS will promulgate a fee structure that is adequate to reimburse the costs incurred related to the legalization activities of the INS and the FBI.

Enforcement

Public Law 99-603, Title I, Sections 101-103, 111, 112, 114-116, 121; Title III, Sections 313; Title VII, Sections 701 and 702: The enforcement effort mandated by the legislation is part of a balanced approach towards a solution of the Nation's interrelated immigration and border control problems. The concept of a broad amnesty/legalization program is accompanied by a multifaceted enforcement program which will establish control of the borders between ports of entry on a permanent basis, augment inspections resources at the ports of entry, assure the expeditious deportation of aliens who have committed crimes, and eliminate the availability of employment to undocumented aliens through implementation of a program of legal sanctions against employers.

Title I of the Act mandates a vigorous, comprehensive enforcement effort to discourage, prevent, and deter the illegal entry of aliens into the United States, and to remove them if they are found here. Title I contains the "teeth" of immigration reform in three broad provisions: (1) the Employer Sanctions program to eliminate

the job magnet to illegal immigration, (2) the Systematic Alien Verification for Entitlements (SAVE) program to eliminate the entitlements and benefits magnet to illegal immigration, and (3) the Moorhead Amendment and related provisions to enhance the security of our borders at and between ports of entry by augmenting the Border Patrol by 50 percent over 2 years. To implement the Employer Sanctions program in the interior 1,237 positions and $33,669,000 are requested in 1987. The SAVE provisions will require 85 positions and $1,958,000 in the first year. The resources required to implement the Moorhead Amendment and related provisions of the law in 1987 are 2,261 positions and $70,479,000.

Title III, Section 313 of the Act authorizes the Attorney General and the Secretary of State to establish a visa waiver pilot program, to be operated over a three-year period with up to eight countries participating, in an effort to expedite the entry of certain categories of non-immigrants. Implementation of this pilot program primarily involves systems development and execution activities to be carried out by the Data and Communications Systems program.

Title VII, Section 701--the MacKay Amendment--mandates the expeditious location and removal of criminal aliens by the INS. This request includes 616 positions and $16,781,000 in 1987 to carry out the provisions of the Act.

Agricultural

Title III, Sections 301-305: In recognition of the unique needs of growers, Section 301 of the Act creates a separate and distinct temporary worker program for agriculture, the "H-2A" program.

Section 302 of the Act mandates adjustment procedures whereby aliens who can demonstrate that they have performed seasonal agricultural services in the United States for at least 90 mandays during the 12 month period ending May 1, 1986 can apply for temporary resident status. It also calls for the establishment of procedures enabling aliens to apply for temporary resident status at American consular offices outside the United States. Resources totalling 117 positions and $14,966,000 are requested in 1987 to implement the agricultural provisions of the Act.

Detention of Mariel Cuban Criminals

The Immigration and Naturalization Service is requesting a supplemental appropriation of $9,000,000 to address the serious national problem associated with detaining Mariel Cuban criminals after they have served their sentences in State and local prisons and jails. This request stems from an existing shortage of Service detention facilities, the unsuitability of utilizing INS' minimum security facilities to detain hard-core criminals and a shortage of resources to acquire additional non-Service detention space.

Due to the suspension of the December 14, 1984 accord between the United States and Cuba, INS has not been able to return Mariel Cuban criminals to Cuba since May 1985. This has created a severe detention crisis in INS detention facilities and in the United States Penitentiary at Atlanta. Atlanta has been operating under a moratorium against accepting additional Mariel Cuban detainees since October of 1985, forcing INS to detain hard-core criminals in its minimum security Service Processing Centers and local jails.

There are a number of problems related to long-term detention in INS facilities. First, the detention centers are minimum security facilities that were neither designed nor intended for the long-term incarceration of serious offenders. As a result, security problems in the form of disturbances, riots, and escapes--instigated primarily by Mariel Cubans--will continue to occur. Second, the hard-core criminals intimidate and victimize more passive detainees with whom they are commingled. Fundamental correctional procedures require the separation of detainees based on the degree of security risk. Placing violent criminals in INS' minimum security facilities clearly makes the Service vulnerable to litigation based on the failure to protect essentially passive non-Mariel Cuban detainees.

As available detention space is occupied by Mariel Cuban criminals, space for aliens other than Cubans will become virtually non-existent. Without this supplemental appropriation, the funds allocated for non-Service detention will be required to detain Cubans. The Congress recognized this developing problem in FY 1986 and provided $3 million in supplemental appropriations to address it. This request extends and expands that action into FY 1987.

Increase in Federal Telecommunications System (FTS) Charges

An increase in resources of $950,000 is needed in order to fund additional costs which will result from higher charges for service from the Federal Telecommunications System (FTS). This is mainly due to unanticipated tariff increases and other system costs which are now projected to be above those originally established by the General Services Administration.

DEPARTMENT OF JUSTICE

Immigration and Naturalization Service

Salaries and Expenses

For an additional amount for "Salaries and expenses", $147,793,000 of which $35,000,000 for construction shall remain available until expended: Provided, That, in appropriation language under this head in the Department of Justice Appropriation Act, 1987, as included in Public Laws 99-500 and 99-591 delete the phrase "(not to exceed four hundred ninety, all of which shall be for replacement only)" and substitute (not to exceed 2,230, of which 490 shall be for replacement only).

Explanation of Request

This proposed supplemental would provide for the increased expenses for implementing Titles, I, III, and VII of the Immigration Reform and Control Act of 1986. This proposal would also provide resources to fund contract detention of Mariel Cuban criminals and hiyher than anticipated telecommunications tariff rates. No year authority is requested to allow funds to remain available until construction is completed. 1/

1626

1/ This clause was inadvertently left out of the President's Budget; however, it is the Administration's intent that these funds remain available until expended.

Enforcement: Improve Enforcement-Border

The enforcement effort mandated by the Immigration Reform and Control Act of 1986 is intended to establish control of the border between ports of entry and increase the effectiveness of inspections at the ports of entry.

Section III of Title I of the Act mandates a vigorous, comprehensive enforcement effort "to prevent and deter the illegal entry of aliens into the United States and the violation of the terms of their entry".

The Border Patrol will be expanded by adding 1,456 agents, 37 pilots, and 220 support personnel (in occupations such as radio operations, electronics technicians, mechanics, etc). Automobiles, trucks, and all-terrain vehicles will be acquired to support operations. Radios and night vision equipment will also be purchased in order to make the additional personnel as effective as possible in the field. Finally, ten helicopters will be obtained to expand air operations on the border.

The mandated Border Patrol increase must be supported adequately through the addition of resources to other enforcement and support programs to provide for the expeditious processing and removal of aliens apprehended by the Border Patrol. Increases in permanent positions are proposed in the Detention and Deportation, Data and Communications, Information and Records, Construction and Engineering, Field Management and Support, Legal Proceedings, Executive Direction and Control, and Administrative Services programs.

The request includes 85 additional immigration inspectors to staff high traffic/high risk ports of entry to permit a permanent expansion of the implementation of the fraud intercept task force concept.

1629

The Investigations program will require 87 additional special agents and limited support personnel in order to carry out the added requirements of the open land entry warrant provisions of the Immigration Reform and Control Act of 1986. New vehicles and radio equipment will be needed to allow the new agents to perform their duties.

INS has seen an increase in alien smuggling operations. To address this, 14 new positions and operational resources are included for the Anti-Smuggling program to permit this unit to engage in a greater number of investigations of sophisticated smuggling operations.

The Adjudications and Naturalization program will require the addition of 75 personnel and supporting resources in order to process additional claims for immigration benefits as part of the effort to maintain acceptable levels of service to the public. Likewise, the Refugee and Overseas program is to receive 13 additional positions in order to maintain adequate agency services in overseas offices.

Resources are also included in the support programs to permit more efficient utilization of additional personnel in the operating enforcement programs. Of particular importance are increases in data systems for digital voice privacy radio equipment ($2,280,000 for 1,140 radios) for the safety of our officers and for increased operational effectiveness, and the development and implementation of new ADP systems (8 positions, 5 FTE's, $1,836,000): apprehensions, case management, employer information, and alien employment eligibility systems. Also needed are construction and engineering funds for a new detention facility ($15,000,000) to support the interior enforcement requirements mandated by law, funds for the modification of various topographic features on the borders ($4,000,000) and the construction and renovation of Border Patrol stations for increased staff complements ($16,000,000).

1690

Enforcement: Sanctions

Title I, Section 101 of the Act establishes a major employer sanctions program making it illegal to employ undocumented aliens. Commencing with a six-month period after enactment, employers will be provided with detailed information about the law; funds are included in the Investigations program for literature and an active public information campaign. Actual enforcement will begin after this education/information phase. During the first year of enforcement, employers' first violations will not be prosecuted. Implementation of sanctions requires a large permanent increase of 500 Investigations personnel (including support personnel), vehicles, and radios.

Border Patrol staffing and support are increased to permit the Patrol to take an appropriate role enforcing this law along the border. Note that while the Border Patrol staffing included in this initiative plus the staffing outlined in the Moorhead initiative increase the Patrol positions by 50 percent as mandated by the Act, requested funding levels of workyears for these and other position increases realistically reflect our ability to hire and train top-flight applicants in the remainder of this fiscal year. In addition, the Anti-Smuggling program is expected to play a role in this area in the prosecution of employers of smuggled aliens who will be discovered during investigations. The Anti-Smuggling program will be expanded by adding 38 positions, vehicles and radios.

Supporting resources are included for Detention and Deportation to process the difficult and time consuming deportations of aliens apprehended during sanctions enforcement operations. Data Systems funding is necessary to handle the anticipated status verification inquiries which will be made as employers comply with the new requirements.

A permanent increase in the Intelligence program is needed to accommodate a projected increase in requests for forensic examinations of suspected fraudulent documents.

Legal Proceedings personnel and funding are increased to handle the anticipated large increase in casework in fine hearings, appeals, and litigation arising from enforcement activities.

Other resources are included in Information and Records, Training, Construction and Engineering (SLUC), Executive Direction, and Administrative Services to provide essential support for the implementation of the sanctions program.

Enforcement: MacKay Amendment

This initiative is targeted directly at aliens engaged in criminal activities. These aliens comprise a growing threat to the domestic security of this Nation. In 1985 alone, there were over 135,000 criminal alien referrals to INS from Federal, State and local law enforcement agencies. Of this number, 42,277 had been convicted and found to be deportable. However, because of INS' resource constraints only 12,530 deportation proceedings could be initiated.

The new law mandates that INS take affirmative action to locate, process and remove criminal aliens from the United States. It requires that the Service initiate deportation proceedings as expeditiously as possible after the conviction of an alien on a deportable offense. To meet the statutory requirements of this provision, the Service is requesting 616 additional positions. The additional 345 positions in the Investigations program will allow INS to address the existing backlog and continue the workload of deportation cases with the focus on drug crimes. Interagency liaison and investigations with Drug Enforcement Administration and the Federal Bureau of Investigation will be a high priority. Removal of aliens with criminal records can result in cost savings by avoiding lengthy and costly litigation and incarceration.

The Detention and Deportation program will need 100 new positions and supporting resources to allow INS to process, detain and transport the large number of criminal aliens expected to be apprehended through drug enforcement efforts, as well as those who must be held on detainers in State and local facilities after completing sentences for drug crimes and other criminal violations. Those aliens who are involved in lengthy deportation proceedings will be detained to prevent them from absconding and returning to drug trafficking and other criminal activities.

Legal Proceedings requires 129 new positions to provide attorneys and support personnel to process additional deportation cases and appeals resulting from increased prosecutions of alien criminals. It is expected that other litigation may also arise from increased efforts in this area.

Other resources are requested for Training, Data and Communications, Information and Records, Construction and Engineering, Field Management and Support, Executive Direction and Control, and Administrative Services to provide essential support for the implementation of this sub-initiative.

Enforcement: SAVE

Title 1, Section 121 of the Act requires the States to verify the immigration status of aliens applying for benefits under the Aid for Dependent Children, Medicaid, Unemployment Compensation, Food Stamp, Educational Assistance, and Housing Assistance programs. By October 1, 1987, the Service is required to implement a system for the verification of immigration status and to make that system available to the States. The States then have until October 1, 1988 to begin complying with the status verification requirements. Data and Communications Systems resources are included in the supplemental request to expand the capacity of existing systems to process automated Central Index status inquiries. Information and Records will require 82 additional positions to respond to secondary verification requests which will result when automated inquiries cannot be processed due to data base problems e.g., incorrect or incomplete records. It is anticipated that the verification requirement will lead to a general improvement in the quality and accuracy of the data base. Investigations will print and distribute forms and information packets. Training will be provided to local offices of entitlement agencies concerning procedures and documentation.

Agricultural

Title III, Sections 301-305: In recognition of the unique needs of growers, Section 301 of the Act creates a separate and distinct temporary worker program for agriculture, the "H-2A" program. Under the provisions of this program, growers may petition to import temporary workers after establishing that qualified domestic workers cannot be found and that admission of the H-2A workers would have no adverse effect on similarly employed domestic workers. Six positions are requested for the Adjudications and Naturalization program to implement this program at a cost of $115,000 in 1987.

Title III, Section 302 of the Immigration Reform and Control Act of 1986 mandates adjustment procedures whereby aliens who can demonstrate they have performed seasonal agricultural services in the United States for at least 90 man-days during the 12 month period ending May 1, 1986 can apply for temporary resident status during the 18 month application period extending from June 1, 1987 to November 30, 1988. Such aliens will remain in temporary status for at least two years, at which time they can be adjusted to lawful permanent resident status (but not before December 1, 1990.)

Not more than 350,000 of those who can also establish that they have worked in agriculture for at least 90 days in the 12 month periods ending May 1, 1984 and May 1, 1985 will remain in temporary status for at least one year before being adjusted to lawful permanent resident status beginning December 1, 1989.

Section 302 of the Act also calls for the establishment of procedures enabling aliens to apply for temporary resident status at American consular offices outside the United States. Applicants for the Special Agricultural

Worker Program (approximately 200,000) will be processed through American consulates overseas. It is thought that 600,000 will be processed in and through legalization offices. If accepted by the consulates, aliens will be given authorization to enter the U.S. All applications, whether from consulates or legalization offices, will be processed through regional processing facilities.

Adjudications and Naturalization program, and Refugees and Overseas program positions and supporting resources will allow INS to process in a timely manner the large number of applications for temporary resident status that are anticipated, both from within the United States and at consular offices abroad, and to adjust the status of eligible applicants. Enhancements to the Anti-Smuggling program are needed to deal with increases in alien smuggling operations anticipated as a result of the Agricultural provisions of the law. A permanent increase in the Intelligence program is needed to accommodate a projected increase in requests for forensic examinations of suspected fraudulent documents.

Finally, Section 303 of the Act establishes a mechanism to determine whether additional agricultural workers are needed in fiscal years 1990 through 1993. If such a replenishment need is demonstrated, additional workers will be admitted in those years.

	1987 Presently Available	1987 Revised Estimates	1987 Proposed Supplemental
Item: Detention of Mariel Cuban Criminals ...	$3,000	$12,000	$9,000

Additional resources for Detention and Deportation are needed to fund the projected cost of non-Service detention of Mariel Cuban criminals who must be detained after completing sentences for State and local law violations, in anticipation of eventual exclusion and removal from the United States. Since the Cuban Government suspended the December 1984 repatriation agreement with the United States, the number of Mariel Cuban criminals in Service detention has been growing steadily. INS now has approximately 1,000 Mariel Cubans in custody and expects this number to remain the same between now and the end of 1987. This is a result of the use of the Oakdale Federal Alien Detention Facility. INS has been receiving, and will continue to receive, 80 to 90 Cuban criminals per month as these aliens are released from state and local prisons. Since INS has detainers on over 2,800 who are presently incarcerated, the flow into INS facilities will continue for some time to come. In addition, other Mariel Cubans are likely to be arrested, convicted, incarcerated and eventually released from State and local facilities, into INS' custody for eventual deportation.

	1987 Presently Available	1987 Revised Estimates	1987 Proposed Supplemental
Item: Increase in Federal Telecommunications System (FTS) Charges.....	$6,613	$7,563	$950

This supplemental request would provide funding for increased FTS costs. In 1986, the General Services Administration (GSA) advised agencies that lower charges could be anticipated for 1987. The 1987 budget request was reduced accordingly. However, in 1987 GSA increased FTS Intercity costs by approximately 16 percent, due to the divestiture, deregulation and restructuring of the telecommunications industry. This increase was due primarily to higher than anticipated tarriffs rates and prior year costs that are billed in the current year and were not included in GSA's original estimates. This combination of events left a deficit of $950,000 which this supplemental request seeks to recover.

The entire amount proposed for rescission in the Enforcement activity would come from the Inspections program. For the Immigration Support activity the only program effected would be Data and Communications Systems.

1/ Includes proposed supplemental appropriations requests of $10,186,000 for Federal Employee Retirement System (FERS) costs; $5,588,000 to fund increased pay costs; and $147,793,000 for program increases to implement the Immigration Reform and Control Act of 1986 (Public Law 99-603), to detain Mariel Cuban criminals, and to remedy a funding shortage due to a change in Federal Telecommunications System rates.

Immigration and Naturalization Service

Salaries and expenses

Justification of Requirements
(Dollars in thousands)

	1987 Presently Available			1987 Revised Estimates			1987 Proposed Rescission		
	Pos.	WY	Amount	Pos.	WY	Amount	Pos.	WY	Amount
Activity:									
Enforcement Inspections	1,665	1,933	$82,637	1,108	1,496	$68,039	-557	-437	-$14,598
Immigration Support Data and Communications Systems	209	191	60,639	209	191	50,639	...	...	-10,000
Total	1,874	2,124	143,276	1,317	1,687	118,678	-537	-437	-24,598

The Department of Justice Appropriations Act for 1987, P.L. 99-500 provides for the establishment of an "Immigration User Fee Account." This will allow the Immigration and Naturalization Service to charge for the inspection of certain passengers arriving in the United States aboard commercial aircraft or vessels. This Act also authorizes the Secretary of Treasury to refund the amounts paid for certain expenses incurred in providing inspectional and other identified services out of the "Immigration User Fee Account". The proposed rescission reflects those resources currently included in INS' 1987 appropriation that fund items which will now be funded through the user fee account (effective December 1, 1986).

Because the Immigration User Fee Account merely switches the source of funding for certain functions, there will be no adverse impact on INS as a result of this rescission.

Item	Page Number
Appropriation Language Sheet and Authorization Requirements	1
Summary of Requirements	2

DEPARTMENT OF JUSTICE

Federal Prison System

Salaries and expenses

For an additional amount for "Salaries and expenses", $548,000.

Explanation of Request

This supplemental request would provide funding for increased FTS costs. In 1986, the General Services Administration (GSA) advised agencies that lower charges could be anticipated for 1987. The 1987 budget request was reduced accordingly. However, in 1987 GSA increased FTS Intercity costs by approximately 16 percent, due to the divestiture, deregulation and restructuring of the telecommunciations industry. This increase was due primarily to higher than anticipated tariff rates and prior year costs that are billed in the current year and were not included in GSA's original estimates. This combination of events left a deficit of $548,000 which this supplemental request seeks to recover.

Authorization Requirements

The 1987 authorization/appropriation bill has been transmitted to Congress for approval. Additional authorization of $548,000 will be required.

OPENING STATEMENT

Mr. SMITH. Do you wish to place your statement in the record or read it?

Mr. BURNS. I would like to put the statement on the record, and then I would like to summarize it, if I may.

Mr. SMITH. All right. That would be fine.

[The prepared statement and biography of Mr. Burns follows:]

DEPARTMENT OF JUSTICE
SUPPLEMENTAL APPROPRIATION

STATEMENT OF THE DEPUTY ATTORNEY GENERAL
ARNOLD I. BURNS

BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON
THE DEPARTMENT OF COMMERCE, JUSTICE, AND STATE,
THE JUDICIARY, AND RELATED AGENCIES

MR. CHAIRMAN AND MEMBERS OF THE SUBCOMMITTEE:

I AM PLEASED TO HAVE THE OPPORTUNITY TO BE HERE TODAY TO DISCUSS THE DEPARTMENT'S SUPPLEMENTAL APPROPRIATION REQUIREMENTS FOR 1987. THE REQUESTS ARE VITALLY IMPORTANT TO THE DEPARTMENT'S OBLIGATION TO IMPLEMENT MANY OF ITS NEW RESPONSIBILITIES RESULTING FROM LEGISLATION PASSED DURING THE SECOND SESSION OF THE 99TH CONGRESS. THESE LEGISLATIVE INITIATIVES DRIVE OUR REQUESTS. THERE IS NO ATTEMPT TO ENRICH ESTABLISHED PROGRAMS OF THE DEPARTMENT. WITH ME TO DISCUSS OUR NEEDS IS COMMISSIONER NELSON OF THE IMMIGRATION AND NATURALIZATION SERVICE AND DIRECTOR STANTON OF THE EXECUTIVE OFFICE FOR U.S. TRUSTEES.

I FIND IT DIFFICULT TO OVEREMPHASIZE THE IMPORTANCE OF THESE REQUESTS BECAUSE THEY ARE INDEED URGENT AND BECAUSE THEY ARE SO CLOSELY ALIGNED TO THE PENDING 1988 REQUESTS. THREE PIECES OF LEGISLATION PASSED LATE IN THE 99TH CONGRESS REQUIRE SUBSTANTIAL NEW RESOURCES IN 1987. THESE ARE THE IMMIGRATION REFORM AND CONTROL ACT, THE BANKRUPTCY JUDGES, UNITED STATES TRUSTEES AND FAMILY FARMER BANKRUPTCY ACT, AND THE FEDERAL EMPLOYEES RETIREMENT SYSTEM ACT. OUT OF OUR TOTAL REQUEST FOR $303,657,000 IN SUPPLEMENTAL APPROPRIATIONS, $231,605,000 OR 76 PERCENT RELATES DIRECTLY TO THESE MAJOR LEGISLATIVE INITIATIVES. WITH $29,476,000 TO FUND THE JANUARY 1987 PAY RAISE, THE PERCENTAGE

FOR THESE MAJOR ELEMENTS GROWS TO 86 PERCENT. ADDITIONALLY, WE ARE REQUESTING FUNDING TO SUPPORT EXPANDED EFFORTS INVOLVING LEGISLATIVE INITIATIVES IN THE 99TH CONGRESS RELATING TO DEBT COLLECTION AND PROCUREMENT FRAUD.

THE REMAINING ITEMS ARE TO FUND UNEXPECTED TARIFF RATES FOR THE FEDERAL TELECOMMUNICATIONS SYSTEM, TO PAY RELOCATION AND SPACE RENTAL INCREASES, TO PROVIDE FOR THE CONTRACT DETENTION OF CERTAIN MARIEL CUBANS AND UNSENTENCED FEDERAL PRISONERS, TO PAY INDEPENDENT COUNSEL EXPENSES, AND TO FUND SEVERAL PRESIDENTIAL SECURITY INITIATIVES. IN ADDITION, A TECHNICAL LANGUAGE PROVISION IS INCLUDED EXTENDING THE PERIOD FOR WHICH CERTAIN FEDERAL BUREAU OF INVESTIGATION FUNDS ARE AVAILABLE. FINALLY, SOME OF THE SUPPLEMENTAL REQUESTS, PARTICULARLY THE PAY AND RETIREMENT SUPPLEMENTALS, ARE IN AREAS THAT WE RECEIVED FUNDS IN THE OMNIBUS DRUG SUPPLEMENTAL APPROPRIATION ACT OF 1986, ALSO PASSED LAST FALL. TO THE EXTENT THAT OUR REQUESTS ARE NOT FUNDED, THIS SUPPLEMENTAL DRUG INITIATIVE AND THE ACCOMPANYING SUBSTANTIVE LEGISLATION, THE ANTI-DRUG ABUSE ACT OF 1986, WILL BE IMPEDED. TAKEN AS A WHOLE, OUR REQUESTS ARE NECESSARY TO CARRY OUT FUNDAMENTAL RESPONSIBILITIES TO ENSURE THAT THE LAWS ARE EFFECTIVELY ENFORCED.

IMMIGRATION REFORM

THE IMMIGRATION REFORM AND CONTROL ACT WAS THE PRODUCT OF ONE OF THE LONGEST AND MOST DIFFICULT LEGISLATIVE UNDERTAKINGS IN RECENT MEMORY. ITS GOAL IS TO SEIZE CONTROL OVER AND ADDRESS SUCCESSFULLY THE SUBSTANTIAL PROBLEM OF ILLEGAL IMMIGRATION THAT

CHALLENGES OUR NATION'S SOVEREIGNTY. AT THE SAME TIME, IT SEEKS TO UPHOLD THE IMMIGRATION TRADITION OF THE UNITED STATES--THE FIRM, FAIR ENFORCEMENT OF LAWS DESIGNED TO ENCOURAGE THE CONTINUED FLOW OF LEGAL IMMIGRANTS. IT CONFRONTS THE PROBLEM OF THE ILLEGAL IMMIGRANT WHO HAS HAD TO HIDE IN THE SHADOWS, WITHOUT ACCESS TO THE FULL BENEFITS OF A FREE AND OPEN SOCIETY. THE COMPREHENSIVE REFORMS OF THE ACT, HUMANELY SEEKING TO REGAIN CONTROL OF OUR BORDERS WHILE PRESERVING ONE OF THE MOST SACRED POSSESSIONS OF OUR PEOPLE, AMERICAN CITIZENSHIP, MUST NOW BE IMPLEMENTED.

THE BIPARTISAN EFFORT THAT WENT INTO ENACTING THIS LAW MUST CONTINUE. THE DEPARTMENT HAS UNDERTAKEN A VIGOROUS EFFORT TO IMPLEMENT THE PROVISIONS OF THE ACT. PART OF THESE EFFORTS HAVE BEEN DIRECTED AT DETERMINING THE APPROPRIATE LEVEL OF RESOURCES NEEDED TO FUND THIS RESPONSIBILITY. WE APPRECIATE THE SUBCOMMITTEE'S PROMPT RESPONSE TO OUR SUPPLEMENTAL REQUESTS, NOT ONLY IN THIS AREA, BUT IN OUR OTHER CRITICAL NEEDS.

WE ARE ALL VERY MUCH AWARE THAT THE ACT IMPOSED SIGNIFICANT NEW RESPONSIBILITIES ON THE IMMIGRATION AND NATURALIZATION SERVICE, THE EXECUTIVE OFFICE FOR IMMIGRATION REVIEW, AND THE CIVIL DIVISION. OUR REQUESTS RELATE DIRECTLY TO THE REFORMS OF THE ACT AND THE NEED TO ENSURE EFFECTIVE ENFORCEMENT. EMPLOYER SANCTIONS, THE AGRICULTURAL WORKER PROGRAM, IMPROVED VIGILANCE AT THE BORDER, VIGOROUS PURSUIT OF FRAUD IN CONNECTION WITH THE LEGALIZATION AND EMPLOYER SANCTION PROGRAMS AND THE EXPEDITIOUS

DEPORTATION OF CRIMINAL ALIENS ARE ALL AREAS WHERE WE ARE IN NEED OF SUBSTANTIAL RESOURCES.

THE BULK OF THE SUPPLEMENTAL APPROPRIATION REQUEST IS SPREAD ACROSS THESE ENFORCEMENT ACTIVITIES. EFFECTIVE IMPLEMENTATION OF THE EMPLOYER SANCTION PROVISIONS SHOULD REDUCE THE JOB MAGNET OF ILLEGAL IMMIGRATION. SIMILARLY, WE PROPOSE A SUBSTANTIAL AUGMENTATION OF THE BORDER PATROL AND THE IMPLEMENTATION OF PROGRAMS TO REDUCE FRAUDULENT THE USE OF ENTITLEMENT AND OTHER BENEFITS BY ILLEGAL ALIENS. OTHER ENFORCEMENT INITIATIVES ARE TARGETED AT ALIENS ENGAGED IN CRIMINAL ACTIVITIES AND AT EXPEDITING THE ENTRY OF CERTAIN CATEGORIES OF NON-IMMIGRANTS FROM SELECTED COUNTRIES. THE SPECIAL AGRICULTURAL WORKER PROGRAM WOULD ALLOW AGRICULTURAL PRODUCERS TO USE TEMPORARY WORKERS WHO COULD QUALIFY FOR TEMPORARY RESIDENT STATUS.

THE ACT ALSO REQUIRES THE DEPARTMENT TO ESTABLISH A SPECIAL COUNSEL FOR IMMIGRATION-RELATED UNFAIR EMPLOYMENT PRACTICES. THE SPECIAL COUNSEL WILL RECEIVE CHARGES OF UNFAIR PRACTICES FILED BY PRIVATE INDIVIDUALS OR OFFICERS OF THE IMMIGRATION AND NATURALIZATION SERVICE. THE SPECIAL COUNSEL WILL BE OBLIGATED TO DETERMINE WHETHER THE CHARGES WARRANT THE FILING OF AN ADMINISTRATIVE COMPLAINT. AN ADMINISTRATIVE HEARING MAY BE SOUGHT BY THE SPECIAL COUNSEL FOR THE PURPOSES OF SEEKING INJUNCTIVE RELIEF, BACK PAY OR CIVIL MONETARY PENALTIES. THE DEPARTMENT IS MOVING TO ESTABLISH THE STRUCTURE OF THE OFFICE OF SPECIAL COUNSEL.

WE ARE AWARE OF OUR OBLIGATIONS WITH RESPECT TO THE OFFICE OF SPECIAL COUNSEL. THE ESTABLISHMENT OF THE OFFICE EMANATED FROM A CONCERN THAT THE NEW EMPLOYER SANCTION PROVISIONS CREATE AN OPPORTUNITY FOR EMPLOYERS, IN ORDER TO AVOID SANCTIONS, TO DISCRIMINATE AGAINST THOSE WHO APPEAR TO HAVE FOREIGN ORIGINS. THE DIVERSITY OF THIS NATION'S PEOPLE IS ONE OF ITS STRENGTHS. THERE IS NO EXCUSE FOR AN EMPLOYER TO DISCRIMINATE AND DENY EMPLOYMENT TO THOSE ENTITLED TO IT MERELY TO AVOID THE POSSIBILITY OF SANCTIONS. THE RESPONSIBILITIES OF THE OFFICE WILL BE VIGOROUSLY PURSUED.

THE SUPPLEMENTAL REQUESTS FOR THESE ACTIVITIES TOTAL $145,961,000. THE REQUESTED FUNDS WOULD PROVIDE 4,559 POSITIONS IN 1987. NEARLY 95 PERCENT OF THESE RESOURCES WILL BE USED BY THE IMMIGRATION AND NATURALIZATION SERVICE. ANOTHER INITIATIVE OF THE NEW LEGISLATION, LEGALIZATION OF ELIGIBLE ILLEGAL ALIENS, WILL, AS PROVIDED IN THE ACT, BE FINANCED FROM FEES COLLECTED FROM PERSONS APPLYING FOR TEMPORARY RESIDENCE STATUS.

THE ONGOING EFFORTS WE HAVE TAKEN TO IMPLEMENT THE ACT CAN ONLY BE SUSTAINED BY SUPPLEMENTAL RESOURCES FOR 1987. THE CONSTRUCTION OF NEW FACILITIES AND THE HIRING AND TRAINING OF ADDITIONAL BORDER PATROL MEMBERS TO INCREASE OUR VIGILANCE AT THE BORDER, THE CONTINUATION OF OUR EDUCATIONAL EFFORTS UNDER THE ACT, THE ACQUISITION OF DATA AND COMMUNICATION SYSTEMS TO SUPPORT THE NEW PROGRAMS AND THE HIRING OF PERSONNEL TO STAFF THESE PROGRAMS, MUST NOW TAKE PLACE. WE URGE THE SUBCOMMITTEE TO GIVE EXPEDITIOUS AND FAVORABLE CONSIDERATION TO OUR REQUESTS.

BANKRUPTCY TRUSTEES

THE ENACTMENT OF THE BANKRUPTCY JUDGES, UNITED STATES TRUSTEES, AND FAMILY FARM BANKRUPTCY ACT OF 1986 FULFILLED ONE OF THE PRIMARY GOALS OF THE BANKRUPTCY REFORM ACT OF 1978. BY EXPANDING THE U.S. TRUSTEE PROGRAM TO A NATIONWIDE STATUS, CONGRESS ACTED TO SEVER FROM THE JUDICIAL FUNCTION THE DUTY OF ADMINISTERING BANKRUPT ESTATES. THIS AWKWARD CIRCUMSTANCE OFTEN BROUGHT CHARGES OF FAVORITISM AND BIAS. THE ENTIRE BANKRUPTCY SYSTEM SUFFERED FROM THIS SITUATION.

THE U.S. TRUSTEES WILL BE RESPONSIBLE ON A NATIONWIDE BASIS FOR SUCH MATTERS AS ENSURING PAYMENT OF WITHHOLDING AND OTHER TAXES BY BANKRUPT DEBTORS, ORGANIZING AND SCHEDULING MEETINGS OF CREDITORS, MONITORING THE FILING OF REPORTS AND SCHEDULES, AND APPOINTING INDIVIDUALS TO SERVE AS PRIVATE TRUSTEES. MOST SIGNIFICANTLY, THE U.S. TRUSTEES HAVE IMPORTANT OVERSIGHT RESPONSIBILITIES IN PREVENTING FRAUD AND OTHER ABUSES IN THE BANKRUPTCY SYSTEM.

THE U.S. TRUSTEE PROGRAM MUST NOW EXPAND FROM ITS PRESENCE IN 18 FEDERAL JUDICIAL DISTRICTS TO ASSUMING RESPONSIBILITY FOR BANKRUPTCY ADMINISTRATION IN 11 REGIONS ENCOMPASSING 49 JUDICIAL DISTRICTS BY AUGUST 23, 1987. THE ACT CREATED 21 BANKRUPTCY REGIONS ENCOMPASSING ALL 94 JUDICIAL DISTRICTS OF THE UNITED STATES. ANOTHER 39 DISTRICTS WILL JOIN THE PROGRAM BY NOVEMBER 26, 1988, WHILE THE REMAINING 6 DISTRICTS HAVE FIVE YEARS BEFORE THEY MUST BE BROUGHT UNDER THE PROGRAM. THESE DISTRICTS MAY ELECT TO JOIN AS EARLY AS THIS AUGUST.

THE ACT ESTABLISHED NEW AND HIGHER FEES AND CHARGES IN BANKRUPTCY CASES AND MADE PROVISION THAT PART OF THESE FEES SHALL BE CREDITED TO A NEW "U.S. TRUSTEE SYSTEM FUND" WHICH WILL REPLACE THE PRESENT "OVERSIGHT OF BANKRUPTCY CASES" APPROPRIATION. THIS FUND, HOWEVER, WILL NOT BE ABLE TO FULFILL ITS PURPOSE OF FINANCING U.S. TRUSTEE OPERATIONS UNTIL 1989. THE SUPPLEMENTAL REQUEST FOR $16,993,000 IN 1987 PROVIDES FOR 377 NEW POSITIONS AND 123 WORKYEARS TO COVER THE FIRST PHASES OF THE NATIONWIDE EXPANSION. THESE FUNDS INCLUDE RESOURCES FOR THE GENERAL ADMINISTRATION APPROPRIATION FOR ITS EFFORTS IN SUPPORT OF THE U.S. TRUSTEE PROGRAM. ADDITIONAL RESOURCES ARE REQUESTED IN 1988 TO BRING THE PROGRAM TO NATIONWIDE COVERAGE.

WITH THE DEPARTMENT'S SUPPORT, CONGRESS HAS CONCLUDED THAT THE U.S. TRUSTEE PROGRAM IS SUCCESSFUL AND SHOULD BE ESTABLISHED NATIONWIDE. THE PROGRAM HAS IMPROVED THE SPEED AND EFFICIENCY OF BANKRUPTCY PROCEEDINGS, INCREASED THE LIKELIHOOD OF SUCCESSFULLY REHABILITATING DEBTORS, AND APPEARS TO INCREASE THE RECOVERIES OF CREDITORS. WITH OTHER COMPONENTS OF THE DEPARTMENT, IT WILL MAKE SIGNIFICANT EFFORTS IN UNCOVERING FRAUD. OVERALL, THE BANKRUPTCY SYSTEM'S INTEGRITY WILL BE ENHANCED. WE ARE COMMITTED TO A VIGOROUS U.S. TRUSTEE PROGRAM. THE ESTABLISHMENT OF THE NEW OFFICES REQUIRED BY THE EXPANDED PROGRAM AND THE HIRING OF STAFF TO SUPPORT THESE OFFICES, HOWEVER, CANNOT BE FULLY IMPLEMENTED UNTIL ADDITIONAL RESOURCES ARE PROVIDED.

THE NEED TO ACT EXPEDITIOUSLY ON THIS SUPPLEMENTAL REQUEST IS GREAT. THE PILOT PROGRAM APPROPRIATION FOR 1987 IS RELATIVELY

SMALL. UNDER THESE CIRCUMSTANCES, THERE IS A SMALL BASE AGAINST WHICH EXPANSION COSTS CAN BE ABSORBED PENDING ENACTMENT OF A SUPPLEMENTAL APPROPRIATION. ANY SIGNIFICANT DELAY WILL SUBSTANTIALLY DISRUPT THE PROGRAM.

FEDERAL EMPLOYEES' RETIREMENT SYSTEM

OVER THE LAST SEVERAL YEARS, CONGRESS CONSIDERED A NUMBER OF PROPOSALS TO PHASE OUT THE EXISTING CIVIL SERVICE RETIREMENT SYSTEM AND OFFER A NEW SYSTEM THAT IS MORE FLEXIBLE AND COMPARABLE TO PLANS OFFERED IN THE PRIVATE SECTOR. THE FEDERAL EMPLOYEES' RETIREMENT SYSTEM ACT OF 1986 REPRESENTS THE CULMINATION OF THIS EFFORT. THE PROVISIONS OF THE NEW ACT ARE MANDATORY FOR ALL EMPLOYEES HIRED AFTER DECEMBER 31, 1983. MANY CURRENT EMPLOYEES HAVE THE OPTION OF JOINING THE NEW PROGRAM AND WE BELIEVE MANY WILL DO SO, PARTICULARLY LAW ENFORCEMENT PERSONNEL WHO ARE ELIGIBLE FOR SPECIAL BENEFITS UNDER THE NEW SYSTEM. AGENCY COSTS ARE DISPROPORTIONATELY HIGH FOR LAW ENFORCEMENT PERSONNEL CHIEFLY BECAUSE OF THE EARLY RETIREMENT PROVISIONS AND BECAUSE ANY SHORTFALLS IN FUNDING MUST BE BORNE BY AGENCIES INSTEAD OF THE OFFICE OF PERSONNEL MANAGEMENT. THE OVERALL NET INCREASE TO FINANCE 1987 COSTS OF THE NEW SYSTEM IN THE DEPARTMENT IS $68,651,000.

OTHER LEGISLATIVE ENACTMENTS

DURING THE 99TH CONGRESS, IMPORTANT LEGISLATION WAS ENACTED TO ASSIST OUR EFFORTS AGAINST THOSE WHO ATTEMPT TO DEFRAUD THE GOVERNMENT. THE FALSE CLAIMS ACT AMENDMENTS, THE PROGRAM FRAUD CIVIL REMEDIES ACT OF 1986, AND THE ANTI-KICKBACK ACT OF 1986

DEMONSTRATE THE ADDITIONAL LITIGATION ARSENAL NOW AVAILABLE AGAINST SUCH CONDUCT. MOST APPROPRIATELY, OUR EFFORTS WILL CONTINUE TO FOCUS ON PROCUREMENT FRAUD, PARTICULARLY IN THE DEFENSE INDUSTRY. THE ENACTMENT OF THESE NEW LAWS IMPOSES ADDITIONAL INVESTIGATIVE AND LITIGATION DEMANDS ON THE DEPARTMENT. AN ADDITIONAL $640,000 WOULD PERMIT FILLING 21 CIVIL DIVISION POSITIONS TO MEET OUR NEW RESPONSIBILITIES.

AT THE END OF THE 99TH CONGRESS, THE ATTORNEY GENERAL WAS AUTHORIZED TO RETAIN PRIVATE COUNSEL IN FIVE DISTRICTS FOR THE COLLECTION OF DEBTS. WE REQUEST $2,234,000 TO GET THIS DEBT COLLECTION PROGRAM STARTED. MOST OF THESE FUNDS WILL BE USED TO PAY THE LITIGATION COSTS--FILING FEES, SERVICE OF PROCESS FEES AND FEES TO RECORD LIENS--WHICH THE PRIVATE COUNSEL EXPECT TO INCUR, AND TO CONTRACT FOR A SYSTEM TO TRACK CASES REFERRED TO PRIVATE COUNSEL AND THE PAYMENTS THEY COLLECT. THE FEDERAL GOVERNMENT MUST VIGOROUSLY PURSUE AMOUNTS OWED TO IT. WE THINK THAT THIS INVESTMENT WILL HAVE SUBSTANTIAL RETURNS OF UP TO $91 MILLION.

PAY INCREASE

ANOTHER SIGNIFICANT COMPONENT OF THE SUPPLEMENTAL IS THE $29,476,000 TO FUND THE JANUARY 1987 PAY INCREASE OF THREE PERCENT. THE TOTAL COST OF THE PAY RAISE IS ESTIMATED AT ALMOST $60 MILLION. WE HAVE ALREADY ABSORBED MORE THAN HALF OF THE COSTS. FAILURE TO PROVIDE SUPPLEMENTAL FUNDING IN THIS AREA WILL ENCROACH UPON OUR ABILITY TO FUND NEWLY AUTHORIZED POSITIONS FULLY IN SEVERAL IMPORTANT AREAS, INCLUDING THE WAR AGAINST

DRUGS. THE SUPPLEMENTAL DOES NOT INCLUDE ANY FUNDS FOR THE EXECUTIVE PAY RAISES THAT RECENTLY WENT INTO EFFECT.

RELOCATION AND SPACE COSTS

BECAUSE THE PENNSYLVANIA AVENUE DEVELOPMENT CORPORATION WILL SOON DEMOLISH THE FEDERAL TRIANGLE BUILDING, MUCH OF THE CRIMINAL DIVISION WILL BE REQUIRED TO MOVE IN THE NEXT FEW MONTHS. THE COST OF RELOCATING THE EMPLOYEES INVOLVED AND THE HIGHER RENT FOR THE NEWLY ACQUIRED BOND BUILDING ACCOUNTS FOR OUR $3,264,000 REQUEST. THE BOND BUILDING CONTAINS SUFFICIENT ADDITIONAL SPACE TO PERMIT THE DEPARTMENT TO HOUSE SEVERAL CRIMINAL DIVISION COMPONENTS, THUS CONSOLIDATING THE DIVISION'S WASHINGTON, D.C. PERSONNEL IN TWO BUILDINGS, MAIN JUSTICE AND THE BOND BUILDING. IN ADDITION, THE FEDERAL BUREAU OF INVESTIGATION HAS DETERMINED THAT THE 1987 ESTIMATE FOR RENTAL OF SPACE WAS SHORT BY $2,000,000. SIMILARLY, A NEED FOR $1,180,000 FOR THE GENERAL ADMINISTRATION APPROPRIATION TO PAY RENT FOR SPACE HAS BEEN IDENTIFIED.

FEDERAL TELECOMMUNICATIONS SYSTEM

THIS PAST SUMMER, THE GENERAL SERVICES ADMINISTRATION NOTIFIED THE DEPARTMENT THAT FEDERAL TELECOMMUNICATION SYSTEM CHARGES WOULD BE 16 PERCENT HIGHER THAN THE ESTIMATES USED IN THE 1987 BUDGET. THE TOTAL COST INCREASE OF $6,272,000 IS DISTRIBUTED ACROSS 12 OF OUR APPROPRIATIONS.

72-165 O—87——58

HOUSING OF FEDERAL PRISONERS

WE CONTINUE TO CONFRONT SUBSTANTIAL PROBLEMS HOUSING CRIMINAL MARIEL CUBAN ENTRANTS WHO WE HAVE NOT BEEN ABLE TO RETURN TO CUBA. BASIC PUBLIC SAFETY RESPONSIBILITIES LEAVE US NO ALTERNATIVE IN THIS AREA. THE 1987 BUDGET DID NOT PROVIDE SUFFICIENT FUNDING FOR DETENTION OF THESE PRISONERS WHO ARE BEING RETURNED TO OUR CUSTODY ONCE THEY HAVE SERVED SENTENCES FOR VIOLATION OF STATE LAWS. EXISTING FACILITIES OF THE DEPARTMENT DESIGNATED FOR MARIEL CUBANS ARE ALREADY OVERFLOWING AND THE LOW SECURITY CHARACTERISTICS OF MOST OTHER INS DETENTION FACILITIES PRECLUDE FURTHER USE OF MARIEL CUBANS. THE SUPPLEMENTAL REQUEST INCLUDES $9,000,000 FOR THE IMMIGRATION AND NATURALIZATION SERVICE TO ADDRESS THIS SERIOUS PROBLEM BY USING THE FUNDS TO CONTRACT WITH STATE PRISON SYSTEMS TO HOUSE MARIEL CUBANS RETURNED TO THE CUSTODY OF THE ATTORNEY GENERAL.

THE MARSHALS SERVICE HAS SIMILAR URGENT NEEDS TO INCREASE ITS CAPACITY FOR HOUSING UNSENTENCED FEDERAL PRISONERS. THE NUMBER OF PRISONERS HELD HAS INCREASED BEYOND EXPECTATIONS BECAUSE OF THE BAIL REFORM PROVISIONS OF THE COMPREHENSIVE CRIME CONTROL ACT AND BECAUSE OF THE INCREASED TIME THAT PRISONERS ARE HELD IN CUSTODY. THE NEED IS A RESULT OF AGGRESSIVE INVESTIGATION AND PROSECUTION EFFORTS THAT HAVE LED TO INDICTMENTS. FURTHER COST INCREASES ARE DUE TO THE MOVEMENT OF PRISONERS FROM FEDERAL PRISON FACILITIES TO LOCAL JAILS AS A RESULT OF PAST INVESTMENTS IN THOSE JAILS UNDER THE COOPERATIVE

AGREEMENT PROGRAM. THE SUPPLEMENTAL REQUIREMENTS FOR THE SUPPORT OF U.S. PRISONERS APPROPRIATION IS $9,630,000.

INDEPENDENT COUNSEL

AS YOU KNOW, THE DEPARTMENT CANNOT CONTROL THE EXPENDITURES RELATED TO THE INDEPENDENT COUNSEL. THE LARGE NUMBER OF INDEPENDENT COUNSEL NOW OPERATING MAKES IT CERTAIN THAT THE $1,000,000 IDENTIFIED IN THE 1987 APPROPRIATION FOR THIS PURPOSE WILL BE INADEQUATE. WE SEEK AN ADDITIONAL $2,000,000 FOR THE ANTICIPATED EXPENSES RELATED TO THE INDEPENDENT COUNSEL INVESTIGATIONS. THESE FUNDS ARE PROPOSED TO BE AVAILABLE UNTIL EXPENDED.

NATIONAL SECURITY

OUR CONCERN OVER NATIONAL SECURITY IS EVIDENCED BY TWO REQUESTS TOTALLING $670,000. THE REQUESTS RELATE TO A NEED TO MAKE IMPROVEMENTS IN SEVERAL FOCUSED AREAS. FOR THE GENERAL ADMINISTRATION APPROPRIATION, RESOURCES ARE REQUESTED TO SUPPORT 12 POSITIONS THAT WILL ENHANCE THE OVERALL SECURITY OF THE MAIN JUSTICE BUILDING, STAFF AND OPERATE THE DEPARTMENT'S CRISIS MANAGEMENT FACILITY, AND SUPPORT THE NATIONAL SECURITY EMERGENCY PREPAREDNESS PROGRAM.

REAPPROPRIATION FOR FBI

THE REQUEST ALSO INCLUDES A TECHNICAL REQUEST TO REAPPROPRIATE $5,686,000 FOR THE FBI TO EXTEND THE AVAILABILITY OF UNOBLIGATED BALANCES TO FINANCE A PREVIOUSLY FUNDED CLASSIFIED PROJECT. WE ARE PROVIDING FURTHER INFORMATION REGARDING THIS

MATTER UNDER THE PROCEDURES REGARDING THE CONSIDERATION OF CLASSIFIED INFORMATION.

CONCLUSION

THE CHALLENGE BEFORE THE DEPARTMENT IN IMPLEMENTING THE MAJOR LEGISLATIVE INITIATIVES ENACTED BY THE 99TH CONGRESS IS GREAT. IT IS SYMBOLIZED NOT ONLY BY THE SIZE OF OUR REQUEST, BUT ALSO BY THE NEED FOR EXPEDITIOUS CONSIDERATION. WE TAKE ALL THESE NEW RESPONSIBILITIES QUITE SERIOUSLY. WE SEEK YOUR ASSISTANCE IN MEETING THESE CHALLENGES. WE URGE PROMPT AND FAVORABLE CONSIDERATION OF OUR REQUESTS.

BIOGRAPHY OF ARNOLD I. BURNS

Arnold I. Burns was sworn in as Deputy Attorney General of the United States on July 24, 1986. Prior to that appointment he served as Associate Attorney General, the third ranking post in the Department, beginning January 6, 1986.

From 1960 through 1985, Mr. Burns was the senior partner and Chairman of the Management Committee of the Park Avenue firm of Burns, Summit, Rovin & Feldesman. He practiced law for this firm, which he founded in 1960. Previously, he served for three years as an associate with the New York firm of Dewey, Ballantine, Bushby, Palmer, & Wood. His principal legal work has been in the corporate and securities field, including litigation and negotiation of mergers and acquisitions.

Arnold I. Burns was born in New York City on April 14, 1930. He received his B.A. degree from Union College, Schenectady, New York in 1950 and his J.D. from Cornell in 1953 where he was named to the Order of the Coif. Before entering private practice of law, he served as a captain in the U.S. Army, where he was a member of the Government Appellate Division of the Judge Advocate General's Corps and argued cases in the U.S. Court of Military Appeals.

Mr. Burns is married and has two children. He is a member of the American Bar Association, the New York State Bar Association, the Association of the Bar of the City of New York, and the Cornell Law Association.

1987 SUPPLEMENTAL REQUESTS

Mr. BURNS. Thank you. Good afternoon, Mr. Chairman and members of the Committee. This is my maiden voyage before the subcommittee. I am delighted to be here with you to discuss the Department's supplemental appropriation requirements for 1987.

NEW LEGISLATION REQUIREMENTS

Our request is for an aggregate of a little over $300 million. This falls into three categories. First, the lion's share, over $230 million, or seventy-six percent, to fund our new responsibilities under legislation passed at the tail end of the last Congress. I am referring to the Immigration Reform and Control Act, $146 million; the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act, $17 million; Federal Employees Retirement System Act, over $68 million; and an aggregate of approximately $2.2 million to fund private counsel for debt collection; Civil fraud statutes, $640,000; and Independent Counsel, $2 million.

REQUIREMENTS FOR UNCONTROLLABLE INCREASES

That is the first category, the new legislation.

The second category: to fund our uncontrollable expenses aggregating over $40 million, which includes the January 1987 pay raise, $29.5 million; a move of our Criminal Division out of the Federal Triangle Building into the Bond Building, $3,264,000; General Services Administration rent increases involving $3,180,000; and an FTS surcharge of $6,272,000.

Our third category involves over $20 million for prior programs. That includes $9 million to house Mariel Cubans; $5,686,000 for an FBI classified project; and some $9,630,000 for the support of unsentenced United States prisoners.

IMMIGRATION REFORM

I would like to take a minute or two to talk about immigration reform, if I may, Mr. Chairman.

The Immigration Reform and Control Act was the product of one of the longest and most difficult legislative undertakings in recent

memory. Its goal is to seize control over and to address successfully the substantial problem of illegal immigration plaguing us, to regain control of our borders.

At the same time, it seeks to uphold the immigration tradition of the United States, the firm and fair enforcement of laws designed to encourage the continued flow of legal immigrants. The comprehensive reforms of the Act must now be implemented. The bipartisan effort that went into enacting this law must continue. The Department has undertaken a vigorous effort to implement the provisions of the Act. Part of these efforts have been directed at determining the appropriate level of resources needed to fund the very substantial responsibility.

We are all very much aware that the Act imposed significant new responsibilities on INS, the Executive Office for Immigration Review, and the Civil Division. Our requests relate directly to the reforms of the Act and the need to ensure effective enforcement. Employer sanctions, the agricultural workers special program, improved vigilance at our border, vigorous pursuit of fraud in connection with the legalization and employer sanction programs, and the expeditious deportation of criminal aliens are all areas where we are in need of substantial resources.

The bulk of the supplemental appropriation request is spread across these enforcement activities. Effective implementation of the employer sanction provisions should reduce the enormous job magnet which attracts illegal immigration. Similarly, we propose a substantial augmentation of the Border Patrol and the implementation of programs to reduce the fraudulent use of entitlement and other benefits by illegal aliens.

Other enforcement initiatives are targeted at aliens engaged in criminal activities and at expediting the entry of certain categories of nonimmigrants from selected countries. The special agricultural workers program would allow agricultural producers to use temporary workers who could qualify for temporary resident status.

The Act also requires the Department to establish a Special Counsel for Immigration, for immigration-related unfair employment practices. The Special Counsel will receive charges of unfair practices filed by private individuals or officers of INS. This will happen all over the country. An administrative hearing may be sought by the Special Counsel for the purpose of seeking injunctive relief, back pay, or civil monetary damages.

The establishment of the Office of Special Counsel emanated from a concern that the new employer sanctions provisions might create an opportunity for employers, in order to avoid sanctions, to discriminate against those who appear to have foreign origins. The diversity of this Nation's people is one of its strengths. There is no excuse for an employer to discriminate and deny employment to those entitled to it merely to play it safe and to avoid the possibility of sanctions. The responsibilities of the office will be vigorously pursued.

Now, as I said, the supplemental requests for these activities total $145,961,000. The requested funds would provide 4,559 positions in 1987. Nearly ninety-five percent of these resources will be used by the Immigration and Naturalization Service.

Another initiative of the new legislation, legalization of eligible illegal aliens will, as provided in the Act, be financed from fees collected from persons applying for temporary residence status.

The ongoing efforts we have taken to implement the Act can only be sustained by supplemental resources in 1987.

Now, I have sitting with me the Commissioner of the Immigration and Naturalization Service, someone whom you all know, Al Nelson, who is by my side to make sure I do not make any mistakes in connection with this subject matter.

How am I doing so far? [Laughter]

UNITED STATES TRUSTEE NATIONWIDE EXPANSION

Mr. BURNS. I want to turn now to our Bankruptcy Trustee Program. As this subcommittee well knows, because it was instrumental in keeping this legislation alive, the enactment of the Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986 fulfilled one of the primary goals of the Bankruptcy Reform Act of 1978. By expanding the U.S. Trustee Program from a pilot program to nationwide status, Congress acted to sever from the judicial function the duty of administering bankrupt estates and to provide a watchdog over bankruptcy practice nationwide.

The U.S. Trustees will be responsible for such matters as ensuring payment of withholding and other taxes by bankrupt debtors, organizing and scheduling meetings of creditors, monitoring the filing of reports and schedules, and appointing individuals to serve as private trustees. Most significantly, the U.S. Trustees have important oversight responsibilities in preventing fraud and other abuses throughout the bankruptcy system.

The U.S. Trustee Program must now expand from its presence in eighteen Federal judicial districts today, to assuming responsibility for bankruptcy administration in eleven regions encompassing forty-nine judicial districts by August 23, 1987.

The Act created twenty-one bankruptcy regions encompassing all ninety-four judicial districts of the United States. Another thirty-nine districts will join the program by November 26, 1988, while the remaining six districts have five years before they must be brought under the program. These districts may opt to join as early as this coming August, August of 1987.

Now, the Act establishes new and higher fees and charges in bankruptcy cases, and it made provision that part of these fees shall be credited to a new U.S. Trustee System Fund. This fund, however, will not be able to fulfill its purpose of financing U.S. Trustee operations until 1989. The supplemental request for $16,993,000 in 1987 provides for 377 new positions and 123 work-years, to cover the first phase of the nationwide expansion. These funds include resources for the General Administration appropriation for its efforts in support of the U.S. Trustee Program.

Additional resources are requested in 1988 to bring the program to nationwide coverage. I repeat, these monies in 1987 and 1988 are monies designed to prime the pump. In 1989 we expect this program to be self-sustaining.

With the Department's support, Congress has concluded that the U.S. Trustee Program has been successful in the pilot districts and it must go nationwide. This program has improved the speed and efficiency of bankruptcy proceedings, increased the likelihood of successfully rehabilitating debtors, and it appears to increase the recoveries that go to creditors and are realized by creditors.

With other components of the Department, it will make significant efforts in uncovering fraud. Overall, the bankruptcy system's integrity will be enhanced. We are confident of that. We are committed to a vigorous U.S. Trustee Program. The establishment of the new offices required by the expanded program and the hiring of staff to support these offices cannot be fully implemented, as I have said, until we get additional resources.

We want this program to go forward without any disruption, and that is why we are asking for the additional monies. I have sitting on my left Tom Stanton, who is the director of our United States Trustee Program.

FEDERAL EMPLOYEES RETIREMENT SYSTEM ACT

Now, the provisions of the Federal Employees Retirement System Act of 1986 are mandatory for all employees hired after December 31, 1983. Many current employees have the option of joining the new program, and we believe many will do so, particularly law enforcement personnel who are eligible for special benefits under the new system. The overall net increase to finance 1987 costs of the new system in the Department is, as I have said, $68,651,000.

FRAUD ACTIVITY

Mr. Chairman, during the 99th Congress important legislation was also enacted to assist our efforts against those who attempt to defraud the United States Government. The False Claims Act amendments, the Program Fraud Civil Remedies Act of 1986, and the Anti-Kickback Act of 1986 demonstrate the additional litigation arsenal now available against such fraudulent conduct.

Most appropriately, our efforts will continue to focus on procurement fraud, particularly in the defense industry. The enactment of these new laws imposes additional investigative and litigative demands on the Department. An additional $640,000 would permit filling twenty-one Civil Division positions to meet our new responsibilities.

DEBT COLLECTION ACTIVITY

At the end of the 99th Congress, the Attorney General was authorized to retain private counsel in five districts for the collection of debt. This is a pilot program; this is an experimental program. We request $2,234,000 to get this pilot program underway. Most of these funds will be used to pay the litigation costs, filing fees, service of process fees, and fees to record liens which the private counsel expect to incur, and to contract also for a system to track cases referred to private counsel and to track the payments that they actually collect.

The Federal Government must vigorously pursue amounts owed to it, and pursue the deadbeats that owe the United States Government money. We think that this investment will have substantial returns of up to $91 million. But in all candor, the proof of the pudding will be its tasting. We will have to see how this works.

MARIEL CUBAN DETENTION

I want you to know that we continue to confront substantial problems housing criminal Mariel Cuban entrants who have not been able to return to Cuba. Basic public safety responsibilities leave us no alternative in this area. The 1987 budget did not provide sufficient funding for detention of these prisoners who are being returned to our custody once they have served sentences in State prisons for violation of State laws. As their sentences conclude, they keep entering our Federal prison system. Existing facilities of the Department designated for Mariel Cubans are already overflowing, and the low security characteristics of most of our INS detention facilities preclude the housing of Mariel Cubans. These are a bunch of tough characters.

The supplemental request includes $9 million for the Immigration and Naturalization Service to address this serious problem by using the funds to contract with State prison systems to house Mariel Cubans returned to the custody of the Attorney General.

HOUSING, UNSENTENCED PRISONERS

The U.S. Marshal Service similarly has urgent needs to increase their capacity for housing unsentenced Federal prisoners. The number of prisoners held has increased beyond expectations because of the bail reform provisions of the Comprehensive Crime Control Act and because of the increased time that prisoners are held in custody. The need is a result of aggressive investigation and prosecution efforts that have led to indictments.

Further cost increases are due to the movement of prisoners from Federal prison facilities to local jails as a result of past investments in those jails under the Cooperative Agreement Program. The supplemental requirements for the support of U.S. Prisoners appropriation is $9,630,000.

Mr. Chairman, members of the committee, the challenge before the Department of Justice in implementing the major legislative initiatives enacted by the 99th Congress is great. It is symbolized not only by the size of our request, but also by the need for expeditious consideration. We take all the new responsibilities quite seriously. We seek your assistance in meeting these challenges. We respectfully urge prompt and favorable consideration of all our requests.

Thank you so very much, Mr. Chairman.

IMMIGRATION REFORM AND CONTROL ACT

Mr. SMITH. In general terms, why is it that an act that is supposed to make it easier to enforce the immigration laws ends up requiring more people?

Mr. BURNS. Well, this Immigration Act—and I tried to make this point in my statement-in-brief—is very complicated. The first thing

that this immigration law is intended to do is to try to seal off our borders. That requires enormous increases in enforcement personnel in border control.

This Immigration Act has something brand-new: an agricultural workers program, to bring agricultural workers here who can then claim temporary residence and, ultimately, citizenship. That is a whole new system that has got to be set up and established. Something entirely new is a system which will involve counsel and judges and rules and regulations and personnel to see to it that aliens who are here legally are not discriminated against.

There is a whole new system involving sanctions against employers, for the first time, sanctions against employers who hire illegal aliens. There are all kinds of recordkeeping requirements. Again, there is an administrative procedure for complaints. There will be litigation involving this.

So, to answer your question with some precision, Mr. Chairman, this is really a magnum change in our law, a magnum change in the system that we will have to organize and monitor and the resource requirements are enormous.

FREE CIRCULATION OF ILLEGAL ALIENS

Mr. SMITH. Well, I have been down there on the border and gone with them in the helicopter and seen the illegals, many of whom had been in several times before. They would put the spotlight on them and then the vans that pull up. They don't try to run or anything because they know all it means is they're going to go in, get a meal and be taken back, and then they come back the next night.

My understanding was, that with sanctions, they will not want to come in, because there will be no job for them. It seems to me that the answer should be that there will be a shift in personnel. There should not be as much of a need to stand there and watch the border as there was before, but there will be more enforcement back in the country. I don't know how that relates and what kind of a shift this amounts to.

On a net basis, will there be an increase or are we just talking about an increase in some departments and not in others? Both of you may want to answer this question.

Mr. BURNS. I will just say this, that Congress, in enacting this legislation and in authorizing funds for it, realized that we will not know for some time to come whether or not the very desirable scenario which you have outlined will come to pass.

We expect that, yes, this magnet of which I spoke will be turned off and fewer people will come. But notwithstanding, we expect enormous pressures, continued and heightened pressures, on our border, particularly our southern border. We are now beginning to see it up on our northern border. The Act itself which was passed by the Congress speaks specifically of enhanced enforcement measures.

Al, would you like to comment on what I said?

Mr. NELSON. Yes, Mr. Chairman, again it is a pleasure to be before you and Mr. Rogers. I might ask that the statement we have prepared for the INS portion of this request also be submitted for the record. I think the Deputy Attorney General has covered most

of the points, so I won't go into it. Again, I think Mr. Burns covered it well.

Mr. SMITH. Fine.

[The statement of Mr. Nelson follows:]

DEPARTMENT OF JUSTICE

SUPPLEMENTAL APPROPRIATIONS

IMMIGRATION AND NATURALIZATION SERVICE
STATEMENT OF THE COMMISSIONER
ALAN C. NELSON
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON
THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE,
THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to appear before you in support of a major program enhancement for the Immigration and Naturalization Service. Before discussing the details of that enhancement, let me give you an overview of our funding for fiscal year 1987. We began the year with a Continuing Resolution appropriation of $593,000,000. The Administration is requesting supplemental appropriations of $137,843,000 for enhanced enforcement programs and the Special Agricultural Workers program authorized by the Immigration Reform and Control Act, $9,000,000 for the detention of Mariel Cuban criminals, $11,136,000 for increased costs of the Federal Employee's Retirement System and uncontrollable FTS increases, and $5,588,000 for the Federal pay raise that takes effect in January of this year. These amounts are reduced by a $24,598,000 rescission proposal to offset certain costs previously funded through appropriations that will now be paid for with inspections user fees. The result is an appropriation of $731,969,000 in this fiscal year. This will be augmented by reimbursements from fees paid by applicants who register under the Legalization program in fiscal year 1987. Obligations

for the Legalization program are expected to total $148,540,000 in 1987, of which $125,241,000 will be incurred by INS and $23,299,000 will be incurred by the Federal Bureau of Investigation. As such, INS' resource availability will increased by $125,241,000 from Legalization receipts and by $70,389,000 to be drawn from the inspections user fee account to pay associated INS expenses. Thus the total amount of program funds available to the agency will be $927,599,000 in 1987--a 56 percent increase over the initial Continuing Resolution.

In a few weeks I will be appearing before you in support of our FY 1988 budget request which involves total spending authority of $1.057 billion for the year, computed by counting only those Legalization reimbursements expected to be obligated by INS. This represents a 78 percent increase over the initial FY 1987 Continuing Resolution funding level.

Today I am here in support of a request for $147,793,000, which principally addresses the agency buildup required to implement the Immigration Reform and Control Act of 1986 (Public Law 99-603). Funds for Reform Act implementation total $137,843,000. Resources are also included for detention of Mariel Cuban criminals who are turned over to INS' custody after completing sentences in State and local facilities ($9,000,000) and to remedy a funding shortage due to a change in Federal Telecommunications System rates ($950,000).

Immigration Reform

Two major areas of activity are to be funded by this portion of the supplemental request: improved immigration law enforcement and the new agricultural worker programs.

Enforcement

The Reform establishes a large-scale enforcement program. The effort mandated by the legislation is part of a balanced approach toward a resolution of the Nation's interrelated immigration and border control problems. The concept of a broad amnesty/legalization program is accompanied by a multifaceted enforcement program which will establish control of the borders between ports of entry on a permanent basis, augment inspections resources at the ports of entry, assure the expeditious deportation of aliens who have committed crimes, and eliminate the availability of employment to undocumented aliens through implementation of a program of legal sanctions against employers.

The Act requires a vigorous, comprehensive enforcement effort to discourage, prevent, and deter the illegal entry of aliens into the United States, and to remove them if they are found here. Title I contains the "teeth" of immigration reform in three broad provisions: (1) the Employer Sanctions program to eliminate the job magnet to illegal immigration, (2) the Systematic Alien Verification for Entitlements (SAVE) program to eliminate the entitlements and benefits magnet to illegal immigration, and (3) the Moorhead Amendment and related provisions to enhance the security of our borders at and between ports of entry by expanding the Border Patrol, Investigations, Inspections, and Anti-Smuggling Programs. To implement the Employer Sanctions program in the interior 1,237 positions and $33,669,000 are requested in 1987. The SAVE provisions will require 85 positions and $1,958,000 in the first year. The resources required to implement the Moorhead Amendment and related provisions of the law in 1987 are 2,261 positions and $70,479,000.

Title VII of the Act--the MacKay Amendment--requires the expeditious location and removal of criminal aliens by the INS. This request includes 616 positions and $16,781,000 in 1987 to carry out these provisions.

Agricultural Workers

In recognition of the unique needs of growers, Section 301 of the Act creates a separate and distinct temporary worker program for agriculture, the "H-2A" program.

Section 302 of the Act mandates adjustment procedures whereby aliens who can demonstrate that they have performed seasonal agricultural services in the United States for at least 90 mandays during the 12-month period ending May 1, 1986 can apply for temporary resident status. It also calls for the establishment of procedures enabling aliens to apply for temporary resident status at American consular offices outside the United States. Resources totalling 117 positions and $14,956,000 are requested in 1987 to implement the agricultural worker provisions.

Detention of Mariel Cuban Criminals

The Immigration and Naturalization Service is requesting a supplemental appropriation of $9,000,000 to address the serious national problem associated with detaining Mariel Cuban criminals after they have served their sentences in State and local prisons and jails. This request stems from an existing shortage of Service detention facilities, the unsuitability of utilizing INS' minimum security facilities to detain hard-core criminals, and a shortage of resources to acquire additional non-Service detention space.

Due to the suspension of the December 14, 1984 accord between the United States and Cuba, INS has not been able to return Mariel Cuban criminals to Cuba since May 1985. This has created a severe detention crisis in INS detention facilities and in the United States Penitentiary at Atlanta. Atlanta has been operating under a moratorium against accepting additional Mariel Cuban detainees since October of 1985, forcing INS to detain hard-core criminals in its minimum security Service Processing Centers and in contracted space in local jails.

There are a number of problems related to long-term detention in INS facilities. First, the detention centers are minimum security facilities that were neither designed nor intended for the long-term incarceration of serious offenders. As a result, security problems in the form of disturbances, riots, and escapes--instigated primarily by Mariel Cubans--will continue to occur. Second, the hard-core criminals intimidate and victimize more passive detainees with whom they are comingled. Fundamental correctional procedures require the separation of detainees based on the degree of security risk. Placing violent criminals in INS' minimum security facilities clearly causes substantial difficulties protecting passive non-Mariel Cuban detainees.

As available detention space is occupied by Mariel Cuban criminals, space for aliens other than Cubans will become virtually non-existent. Without this supplemental appropriation, the funds allocated for non-Service detention will be required to detain Cubans. The Congress recognized this developing problem in FY 1986 and provided $3 million in supplemental appropriations to address it. This request extends and expands that action into FY 1987.

Increase in Federal Telecommunications System (FTS) Charges

An increase in resources of $950,000 is needed in order to fund additional costs which will result from higher charges for service from the Federal Telecommunications System (FTS). This is mainly due to unanticipated tariff increases and other system costs which are now projected to be above those originally established by the General Services Administration.

The resources we are requesting are essential for the Service to implement the Reform Act, continue to cope with the Mariel Cuban criminal problem, and provide for our telecommunications needs through the end of FY 1987.

IMMIGRATION ENFORCEMENT

Mr. NELSON. As you indicated, Mr. Chairman, having been there on the border, it is an important job that we control the border, but you can't do it all there. I think we realize that, and that is certainly one of the major reasons for the reform legislation.

If I might, I often give a football analogy, but it is getting closer to baseball season, so it's like having a successful baseball team, you need good hitting, good pitching, and good fielding. The same on immigration enforcement: you need good border enforcement, you need good interior enforcement at the job markets, with employer sanctions, and you need to prevent illegal aliens from getting benefits to which they are not entitled. That is the other side of this legislation, the Systematic Alien Verification for Entitlements program.

I think the immigration bill passed by Congress and signed by the President in November accomplishes those major goals and it does further enhance our border enforcement. We need to do more of that. We will never stop all of the people coming across, as you have observed. But we can improve that; with more people and more equipment, we could do a better job. It raises the cost for people to try to get across, and that's the deterrent.

Mr. SMITH. It won't reduce the workload for the border patrol?

Mr. NELSON. No, sir. Again, as the legislation mandates and the budget that we are submitting for the 1987 supplemental and, I assume, for the 1988 budget, is an increase in all of these areas. We are talking about roughly 1,100 new border patrol positions; that is, the Moorhead amendment to the bill.

In addition, we are talking roughly 900 or more investigation positions that will be the key people to deal with the border sanctions provisions, and a number of additional investigators to deal with the criminal aliens. We are going to be doing more by congressional mandate to try to be sure that criminal illegal aliens, are deported after they have served their time and so forth.

REDUCED APPREHENSIONS ON BORDER

Mr. SMITH. Well, there have been some reports that the pressure on the border has already started to reduce, is this correct?

Mr. NELSON. Well, to some extent. But we are taking a very cautious position, Mr. Chairman, as to what that means. The apprehension numbers are down. There is no question about it. We hope that this bill is driving that, and we think it is to some extent. But it is too early to tell. The people might be sort of sitting and waiting. As Mr. Burns indicates, now, the push factors of economic problems in Mexico, Central and South America and the rest of the world with political unrest and so forth, are all factors that will continue to drive a lot of people to come to this country. So there is no question that we need continued strength at the border as well as in the interior.

Mr. SMITH. Are you saying, you are not sure whether you will need an increase in the border patrol?

Mr. NELSON. We are sure we will because, again, you have the situation even with the lull that is there, as you point out, people get through. So the additional people we're talking about, the thou-

sand-plus, will again fill some of the gaps that we have had for a long time. The number of border patrolmen, as many have said, was one less than the number of Capitol police.

For a border that is 2,000 miles long on the Mexican side, 4,000 miles on the Canadian side, we have always been very thin in resources. So this is just building us up to a point where we can do a more effective job, and hopefully with the sanctions and the other provisions, do a more composite job to deal with the problem from all aspects.

LEGALIZATION APPLICATION FEES

Mr. SMITH. Have you determined yet, how much the legalization application fee is going to be?

Mr. NELSON. For legalization?

Mr. SMITH. Yes.

Mr. NELSON. We are close to that. As indicated, we should be announcing it very shortly. We have indicated that it is in the range of $150 to $250. I might indicate that the fee for the permanent resident, a visa application for somebody coming in, is $185. So there is certainly a comparability.

As you know, the legislation provides that the costs of this program shall be covered by fees, also that the fees shall be comparable to others. And we will be coming out with that and that should be announced within the next few days.

Mr. SMITH. Well, what is the comparable amount of work in the two cases—legalization versus naturalization?

Mr. NELSON. Clearly—and this is another factor that certainly we are considering—the work for the legalization application is more than for the visa, for example, because we have to create a whole group of new offices. There is automation and new procedures to be set up. So we think the comparability standard is a fair one, and we think the fee will be well within reason and fair. And certainly one factor, it should not be a burden on the American taxpayer to take care of this very significant benefit that these legalized aliens will be receiving.

Mr. SMITH. Will a fee of $150 to $250 discourage illegal aliens from applying?

Mr. NELSON. We think not, Mr. Chairman. Certainly, nobody who seeks to come in as a legal immigrant and pays the $185 for a visa, we hear no complaints there. We would suggest for the illegal alien who would qualify, that this benefit, if on the open market would probably be worth many thousands of dollars for the privilege of turning him from an illegal to a legal status.

Remember also that probably a good number of these people have paid thousands of dollars to alien smugglers to get here. Many are paying substantial fees to attorneys. One of the requirements is that they cannot be a public charge in order to qualify. If he/she can't afford the kinds of money we're talking about, well, then there is a question of whether they would meet the public-charge requirement.

So we think the fees are not only reasonable but fair and easily within reach of these people to pay.

BANKRUPTCY JUDGES

Mr. SMITH. Let's discuss your request for bankruptcy judges. How many openings do you have and how many do you think will be appointed and when?

[The written statement of Thomas J. Stanton, Director and Counsel, U.S. Trustee System Fund will be inserted in the record at this point:]

DEPARTMENT OF JUSTICE

SUPPLEMENTAL APPROPRIATION

UNITED STATES TRUSTEE SYSTEM FUND

STATEMENT OF THE DIRECTOR AND COUNSEL,
EXECUTIVE OFFICE FOR U.S. TRUSTEES
THOMAS J. STANTON

BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE ON
THE DEPARTMENTS OF COMMERCE, JUSTICE, AND STATE,
THE JUDICIARY, AND RELATED AGENCIES

Mr. Chairman and Members of the Subcommittee:

I am pleased to have the opportunity to appear before you today to discuss the 1987 supplemental appropriation request for the United States Trustees. The request is for 361 additional positions, 102 additional workyears and $16,436,000 in support of the nationwide expansion of the program and $243,000 for pay increases and conversion to the new retirement system. Funding of this entire request would raise the United States Trustees' 1987 budget to a total of 554 positions, 283 full-time equivalent workyears, and $28,179,000. In support of the administrative requirements of the trustees, the General Administration request includes $557,000 and 16 positions to support the nationwide expansion of the system.

As you know, 1987 is the first of two transition years to a nationwide program pursuant to the "Bankruptcy Judges, United States Trustees and Family Farmer Bankruptcy Act of 1986." The Act places 17 of the 18 former pilot judicial districts and 32 of the former non-pilot federal judicial districts in 11 regions

under the purview of the United States Trustee program in 1987. By the end of 1988, the second transition year, United States Trustees will supervise the administration of bankruptcy cases filed under chapters 7, 11, 12, and 13 of the Bankruptcy Code in at least 88 of the 94 federal judicial districts. Under transition provisions for judicial districts in the states of Alabama and North Carolina (see Sec. 302(d)(3) of the Act), program oversight may be deferred until October 1, 1992, in these six judicial districts. The bankruptcy judges there may choose to join the program sooner, as early as August 1987.

Congress established a 300-day deadline after enactment, or August 23, 1987, for the United States Trustees to assume program responsibilities over cases in 17 former pilot judicial districts and 32 additional federal judicial districts. After this date, case supervision will be the responsibility of the United States Trustee program whether or not an office has opened for the affected geographic area. (See Sec. 302(d)(1) of the Act.)

To meet this deadline, it is critical that the resources in the supplemental request be made available at the earliest possible time. The 1987 appropriation for the entire former pilot program covers 18 federal judicial districts. This budget is less than the supplemental request which expands program coverage to a total of 49 federal judicial districts. The base program can devote very few resources to a small expansion effort before

receiving additional funds. Therefore, with the existing base budget only a very limited expansion can be undertaken.

The United States Trustee System Fund was established by the Act to provide self sustaining financing for the program. Once program expansion is complete, we believe that future requests for appropriations can be provided completely from monies on deposit in the Fund. The Fund started with a zero balance in 1987. By providing direct appropriations to the program during its expansion, other deposits to the Fund from fees in bankruptcy cases will accumulate during the transition years of 1987 and 1988. Beginning with 1989, the Fund balance should be high enough from accumulated fee collections for appropriations from the Fund to finance the fully operational nationwide program for that and subsequent fiscal years.

Mr. BURNS. Well, there are two. There is a dichotomy there. There are bankruptcy judges under the new law, and then of course the United States Trustees.

Mr. SMITH. Yes.

Mr. BURNS. Your question relates to the bankruptcy judges.

Mr. STANTON. There are fifty-two new judges. My understanding is the Judiciary also has a supplemental before this Subcommittee, asking for the money to fund those judgeships. They want to start off just like we do as soon as you give us the go-ahead.

Mr. SMITH. Well, will the number of trustees needed depend on the number of judges?

Mr. STANTON. Well, the staffing projections that we have are based upon caseload rather than judges.

Mr. SMITH. Okay.

Mr. STANTON. To some extent, a few of those judges are going to create additional geographical problems for us, but we don't think they are going to be that substantial. Most of them are going to the larger areas except for Iowa, Mr. Chairman, where you're getting one in the northern and one in the southern district. But generally, they are going to places where the caseload already exists and we had already accounted for that level of staffing.

I would think it would be a small increase, but not a backbreaking increase.

Mr. SMITH. Mr. Rogers?

IMMIGRATION REFORM

Mr. ROGERS. Thank you, Mr. Chairman.

Let me get back to the immigration issue a minute. How many permanent positions do you anticipate that this money will allow you to field?

Mr. NELSON. I think, Mr. Rogers, we are in the range of 4,000-some-odd positions.

Mr. ROGERS. How many of those will be for the border patrol?

Mr. NELSON. We are projecting about 1,100 positions for the border patrol.

Mr. ROGERS. I thought it was supposed to be more than that.

Mr. NELSON. Mr. Rogers, we actually are asking for 1,800 positions for border patrol. The funding is there for the 1,100.

Mr. ROGERS. I see. I would like to focus on the question of whether or not you need the additional border patrol personnel. Now, my information is that in 1965 there were 110,000 apprehensions and by 1986 that had grown by 1.7 million. Are those accurate numbers?

Mr. NELSON. That is approximately correct.

Mr. ROGERS. That was through calendar 1986; correct?

Mr. NELSON. Yes. I do not recall whether we do it on a fiscal or a calendar year. But that's right.

Mr. ROGERS. And I believe you had told us that there had been a slight drop in apprehensions in recent months. Can you tell us what kind of numbers you're talking about now?

Mr. NELSON. The number of the drop—I don't have the numbers in front of me—but about a twenty, twenty-five percent drop in the months since the immigration bill has been passed. On that score,

in further response to the Chairman's question, too, while we have had a drop—and we were glad to have that and we hope it's a trend for the future— we are still higher than every other previous year in the history with this trend. So again it is a little early to take a lot of credit for the drop.

Mr. ROGERS. Also, the river has been high.

Mr. NELSON. The river has been high. We think some people are sort of sitting and waiting to see what's going to happen. There are a lot of people and we advise those who might qualify for legalization, not to leave the country where they might have problems getting back. There are many reasons.

That is why we have not made a dramatic statement that we think the bill itself has forced the drop because frankly we thought when the bill passed, we might even see a continued increase assuming people would try to get in here. So it's hard to judge.

We are hoping, of course, that the thrust of the law is that with the increased enforcement and the increased public attitude and employer sanctions, that it is going to be tougher for illegal aliens to get here or to stay here. That is the hope that the numbers will drop. But it will be gradual, there's no question.

Mr. ROGERS. Well, in addition to those apprehensions, now, how many are getting through that you are not catching?

Mr. NELSON. We don't know that, Mr. Rogers. My predecessor, General Chapman, made the statement—and I think there's a lot of merit in it, "If you can count them, you can catch them." I think there is, as I say, merit in that. We don't know. Our best estimate is that we are probably apprehending about one out of two.

Mr. ROGERS. About half.

Mr. NELSON. About half.

Mr. ROGERS. So even with the extent of your activities right now, one-half are still getting through. That means at least one-and-a-half million a year are getting through; is that right?

Mr. NELSON. Well, again you do have to realize there are some repeaters. So again, in rough terms, if we're catching—let's round it off at two million—then two million, maybe half of those have made a couple of attempts on an average. Let's assume that. So that would be a million have come in, and we would say that half of those return. So we are saying our best estimate again, Mr. Rogers, is about a half-a-million increase each year, over the last number of years in illegal aliens to our population.

Mr. ROGERS. That are making it through?

Mr. NELSON. That are making it through and staying. We're saying, roughly, let's say, on the figures I gave, about a million are making it through, a million individuals, but probably half of those are returning.

Mr. ROGERS. I see. But at least a half-million are getting through.

Mr. NELSON. That's correct. That is again our best estimate.

BORDER PATROL STAFFING

Mr. ROGERS. How many border patrol people do you have now?

Mr. NELSON. About 3,600.

Mr. ROGERS. And you are proposing to add 1,100?

Mr. NELSON. That's correct.

Mr. ROGERS. Which would be a third of what you have.

Mr. NELSON. That's correct.

Mr. ROGERS. With that number of additional border patrol people, what kind of impact do you think you could have on these 500,000 that are still getting through?

Mr. NELSON. I think, Mr. Rogers, in going back to the Chairman's questions, there is a composite of the border enforcement, the job market, employer sanctions, and the entitlement enforcement and the criminal alien enforcement. All those together, I think, is what you have to put together. I don't think you can measure with just one segment of it. But I think again the hope and the intention is that we will over time turn it around and cut back on the number of illegals coming and staying.

Mr. ROGERS. But as it is right now, if a person in Mexico or from that border area wants to get through, if they keep trying, chances are they're going to make it, under present border surveillance; is that correct?

Mr. NELSON. That's a fair statement.

Mr. ROGERS. And unless we beef it up, we're going to have to face that unless this law somehow discourages them; is that right?

Mr. NELSON. That's correct.

Mr. BURNS. It's our best guess that we cannot guarantee that the enhancement by 1,100 border patrol people will indeed solve this problem. We can't guarantee that. But we surely can guarantee that the failure to have this enhancement and other parts of this program will, in effect, leave the border wide open. There are continuing pressures on that border both by legals and illegals, people smuggling drugs across that border. This absolutely requires our attention.

DRUG ENFORCEMENT

Mr. ROGERS. Can you document the drug issue for us more than you already have?

Mr. BURNS. I think that we certainly can, and I would be glad to do so by supplemental letter.

Mr. ROGERS. Can you just elaborate on it verbally here as well?

Mr. BURNS. Absolutely. As we know and as the Members of the Congress know, we have a major, major problem on our southwest border. It is in the corridor, there are drugs and a trail of blood and terrorism and death all the way from Colombia coming all the way up right across that border and into our cities all over the country, the first six major cities and then it fans out.

With this enhanced border patrol business and with our enhancements in other areas of the Department, DEA and FBI, we are going to have cross-designations and working with the Customs Service and with the Coast Guard and other agencies, we are going to try to stem that tide, stop that flow.

And the INS border patrol agents, you should know, have made the largest seizures of drug contraband of any of the agencies.

Is that right, Al?

Mr. NELSON. That's correct.

Mr. ROGERS. I was going to ask you what kind of impact the additional INS personnel would have on drugs.

Mr. BURNS. So it is really, as Al said, the enforcement aspect of border patrol, the enforcement aspects of this bill and this new legislation, that are very, very important. But they are part of an immigration mosaic. So, too, the immigration problem is part of the overall mosaic of law enforcement and trying to stop these aliens who are criminals and are coming with criminal intent.

PROBLEMS WITH DELAYING ENFORCEMENT EFFORT

Mr. ROGERS. Can you put this off until fiscal year 1988?

Mr. BURNS. Without question we cannot. These are programs that are in progress. These are programs that cannot withstand any delay. The pressure on us is not to delay, the pressure on us is to accelerate this effort with all due deliberate speed. We have received a lot of pressures in this regard, but that has to be balanced against the need for putting people who are trained, who are able, who are qualified to do the job. That is the time constraint on us.

FEE STRUCTURES

Mr. ROGERS. Now, the fees that the Chairman asked you about, is it your intent to structure the level of that fee, so as to perfectly repay you for the expense of the service and no more?

Mr. BURNS. That would be ideal, and of course that is not an easy task to perform because——

Mr. ROGERS. But that is the intent?

Mr. BURNS. The intent is to balance two things: one, to have the self-funding; and second, to have it fair when one compares it to the amounts paid by the legal aliens.

Mr. ROGERS. Well, now, why should a person who has broken the law and gained entry into this country illegally, be allowed to gain citizenship for the same or a lower price than a person who has waited in line for ten years to get here? Why should he be given a break?

Mr. BURNS. You can't pick a fight with me on that one, Congressman.

Mr. ROGERS. I really think that $185 is the very minimum.

Mr. BURNS. Well, Congress has really laid down in the legislation our guidelines, and that is to have the self-funding.

Mr. ROGERS. Well, whatever. It just seems to me, you know—and there is an old theory of the law that one should not gain by criminal act, and the person illegally entering this country has done so without regard to our laws and our well-being, and without regard to that person who has legally waited in line somewhere else to get in here the proper way.

To give that person a break under the law is not fair and proper, and I would hope that you would put that fee at least—at least—at the level of a person coming in legally, at the very least, and I think it should be substantially more than that.

Mr. BURNS. That is something we could consider.

Mr. ROGERS. $185 offends me. If that's what we're charging a person who has gone through the process for ten years to get here, and you're letting a law-breaker get in here for the same price, then I am going to be offended, and I think most Americans would feel exactly the same way.

U.S. TRUSTEE SYSTEM

I certainly hope that the trustee system that you are going to put in the bankruptcy courts speeds up the process. As I made this point the other day to one of the witnesses here testifying on the bankruptcy courts, this is a major problem. There is a case that is pending in the Eastern District of Kentucky, still pending today, that I started when I started practicing law—1964. It is still sitting there. In the meantime, the creditors have gone bankrupt and have died or had their houses repossessed or whatever. And there sits those cases. Nobody is doing anything about it.

I would hope that we could get this system in place and start cracking the whip.

Mr. BURNS. Well, I think that I could probably find a case, Congressman, if I looked, that has been pending since I was admitted to the practice of law in 1953.

The problem, as you know, is that there has been too much cholesterol in the system and that there is a hardening of the arteries, and the purpose of this trustee system is to provide a rotor-rooter system. [Laughter.]

Mr. BURNS. To see to it that there is indeed a system of someone monitoring the flow of that calendar and keeping these cases moving. You know, I have been equivocal about some of the answers to some questions where we can't look into our crystal ball and predict with certainty. Here I speak with greater confidence because of the fact that we have had the pilot program going and what the returns tell us is that this works.

Mr. ROGERS. So we shall see, we hope.

Thank you, Mr. Chairman.

INS RESCISSION

Mr. SMITH. I just want to point out one or two things. You are one of the few Departments that has requested an increase for fiscal year 1988, due to increased workload. We understand that, but we have a budget situation that may not provide for such an increase.

In other words, you start working from a baseline. For any Department that had a baseline that is lower than their needs for the next year, it becomes very difficult because the presumption is that nobody needs more dollars than they had last year.

So, with that in mind, you now want to rescind $25 million because of the immigration user fee account. I am not quite clear why you want to do that, since it just complicates our problem.

Mr. BURNS. Why is that?

Mr. SMITH. Because we wouldn't have it then to offset, if it's rescinded. We look at bottom lines of outlays and obligational authority, and if we rescind that in a supplemental——

Mr. BURNS. We think you are entitled to a credit.

Mr. SMITH. Maybe I didn't explain it right. But you have a supplemental in here, a big supplemental, and any money that can be reprogrammed to offset some of the needs for the supplemental would be helpful. It's going to be very difficult to get that kind of money for a supplemental.

Well, anyway, the rescission date is up in another week, I guess. I guess the date is up on the 16th.

Mr. NELSON. I think it is, yes.

Mr. SMITH. Thank you very much. We have some questions that we would ask you to answer for the record.

Mr. BURNS. Thank you very much.

[Questions and answers for the record follow:]

QUESTIONS FROM MR. NEAL SMITH

DEPARTMENT OF JUSTICE FY 1987 SUPPLEMENTALS

Immigration Reform - Legalization

Question:

The Department of Justice requests $145,961,000 for implementation of costs in FY 1987 associated with immigration reform. Also, the Department plans to spend an additional $148,540,000 in FY 1987 for the legalization program; however, no supplemental is requested because the program is to be self-funded through collection of application fees. Please describe how you envision the system for collecting these fees will work.

Answer:

The system for collecting legalization fees will be identical to INS' current fee collection system for applications and petitions. Currently applicants submit their fees when filing for benefits, these receipts are then deposited nightly.

Question:

There seems to be some concern about the interpretation of the usage of the application fees. On what basis did the Department decide that the legalization program would be entirely self-funded from the application fees collected?

Answer:

We do not believe that there is any question of interpretation regarding application fees. Section 201 of the Immigration Reform and Control Act of 1986, states that the Attorney General shall provide for a schedule of fees to be charged for filing applications for legalization. It further states that "The Attorney General shall deposit payments received under this paragraph in a separate account and amounts in such account shall be available, without fiscal year limitation, to cover administrative and other expenses incurred in connection with the review of applications filed under this section". Consistent with this Act, we plan to fund the legalization program through receipts from application fees from those aliens applying for legal status.

Question:

What assurances can you give the Committee that you will collect sufficient application fees to fund your FY 1987 requirements?

Answer:

We do not envision any difficulties with receiving sufficient fees to cover our funding requirements inasmuch as we expect a high initial turnout. However, because no one is absolutely certain of the size of the illegal alien population eligible to apply for

legalization or what percentage of this population will actually apply to legalize their status, these estimates are still subject to some adjustment. If the estimates are low and more aliens than planned apply, INS will be able to use the additional receipts to fund expansion of the program. If the estimates are high and sufficient numbers of people do not apply over the life of the program, we will take action to reduce expenditures. Such reductions, if necessary, would not occur until late 1987 to ensure that the reductions are not just a fluctuation in the pattern of receipts.

Question:

We are aware that some projections call for a relatively small turnout of applications early on in the legalization program because of a lack of trust on the part of illegal aliens. What will be the impact on the legalization program if this occurs and you fail to collect sufficient fees?

Answer:

Our field offices report expectation of high initial turnout. If we fail to collect sufficient fees because of a small turnout of applicants early on in the process, we plan to contract the program as swiftly as possible, thereby reducing our costs.

Question:

You estimate 1,788 full-time equivalents will be hired for legalization purposes in FY 1987 -- 1,002 by INS and 786 by the FBI. How many positions does this equate to?

Answer:

The 1,002 full-time equivalents for INS' legalization program equate to 2,369 staff being hired. The 786 full-time equivalents required by the FBI equate to 1,526 staff being hired.

Immigration Reform - INS Enforcement

Question:

INS requests $137,843,000 in supplemental appropriations associated with improved enforcement. Of this amount, $10,140,000 is compensation associated with a planned growth of 4,316 permanent positions and 489 permanent workyears. It appears that you plan to have these personnel on board for an average of less than 1 1/2 months in 1987. Considering the importance of this program, why are you waiting so long to bring personnel on board?

Answer:

Because of the importance of this program, it is critical to hire qualified candidates to fill new positions. Our budget estimates reflect the constraints inherent in our capability to recruit and hire significant numbers of new employees within a fiscal year.

However, it is important to note that the Employer Sanctions provision of the legislation contains a 6-month employer education period. As such, full enforcement does not begin until June, 1987. Our budget request reflects this reduced staffing need.

Question:

INS is requesting an increase of 4,316 positions in this supplemental, almost a 40 percent increase over currently funded positions in 1987. Did you utilize existing workload formulas to determine the number of positions for each category? For example, did the increase in immigration inspectors drive an increase in detention and deportation officers?

Answer:

Where applicable, INS relied on known inter-relationships between programs to determine positions in various categories. For example, in the Legal Proceedings program, one secretary was included for every two attorneys hired. However, because the legislation provides for many new activities there are some areas where applying base ratios to new activities was not appropriate.

Question:

What was INS' original supplemental proposal as submitted to the Justice Department?

Answer:

INS' original supplemental proposal submitted to the Justice Department requested 4,853 positions, 3,041 FTE workyears, and $421,985,000.

Question:

Did Justice adjust these numbers and, if so, why?

Answer:

Justice adjusted these numbers to reflect the self-funding nature of the legalization provision of the legislation and to more realistically depict INS' ability to recruit and hire large numbers of additional staff.

Question:

Did OMB adjust the INS numbers after they were submitted for review?

Answer:

Yes.

Question:

Why, when the overall average increase in INS positions is approximately 40 percent, does INS increase the number of their attorneys by almost 90 percent, from 291 to 544?

Answer:

The Immigration Reform and Control Act of 1986 contains significant changes to the current immigration laws. INS' Border Patrol, investigations and Anti-Smuggling programs will drive the litigative workload upward. In addition, it creates an entirely new body of law relative to legal sanctions against employers of illegal aliens. In addition, a significant number of attorneys will be required to prepare and prosecute sanctions cases against employers.

Question:

Can you assure the Committee that INS, Justice and OMB have applied rigorous job standards and workload formulas in estimating the number of personnel requested in this supplemental?

Answer:

Yes.

Question:

Are you confident that in fact all the personnel in each job category are necessary?

Answer:

Yes.

Question:

INS requests $12,427,000 for increased travel and transportation. Even if every one of the 4,316 permanent positions are filled and each of those personnel travel, this amounts to almost $3,000 per person. Why are you requesting such a large amount for travel? What assumptions were used in computing your estimates?

Answer:

Only a portion of the $12,427,000 is intended for travel. The majority of these funds will be spent on training the many new employees who will be entering the Service. The cost of basic training for our new officer positions ranges between $4,000 and $6,000. Additionally, approximately $2,000,000 of this is for alien travel.

Question:

Why does INS require $7,104,000 for printing and reproduction? Please provide a detailed list of what these funds will buy.

Answer:

The majority of these funds, $7,049,000 will be used for the implementation of the employer sanctions program, for printing and distribution of forms and descriptive information. All employers in the U.S. must receive and begin to use the new form (required by the Act) by June 1, 1987. At the same time the forms are received, employers must also receive sufficient information and instructions to understand how the form must be used. Distribution of the form will be accomplished by direct mail. Information will be disseminated by direct mail and through trade publications, magazines, inserts, posters, and other printed materials.

Printing and reproduction costs under the Special Agricultural Worker program are projected to cost $50,000. This is needed for printing of application forms and information materials describing the program for prospective applicants.

Finally, a limited amount of printing will be funded using $5,000 allocated under Administrative Services for personnel security purposes. Such items as posters and brochures will be produced with these resources.

Question:

Please provide a list of "Other Services" to be procured with the $14,782,000 requested by INS.

Answer:

Listed below is a breakdown by program of the $14,782,000 requested for "Other Services".

Decision Unit	Amount ($000)
Various Enforcement Programs:	
Repairs and Maintenance of Vehicles	$4,062
Detention and Deportation:	
Contractual Detention Space	1,676
Adjudications and Naturalization:	
Voluntary Agencies (Volags)	1,196
Data and Communications Systems:	
ADP and Contractual Maintenance	5,395
Administrative Services:	
Public Information Campaign	800

Decision Unit	Amount ($000)
Full-field Investigations and Payroll costs associated with requested positions	$1,653
Total	14,782

Question:

How did INS arrive at the estimated amount for supplies and materials? Was it based on an historical factor per each new position?

Answer:

INS used its standard module costing tables to develop resource estimates associated with supplies and materials for new hires. The information contained in this table is based upon historical data.

Question:

INS requests over $38,000,000 for equipment. Please provide a list, broken out by program (e.g., border patrol), type of equipment (e.g, helicopters), number of pieces to be procured (identify if lease or buy), and cost.

Answer:

Listed below is a breakdown by decision unit for the $38,000,000 requested for equipment.

Decision Unit	Amount ($000)
Border Patrol 260-Sedans; 375-4x4s; 33-All Terrain vehicles; 5-Helicopters; 635-Mobile units; Pocket scopes and goggles	$14,459
Investigations 510-Sedans, 36-Surveillance vans, 510-Radios, furniture for new positions	11,017
Anti-Smuggling 20-Sedans; 20-Radios; 12-Trucks	264
Detention and Deportation 16-Sedans; 12-Trucks; 68 Buses; 92 Radios	4,148
Adjudications and Naturalization Furniture and word processing equipment; Personal computers	1,119

Decision Unit	Amount ($000)
Data and Communications Systems	
Digital Voice Privacy	2,280
253-Bay station, 32-Module units, 175-Computer; 1 LLLTV	2,725
Intelligence	
Photography equipment	52
Construction and Engineering	
Furniture	1,623
Executive Direction and Control	
5-Sedans	77
Administrative Services	
11-Sedans; 5 PAX Cargo	236
Total	38,000

NOTE: All equipment will be purchased rather than leased.

Question:

INS requests $35,000,000 for land and structures. Please provide a list of projects broken out in a manner similar to the INS FY 1988 request on page 65 of their justification. In addition, please provide for each project a short explanation of why the funds are required in FY 1987.

Answer:

The funds for all of these projects are requested in 1987. However, we request that they remain available until expended to allow for adequate time to complete construction. Although language proposing no-year authority for these funds was inadvertently omitted from the President's budget, it is the Administration's intent that these construction funds remain available until expended. As you know, due to the time required for site acquisition, etc., the construction of facilities often spans several years.

Project	Amount
New detention facility	$15,000,000
Renovation of Border Patrol Stations	16,000,000
Modification of Topographic features of borders	4,000,000
Total	35,000,000

The following list depicts Border Patrol construction project locations.

Location	Site Acq.	Construction	Total
Partially funded:			
El Paso, TX		$2,600	$2,600
Ajo, AZ		850	850
Naco, AZ		650	650
Planned facilities:			
Temecula, CA	$200	1,800	2,000
El Centro, CA	67	600	667
Las Cruces	67	600	667
Laredo, TX	66	600	666
Under consideration:	790	7,110	7,900
Brownsfiled, CA			
Las Cruces, NM			
McAllen, TX			
Calexico, CA			
Cotulla, TX			
Tecate, CA			
Nogales, AZ			
El Centro, CA			
Uvalde, TX			
Yuma, AZ			
Yselta, TX			
Total	1,190	14,810	16,000

Immigration Reform - General Administration

Question:

How much is requested by the Executive Office for Immigration Review for expansion of their priority ADP system? Please break out the costs by type of cost, i.e., equipment purchase/lease, supplies, software, personnel?

Answer:

The Executive Office for Immigration Review (EOIR) is requesting $1,260,000 in ADP costs for FY 1987. The breakout of this request follows:

Equipment lease	$311,000
Supplies	20,000
Contract with private sector contractor including software development, systems installation and other direct charges.	890,000
Travel	28,000
Communications	11,000
Total	1,260,000

Question:

It appears EOIR plans to have these positions filled for an average of three months in FY 1987. Does this still appear achievable and do you still require the full 42 workyears?

Answer:

EOIR, in anticipation of this considerable administrative task, is establishing hiring procedures which address the large number of positions to be filled. EOIR has also identified the geographical locations where these additional positions are needed. At this time, EOIR believes that the goal is achievable and that the magnitude of work still dictates the full complement of 42 workyears. EOIR is ready to implement its hiring program once it receives approval to begin.

Question:

Your justification states that the growth in EOIR positions is based on INS assumptions. Since the growth in INS positions is about 40 percent, we can assume their workload would increase proportionately. Why does EOIR request an increase in positions of almost 70 percent, from 290 to 490 positions?

Answer:

Initially, we would note that we are not aware of a direct relationship between an increase in the number of INS positions and an increase in its workload. In addition, it should be noted that any increase in INS positions may not, because of the various nature of INS functions, affect EOIR workload to any extent. We do know that INS projected an increase of a certain specific number of cases which must be adjudicated by EOIR. Our own statistical information will tell us the number of positions we need to adjudicate a specific number of cases. Based upon INS' workload projection and our own statistical information, EOIR has estimated the need for 200 additional positions beginning in 1987 and continuing throughout 1988.

Question:

Why does EOIR require an additional $1,293,000 for travel and transportation, which equates to almost $6,500 for each of the additional 200 positions?

Answer:

Of the $1,293,000 requested for travel, $1,229,000 is for the travel EOIR expects to conduct in 1987 as a result of the criminal alien provisions of the Immigration Reform and Control Act which require the expeditious coordination and conduct of civil deportation or exclusion proceedings to adminstratively adjudicate the immigration status of alien inmates incarcerated by federal, state and municipal correctional authorities as a result of convictions for various types of criminal offenses. To comply with

the Act, EOIR's judges will be required to hold hearings in the 50 states at various prison facilities as opposed to regular Immigration Judge courtrooms. These funds will cover the travel expenses EOIR anticipates incurring for FY 1987 to implement this program.

The remaining $64,000 are normal, detail-city, travel expenses associated with the new Immigration Judge positions.

Immigration Reform--GLA

Question:

General Legal Activities requests 43 permanent positions, 16 workyears and $2,295,000 for immigration reform. The other divisions/agencies of Justice appear to be assuming their additional positions will be filled for less than three months in FY 1987. For Legal Activities, this would equate to 10 workyears instead of 16. On what basis are you requesting 16?

Answer:

The General Legal Activities workyear request includes three workyears for the Civil Division and 13 workyears for the newly enacted Office of Special Counsel for Immigration-Related Unfair Labor Practices. The Civil Division request indicates the additional positions will be filled for approximately three months. However, the request for Special Counsel reflects an anticipated start-up date of May 1, 1987, which is established in the enacting legislation. Therefore, the workyears have been calculated to accommodate the additional positions for approximately 42 percent of the year.

Question:

Why does Legal Activities require $253,000 for travel and transportation, which equates to almost $6,000 for each of the 43 additional positions?

Answer:

The Civil Division has experienced travel costs at an average of $5,000 to $7,000 per person in the area of immigration litigation over the past two years. This historical experience was used to develop the request for 1987 travel costs. We believe that these expenses are not excessive due to the amount of travel involved in immigration matters. Since there is no similar experience associated with the Office of Special Counsel, we have also used the Civil Division experience to develop the estimates for this Office.

Question:

Please breakout the $674,000 in "Other Services" and $178,000 in equipment requested by Legal Activities.

Answer:

This request includes $450,000 for automated litigation support, and $145,000 for costs associated with court reporting and filing, systems development and research services for the Civil Division. Also, included is an amount of $79,000 for similar services for the Office of Special Counsel. The additional resources for equipment will be used to purchase office furniture for the Office of Special Counsel and ADP equipment for the Civil Division.

U.S. Trustees

Question:

General Administration requests 16 permanent positions, 12 workyears and $557,000 associated with expansion of the U.S. Trustee program. You estimate 10 workyears for the 16 new positions, which assumes you will have all the positions filled for an average of about 8 months in FY 1987. Is this the case and, if not, provide a revised estimate of when you anticipate filling these positions and what your revised workyear and compensation estimates are?

Answer:

Yes, it is true that estimates provide for 10 workyears associated with 16 permanent positions. It is important to understand that to support the implementation of the Bankruptcy Judges, United States Trustees and Family Farmer Bankruptcy Act of 1986 (Public Law 99-554), it was essential for the General Administration (GA) appropriation to undertake actions within its responsibilities and fund the personnel necessary to expand the Trustees' nationwide system immediately. The law requires the Trustees to expand its program to 49 judicial districts in 11 regions by August 1987. The remaining 39 districts in 10 regions will be opened during 1988. In order to set up these offices, the GA appropriation is required to do preparatory duties, such as: (1) coordination, acquisition, alteration and occupancy for the newly acquired space, (2) procurement of supplies and equipment, (3) administrative support, (4) required security clearance measures, as well as (5) financial and accounting support to efficiently process the greatly increased financial and payroll transactions which will result. The aforementioned resources are required in full in order to support the mission of the U.S. Trustee nationwide expansion.

United States Trustee System Fund

Question:

The U.S. Trustee System Fund requests 361 permanent positions, 102 workyears and $16,436,000 to expand the system. Are you confident you will require the full 102 workyears and associated funding?

Answer:

Yes, the workyears will all be needed to meet the deadline imposed by the "Bankruptcy Judges, United States Trustees, and Family Farmer Bankruptcy Act of 1986" for supervising the administration of bankruptcy cases in a total of 49 federal judicial districts. The workyear estimate is based on only about three months' average salary and related costs being paid for the average employee hired. Depending on how soon funds from the supplemental are made available to the program, many of the employees to be hired can be placed on the payroll for five or six months.

Question:

The Trustee System Fund requests a total of $3,779,000 for "Other Services." Please provide a break out of these services.

Answer:

A break out of the $3,779,000 estimate is as follows:

Item	Estimate ($000)
Reimbursable services (Audit Staff, FBI background checks)	$1,300
ADP systems design & engineering	675
Office of Personnel Management (OPM) employee background investigations	497
Contract for chapter 11 quarterly fee collections	275
ADP contract for operations & maintenance	242
ADP requirements analysis & other studies	204
Employee training	148
ADP & office equipment maintenance & service contracts	128
ADP systems analysis and programming	110
Court reporters	82
Employee data and payroll services	47
Management consulting	28
Graphics services	32
Credentials and I.D. photos	11
Total	3,779

Question:

How many trustee offices do you currently have, what is their average caseload and what is the average size of their staff? How many new offices do you plan to open, what is their average projected caseload, and what will the average size of their staff be?

Answer:

UNITED STATES TRUSTEE PROGRAM
OFFICES, STAFFING AND CASELOAD

Projected Averages for Nationwide Expansion

	Number of UST Offices	Average Staff	Average Caseload
Pilot Program	15	15.3	9,480
1987 Expansion	26	10.4	4,621
1988 Expansion	35	9.7	6,648
All offices, after expansion	76	11.0	6,514

The 1986 Act expanded the role of the U.S. Trustees in several significant areas, including monitoring cases for substantial abuse of the bankruptcy process and assisting prosecutors in the detection of white collar bankruptcy crimes such as fraud, embezzlement or misappropriation of case funds. The offices will also be required to collect chapter 11 quarterly fees for the U.S. Trustee System Fund. These activities all require additional 1987 funding for the former pilot offices. Total field office staffing for the specified offices will increase from 173 positions under the pilot program to 229 positions under the nationwide program. For the average staff comparisons to be most informative, then, the average staff figure for former pilot field offices was calculated from the anticipated level including the 1987 supplemental request.

Several factors assist in explaining variations appearing in the table. First, the pilot program districts were selected in 1978 as a compromise between no program and one which would be tested in all 94 federal judicial districts. As such, the pilot districts are not a representative sample of all 94 districts. For example, two of the largest districts in the country in terms of case filings, the Northern District of Illinois and the Central District of California, are included in the pilot program. Another pilot district, the Northern District of Alabama, has disproportionately high filings under chapter 13. Offices to be added under the expansion cover wider geographic areas than the average pilot program office. Travel time would raise an office's staffing relative to the number of cases being supervised. And the mix of cases, whether filed under chapter 11, the most time consuming in terms of resources, or under another chapter, will affect the projected staffing of an office.

Bond Building

Question:

A total of $3,264,000 is requested for relocation costs of several Justice Department divisions into the Bond Building. Of this

amount, $702,000 in General Administration, $1,465,000 in General Legal Activities, and $215,000 in the Antitrust Division result from GSA rent increase. Does this increase take into account rent decreases at the old locations?

Answer:

Yes, the requested increase reflects the net change in rental costs between the old locations and the Bond Building.

Question:

Please explain why the Antitrust Division, which is not being relocated to the Bond Building, may pay additional rent?

Answer:

The Antitrust Division will incur additional rental charges because of the method of charging Departmental organizations for space in the Washington, D.C. metropolitan area. Because of this method, an adjustment to the rental charges for the other components of the General Legal Activities appropriation will also be required.

Question:

Do any of the funds requested for the relocation provide any equipment or capability not available at the previous location? If so, how much is requested?

Answer:

Because we are consolidating several Criminal Division offices, there will be a need to provide a more secure access control system. In addition to enhanced security, the Division seeks to modernize its operations by constructing a computer room, copier rooms and installing data communication lines. Of the total request, $822,000 is devoted to one-time relocation costs, which includes the expenses associated with the above-mentioned modifications.

Security

Question:

The Department requests a total of $550,000 for three security programs: the Justice Command Center (JCC), National Security Emergency Program, and improved security at the Visitor Center. While these three programs appear to have merit, it is unclear why they weren't requested during the normal budget process.

Answer:

In FY 1986, during the development of the Department's FY 1988 budget request, resources were requested for all three programs, totaling 14 positions, 12 full-time-equivalent workyears (FTE) and $1,661,000. At that time, taking into consideration a range of

circumstances, it appeared that delaying these projects until FY 1988 would be feasible. However, since that time forward funding has been necessitated in all three areas as follows:

Justice Command Center - Project CHOSUN is in the process of being installed now. The 24-hour "watch officer" capability provided by the JCC has proven to be invaluable to Department officials. The single watch officer cannot handle the JCC requirements and the Project CHOSUN requirements.

National Security Emergency Programs - There has been a dramatic increase in government-wide emergency planning activities. The Federal Emergency Management Agency (FEMA) and the Defense Mobilization Systems Planning Activity (DMSPA) are both imposing requirements on DOJ for active participation in developing plans for continuity of government and for participating in exercises of these plans. For the first time, DOJ is now required to involve our regional offices in the planning and in the exercises. We must have resources to meet the demands being placed on us by FEMA and DMSPA.

Visitor Center - Increased security for the Main Justice building is promulgated in part because of several foreign national extradition cases in which the Department will be involved. The foreign nationals involved are members of known terrorist organizations and drug-related cartels and have made threats against various federal officials. There is also a fundamental need to improve the effectiveness of our security at the Main Justice building.

Question:

What is the urgency that requires supplemental appropriations and what would be the impact if funding was delayed until FY 1988?

Answer:

Project CHOSUN is in the process of being installed now. The Justice Command Center (JCC) was completed in May of 1986. The single watch officer cannot handle the JCC requirements and the Project CHOSUN requirements. Resources are needed immediately to enable the DOJ to meet its responsibilities.

Requirements for participating in emergency planning and participating in the numerous exercises are on us now, not FY 1988. The DOJ Emergency Coordinator is traveling to various regional U.S. Attorneys Offices this month, as this is being written, to give instructions to our regional offices.

The recent actions taken by the DOJ to extradite terrorists from Europe and South America have considerably increased the probability that the "open", "soft target" Main Justice building and its employees will become the target for retribution by the terrorists. The threat exists now.

GSA Rent/FTS

Question:

We understand that your request for supplementals to cover increased GSA rent and FTS costs is out of your control; however, we would like to know the basis for your requested increases.

Answer:

The basis for our FTS request is due to rate increases. The General Services Administration (GSA) estimate for 1986 was approximately $65 million short of costs, governmentwide. GSA stated that the increase was due to unanticipated tariff increases and savings which did not materialize. It was further stated that the tariff increases were actions they could not control since increases are approved by the Federal Communications Commission (FCC) and the State public utilities commissions. These decisions were reflected in higher bills from FTS communications carriers. In accordance with the law that created the FTS fund, GSA is mandated to recover the additional tariff costs from customer agencies.

Subsequent to this action GSA revised 1987 and 1988 FTS estimates. This took place well after our 1987 budget was constructed. The increases sought by the Department in 1987 are based solely on the estimates provided by the GSA. In fact, no growth in usage has been included.

The GSA rent increases are sought for appropriations whose availabilities are not sufficient to meet the decision to restore the rates to a market level. This was determined during the fall update of the Work Space Management Plan and Budget Justification, a joint GSA and OMB exhibit. After review of these documents, which agency space and facilities personnel and financial managers complete jointly, it was determined that an increase would be required to meet expenses for space which is currently held and is within GSA guidelines.

Question:

Have you received any new billings or information from GSA that would alter your request?

Answer:

We have not.

Litigation Resources

Question:

General Legal Activities requests 25 permanent positions, 6 workyears and $2,760,000 for additional litigation resources. Are you confident you will fill all your positions as requested and will require the full workyears?

Answer:

Yes, we are confident that if the requested resources are appropriated, we will fill the positions promptly and will, therefore, require the workyears requested. It should be noted that in recognition that approval of the supplemental would occur well beyond the mid-point of the fiscal year, we have requested a workyear equivalent of only 25 percent of the full annualized amount.

Question:

Based on latest budget execution data, do you still require the full $2,000,000 requested for Independent Counsel?

Answer:

Yes. Projections provided to the Department by the Administrative Office of the U.S. Courts (AOUSC) indicate that Independent Counsel costs for the currently active investigations could exceed $3 million in 1987. Since several of the counsel were not in full operation until late in January 1987, the Department must rely on projections of need provided by AOUSC rather than budget execution data.

Question:

Do you anticipate that the recent lawsuits questioning the constitutionality of the Independent Counsel will result in a lessening of their operation and reduce costs?

Answer:

We do not think that there will be any material changes. In fact, the lawsuits may have the effect of increasing the cost of the investigations because of delays interposed into the proceeding, and the necessity for the counsel to prepare arguments in answer to the issues raised in the lawsuits.

Support of U.S. Prisoners

Question:

The Marshals Service is experiencing an increase in the number of prisoners and the length of time they are held in contract jails. The projected increase in jail days and costs results in their request for $9,630,000. Please provide the number of jail days and average daily rate provided in the FY 1987 appropriation and the increase requested in the supplemental.

Answer:

The original 1987 appropriation request was based upon an estimated 1,340,000 jail days at a rate of $38.38. The supplemental request cited an additional 260,000 days for a total of 1,600,000. At the time the supplemental was prepared the jail day rate was calculated

at $37.00. Since then, we have seen a significant increase in this rate, which is now expected to reach $39.00 a day by the end of the fiscal year.

Question:

How many jail days have been used to date for 1987 and what were the number of days used for the same time period in 1986 and the total number of jail days for 1986?

Answer:

During the first quarter of 1987 a total of 384,265 jail days were reported. This compares with 348,150 days for the first quarter of 1986. A total of 1,425,435 days were reported for all of 1986.

Question:

What is your average daily jail rate to date and what was the average through the same date in 1986?

Answer:

The average daily rate calculated on December 31, 1986, was $37.37. The estimated rate one year ago was $35.32. This represents an increase of 6 percent or $2.05 per day.

Question:

Based on latest execution, have you revised your FY 1987 estimate?

Answer:

In our best judgment, a supplemental funding need of $9.6 million continues to be the minimum necessary to meet our anticipated requirements for the Support of U.S. Prisoners appropriation. Much of the effect of the Administration's accelerated war against drugs is just now beginning to be felt. The problem of detaining a growing number of drug-related prisoners will continue as 1987 progresses.

INS Rescission

Question:

The INS recommends a rescission of $24,598,000 due to a reduced requirement for funds for immigration inspectors at air and sea ports which are to be funded from amounts collected from the "Immigration User Fee Account". It is our understanding that INS will fund not only the 557 positions identified in this rescission through the user fee, but also an additional 150 inspectors not currently on board. Is this true?

Answer:

No. INS plans to fund an additional 300 inspectors, which in 1987 will utilize 150 FTE workyears from receipts to the user fee account.

Question:

Do you foresee the additional 150 inspectors as being sufficient to reduce the airport delays envisioned when the user fee was included in the 1987 Appropriations Act?

Answer:

We foresee the 300 inspectors we plan on adding as sufficient to reduce the airport delays envisioned when the user fee was included in the 1987 Appropriations Act.

Question:

If the Congress fails to approve the rescission, does the Department plan to reprogram the funds for other purposes? If so, can you provide us the details of the proposal.

Answer:

If Congress does not approve the rescission, the Department plans to reprogram the funds to cover items requested in the 1987 supplemental appropriations request for INS. At present we have not developed a detailed proposal. We are hoping that Congress will support the Administration and approve the proposed rescission. As I understand, the 45-day period to act on the President's rescission proposal expired about March 15, 1987.

Pay Raise Supplemental

Question:

The Department requests a total of $29,476,000 associated with the January 1987 federal pay raise. Your total requirement for this pay raise is $59,940,000 and you plan to absorb a little over half this amount, $30,464,000. Do you believe you will have difficulty in absorbing this amount, especially considering your budget execution to date?

Answer:

Because the proposed absorption amounts have been known for some time, Department organizations have been able to take the steps necessary to absorb these amounts. Therefore, barring unforeseen emergencies, the Department as a whole will not have major difficulty absorbing half of the 1987 pay raise.

Question:

Do you believe the absorption will result in any RIFs, furloughs, or hiring freezes?

Answer:

We do not believe that RIFs or furloughs will result, however, we anticipate delaying hirings and leaving vacancies open for longer periods of time.

Question:

Do you anticipate having to reprogram funds to cover the absorption, and if so, do you have any idea from where?

Answer:

We may have to reprogram available funds from other areas to cover absorption of pay. This, however, will be difficult since a large portion of the Department's budget is for personnel and related expenses.

Question:

Please provide for the record the FY 1987 personnel compensation baseline from which the pay raise amounts were estimated, by appropriation.

Answer:

Following are the 1987 baseline personnel compensation amounts used to estimate the pay raise amounts.

Appropriation	Amount ($000)
General Administration	$36,423
U.S. Parole Commission	5,667
General Legal Activities	114,218
Foreign Claims Settlement Commission	375
Antitrust Division	25,769
U.S. Attorneys	208,869
U.S. Trustees	6,070
U.S. Marshals	88,385
Community Relations Service	3,531
Federal Bureau of Investigation	646,362
Drug Enforcement Administration	182,674
Immigration and Naturalization Service	309,524
Federal Prison System	
Salaries & Expenses	298,469
Buildings & Facilities	2,528
National Institute of Corrections	1,520
Total, Federal Prison System	302,517

Appropriation	Amount ($000)
Office of Justice Programs	13,155
TOTAL, Department of Justice	1,943,539

Increased Retirement Contributions

Question:

The Department requests a total of $68,651,000 for implementation costs of the new Federal Employees Retirement System (FERS). It is our understanding that your estimates are based on OMB-approved assumptions. Do you have any experience yet to confirm or deny those assumptions, at least for new employees?

Answer:

Although our data are preliminary, it appears that the assumptions used for new employees (those hired since December 31, 1983) are correct. We do not have sufficient experience to determine if the assumptions regarding the number of old employees (hired before December 31, 1983) who elect to switch or the percentage of the payroll paid to FERS employees are correct.

Question:

What is the basis for assumption that 40 percent of employees currently enrolled in the Civil Service Retirement System (CSRS) will transfer to the new system?

Answer:

This assumption was provided by OMB. Informally, it is our understanding that this is also the assumption used by the Congressional Budget Office in analyzing the proposed legislation. OMB did not permit the use of alternate assumptions unless the agency could "provide convincing justification for doing so."

It is our belief that law enforcement employees (who comprise more than 50 percent of the Department's payroll) may switch at a higher rate because of the enhanced benefits available to them under FERS, however, we have no experience yet to document this belief.

Question:

How many Justice personnel are in CSRS in FY 1987, and how many do you estimate will transfer between July 1, 1987 and September 30, 1987?

Answer:

Our 1987 request is based on 64,030 persons. This amount is composed of the 61,793 persons under CSRS as of the end of October, plus the 2,237 new positions authorized by the Congress in the 1987 appropriation.

Based on OMB instructions, we assumed that 20 percent of those eligible to transfer would do so on July 1, 1987, and the remaining 20 percent on December 31, 1987. This means that 12,806 persons will transfer between July 1 and September 30, 1987.

Question:

How much of your request is tied to this transfer?

Answer:

Of the total request of $68,651,000, $20,213,530 or approximately 29 percent of the total is related to CSRS personnel who transfer to FERS.

QUESTIONS FROM MR. ROYBAL

FY 1987 Supplemental Request

Special Counsel for Discrimination

Question:

The Department requested an FTE staffing level of 13 for the Office of Special Counsel. How did the Department arrive at the estimate and how did it assess the expected workload of the office?

Answer:

The 13 FTE planned for the Special Counsel are required to support the 30 positions required for 1987 based on the current start-up date of May 1987.

The Special Counsel is a new organization which resulted from the enactment of the Immigration Reform and Control Act of 1986. Because the activities planned are new, it is difficult to predict the workload of this component. However, the Department plans to establish an Office of Special Counsel in 1987 to handle the initial implementation of the anti-discrimination provisions, and has planned on a substantial increase in the size of the office for 1988.

Question:

How does the Department intend to handle discrimination complaints based on the new immigration bill at the district and regional levels? What additional resources will be required to establish field offices for the enforcement of the anti-discrimination provisions of the bill?

Answer:

The Department intends to make optional charge forms available at INS, EEOC, and United States Attorney offices throughtout the country. Written charges will be mailed to the Special Counsel at the Department in Washington. The Special Counsel and the Department will monitor the charge filing process and the office's workload to determine if there is a need for the establishment of regional offices. The current request does not include resources for the establishment of regional offices. It is unclear at this point whether such offices will be needed.

Question:

What has the Department done to monitor potential complaints based on adverse employer actions since enactment of the bill? Did the Department take into consideration outstanding allegations of discrimination when developing its plans for establishment of the Office of Special Counsel, and, if so, how is that reflected in the Department's request?

Answer:

The Department has worked diligently to establish the new Office of Special Counsel, which has responsibility under the Immigration Reform and Control Act of 1986 (IRCA) for conducting investigations of alleged violations of section 102 of the Act. To date, the Department has received only a few charges of discrimination under IRCA. Those charges which raise claims cognizable under Title VII will be given to the EEOC. Other charges potentially cognizable under IRCA will be held for delivery to the Special Counsel.

Question:

How is the Service coordinating its activities with the EEOC to ensure that complaints are filed with the proper agency and that complainants do not lose legitimate causes of action simply because of delays due to erroneously filing with the wrong entity?

Answer:

The Department is consulting with EEOC to ensure that procedures are in place to effectuate the "overlap" paragraph of the discrimination section. We are working with EEOC to develop procedures ensuring that complaints are not lost due to misfiling.

Legalization Program

Question:

What are the projected costs and staffing levels for the legalization program for 1987? What are the assumptions underlying those estimates, including the expected number of applicants, fee structure, and expected receipts in fees?

Answer:

Our projected expenses for the Legalization Program for 1987 are $148.6 million of which $125.2 million will be incurred by INS and the remainder will be incurred by FBI. These expenditures in 1987 and continued funding in 1988 will allow for the processing of up to 3.9 million applicants for temporary residence. The projected number of applicants was developed using census data and other estimates of the illegal alien population in the country. We have finalized our fee structure. It provides reduced rates for families.

Question:

List all the services for which applicants are expected to pay during the application process and your best estimates of the costs of each such service (including payments to individuals and entities other than INS, such as payments for assistance in preparing applications).

Answer:

All applicants must pay the INS fee for the processing of their application for temporary residence, $185. The application fee for a minor child living with his or her parents is $50. A maximum fee of $420 has been established for families. This fee covers work authorizations and identification cards for individuals who are approved for temporary residence.

Outside entities may require fees for services such as fingerprinting, photographs, and medical exams. It is difficult to estimate what an alien would pay for a medical exam. However, qualified designated entities may charge up to $25 per applicant for fingerprinting, photographs and processing of applications. In addition, they may charge applicants up to $75 to provide counseling and assistance in completing the application in the event that it is needed. We are paying qualified designated entities $15 to $16 for each application we accept for their assistance to the applicant in completing the application.

In isolated cases, aliens may file applications for waivers of grounds of excludability under Section 212(a) of the Act, as amended, in conjunction with their applications for temporary residence. Each application for waiver filed involves a $35 charge.

Aliens may also appeal denials of their applications for temporary residence. The charge established for filing an appeal is $50.

The fee to be charged for applications for permanent residence has not yet been established.

Question:

Estimate the total costs that a family of four would incur for the legalization process, assuming that they needed all of the above.

Answer:

A family of four would incur a cost of $420 for filing an application for temporary residence.

Qualified designated entities may charge up to $25 per applicant for fingerprints, photographs, and processing of applications. In addition, they may charge applicants up to $75 to provide counseling and assistance in completing the application in the event that it is needed. We have not been able to ascertain the fees that personal lawyers may charge.

Should it be necessary for a family member to file a wavier of grounds of exlusion or appeal the denial of an application for temporary

residence, the fees established for these procedures would have to be paid. It is not probable that the average family will have to pay these costs.

Question:

What are the fees that INS currently charges for comparable services, such as processing of registry date applications?

Answer:

The House-Senate Conference Report on the Immigration Reform and Control Act of 1986 indicates that the conferees intended that the fee to be charged under the legalization program should be comparable to the fee charged an alien entering the United States as an immigrant. The fee charged for immigrant visa processing is $185, which includes $35 for each relative petition and $150 for each visa issued by the Department of State. The fee for processing a registry date application will remain $50.

Question:

INS has requested 292 positions, 1,002 FTE, and $125,241,000 for the Legalization Program. A fee structure will be established to reimburse the costs related to the legalization activities of INS and the FBI. It was recently reported that INS will charge $175 per application and $400 for each family application. In discussing the following question, use the data developed to support these two fees.

What costs will be included in establishing the fees to be charged to applicants under the legalization program? For example, will cost include funding for research into development of fraud resistent documents, training for personnel staffing the offices and high speed data and communications systems?

Answer:

INS has not requested any appropriated positions for legalization. All costs to the INS will be included in the fee. These costs include: establishment and administration of over 100 offices nationwide, the trained personnel to operate them, all equipment, furniture and supplies, as well as the automated systems to support the program.

Question:

Given that the fee structure is designed to cover INS' and the FBI's costs and is related to the number of applicants, what will happen to the fees should INS significantly over/underestimate the number of applicants? Would the fees be adjusted? For

example, if only a small number of applicants come forward for amnesty, would the fees have to be significantly increased? Would INS try and collect additional sums from the applicants? Would INS retain the additional monies if its fees are too high? Would monies be refunded in such cases?

Answer:

We do not intend to adjust the fees for temporary residence. We will establish a fee for adjustment to permanent residence that will allow the program to be self-supporting. That is, if the number of temporary residence applicants who come forward runs high we will be able to set a lower fee for adjustment to permanent residence.

Question:

Explain what costs of the FBI are to be included and for what type of activities? Are any other agencies and organizations assisting in the legalization program? If so, who are they and how will their costs be included in the fees?

Answer:

The FBI's activities will include name and fingerprint checks for all applicants. There are no other Federal agencies or organizations assisting in the legalization program whose costs will be covered by fees. States will be reimbursed for background and other checks requested by INS.

Legalization and Overview

Question:

INS states that it will establish about 100 temporary offices in key locations and four regional processing centers (page 4 of the Legalization budget) and has requested 292 positions, 1,002 FTE, and $125.2 million. What is the basis for these estimates? Is it related to anticipated caseload data (e.g., number of expected applicants)?

Where will the 100 or so offices be located? What was the basis for the site selections? For example, how many will be in the Los Angeles District Office? Why that number? What input from outside organizations (e.g., church groups who work with undocumented workers) was obtained in their selection?

Answer:

INS has not requested any appropriated positions to support legilization. The temporary office sites were established based on projections from the 1980 census, as well as surveys of INS districts and volunteer agencies who are familiar with alien populations.

The legalization offices will be in the following locations:

The Los Angeles area will have 15 legalization sites, and have a capacity to handle over 3,000 applications per day. Our Los Angeles District Office management has worked very closely with volunteer agencies in the area.

Question:

The legalization program will be started in May of this year and suboffices will be opened specifically to handle applicants for temporary residence who have lived here prior to January 1, 1982. Will the employees who work in these offices be present employees, new hires or a mix of both? If employees are to be transferred from your district offices, what will be the impact on services at these offices?

Answer:

There will be a mixture of new hires, reemployed annuitants, and current INS employees. Local district directors will consider impact on their operation when determining sources of recruitment for staffing the legalization offices.

Overall/General

Question:

INS has limited resources to provide the services to the alien population. With the new legislation, INS has greatly increased its service-related mission.

What impact will the new Act have on your ability to carry out your existing responsibilities (e.g., adjudication and naturalization) especially in view of the large number of requests for information regarding status of cases and the time people spend waiting in very long lines to discuss immigration-related matters with overworked INS staff?

Answer:

We have taken into account the possibility that the Reform Act could have some impact on existing activities in adjudications and naturalization. In view of the level of resources being added for the implementation of the legislation, we feel that existing operations will not be negatively affected. Service management will continue to concentrate on improving services to INS's clients and reducing waiting time.

Question:

Will the emphasis to implement the legalization and enforcement aspects of the new immigration Act have any effect on the services you now provide the public. In other words, will this be of such a high priority that personnel and resources from various activities will be transferred to assist in implementing the new Act with the resultant effect that the normal immigration services provided in prior years will take even longer--longer lines when arriving at your district offices and increased complaints of people attempting to contact you by telephone.

Answer:

We do not envision that the emphasis that is being placed on implementing the Reform Act will have a significant impact on normal immigration activities. The Administration is keenly aware of the need to continue operations of the basic INS program while minimizing the impact of efforts related to the Reform Act. Service managers are taking appropriate steps to assure that normal operations continue in a satisfactory manner and that planned improvements in the delivery of services are implemented as planned.

Question:

Your district offices have been sharply criticized in certain locations including my own district of Los Angeles about the long lines of people who have to wait to obtain service in person and the complaints of people attempting to contact your agency by telephone. What actions has your agency taken to alleviate these problems and have they been successful? Have the waiting times gone down?

Answer:

INS has moved to address these problems as effectively as possible. With respect to responding to telephone inquiries, the Service over the past several years has worked systematically on improving both

telephone accessibility to the public and its responses to phone inquiries. In 1984, INS established the Western and Eastern Telephone Service Centers to serve the calling public in nine major cities, four in California (Los Angeles, San Diego, San Francisco and San Jose) and five in the East (New York City, NY; Newark, NJ; Philadelphia, PA; Boston, MA; and Hartford, CN). Since the implementation of the Regional Center approach, the Service's ability to respond to phone inquiries has risen dramatically. At present, for example, the Western Center assists approximately 60,000 callers per month. For Los Angeles alone, annual call volumes were about 254,000 calls answered prior to establishing the Western Center. Since the Center was established, an average of 398,000 Los Angeles callers are assisted per year, an increase of 56%.

At present, nationwide, "Ask Immigration" (AI) message library telephone answering systems are operating in 24 major cities (6 with completely automated systems and 18 with systems involving Tape Librarians--Operator Assisted Systems). By the end of March 1987, automated AI systems will have been installed in 3 more cities, bringing the total to 27.

INS is very sensitive to the problem of public lines at Los Angeles and several other major district offices. The Service is presently engaged in a study to identify and analyze the major factors which contribute to this problem in order to develop viable permanent solutions. To some extent, the need for additional staff to serve the public has been a recurring problem due to constraints beyond the control of INS. In the case of the Los Angeles District Office, management at that office has recently instituted a process of scheduling "guaranteed" appointments for those persons each day who are not served because the available tickets for that day have been exhausted. Now, persons either still in line or those with tickets not reached that day are referred to a clerk for a letter granting them a specific future appointment. Typically, because of the volume of people coming into the Los Angeles office each day, the appointments are running about two weeks from the date of receipt of the letter. Persons with bonafide emergency circumstances are granted more immediate appointments.

In addition, two telephone lines are being installed for the public to contact the Los Angeles office to make appointments without having to wait in line. The office is investigating the possibility of offering extended business hours during the week as well as being open to the public on Saturdays as another way of helping to relieve this problem and better serve the public.

In June 1987, we will increase the information services staff directly serving the public at the Los Angeles District Office by four people. We believe that this will certainly provide better service to the public along with other improvements which have been made.

A comprehensive field study and analysis is being done now, involving major offices, to identify major factors which contribute to long public lines. The results of the study will be used to effectively

address the problem with lines. This study will produce information which allows the formulation of estimates of waiting time and an assessment of the effectiveness of measures to reduce it. We do not at this time have information on average waiting times.

The study will be focused on developing approaches to increase the volume of people served in major offices. The direct effect of increasing service volumes with existing or enhanced resources will be reduced waiting time.

1987 Supplemental Justification of Requirements

Question:

The INS Supplemental request for 1987 indicates an increase of 254 positions for your Information and Records Management activity. How and on what basis will these positions be allocated to your district offices? How are your cases per district and per worker in each district handled? What is your goal for case processing? How many of these positions will be allocated to your Los Angeles District Office? Is your Los Angeles District Office, as well as other offices, adequately staffed to meet your goals? If not, why have you not requested additional staff positions in your 1988 budget?

Answer:

The positions will be allocated to the INS district offices according to known and projected program workloads. Of the 254 positions, 82 are allocated to support Information and Records for the Systematic Alien Verification for Entitlements (SAVE) Program, 96 are to support employer sanctions employment verification activities and 76 are added requirements of the enhanced border enforcement and special agricultural workers programs.

The goal for case processing for these positions is to provide immediate information and records support to the associated enforcement and agriculture activities.

The Los Angeles District Office will be allocated 22 of the 254 positions. Based on current projections of workload, this should be adequate staffing to meet our goals. The same is true for other INS offices. Positions can be shifted if actual workload levels are higher than those projected during the program planning phase.

Test of INS Library System

Question:

In 1986, you indicated a fully automated, disk expandable system was installed at San Jose to test and evaluate the equipment capability to provide direct local access to the Ask Immigration

library tapes and then forward calls needing assistance to Western Telephone Service Centers. What were the results of your test and evaluation and will the system improve your operations in that Center's area of operation, especially the Los Angeles District Office?

Answer:

The experience with the San Jose test and evaluation has been successful in dramatically expanding service to the calling public throughout the San Jose area. Prior to this test, all local San Jose callers could only get into the Ask Immigration (AI) library system through five long distance lines into the Western Center located in Los Angeles. With the automated disk system installed at the San Jose INS office, local callers can now call directly by way of 14 local phone lines connected into the disk system which instructs each caller on how to use the system and enables callers to select any message they desire. Experience over the years has shown that 70% of all callers are satisfied by the AI library subject messages, with only 30% needing additional "live assistance" beyond the AI recorded subject message. This has also proven to be the case in the San Jose test. This system enabled INS to expand phone service from 5 to 14 lines without requiring additional costly long distance lines into that Center.

Plans are now being implemented, based on tests of automated disk expandable telephone answering equipment at San Jose, to install similar systems for Los Angeles, San Diego and San Francisco before the end of 1987. The local lines serving Los Angeles will be expanded to 28 when installation of the equipment occurs later this year.

These automated systems will allow INS to increase substantially the number of local phone lines for the public access to information contained in more than 50 subject tapes.

1987 Supplemental for FTS

Question:

An increase in FTS charges for this activity as well as for data and communications systems is requested. What will be the effect of any of these increases on these activities, i.e., will you decrease availability of telephone or number of the people who handle the calls? Also, what will be the effect of these changes on the expansion of such systems?

Answer:

If supplemental funding is not allowed for the FTS rate increase, we will be forced to find other ways to fund these costs by using funds in other parts of the budget. INS is well aware of the need to maintain and improve telephone access to its numerous offices. This access will not be reduced and planned system improvements will be implemented to the extent that available funding will permit.

Language Abilities of INS Staff

Question:

Your Los Angeles District Office handles a multinational population who speak various foreign languages. How capable is your staff in communicating with such people? What types of delays do you encounter in Los Angeles and elsewhere due to the inability of your staff to communicate with certain nationalities? How do you plan to improve the communication and language skills of your staff in order to respond at the new legalization offices?

Are you able to retain personnel with good communication and language skills on your information staff or do they transfer for promotional purposes to other areas of the INS and elsewhere? If so, have you any plans for improving the incentive for

people to continue serving in these areas? In addition, how will your legalization suboffices be staffed as to capability to communicate in various foreign languages.

Answer:

The information services staff at the Los Angeles INS office is most capable of effectively serving a multinational population. At present the Los Angeles information staff is authorized 36 positions: four supervisors, one clerk, 27 Immigration Information Officers, and four Freedom of Information Specialists. Of these, 13 are fluent in Spanish, three are fluent in Tagalog, three are fluent in French, one is fluent in Korean, three are fluent in German, and one is fluent in Italian. In addition to the above, three other staff members are moderately fluent in Spanish. There are no studies or data available on what, if any, delays have been created solely because of language problems. Based on reviews by INS' field audit staff, GAO and day-to-day observations by management of the Los Angeles information services operations, there are no major apparent problems or delayed service to the non-English speaking public.

INS strives to ensure that sufficient proportions of its information services staff in any office serving a multinational population include persons fluent in the most frequently encountered languages of the area. INS personnel hiring practices require the ability to speak, read and write necessary foreign languages tailored to the multinational profile of the population being served. The Service will continue including fluency in various foreign languages as a requirement of selected jobs in the information services area at all legalization offices based on the anticipated alien populations to be served.

Information services personnel are recruited by other elements of INS offering jobs with greater promotional potential. We seek to replace them with similarly qualified and language skilled people.

Immigration Support Activities

Question:

In the budget request for the supplemental appropriation for 1987 and for the 1988 appropriation, INS is requesting an increase of $1.4 million for its immigration support activities (e.g., training, data and communication systems, etc.). Will this increase be sufficient for INS to adequately carry out its support activities given the prior problems in providing needed service to the alien population? For example, how will the case processing times be changed and how long will people be waiting to see an INS official or have a call answered?

Answer:

We feel that these funds will be adequate to carry out the activities related to INS' public service mission, including reduction of case processing times and expediting responses to inquiries for the public.

WEDNESDAY, MARCH 11, 1987.

Federal Bureau of Investigation

Summary Statement

Fiscal Year 1988

For 1988, the FBI is requesting a total of $1,484,421,000 in funding, 22,974 permanent positions, and 22,267 workyears. These direct funded resources represent program increases of $75,775,000 in funding, 718 permanent positions and 494 workyears over the 1988 base level. The 1988 request includes a total of 9,807 agent positions and 13,167 support positions (9,470 agent workyears, 12,797 support workyears). The program increases in these categories are 253 agent positions and 465 support positions (157 agent workyears, 337 support workyears).

The FBI's request is being submitted only after an excruciating internal examination of all aspects of the FBI's resource requirements. This request achieves a fair degree of equanimity between expanded FBI responsibilities and the existing fiscal environment. The 1988 budget represents a commitment by the Administration to maintain the FBI as a nationwide, general purpose law enforcement agency. In order for the FBI to investigate the wide range of criminal violations for which it is responsible, additional resources are critical. A primary theme of the FBI's request is the necessity to achieve balance between a significantly augmented investigative capability over the past five years and unproportional growth in Administrative Services to support the investigative functions. Over the past five years, the FBI has grown by 2,921 workyears, a 15.4 percent increase from 1983 to 1987, while Administrative Services has grown by only 40 workyears, or 5.1 percent. The FBI will continue to emphasize Foreign Counterintelligence (FCI); Organized Crime, including drug enforcement; White-Collar Crime; and Terrorism investigations as nationwide investigative priorities. Additional administrative support is acutely needed to ensure that FBI special agents have the necessary resources, both personnel and nonpersonnel, to meet their responsibilities in these and other investigative areas.

The FBI's budget request for 1988 contains four budget activities incorporating nineteen decision units. The budget activities are: Criminal, Security, and Other Investigations; Investigative Support; State and Local Assistance; and Program Direction. The major initiatives and resource requests for 1988 for the above-mentioned activities are summarized below:

Criminal, Security, and Other Investigations:

The principal investigative programs of this activity are FCI, Organized Crime, Organized Crime Drug Enforcement, White-Collar Crime, Terrorism, General Crimes, and Civil Rights, Applicant and Other Investigations. A program increase of 629 positions, 441 workyears, and $44,972,000 is requested in this activity over the 1988 base level.

To counter the human intelligence threat, the FBI engages in FCI activities designed to reduce the effectiveness of the hostile intelligence presence in the United States.

1732

Organized Crime investigations will focus on the La Cosa Nostra's criminal control and domination of four major national and international unions in the United States: The International Brotherhood of Teamsters; the Laborers' International Union of North America; the Hotel Employees International Union; and the International Longshoremen's Association. The resources requested will enable the FBI to increase investigative activities, seize assets and initiate forfeiture actions, and prosecute members of organized criminal groups. The FBI will be able to participate more effectively in Organized Crime Drug Enforcement Task Force endeavors. The Organized Crime Drug Enforcement enhancements will permit the FBI to continue working closely with the Drug Enforcement Administration (DEA), Internal Revenue Service, and U.S. Customs Service, as well as foreign authorities, to penetrate drug trafficking enterprises in a manner in which financial assets can be tied to high-level drug activities so that seizures can be made. Organized Crime increases include 106 agent and 139 support positions, for a total of 245 positions. The Organized Crime Drug Enforcement Program includes a request for an enhancement of 12 agent positions. Increases in budget authority include $13,588,000 for Organized Crime and $1,956,000 for Organized Crime Drug Enforcement, or a total of $15,544,000.

Fraud Against the Government, affecting the 13 departments and 57 agencies of the Executive Branch, is the number one investigative priority of the FBI's White-Collar Crime Program. Of primary concern are Department of Defense (DOD) procurement frauds which involve improper charges for labor, defective pricing, product substitution, and false test certifications. From 1984 to 1985, the number of DOD procurement fraud investigations being conducted by the FBI increased 36 percent. In 1985, 954 convictions and pretrial diversions were obtained as a result of FBI investigative efforts in governmental fraud cases. Over two dozen criminal convictions were obtained against major defense contractors throughout the country following joint investigations with DOD. It is expected that there will be an increasing number of FBI investigative matters in this area through 1991. From 1983 to 1985, the number of bank fraud and embezzlement matters with losses in excess of $100,000 increased from 1,513 to 2,046, a 35 percent increase. A significant number of these investigations involved bank failure fraud matters. It is anticipated that the number of major bank fraud and embezzlement cases will continue to escalate into 1991. The White-Collar Crime Program enhancements include 42 agent and 38 support positions, for a total of 80 positions. The augmented budget authority for this program is $2,003,000.

The FBI's Terrorism Program includes efforts to address the terrorism problem through intelligence / criminal investigations. With heightened Puerto Rican terrorist activity, the apparent resurgence of Jewish terrorist groups, and the continuing threat posed by domestic right-wing terrorist groups (i.e., Sheriff's Posse Comitatus, Aryan Nations, Arizona Patriots, etc.), the domestic terrorism threat is not expected to diminish. Additional personnel are required to address the new responsibilities generated as a result of the passage of the 1984 Comprehensive Crime Control Act (CCCA), specifically, Title 18, USC 1203, to wit: Hostage Taking. In the past year, significant resources were expended on four investigations of hostage taking abroad. The FBI has acquired jurisdiction and authority to act, where deemed appropriate, in certain terrorist related hostage situations both within the United States and internationally. There has been a direct correlation between workyears expended and the number of terrorist incidents prevented. As workyear utilization has increased substantially since 1982, the annual number of preventions has increased from three in 1982 to seven in 1986.

Investigative Support:

The programs within this activity are: Training; Forensic Services - Federal; Automatic Data Processing and Telecommunications; Legal Attaches; Records Management; and Technical Field Support and Equipment. This activity provides the training and "tools" necessary to meet the demands of the FBI's investigative objectives. It includes the maintenance of all investigative records and the entire FBI communications system. A program increase of 50 positions; 15 workyears; and $26,653,000 is requested for 1988.

In August 1985, the Attorney General directed that the FBI take the lead in the design, development, and implementation of a single, integrated VHF Digital Voice Privacy (DVP) radio system to support the tactical radio requirements of the FBI, DEA, and United States Marshals Service. A single DVP architecture will ensure compatibility of radio communications among the three agencies. This is particularly important when the concurrent jurisdiction of the FBI and DEA in narcotics matters is considered. DVP increases include 50 support positions, budget authority of $703,000 for personnel and $10,450,000 for nonpersonnel funding, or a total of $11,153,000. The major nonpersonnel enhancements will be $10,000,000 for DVP radio equipment and $450,000 for motor vehicles. Current FBI plans call for the architecture and design to be completed in 1987, with the construction of the integrated system to begin in 1988.

Another noteworthy funding initiative is the Engineering Research Facility (ERF). This request builds upon the course of action, approved by the Director, FBI, in October 1983, that established coordination between FBI and DEA engineering entities in order to standardize the technical equipment of both agencies and avoid duplication of research and development (R&D) projects. In 1985, the FBI received $9,982,000 for the construction of an engineering research facility to accommodate the collocation of FBI and DEA engineering and R&D activities. An architectural and engineering study estimates the facility will cost approximately $36,511,000 to complete. The ERF will provide the combined FBI/DEA engineering and R&D staff with a versatile, state-of-the-art facility supporting an in-house rapid prototyping/quick reaction capability and the integrated voice privacy radio system. The collocation of staffs and activities is essential for this merger to be successful. It will also serve as a cost containment factor in the development of new technology and the coordination of equipment procurement and use. Additional funding totaling $13,000,000 is required in 1988 to continue construction of the ERF as planned.

Several nonpersonnel items are vital to the FBI. The FBI is requesting $2,500,000 for dormitory furniture for a third dormitory to be completed at the FBI Academy in 1988; $4,051,000 in additional funds is required for aircraft operations; $5,530,000 is needed for confidential expenditures; $11,358,000 is necessary for a technologically advanced system to streamline the acquisition and translation of recorded conversations; and $750,000 is essential for the witness security program.

State and Local Assistance:

The FBI provides state and local law enforcement officials with training, laboratory, fingerprint identification, and information services. No program enhancements are requested for these services in 1988. The following programs are included in this activity: General Law Enforcement Training; Forensic Services - Non-Federal; Fingerprint Identification; and Criminal Justice Data and Statistics Services. These services are important to state and local law enforcement and, as a result, Federal law enforcement receives valuable reciprocal services from state and local authorities.

Program Direction:

This activity consists of two programs: Executive Direction and Control and Administrative Services. Included are the executive direction, administrative, legal, planning, inspection, and financial management functions of the FBI. Emphasis is being focused on the relatively small, but very essential, request for Administrative Services enhancements. The FBI requires four agent and 35 support positions, and associated funding of $4,150,000 in budget authority for all aspects of Administrative Services. These resources will enable the FBI to maintain efficient financial services and effective personnel management, including the requisite recruiting and hiring of personnel.

Federal Bureau of Investigation

Salaries and expenses

Justification of Proposed Changes in Appropriation Language

The 1988 budget estimates include proposed changes in the appropriation language listed and explained below. New language is underscored and deleted matter is enclosed in brackets.

Salaries and expenses

For expenses necessary for detection, investigation, and prosecution of crimes against the United States; including purchase for police-type use of not to exceed [one thousand five hundred seventy-nine] passenger motor vehicles of which [one thousand four hundred fifty] will be for replacement only, without regard to the general purchase price limitation for the current fiscal year, and hire of passenger motor vehicles; acquisition, lease, maintenance, and operation of aircraft; and not to exceed $70,000 to meet unforeseen emergencies of a confidential character, to be expended under the direction of the Attorney General, and to be accounted for solely on his certificate; [$1,260,000,000,] of which not to exceed $10,000,000 for automated data processing and telecommunications and $1,000,000 for undercover operations shall remain available until September 30, [1988]; of which $3,000,000 for research related to investigative activities shall remain available until expended; and of which not to exceed $500,000 is authorized to be made available for making payments or advances for expenses arising out of contractual or reimbursable agreements with State and local law enforcement agencies while engaged in cooperative activities related to terrorism: Provided, That [notwithstanding the provisions of title 31 U.S.C. 3302], the Director of the Federal Bureau of Investigation may establish and collect fees to process fingerprint identification records for noncriminal employment and licensing purposes, and credit not more than [$15,500,000] of such fees to this appropriation to be used for salaries and other expenses incurred in providing these services: Provided further, That not to exceed [$45,000] shall be available for official reception and representation expenses.

Two thousand
One thousand six hundred fifty

$1,484,421,000,

1989
of which $13,000,000 for the construction of the Engineering Research Facility shall remain available until expended; of which $11,358,000 for a highly sophisticated system to assist in language translation and recording for the New York field office shall remain available until expended;

notwithstanding the provisions of 31 U.S.C. 3302,
$17,500,000

$70,000

[:Provided further, That $13,800,000 for the expansion and renovation of the New York field office shall remain available until expended].

(28 U.S.C. 524, 531-37; 18 U.S.C. 3052, 3059; 22 U.S.C. 4081, 4084; Department of Justice Appropriation Act, 1987, as included in Public Laws 99-500 and 99-591, section 101(b); additional authorizing legislation to be proposed.)

[For an additional amount for "Salaries and expenses", $2,000,000]

(Omnibus Drug Supplemental Appropriations Act of 1987, as included in Public Laws 99-500 and 99-591, Title II.)

Explanation of Changes:

1. Language is being requested for the purchase of additional motor vehicles to support personnel increases and for operational flexibility. This is required because the FBI has not been able to purchase the additional vehicles needed to support investigative personnel increases over the past two years. Currently, the FBI has purchased all additional vehicles allowed for 1987, although there is a documented need for an additional 120 vehicles. At the end of 1986, the FBI had 2,208 vehicles which exceeded the current replacement cycle of six years or 60,000 miles. Therefore, the FBI is requesting a change in language to allow the procurement of 1,650 replacement vehicles. For 1988, the FBI anticipates that funding will be available to procure approximately 1,850 vehicles, and flexibility is required in the determination as to whether to procure additional vehicles or replacement vehicles. Therefore, a total ceiling of 2,000 vehicles is required.

2. The $13,000,000 for the construction of the Engineering Research Facility is requested as "until expended" because of the multiyear nature of this construction project.

3. The funding of $11,358,000 for a highly sophisticated system to assist with language translation and recording is requested as "until expended" because of the multiyear nature of this project.

4. In regard to the increase for reimbursable fingerprint services, the current ceiling of $15,500,000 will not allow the User-Fee Program to retain sufficient funds to cover all costs incurred in 1988. The estimated workload of 1,221,000 revenue prints at the 1987 fee of $14 would produce $15,995,000 in revenue. The proposed ceiling of $17,500,000 would allow for increases in workload above the current estimates and/or increases to the 1987 fee, if necessary, without adversely affecting the program.

5. Language is being requested to reflect an increased level of expenditures by Headquarters and the Legal Attaches for reception and representation purposes.

6. Language concerning the carryforward of $13,800,000 in funding for the expansion and renovation of the New York field office is being deleted since such language is already contained in the Department of Justice Appropriation Act of 1987.

Congressional Appropriation Actions

The Congress reduced requested program increases by 22 positions and workyears and $5,520,000 and uncontrollable increases by $4,167,000. Additional resources were provided for narcotics initiatives, including 48 workyears and $6,000,000, of which $2,000,000 was for digital voice privacy radio. Restoration of funds sequestered in 1986 under the Balanced Budget and Emergency Deficit Control Act of 1985 totaled only $34,982,000, resulting in a reduction of $17,005,000 in 1987.

Supplementals Requested

Supplementals requested include: $9,309,000 for increased pay pursuant to Public Law 99-500; $23,005,000 for implementation of the Federal Employees' Retirement System; $2,000,000 for rental of space; $1,989,000 for Federal Telecommunications System costs; and $5,686,000 for a reappropriation request under the existing legislation.

Reprogrammings

These reprogrammings are the result of transfers and the reallocation of personnel due to increases in workload and functional transfers between and among decision units. A major reprogramming included the Administrative Services Division reorganization, which involved the division of the Budget and Accounting Section into separate sections for Budget and Accounting and expanded financial management analytical support. Additionally, personnel resources to provide programming development and support of the Automated Identification Division System (AIDS) within the ADP & Telecommunications Program were reallocated to the Fingerprint Identification Program in anticipation of full AIDS-III operations beginning in September 1987. Also, the FBI Bomb Data Center was transferred from the Training Program to the Forensic Services - Federal Program in order to consolidate similar activities and functions within one management area.

This budget activity includes resources for managing and coordinating field investigations for all field investigative operations for the FBI. The operations are conducted out of 59 field offices and 417 resident agencies located throughout the United States and Puerto Rico. Field offices are responsible for all investigations including the national priority law enforcement areas of organized crime, white-collar crime, foreign counterintelligence, and terrorism.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Other Field Programs	8,928	8,621	$517,737	8,900	8,691	$560,364	9,192	8,917	$587,789	292	226	$27,425

Long Range Goal: To reduce the incidence of various general criminal activities; to conduct appropriate applicant, civil rights, and fugitive investigations as directed by law and the Attorney General; and to counter within the United States the hostile activities of foreign intelligence officers, agents, and terrorists.

Major Objectives:

To conduct thorough, penetrative, and timely background investigations on candidates for appointment by and employment with the White House, the Department of Justice, including the Drug Enforcement Administration, certain Congressional committees, and other Federal agencies.

To develop, through automation, a greater capability to manage efficiently a large volume of background investigations and to identify and resolve issues that impede the timely completion of these investigations.

To investigate alleged violations of various civil rights statutes and provide the results of civil rights investigation to the Department of Justice for prosecutive action or referral to another Federal agency for appropriate action.

To develop an automated capability to analyze civil rights investigations; to identify patterns of violence involving individuals, groups, or local police agencies; and to analyze the nature of civil rights complaints to determine patterns of discrimination directed against individuals.

To effectively recruit, process, investigate, and appoint the most qualified individuals available to meet the internal staffing needs of the FBI.

To investigate threats and assaults against, kidnapings, or assassination of the President, Vice President, executive department heads, members of Congress, Justices of the Supreme Court, other designated Government officials, and Federal law enforcement officers; kidnapings; incidents involving the sexual exploitation of children; extortions; crimes aboard aircraft; tampering with consumer products; thefts of controlled substances; and other personal crimes under FBI jurisdiction.

To locate and apprehend local and state fugitives charged under the Fugitive Felon Act with unlawful flight to avoid arrest, prosecution, or confinement for violent crimes, substantial property thefts, and narcotics violations; to locate and apprehend major Federal narcotics offenders sought by the Drug Enforcement Administration; United States military personnel who desert under

rights statutes is basic to constitutional guarantees. In addition, the citizenry expects the FBI to attract and employ the most qualified applicants for its internal staffing needs. All investigative activity for this decision unit is conducted by personnel assigned to the 59 field offices geographically distributed throughout the country with direction provided by several FBI Headquarters units.

The FBI conducts background investigations for the White House, the Department of Justice, certain Congressional committees, the Administrative Office of the United States Courts, the Department of Energy, the Drug Enforcement Administration, the Nuclear Regulatory Commission, and through the Office of Personnel Management, other Federal agencies, in addition to background investigations of its own personnel. Executive Order 10450, which is the basis for most Federal personnel background investigations, provides that all employees of the Executive Branch will be afforded some level of investigation to establish reliability, trustworthiness, good conduct, and loyalty. Investigative results permit the FBI's client agencies to draw conclusions about the candidates' ability to perform the position for which the candidate is being considered and the ability to grant the prospective employee access to classified information. This Order, other Executive Orders such as the Directorate of Counterintelligence Directive 1-14, Department of Justice Orders, statutes such as the Atomic Energy Act; and agreements between the Attorney General and other entities provide the basis for FBI participation in this process. The FBI is committed to conduct these background investigations when requested to do so by other agencies, to conduct them in a thorough and penetrating manner, and to ensure the results are furnished to the requestor in a timely fashion. Overall direction and coordination is provided by FBI Headquarters.

The FBI's responsibilities and efforts in the civil rights program are directed toward the continued improvement of the atmosphere in which citizens and inhabitants can obtain and maintain their civil rights as guaranteed by the Constitution and laws of the United States. This is accomplished by thorough investigation of alleged violations of the various civil rights laws. Statutory responsibility for this program is set forth in legislation embodied in the Civil Rights Acts of 1957, 1964, and 1968, and the Equal Credit Opportunity Act as amended, March 23, 1977, the various Federal Revenue Sharing Acts, as well as other legislation in the civil rights field. Responsibility for managing investigations of possible criminal violations of the Privacy Act has been charged to the FBI by the Department of Justice. FBI Headquarters provides direction and coordination for these investigations.

This decision unit serves to perform all phases of the FBI's employment activities, including background investigations of FBI employment candidates. FBI Headquarters controls and directs all aspects of the applicant program throughout the FBI and ultimately makes all hiring decisions. Additionally, each of the 59 field offices handles all initial processing for positions in the FBI and conducts the necessary background investigations. This decision unit has the responsibility of hiring the most qualified applicants available and encompasses concerns both as to an applicant's suitability and security issues.

A significant portion of the FBI's Special Agent population will become eligible to retire throughout the remaining 1980s and early 1990s. These retirees will have to be replaced with individuals having expertise in a multitude of different areas. The current responsibilities of the special agent position call for the hiring of engineers, linguists, attorneys, accountants, scientists, pilots, and many other individuals with particular expertise and skills. The FBI receives over 1,000 applications per month from individuals who meet the threshold requirements; an effective Special Agent Selection System (SASS) must be maintained if the FBI is to attract and select the most qualified applicants available consistent with the FBI's needs.

1746

Crime is a pervasive problem in American society, one that affects millions of citizens and communities across the Nation. National Crime Survey data released by the Bureau of Justice Statistics showed that 25 percent of American households -- more than 22 million -- were touched by a crime of violence or theft in calendar year 1985. According to Uniform Crime Report data, 12.4 million index offenses occurred in 1985 with nearly $10.5 billion in money and property taken. Preliminary Uniform Crime Report data, for the first half of 1986, shows an eight percent increase in reported index offenses over the same period in 1985. Citizens and communities are acutely aware of the direct and indirect effects crime has on the quality of life in their neighborhoods, the operation of their businesses, and their personal lifestyles. It is because of the significant impact crime has on American citizens and the visibility of these acts in the communities where they occur, that the public maintains high expectations for law enforcement in the investigation of street crimes.

The FBI is directly involved at the streetlevel in attacking the incidence of violent personal and property crime through its four General Crimes investigative programs. This involvement includes both the investigation of crimes that fall under Federal jurisdiction and assistance to state and local law enforcement agencies in locating and apprehending dangerous criminals sought for serious crimes. These four programs -- Fugitive, General Government Crimes, General Property Crimes, and Personal Crimes -- provide the primary Federal law enforcement response to crimes directed against designated Federal officials, committed on or against United States property, or where a Federal interest has been recognized by enactment of Federal statutes.

Through the Fugitive Program the FBI assists state and local law enforcement agencies seeking felons who cross state boundaries to avoid prosecution or confinement. Typically, these fugitives are wanted for such crimes as murder, armed robbery, aggravated assault, rape, and narcotics offenses. Additionally, abductions of children by natural parents in defiance of custody decrees are investigated. Efforts are made to locate and apprehend Class I and II narcotics law violators sought by the Drug Enforcement Administration and other fugitives in cooperation with other Federal agencies, at their request. Assistance is also provided to the United States armed forces in locating military personnel deserting under aggravated circumstances, and local and foreign police agencies conducting criminal investigations. Through FBI/Interpol assistance, all available identifying data on organizations or individuals is obtained, along with other types of criminal activity under investigation.

General Government Crimes Program investigations are directed toward serious personal and major property crimes committed on Indian reservations and United States property, which includes approximately 430 major Department of Defense installations, numerous civilian agency buildings and sites, national parks and recreational areas, approximately 166 Indian reservations, and 45 Federal penitentiaries and correctional facilities. Also investigated under this program are matters referred to the Department of Justice by the Selective Service System (SSS) (when an individual is suspected of failing to register with SSS as required by law), cases where individuals impersonate Federal officials, and other crimes affecting the Federal Government.

General Property Crimes Program investigations focus on thefts from interstate shipment, the interstate transportation of stolen property and/or motor vehicles, individuals and groups engaged in such activities, and fences dealing in stolen property. Investigations of such individuals and groups often uncover links between property crimes, fences, organized crime, and narcotics trafficking. In addition to investigating reported incidents of property crimes, the FBI also employs the use of undercover operations to identify and penetrate theft rings and fencing activities and obtain intelligence information and evidence against

1747

criminals who have attempted to insulate themselves against direct lines of complicity in illegal activities. Other program investigations include Crime on the High Seas, Destruction of Aircraft and Motor Vehicles, and Interstate Transportation in Aid of Racketeering - Arson (non-LCN) matters.

The Personal Crimes Program addresses a group of offenses involving the common characteristics of threatened or actual injury or loss of life. These offenses include threats, assaults, kidnapings, and assassinations of the President, Vice President, executive department heads, Supreme Court Justices, members of Congress, other designated Federal officials, Federal law enforcement officers; bank robberies; kidnapings; extortions; tampering with consumer products; theft of controlled substances; and aircraft hijackings and other crimes aboard an aircraft. Beginning in 1986, the Personal Crimes Program became responsible for the investigation of matters involving the sexual exploitation of children through violations of the White Slave Traffic Act and the Interstate Transportation of Obscene Matter statutes. The Child Protection Act of 1984 increased the criminal penalties and authorized criminal or civil forfeiture of material made or distributed, as well as any profits derived from these violations. This act also eliminated the requirement that the Government show that a defendant acted for monetary gain and increased the age of protected children from 16 to 18 years of age.

The FBI is the lead Federal law enforcement agency in the United States Government's fight against terrorism. The FBI defines terrorism as the unlawful use of force or violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof in furtherance of political or social objectives. The FBI categorizes terrorism as either domestic or international depending on origin, base, and objectives of the terrorist organization. The Terrorism Program is responsible for preventing, interdicting, and investigating the violent acts and criminal manifestations of terrorist groups and individuals.

Terrorist groups originating in the United States are investigated pursuant to the Attorney General's Guidelines for Domestic Security/ Terrorism (DS/T) Investigations. DS/T investigations are used to assemble intelligence information on terrorist groups, but provide the safeguards designed specifically to protect the rights of United States citizens and other persons protected by the Constitution of the United States. FBI Headquarters personnel examine these cases to insure that the investigative procedures being utilized are in compliance with the DS/T Investigative Guidelines.

The reactive portion of the program utilizes all the resources and techniques of the FBI to aggressively investigate and prosecute terrorists who commit violent and/or illegal acts in the United States. These criminal acts include violations of the Protection of Foreign Officials, Neutrality, Extortion statutes, as well as Firearms and Explosives laws. Additionally, as a result of the passage of the 1984 Comprehensive Crime Control Act, specifically, Title 18, United States Code (USC), Section 1203, entitled, "Hostage Taking," the FBI acquired jurisdiction and authority to act, where appropriate, in certain terrorist related hostage situations both with the United States and internationally. Further, as a result of the passage of the "Omnibus Diplomatic Security and Anti-Terrorism Act of 1986," specifically, Title 18, USC, Section 2331, entitled, "Terrorist Acts Abroad Against United States Nationals," the FBI has acquired jurisdiction and authority to act, where appropriate, in any acts of terrorist violence inflicted upon a national of the United States while outside the United States.

All aspects of terrorist groups are the constant focus of intensive research which feeds analytical assessments regarding potential danger to United States' interests. These analyses are used as investigative aids by FBI field agents and FBI Headquarters management personnel.

Additionally, the reactive portion of the program includes the FBI response to high risk terrorist takeovers and hostage barricade situations. Terrorist groups usually employ teams made up of sophisticated, well-trained, and heavily armed individuals. To successfully resolve these situations, special abilities, equipment, and techniques beyond those of local authorities or FBI Special Weapons and Tactics (SWAT) teams are often required. To provide the President and the Attorney General with a civilian law enforcement alternative to those of military force, the FBI has instituted and is continuing to develop and train a Hostage Rescue Team (HRT). The HRT has capabilities which exceed those of a normal SWAT team in the areas of communications, command control, and the use of sophisticated electronics equipment. It also has a high degree of expertise in the handling of several types of weapons and explosive devices for breaching and diversionary tactics.

Convictions - Domestic Terrorism	103	68	68	68
Terrorist Incidents Prevented	23	7*	7	7
Potential Economic Loss Prevented ($000)	$13,250	$1.003,259	$4,000	$4,000

*Calendar year figures are actuals as of December 31, 1986.

During 1986, 2,742 individuals were investigated under the nonreimbursable applicant program. Among these were 803 requests from the White House (304 Presidential appointments and 499 staff). Many of these requests were of an expedite nature and short deadlines were required to complete the investigations. In addition, 1,324 individuals were investigated for the Department of Energy and 279 for the Administrative Office of the United States Courts on a reimbursable basis.

During 1986, the regional recruiting concept was expanded to 11 additional offices to meet the heavier hiring demands. This concept has proven to be effective in minimizing expenditures for initial reimbursable transportation costs.

New interview dimensions for the SASS, designed to provide better predictors of job performance, were validated.

There were 986 DEA background investigations conducted in 1986, and DEA has requested that the FBI conduct investigations on analysts and chemists along with agents and diversion control investigators.

In 1986, 2,000 specialty and general support applicants were hired, which required in excess of 4,000 applicants being tested. In addition, 431 special agents were hired which necessitated 1,050 background investigations.

On May 23, 1986, the Dallas Field Office initiated an investigation into the allegation that State of Texas Judge Thomas Cave, with the assistance of attorney Ronald Aultman and bondsman Joe Adams, engaged in sex with women who had pending criminal matters

1751

in the District Courts of Tarrant County in order for these women to receive consideration for probation, leniency, etc., from Judge Cave in their criminal proceedings. All three subjects were indicted by a Federal grand jury in Ft. Worth, Texas, on November 14, 1986, for Civil Rights and related violations. Investigation is continuing as subjects await trial proceedings.

In July 1983, the Detroit Field Office began an investigation concerning a religious cult organization known as the "Black Hebrew Israelite Jews" regarding violations of the Involuntary Servitude and Slavery statute. The allegation related to approximately 66 minor children having been enslaved by their camp leader and forced to work. One minor child was beaten to death. The investigation culminated in the conviction of seven members of the organization on September 12, 1986, of Involuntary Servitude and Slavery and related civil rights violations.

On April 25, 1986, 16 subjects were convicted and sentenced in Federal court in Ashville, North Carolina, for violations of Title 18, U.S.C., 241, Conspiracy Against Rights Of Citizens, Title 42, U.S.C., 3631, Criminal Interference, and related charges. Three other subjects had earlier been convicted and sentenced on similar charges. The sentences culminated a three year investigation into numerous acts of cross burnings, shootings at unoccupied residences, and harassment of blacks and interracial couples by the Ku Klux Klan in North Carolina.

In November 1985, investigation was initiated concerning several incidents of harassment and violence directed against a black couple and an interracial couple who had moved into an all-white neighborhood in Philadelphia. As a result, four individuals were arrested on January 7, 1986, for violating Title 18, Section 241, U.S.C., (conspiracy to violate the constitutional rights guaranteed by Title 42, Section 1982, U.S.C.) and Title 18, Section 844(f) U.S.Cs. (destruction of Federal property). The arrests stem from an incident where the subjects had set fire to one couples residence which had been returned to control of the Veterans Administration. These subjects were tried in Federal court in March 1986 and found guilty.

A major product tampering case was resolved in May 1986, when stockbroker trainee Edward Arlen Marks was arrested for contaminating cold, allergy, and diet capsules with rat poison in an attempt to manipulate the stock price of the manufacturer. Marks was linked to the tampering by a fingerprint found on one of the packages containing poisoned capsules. Marks pled guilty to nine counts of Tampering with Consumer Products and was sentenced to 27 years in prison.

Intensive investigative effort by numerous FBI field offices over an eleven day period, was employed in an attempt to locate and apprehend Mike Wayne Jackson, a "Ten Most Wanted Fugitive," who began a crime spree in Indianapolis, Indiana, by brutally murdering his Federal probation and parole officer on September 22, 1986. Jackson commited suicide to prevent his arrest by FBI agents.

An undercover operation, code named FINAL PUNCH, centering around the smuggling of drugs into Utah State Prison by employees and guards, has resulted in the indictment of eight suspects, including two inmates, two guards, and one other prison employee. The narcotics trafficking in this investigation was financed by the sale of stolen property. This case clearly reflects the growing trend of property crimes being related to narcotics trafficking.

The FBI assisted the Canadian Government by locating and arresting Yvon Savard, one of Canada's top most wanted fugitives. Savard has been sought since 1973, when he escaped from custody while serving two life sentences as a result of his conviction in 1967 of the death of a bank manager during a bank robbery in Quebec, Canada.

On June 18, 1986, Charles Lee Herron, listed as an "Ten Most Wanted Fugitive" since 1968, was arrested without incident by the FBI and the Florida Highway Patrol in Jacksonville, Florida. Herron and three other individuals, William Garrin Allen, II, Stephen Correlus Parker, and Ralph Canady, were wanted in connection with the brutal slaying of one police officer and the fatal wounding of another on January 16, 1968, in Nashville, Tennessee. Allen was taken into custody the previous day as he was attempting to renew a falsified driver's license. The Baltimore Division located and arrested Canady on April 1, 1986. The following morning, he was found hanging in his cell after an apparent suicide. The only remaining fugitive is Parker and a vigorous investigation is continuing to locate this subject.

An infant snatched from his mother's arms in Pennsylvania was recovered by the Baltimore field office of the FBI after a coast to coast search for the infant. Informant information led to the location and apprehension of an infertile woman who claimed to be the infant's mother. Ramona Joan Thompson has been charged with kidnaping and is scheduled for trial in early 1987.

On February 13, 1986, Dikran Sarkis Berberian, a member of the Armenian Revolutionary Army (ARA), a Socialist Armenian terrorist group, was convicted and sentenced to 15 years in prison on charges relating to his involvement in the 1982 attempted bombing of the Turkish Honorary Consulate in Philadelphia, Pennsylvania.

On March 12, 1984, police in Ottawa, Canada, acting on FBI information, arrested four members of a Marxist Armenian terrorist group, the Armenian Secret Army for the Liberation of Armenia, in connection with the attempted murder of Turkish Commercial Attache Kani Gungor at Ottawa in April 1982.

On February 6, 1986, three members and/or associates of Omega 7, a fanatical anti-Castro Cuban exile terrorist group, pleaded guilty to conspiracy to murder a foreign official and conspiracy to bomb and destroy property of a foreign government. They were each subsequently sentenced to ten years in prison.

On June 11, 1986, at Le Havre, France, the Police Judiciare National arrested five members of the Irish National Liberation Army (INLA), a left-wing Irish terrorist group, two of whom were United States citizens. These individuals were procuring weapons at the direction of INLA for shipment to Ireland.

On May 20, 1986, eight members and/or associates of the Provisional Irish Republican Army (PIRA), a violent Irish militant Marxist terrorist group, were arrested without incident in and around Boston, Massachusetts, while attempting to procure automatic weapons for shipment to PIRA in Belfast, Northern Ireland. Six of these individuals pleaded guilty and two were convicted in connection with this matter. All have been sentenced.

On May 30, 1986, Canadian authorities arrested five persons believed to be Sikh terrorists and charged them with conspiracy to manufacture and utilize an explosive device with intent to cause injury. These arrests in all probability prevented the bombing of an Air India facility and/or aircraft. The FBI contributed substantially to this investigation.

Six individuals were convicted on charges relating to their involvement in a 1984 plan to stage a coup against the Government of Honduras to include the assassination of the incumbent President of Honduras, Roberto Suazo.

On July 28, 1986, 14 individuals were arrested on charges relating to their involvement in a plan to invade the country of Surinam. On September 11, 1986, nine of the 14 individuals pleaded guilty to a misdemeanor charge.

On March 19, 1986, Richard Joseph Scutari, "Order" member, a right-wing terrorist organization, was arrested in connection with the armed robbery of an armored truck on July 19, 1984, at Ukiah, California. On April 30, 1986, Scutari pleaded guilty and was sentenced to a total of 60 years in prison.

Intensive intensive investigation resulted in the indictment of 19 members and/or associates of the Puerto Rican terrorist group, the EPB-Machateros on charges relating to the September 12, 1983, armed robbery of $7.2 million from the Wells Fargo Terminal in West Hartford, Connecticut.

Six individuals have been indicted in connection with a plot to break an incarcerated FALN leader out of Leavenworth Penitentiary. Investigation in this matter identified members of a non-Puerto Rican domestic terrorist group, the Prairie Fire Organization Committee, and an individual formerly incarcerated with the FALN leader in Leavenworth as being actively involved in the escape plan.

On January 17, 1986, May 19th Communist Organization member Marilyn Jean Buck was convicted on weapons violations and subsequently sentenced to a five year consecutive prison term. Buck, who had been wanted since 1977 since her escape from a Federal prison in West Virginia, was arrested by the FBI on May 11, 1985.

On March 4, 1986, seven individuals were convicted for the 11 bombing-related incidents attributed to the United Freedom Front, a left-wing terrorist group. Among those convicted were former Top Ten Fugitives Raymond Luc Levasseur and Thomas William Manning.

Five members of the El Rukn Street Gang (ERSG), a violence-prone domestic organization with links to the Libyan Government, were arrested on firearms and related conspiracy charges.

Program Changes: Increases of 292 positions and $27,425,000 are requested for 1988 for Other Field Programs. The requested increases will enable the FBI to meet its mandated responsibilities and objectives in all critical areas. Detailed information regarding this program can be obtained from the "Special Analysis of Field Programs Exhibit."

Informants often have access to information of evidential value that is not accessible through ordinary investigative methods. This information may result in opening a new case or directing the focus of an investigation in an ongoing matter. Informant information often saves the investigators time and is considered to be an extremely cost-effective investigative technique. The development and maintenance of a reliable and effective informant base is considered a key element to the enjoyed within the program for both individual cases and program levels. Payments are made to informants for services rendered/information provided

1754

on a cash-on-delivery basis with payment amounts closely monitored by supervisory and managerial personnel, both in the field and at FBIHQ, to insure funds expended are commensurate with the value of the information provided or the value of the service rendered. Although payments have exceeded funded levels in the General Crimes program, no enhancements have been received since 1984. As payments have increased each year, a concomitant increase has occurred in the achievement of statistical accomplishments attributable to informants. During 1985, accomplishments attributable to informants in FBI investigations were: 1,778 subjects arrested; 10,747 subjects identified; 2,518 investigations initiated; $171,848,000 in value of merchandise recovered; and 1,166 convictions achieved. Final 1986 statistical accomplishments attributable to informants have not yet been compiled, however, preliminary figures show a continued increase.

It can readily be projected that the expenditure of additional funds for payments to informants in the General Crimes programs will result in an increase in statistical accomplishments attributable to informants in that program. In order for this investigative technique to be effectively employed in major General Crimes investigations, an additional $369,000 is required for 1988.

Terrorism is an extremely fluid field of investigation for the FBI. For a variety of reasons a distinction has been drawn between "domestic" and "international" terrorism in the United States. Succinctly, international terrorism is that which has some degree of foreign or transnational character, while domestic terrorism does not. Because of this distinction, the domestic and international elements of the FBI's Terrorism Program operate under different funding and guideline provisions. In reality, however, the FBI has one Terrorism Program and views this overall program as a national priority. Typically, in a field office organization, a squad of agents will work both international and domestic terrorism, concentrating on those cases which are judged to pose the greatest threat in that particular office.

At the present time, within the borders of the United States, the domestic threat appears to be more imminent; therefore, the field offices have had to respond accordingly. As of December 30, 1986, the FBI has recorded 16 terrorist incidents which have resulted in one death and eighteen injuries. All of these incidents are attributable to domestic terrorist groups. In order to counter the activities of active domestic terrorist groups, resources above the level funded for domestic terrorism have been used. Unfortunately, these resources have generally been drawn from the International Terrorism subprogram. Yet, significant successes have been realized. Apprehensions and prosecutions in the domestic area have seriously weakened the capability and resolve of several violence prone groups; however, this is not to say that the terrorist threat has diminished. This fact is best illustrated by the most recent series of bombings and attempted bombings directed against Department of Defense facilities throughout Puerto Rico on October 28, 1986, causing minor property damage and critically wounding one individual. Additionally, in September 1986, right-wing domestic terrorists carried out a bombing campaign in Coeur D'Alene, Idaho, in which four bombs exploded and a fifth malfunctioned. There were no injuries reported, although there was extensive property damage.

Within the past year, the Terrorism Program has been involved in a substantial number of significant investigations with not only national but international ramifications. Effective management of available resources has been of critical importance to the success which has been achieved by our collective investigative efforts. In that regard, agent resources at the headquarters level were taxed to their fullest in order to achieve the successes which were obtained in the Terrorism Program during the past year. If current efforts in the Terrorism Program are not sustained, program momentum will certainly be diminished and it will

1755

become increasingly necessary for the FBI to assume a reactive rather than proactive posture in dealing with future terrorist attacks. Such an approach will almost certainly impair the ability of the FBI to deal with the current threat of terrorism in an effective and timely manner.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Organized Crime	2,689	2,604	$136,867	2,689	2,622	$149,674	2,934	2,785	$163,262	245	163	$13,588

Long-Range Goal: To reduce the sphere of influence and neutralize the adverse effect that organized criminal groups exert over the citizens of the United States by developing investigative programs that will approach this problem in a systematic, coordinated, and sustained manner.

Major Objectives:

To penetrate the hierarchy of the La Cosa Nostra (LCN) by identifying the leadership and membership of these groups in an effort to determine their complicity in criminal activity as well as determine the extent of interrelationships among the LCN families and thereby develop successful prosecutions for specific violations of Federal Statutes, including the Racketeer Influence and Corrupt Organizations (RICO) and the Continuing Criminal Enterprise (CCE) statutes.

To further determine the extent of influence and control the LCN has established within the legitimate labor union community in the United States; continue to pursue investigations against the LCN through an aggressive and successful Labor Racketeering Program within the FBI that will neutralize this control and have a lasting and positive impact upon the nation's economy.

To pursue the goals of the FBI's National Drug Strategy which will endeavor to identify, investigate, arrest, and prosecute individuals who organize, direct, and/or finance high-level domestic or international drug trafficking enterprises and seize their assets for forfeiture. These groups would include the Colombian cartels, Mexican networks, and the Sicilian Mafia.

To identify the hierarchy and membership of nontraditional organized crime groups such as outlaw motorcycle gangs (OMGs), Oriental groups and other significant drug trafficking groups and determine their involvement in criminal activities in order to develop significant prosecutions to neutralize their effect on American society.

To continue the enhancement and installation of the Organized Crime Information System (OCIS) in field locations which will enable the FBI to collate the vast quantity of information concerning organized criminal activity so that complex associations between members of organized criminal groups might be identified.

1756

To develop and maintain a national intelligence base which will consist of: quality, high level informants to penetrate the organizational structure and operations of organized crime groups; cooperating witnesses to provide first hand testimony as to the day-to-day operations of these illegal organizations and sponsor their subsequent entry into the Witness Security Program, if necessary; and liaison efforts with other Federal, state, local, and foreign law enforcement agencies.

To provide resources necessary for the FBI to utilize the forfeiture provisions of the Controlled Substances Act, (Title 21 United States Code (U.S.C.)) as well as the provisions of the Comprehensive Crime Control Act (CCCA) which permit sharing of asset forfeiture proceeds with state and local authorities.

To provide overall coordination and management oversight of efforts relating to the use of sophisticated and sensitive investigative techniques including court approved Title-III intercepts, consensual monitorings, undercover operations, and aircraft surveillances, and to perform a wide variety of administrative and investigative support functions including the funding of Special Operations Groups and Off Premises Sites which are related to the operation of the Organized Crime Program at FBIHQ.

Base Program Description: This Decision Unit addresses the problem of organized crime in the United States. Organized crime is defined as a criminal act or series of acts committed by a group of individuals having a formalized structure whose primary objective is to obtain money through the use of violence or threats of violence, corruption of public officials, graft, extortion, or drug trafficking, and which has a significant adverse effect on people in its locale, region, or the entire United States. Organized Crime groups affect the social, financial, and political framework of American society by directing and/or becoming involved in labor racketeering, corruption of public officials, illegal infiltration of legitimate business, loansharking, illegal gambling, narcotics trafficking, and gangland slayings. There are few businesses or industrial sectors in American society that are not affected by organized criminal exploitation or penetration.

Recent investigations focusing on the criminal activities of members of LCN families have developed intelligence which reinforces previous information indicating that many of the unions within the United States are being influenced or directed in an illegal manner by the LCN. Because these unions affect the very fabric of the American economy, investigations have been initiated and efforts have been directed toward this problem to lessen the control and/or influence of the LCN over these unions.

In spite of the recent investigative successes the FBI has had against the hierarchy of the LCN, it would be naive to think that the LCN has been eliminated. Experience has shown that the criminal activities of an LCN family do not stop simply by convicting and incarcerating the upper echelon. Their positions are merely filled by subordinates, often acting as figureheads who maintain constant contact with his jailed superiors. Upon release from jail the convicted member resumes hands-on control, never having actually relinquished control of the operation. The recent indictments and convictions of the LCN hierarchy have left these LCN families in a state of disarray. The federal government must pursue the opportunities that are now available to level a devastating blow to these weakened criminal enterprises; delay would give the LCN the much needed time they required to reorganize and re-establish their grip on certain sectors of the American society.

Although the level of criminal activity and illegal influence of traditional organized crime groups such as the LCN and Sicilian Mafia have not lessened, the FBI has, by necessity, redirected some of its organized crime resources to the investigation of major

1757

drug trafficking groups including the Colombian and Mexican networks as well as OMGs, Oriental groups, and other significant crime groups. These groups are extremely violence prone and are involved in extensive criminal activity which includes extortion, loansharking, murder, corruption, and numerous other criminal acts.

Beginning in 1982, when the FBI received concurrent jurisdiction with the Drug Enforcement Administration (DEA) in the investigation of illicit narcotics trafficking, the FBI dramatically increased its involvement in the investigation of organized criminal groups trafficking in narcotics. The FBI's commitment to the President's Narcotics Initiative is reflected in the reallocation of resources from investigations of traditional organized criminal activities, such as gambling and prostitution, to these narcotics matters. Through 1986, the FBI's Organized Crime Program was funded for 43 agents to investigate narcotics matters. During 1984, 489 agent workyears were expended on narcotics investigations; in 1985, 523 workyears were used; and in 1986, 515 workyears were used. The problem of illicit narcotics trafficking continues to be the number one crime problem in the United States today. In order to maximize the efforts of its resources, the FBI redefined its National Drug Strategy in 1986 and set as one of its major objectives, neutralizing the three most significant entities involved in narcotics trafficking: the Colombian cartels, Mexican groups, and Sicilian Mafia's networks.

Title V of Public Law 91-452 (The Organized Crime Control Act of 1970) authorizes the Attorney General to provide for the security of a Government witness or potential witness, whose life and person is placed in jeopardy by virtue of being a witness or intended witness in legal proceedings against any person alleged to have participated in organized criminal activity. Under this law, the Department of Justice designated the United States Marshals Service as the sole authority to arrange for the maintenance of persons designated as protected witnesses. Since the creation of the Office of Enforcement Operations to administer the Witness Security Program, new policies/procedures have expanded the responsibility of investigative agencies sponsoring individuals for inclusion in the Witness Security Program. This change, in effect, requires the sponsoring agency to expend resources relative to the protection of the witness, and/or the witness' immediate family, prior to the assumption of responsibility for the protection by the United States Marshals Service.

In addition, this Decision Unit provides funding for the performance of certain critical support functions which are necessary for the investigation of criminal violations within the purview of the FBI's responsibility.

The Organized Crime Information System (OCIS) complements investigative efforts and maximizes the limited investigative resources within the Organized Crime Program by providing FBIHQ, selected field offices, resident agencies, and Legal Attache Offices with computer based capabilities which assist in the collection, collation, analysis, and dissemination of investigative information relative to organized crime matters. Within OCIS, particular emphasis is placed upon link analysis of relationships which might exist between or among organized crime groups and narcotics cartels, and/or between corrupt organizations and union officials or business leaders or public officials. In view of its capabilities, OCIS plays an integral role in the FBI's efforts to determine the interrelationships among narcotics cartels and organized crime groups. When first brought on-line in 1980, OCIS was scheduled to be implemented in the 23 field offices with significant LCN activity. As a result of the FBI receiving concurrent jurisdiction in narcotics investigations in 1982, the demands on OCIS have expanded. To further enhance the Organized Crime Program, the OCIS schedule now calls for virtually all field locations (field offices, resident agencies, and some Legats) to have at least a retrieval capability system by the end of 1988. The OCIS Program presently has 117 positions allocated in 40 field offices, 10 resident agencies, and two Legal Attache posts.

The FBI provides a sophisticated surveillance capability to the field in the form of aircraft support. Extensive investigations in the areas of organized crime, white-collar crime, counterterrorism, and other investigations have demonstrated an expanding need for a sophisticated mode of conducting physical surveillance in numerous environments. An aircraft is capable of discreetly maintaining contact with a moving target even though the target is using evasive maneuvers to elude surveillance. The aircraft is in a position to recognize evasive maneuvers and can direct accompanying ground units clear of the target, where ground units might be unable to get close enough to observe the target without detection. By utilizing an aircraft, a successful moving surveillance can generally be conducted using one-half the number of special agents and automobiles that would normally be required.

Aircraft can be equipped with vehicle tracking devices and photography equipment. The capabilities of such equipment can be greatly enhanced by the use of an airborne platform. Aircraft are equipped with FBI radios, thus allowing them to function as airborne repeaters and Command and Control vehicles when the need arises. The aircraft perform one or more of the following missions during each flight:

- Surveillance
- Ferry
- Communications Relay
- Undercover Flight Operations
- Title III Support
- Aerial Photography
- Training
- Protection of Law Enforcement Personnel
- Expedite Transportation
- Maintenance/Test
- Command and Control
- Assist Other Agency
- Ground Search

The undercover technique has opened avenues of investigative pursuit not available in the context of traditional investigative processes. The presence of an undercover special agent provides firsthand special agent testimony relating to the [illegible] and the scope of the criminal activities, the extent of involvement of the various offenders, and the location of items of evidence. Undercover agents are often able to obtain evidence relating to the knowledge, intent, and predisposition of individuals involved in criminal activity which, combined with the use of audio and/or video tapes, produces the strongest and most convincing evidence in a court of law. Undercover agents have the ability, in certain situations, to penetrate the highest levels of criminal activity; heretofore unreachable.

The undercover technique also allows for more effective and safer use of sources and informants, in that the information obtained from the undercover operative may preclude the necessity for sources/informants to testify in court. In addition, undercover operatives often obtain evidence of past and planned crimes. In the instance of a planned crime, the undercover technique affords the FBI the opportunity to take a proactive approach, rather than investigating solely after the fact. With the increasing complexity of FBI cases, it has become evident that the previous methods of information gathering are not always entirely adequate to meet revised priorities. Quality cases frequently involve a greater number and more sophisticated type of subject. These cases are often protracted and generally involve difficult to detect conspiratorial activity.

To address this need, Special Operations Groups (SOGs) were formed. Operating out of covert premises situated apart from overt FBI facilities, these groups are used to support the integrated functions of surveillance, tactical mobility, undercover

operations, sensitive and complex Title III electronic surveillance installations, and the tracking of extremely sensitive and surveillance-conscious subjects. Other off-premise sites were created to provide covert storage facilities for surveillance vehicles and to support undercover and other sensitive operations.

SOGs are merely the continuation of investigations by other means, and their methods are not secondary to case squad methods, but are an adjunct to them. They provide a dimension to investigative operations which is unique and cannot be duplicated by other means. In many instances, the SOG develops information so significant, it completely changes the direction of the existing investigation. It has been demonstrated that the SOG agent, when properly trained, experienced, equipped, and supported, can be an extremely efficient, cost-effective, and rapid way of shaping the investigator's suspicion into the prosecutor's fact. SOGs can provide a rapid FBI presence in situations where individuals, locations, or circumstances must be secured or controlled.

Accomplishments and Workload: The statistical accomplishments and estimates for the Organized Crime Program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Investigative Matters Handled	25,040	21,637	22,320	23,445
Title IIIs Initiated	90	71	75	75
Organized Crime Informants Matters	2,879	2,697	2,700	2,940
Informations and Indictments	2,092	2,256	2,260	2,425
Convictions/Pre-trial Diversions	1,714	1,797	1,815	1,940
Offices Requiring OCIS Personnel	35	41	52	56
Court Ordered Forfeitures (in thousands)	*	$25,250	$26,750	$26,750

* Court Ordered Forfeitures were not tracked as a separate item prior to 1986.

Organized Crime Investigations:

During 1986, organized crime investigations resulted in over 2,000 indictments and over 1,700 convictions. Included in the convictions are a number of traditional organized crime members and their associates; non-traditional organized crime members and their associates, and union members and public officials. The convictions included 1,294 for narcotics violations, 98 for corruption violations, 118 for illegal gambling violations, 41 for loansharking violations, 72 for labor racketeering violations, 2 for involvement in gangland slaying matters, 33 which are related to the area of infiltration of legitimate business by organized crime elements, and 130 for other violations. In addition, $8,975,000 in fines, $19,883,000 in recoveries, and $2,389,000 in restitutions, and $120,693,000 in Potential Economic Loss Prevented were obtained as a result of investigative efforts expended in the Organized Crime Program during 1986.

During 1986, the FBI targeted the illegal activities of several of the La Cosa Nostra families for investigation. As a result of these investigations, 3 "bosses", 2 "underboss", 9 "capodecinas", 22 "soldiers" and 109 associates of organized crime family members were convicted in 1986 for various Federal violations. In addition, 8 Sicilian Mafia associates were also convicted.

72-105 O—87——98

Although the FBI has been successful in several of its investigations of La Cosa Nostra families, their influence on everyday American life continues.

Investigations involving public corruption have resulted in the convictions of 23 local law enforcement officers, 1 state judge, 2 state public officials, 1 state officer, 15 local public officials, 2 local judges and 1 federal prosecutor.

Investigations of non-traditional organized crime groups brought convictions against 225 members of these groups and their associates for narcotics, corruption, loansharking, and arson violations as well as for their involvement in gangland slayings. These groups included the OMGs (159), Colombians (44), Cubans (11), and other groups (11).

As a result of Labor Racketeering investigations 1 vice-president, 1 secretary/treasurer, 1 trustee, 1 organizer, 20 members, 2 business manager/agents and 2 other affiliate of labor unions were convicted for illegal activities.

Specific organized crime case accomplishments follow. They are indicative of the complex, long-term, and personnel-intensive organized crime investigations being conducted by the FBI in which a wide variety of sophisticated, investigative techniques are being utilized.

In August 1985, an indictment was returned charging Luchese LCN capo and two other Luchese LCN members as well as 23 other individuals under the RICO statute with predicate offenses being multiple counts of narcotics violations, gambling, loansharking, credit card fraud, and conspiracy. In June 1986, a superseding indictment was returned in charging an additional 11 subjects with conspiracy to distribute cocaine. Several Title IIIs, physical surveillances, and consensual recordings by cooperating witnesses were used in this case. In October 1986, 11 defendants were convicted of narcotics violations.

In March 1986, through the use of several Title IIIs, a capo in the Gambino Family and five codefendants were convicted on charges of murder, ITSP, narcotics, bribery, ECT, prostitution, and pornography. The Gambino boss and defendant in this trial, Paul Castellano, was murdered prior to the conclusion of the prosecution. In November 1986, three defendants pled guilty. Twenty-two convictions have been recorded and the 165-year sentences given to two defendants were the longest sentences reported in the history of the Federal court in New York. A RICO trial is scheduled to commence in New York on the remaining three members and five associates in January 1987.

RICO indictments were returned against the hierarchy of the Genovese Family as a criminal enterprise. Included in this indictment were a boss, capo, and six soldiers of the Genovese Family, the acting boss of the Cleveland Family, and a Gambino member. The defendants were charged with the extortionate control of the concrete industry in New York, illegal control of the International Brotherhood of Teamsters, conspiracy to commit murder, and operating an illegal gambling

Through the use of Title IIIs and cooperating witnesses, the boss of the Colombo LCN Family, the underboss, three soldiers, and four associates were charged with RICO, RICO conspiracy, extortion, bribery of public officials and dealing in narcotics. Utilizing the factual presentation from the Colombo Family hierarchy criminal prosecution, a civil complaint was filed June 1986, charging 31 defendants with controlling a labor organization through a pattern of racketeering activities. The defendants from

whom the government is seeking injunctive relief include Laborers International Union of North America Local 6A, District Council of Cement and Concrete Workers, and Colombo LCN members and associates.

As of December 1986, an investigation has used an undercover operation, consensual monitorings and physical surveillances to document the corruption of sheriffs, judges, and other public officials in five counties of eastern Tennessee. Forty-five individuals have been arrested and/or indicted, including three judges, two sheriffs, and one former sheriff. The officials were involved in gambling and also received payoffs for judicial actions. The remaining 22 subjects who are yet to be indicted indicted include a judge, district attorney, sheriff, and other prominent public officials in eastern Tennessee.

A joint organized crime task force consisting of the FBI, IRS, and New York State and County Police Departments and prosecutors was formed to investigate the organized crime infiltration of the gasoline industry. This investigation exposed a scheme being utilized by various organized crime groups to defraud state governments and the Federal Government of millions of dollars through the evasion of excise taxes. To date, there have been 11 Federal and state convictions, including Colombo LCN member Michael Franzese, 12 returned indictments and 25 additional indictments are anticipated. New York State Department of Taxation estimated the disruption of the Franzese group alone will increase excise tax revenue by $200 million.

An investigation was directed at the LCN control of the 250 million-dollar-a-year moving and storage industry in the New York area. The investigation exposed a 20-year criminal conspiracy in which the LCN controlled this industry through its influence over officials in the International Brotherhood of Teamsters. In October 1986, guilty verdicts were returned in a RICO prosecution in the Eastern District of New York against 10 defendants to include the boss, underboss and acting boss of the Bonanno LCN Family and the President, Secretary Treasurer and Business Agent of a Teamster's Local.

In February 1986, Adler B. Seal, a DEA informant who testified before the President's Commission on Organized Crime, was murdered in Baton Rouge, Louisiana. Through an aggressive investigation, FBI Agents, within 48 hours identified and apprehended six subjects involved in the murder. In July 1986, three ranking members of the Ochoa Colombian drug smuggling cartel including Fabio Ochoa-Vasquez were indicted on charges relating to Seal's murder. The investigation involved physical surveillances and consensual monitorings.

As of August 1986, after an extensive three-year investigation, over 100 members of a major Mexican narcotics organization known to operate from Durango, Mexico have been indicted and arrested for various Title 21 violations in Chicago, Illinois. Forty-one subjects have pleaded guilty or have been convicted after lengthy trials. Additional indictments are expected in the investigation. Through the use of Title IIIs, physical surveillances, consensual monitorings, informants, and translators, this investigation has exposed the sophistication and the extent to which a major Mexican drug trafficker conducts illegal business within the United States from the safe confines of Mexico.

In May 1986, Vito Salvatore Sullo, a Sicilian Mafia figure wanted on murder and heroin charges by Italian police in Sicily, Italy, was arrested in Newark. This was a joint FBI, DEA, and Italian investigation regarding an international heroin smuggling and distribution network in Dallas, Newark, New Jersey, and Massa Carrara, Italy. Over 60 subjects have been arrested and are at various stages of prosecution. Nine kilos of cocaine, one and a half kilos of heroin, $7,100 in cash; and a 1985 Mercedes Benz 500 SEL valued at $50,000 were seized.

An investigation was initially begun by the Miami Division to address a number of unsolved murders in south Florida that were attributed to the Outlaw Motorcycle Gang (OMG). Through the extensive use of cooperating witnesses, indictments were obtained for twelve present or former members of the OMG charging them with violation of the RICO statute. The indictment was based on 90 predicate acts which include 11 murders, armed robberies, kidnaping, extortion, prostitution, and narcotics trafficking. Eight of those individuals indicted have been arrested.

During 1986, a special task force of FBI and New York Police Department (NYPD) personnel, investigated the illegal activities of a Chinese gang known as the United Bamboo Gang which emanated from Taiwan. Two NYPD officers, in an undercover capacity were actually inducted into the United Bamboo Gang, and aspects of the undercover operation were conducted in New York City, Las Vegas, Los Angeles and Houston. The investigation concerned illegal drug trafficking, the murder of journalist Henry Lui in California, extortion, weapons trafficking, and other criminal activities. The investigation included the use of consensual monitorings and physical surveillances. Twelve defendants were convicted in September 1986.

An investigation was initiated regarding an organization comprised of Jamaican nationals who are members of the Rastifarian Cult. Rastifarians are operating a loose knit cocaine distribution network and have been credited with 12 drug related homicides. Forty-five Jamaican cocaine dealers have been arrested. It is anticipated that additional indictments and arrests will be forth coming.

Organized Crime Information System:

In order to illustrate the value of OCIS to investigative efforts in the Organized Crime Program, a number of examples in which the system has been effectively employed are set forth below. The examples cited appreciably reduced the agent workyear commitment usually devoted to manual retrieval of the information obtained through use of OCIS and/or to efforts associated with time-consuming methods of exchanging investigative information without computer assistance. In each instance, retrieval of data and subsequent analysis of the information acquired through use of the system were accomplished by OCIS analysts. As a direct result of the efforts of these analysts coupled with their use of OCIS, agent personnel were able to accomplish their investigative responsibilities in an effective and highly efficient manner while at the same time devoting their time to the most complex aspects of their investigative responsibilities.

OCIS verified source information following an inquiry which involved paramilitary transportation of weapons and drugs from Colombia to Montreal and then to the United States. This resulted in a possible hit and previously unknown links to a sensitive investigation on the East Coast.

An agent was advised by an OCIS Analyst that, based on data in OCIS, the possibility existed of using an individual as an informant against the subject of an LCN investigation. Subsequently, an individual was identified, through an alias, as being involved with Kansas City LCN figures in large-scale thefts. It was determined through OCIS that this individual was being called on a continuing basis.

1763

A White Collar Crime squad utilized OCIS concerning anonymous information regarding a gambling junket in which a high ranking public official had taken part. The caller had given an approximation of the name of the man who had arranged the junket. OCIS was able to furnish the correct name as well as the descriptive data, associates, and travel clubs this individual was connected with, thus corroborating the information.

During the course of a Title III, the intercepted parties discussed phone numbers from Florida. Conversations with one individual known only by a first name were intercepted and negotiations of narcotics purchases were discussed. Subscriber information provided a possible last name for this individual. A check of OCIS disclosed a Philadelphia subject with a Florida address. This individual was subsequently identified as a Federal fugitive with suspected Sicilian Mafia ties. The subject was subsequently located and apprehended.

A link analysis was conducted regarding a pizza chain and the Sicilian Mafia. This analysis was based on information that a Sicilian was operating one of these restaurants in Kansas City and was allegedly paying tribute to the Kansas City LCN family. Analysis determined that there are 25 of these chain restaurants on the East Coast. Most have the same owners, who have links to a company with alleged organized crime ties including the Sicilian Mafia.

Aircraft Operations:

In addition to normal field office operations, numerous FBI special investigations were supported throughout the country. These include five major specials where pilots and aircraft were furnished on a temporary basis to field offices. Major temporary assignments required fifty-two pilots for 15-day assignments, three pilots for 21-day assignments, and six pilots for 30-day assignments, for a total of 1,324 days, not including travel time.

During 1986, the aircraft equipped with a Forward Looking Infrared (FLIR) platform, assigned to FBI Aircraft Operations, participated in approximately 40 major investigations across the United States requiring night surveillance. In two instances, surveillance by the FLIR aircraft led to arrests of subjects and recovery of ransom in kidnaping cases. Two major surveillances conducted with this system assisted in the location and arrests of numerous subjects involved in terrorist activities. The system was utilized to cover narcotics exchanges and to protect the safety of undercover agents. A top ten fugitive arrest was facilitated by night surveillance conducted by the FLIR system.

Special Operations Group/Off-Premise Sites:

Since 1979, the number of Special Operations Group/Off-Premise Sites has increased from 10 divisions operating 13 Special Operations Groups and 3 Off-Premise Sites to 24 divisions operating 33 Special Operation Groups and 14 Off-Premise Sites. Special Operations Groups were organized to investigate, observe, and penetrate ongoing criminal activity for the purpose of gathering evidence. Their continued emphasis has been to target organized crime investigations. Since 1985, on more than 25 occasions, Special Operations Group teams comprised of 6 agents were directed to divisions needing Special Operations Group expertise for an extended period of time. One instance occurred when 12 Special Operations Group teams were detailed to assist a western division office. A total of 478 workyears were expended by SOGs in support of all investigative programs, although the majority of this effort was in support of organized crime investigations.

Program Changes: An increase of 245 positions (163 workyears) and $13,588,000, including $6,219,000 in nonpersonnel funding is requested for the Organized Crime Program. The requested 106 agent and 54 general support positions will enable the FBI to continue to build on its investigative successes for the purpose of dismantling the entire LCN structure and relieving American society of the stranglehold the LCN now maintains. The ongoing problem confronting the FBI is the growing need for general support employees to support the agents in the field offices. The agent positions will be directed toward labor racketeering matters, specifically toward the La Cosa Nostra's criminal control and domination of four major national and international unions in the United States. These unions are: the International Brotherhood of Teamsters; the Laborer's International Union of North America; the Hotel Employees and Restaurant Employees International Union; and the International Longshoreman's Association. Through control of these unions, the La Cosa Nostra gains political power, economic power and a vast source of funds from which they can finance other illegal activities. With the concentrated efforts on the labor racketeering matters in 1988, the need for personnel to type, file, transcribe tapes, and handle day-to-day operations of the office will increase. The President's Commission on Organized Crime reported that, based on an analysis conducted by the Wharton Econometric Forecasting Associates Inc., estimates that organized crime reduces the Gross National Product by $18 billion a year and reduces employment by 414,000. They also estimate that organized crime raises consumer prices about 0.3 percent and reduces per capita personal income by $77.22.

The special support positions will greatly facilitate investigative efforts and contribute measurably to the overall efficient use of allocated agent resources. The 66 OCIS positions will enable OCIS to address the demands placed on it since 1982 when the FBI received concurrent jurisdiction in narcotics investigations. The requested positions will relieve agent personnel of routine, less complex matters and will provide vital resources in order for the FBI to take advantage of the high speed, cost effective capabilities OCIS was designed to provide.

An additional 66 special support positions are essential for the OCIS. OCIS provides the FBI with nationwide computer capabilities which assist in the collation, analysis, and dissemination of investigative information relative to organized crime. Within OCIS, particular emphasis is placed upon link analysis of relationships which may exist between or among organized crime groups and narcotics cartels. Information developed through traditional investigative efforts, physical surveillances, and electronic surveillances is entered into OCIS. The vase quantity of investigative information obtained during Title III intercepts can become so overwhelming that it cannot be made readily accessable using a manual filing system. The speed, accuracy, and analytical capabilities of OCIS are used to cull the voluminous amounts of data that have been amassed during investigations to facilitate and further direct investigative efforts. Without the capabilities of OCIS, the amount of time required to resolve a case is substantially increased and requires the commitment of a substantial amount of additional agent workyears.

At the base level, OCIS files designed to save time and resources will not be fully used and the cost effective benefits of the system will not be realized. Two examples are the Title III and Pen Register files. Both were designed to sort, collate, and print at high speed the large amounts of information these investigative techniques generate. However, due to insufficient OCIS personnel to process the pertinent background data to support these files, use of these two files has been extremely limited. During 1986, the OCP and Organized Crime Drug Enforcement Task Force program initiated 105 Title III intercepts; only 16 had results of the intercepts entered into OCIS. Of those entered into OCIS, the average number of intercepts was approximately 1,210

intercepts. Based on that average, the 89 Title IIIs not entered into OCIS would have resulted in approximately 107,700 intercepts. At base level funding, OCIS analysts were not available to process this data into the system and thereafter provide agents with analytical reports to support the investigation. Hence, agents were required to perform functions which should have been handled by lower grade employees, thereby freeing the agents for the more complex phases of investigations. In addition, agents must also rely on antiquated, less-accurate, and time-consuming manual filing systems for storing retrieving pen register and Title III information.

At the present time OCIS analysts spend approximately five percent of their time retrieving data and preparing projects in support of specific oganized crime cases and the OCP in general. To fully use the capabilities of these specially trained employees, it is estimated that they should dedicate 25 to 30 percent of their time to the preparation of these reports. However, due to the critical shortage of OCIS personnel, the available analysts must forego these reports in order to enter information into OCIS. The entry of information is critical, inasmuch as OCIS will be the base line system for the implementation of the the labor-racketeering expert system now under development. Without this data, the artificial intelligence capabilities of the labor racketeering system will not be used to its full potential.

As of October 1986, approximately 28 percent of the organized crime matters in the 33 field offices currently on-line with OCIS had no data entered into the system. Over 51 percent of all pending OCP cases had not data entered into OCIS. As a result, the OCIS data base is incomplete. This will preclude those offices on-line with OCIS from having access to information which might be vital to their investigative efforts. In addition, base level personnel funding does not allow other field offices to implement the OCIS program. Hence, the unavailability of OCIS in field offices severely hampers coordination among field offices, and between field offices and FBI Headquarters. Further, the coordinated efforts between the FBI and DEA, which includes limited direct access to OCIS by DEA at their headquarters, will also be impaired. The base level of funding will permit most of the data regarding the LCN and Sicilian Mafia to be processed into OCIS; however, entry of information regarding OMGs, Oriental groups, and other significant non-LCN groups will be delayed. Relationships between individuals and groups, which OCIS can readily identify, will go undetected and reslut in costly duplication of investigative effort.

The three Intelligence Research Specialists (IRS) will provide the FBI with specialized employees who will possess a thorough knowledge of the FBI's Organized Crime Program, to include the activities of the LCN, narcotics cartels, and other organized crime groups. The IRS will use data obtained from OCIS, while not duplicating the function of OCIS analysts, as well as information from pending and closed investigations, and, through liaison efforts with intelligence specialists of other agencies, both law enforcement and non-law enforcement, provide forecasts, predictions, and trend analysis necessary to plot courses of investigative action, focusing efforts toward the more signigicant organized crime groups. The IRS will also analyze Title III information, especially secondary individuals and violators who could become the focus for subsequent investigations.

In an effort to capitalize upon one of its most significant investigative techniques and to enable FBIHQ to properly manage use of informants in support of criminal investigations, the FBI has developed a computerized Criminal Informant Management System (CIMS). CIMS will be installed in all FBI field offices by 1988. Once fully implemented, informant information will be much more readily available to agents, while at the same time providing for rapid collation of information, informant statistics, and administrative data within the field and at FBIHQ. Implementation of the system will permit the FBI to accomplish a variety of

1766

tasks which are labor intensive -- some of which are currently performed manually and others of which are foregone or delayed because of resource constraints. CIMS has been established as a separate computerized system in order to provide optimum security for the sensitive information which will be maintained in the system. A total of ten analysts are required in 1988 to continue implementation of the system which will simplify and streamline the various administrative procedures associated with an informant (seven will provide direct support in the field and three will support system operations at FBIHQ).

The FBI has made extensive use of a variety of sophisticated investigative techniques against narcotics traffickers. One of the most successful techniques has involved the use of aerial surveillance. The FBI's aerial surveillance capabilities have been significantly enhanced through the use of an aircraft equipped with a Forward-Looking Infared (FLIR) platform for night surveillance. The operation of this aircraft requires four Investigative Specialists. In view of that fact, funding is required for the four operator personnel necessary for the continued use of the FLIR aircraft in support of this initiative.

Nonpersonnel Enhancements

The use of informants provides the FBI with a means to gather information and evidence and is often far more effective and efficient than the investigative efforts of agent personnel. While the amount of funds being expended by the FBI for informant payments continues to increase, both field office and FBIHQ management closely scrutinize requests for payments to insure that the monies paid for information, services, and/or expenses of informants are commensurate with the services which were performed. Payments to informants have historically exceeded funded allocations in the Organized Crime Program and have produced results commensurate with the amount of funds expended. In 1984, payments to informants exceeded funded levels by approximately $2.5 million. In 1985, payments exceeded funded levels by approximately $2.1 million, and it is estimated that in 1986 payments will exceed funded levels by approximately $2.2 million. This increase in spending is a result of the overall increase in the total number of informants being operated by the FBI as well as their involvement in more complicated investigations resulting in larger payments to the informants. The statistical accomplishments attributable to informants is reflective of their involvement as they often obtain information or perform services which our investigative Special Agents cannot perform or obtain. In 1986, the statistical accomplishments attributable to informants in FBI investigations were: 1,458 subjects arrested, 10,978 subjects identified, 2,351 investigations initiated, $159,591,441 in value of merchandise recovered, and 1,239 convictions.

The emphasis being placed by the FBI on efforts to combat the importation of heroin from Sicily into the northeast will require the development of additional informant coverage by the FBI. The additional coverage will, in turn, require the expenditure of additional informant payments; therefore, the Organized Crime Program is requesting an increase of $138,000 for 1988.

No separate funding presently exists to offset expenses incurred by the FBI while maintaining individuals who have been proposed for entry into the Witness Security Program, but who have not yet been accepted into that program. It is the responsibility of the sponsoring agency to maintain the security of such individuals until such time as they are accepted for entry into the WSP by the Office of Enforcement of Operations, Department of Justice, and the United States Marshals Service. As a result of the increased review given to an individual proposed for entry into the WSP resulting from the passage of the Witness Security Act of 1984, the period of time which is required to process an individual for entry into the WSP now averages approximately eight weeks. This increased time during which the FBI must provide security for endangered witnesses has greatly increased the amount of funds being expended for maintenance and security of individuals awaiting approval for entry into the WSP.

The FBI continues to sponsor approximately 120 individuals each year for entry into the WSP--spending approximately $425,988 in 1984, and $630,430 in 1985, for these expenses. As a result of the FBI's involvement in narcotics investigations, and due to the violence prone nature of narcotics traffickers, an ever increasing number of witnesses are being proposed by the FBI for entry into the Witness Security Program. It is estimated that at least $750,000 will be required for these expenses in 1988.

The FBI frequently employs Special Operations Groups (SOGs) and/or uses Off Premise Sites (OPS) to facilitate its investigative efforts regarding narcotics trafficking. SOGs are used to conduct complex and sophisticated physical surveillances in support of undercover operations, Title III electronic surveillance installations and operations, and other sensitive matters. In order to conduct effectively such surveillances, it is necessary to employ specially trained agent personnel and coordinate closely technical, aerial and ground surveillance efforts in a manner which will prohibit detection by surveillance-conscious narcotics traffickers. The SOGs have become an essential and integral part of FBI operations. During 1986, SOGs were credited with 1,012 felony convictions and over $50 million in fines, savings, recoveries, and potential economic loss prevented. At the present time, only 24 of the FBI's 59 field offices have SOGs. The requested increase of $780,000 will provide for the establishment of SOGs and OPS in six additional field offices which have a present demonstrated need for a full-time SOG capability.

During 1986, FBI aircraft flew a total of 37,128 hours at a total cost of approximately $5,932,000. Those costs included $500,000 for operation of the Forward Looking Infrared (FLIR) aircraft. It is noteworthy that flight hours for FBI aircraft have increased over 100 percent since 1979, when 17,000 flight hours were flown in support of FBI investigative activities. Based upon a projected 10 percent annual increase in actual flight hours and increased rental costs for certain helicopters, funding enhancements are sought for the following categories of expenditures in support of aircraft operations: $224,000 for rental costs and $108,000 for aviation fuel costs.

The FBI formulated its long range plan for the acquisition and replacement of FBI aircraft based upon an August 1980 study by the Department of Justice which indicated outright purchase is the most effective and efficient method of obtaining aircraft. The plan calls for the assignment of one surveillance aircraft, up to a maximum of four, for each 300 hours of usage in those offices which fly more than 600 hours annually. It is projected that the workload demand for aircraft flight hours will require an additional $224,000 for aircraft rental expenses in 1988.

Portable intercommunications systems (ICS) are required for the safe and efficient operation of FBI aircraft. When operating in a high noise environment, pilots need the capability to transmit and receive simultaneously and independently on FAA and FBI radios, as well as be able to talk to one another. This capability is currently provided by portable intercommunications boxes acquired during the period from 1978 to 1982, which have become increasingly unreliable with their use and age. An enhancement of $100,000 is required to purchase 40 new portable ICs for installation in FBI aircraft as needed.

The FBI currently uses a large twin-engine aircraft, known as Night Stalker, which carries a stabilized FLIR platform to conduct sophisticated night surveillances. At the present time, the FBI does not have any other owned, leased, or rented aircraft that are suitable for a FLIR installation which have the capability for high speed and long-range response. In some instances, the FLIR system was temporarily unavailable for use in major investigations because of maintenance downtime. In addition, there were

numerous instances in which the FLIR aircraft was required to fly coast-to-coast on short notice to respond to emergency situations. Because of the significant benefit which FLIR aircraft has provided to a number of major investigations during the first two years of its operation, and based upon operational constraints which result from use of a single aircraft, it is apparent that a second FLIR aircraft is required to provide effective support to the major organized crime investigations addressed in this initiative. Once acquired, this aircraft will be based on the West Coast, and the FBI will be able to provide same-day response capability anywhere within the United States for two investigations being conducted simultaneously. The cost of this aircraft and equipment is estimated to be $3,500,000. Of the total cost, it is estimated that $2,000,000 will be required for aircraft, $500,000 for the FLIR, and $1,000,000 for the requisite modification of the aircraft and installation of the FLIR.

Since becoming operational in February 1984, Night Stalker has flown over 1,200 hours in support of 50 major investigations. In 1986, Night Stalker flew over 791 hours at an operational cost of $493,466. Based upon the substantial benefit which has been derived from operation of the aircraft in major investigations to date, it is anticipated that Night Stalker will fly 1,000 hours in support of FBI investigations in 1988. It is projected that operational costs for the aircraft will be approximately $500 per hour. In view of that fact, an enhancement of $119,000 to base-level funding will be required to sustain operation of Night Stalker at its expected workload in 1988.

As the volume and complexity of investigations increased, so too has the amount of travel necessary to investigate these matters within the OCP. Travel is required to insure that all facets of an investigation are coordinated and that a propert level of informant, cooperative witness, trial preparation, and investigative leads are completed. An example of required travel is the New York "Pizza" case that involved several field offices and other Federal agencies. Extensive travel was required to coordinate investigative efforts that led to the maximum prosecution of subjects. The FBI closely monitors travel costs to insure only those necessary expenditures are incurred. In spite of these efforts, at the present time, the cost of travel has exceeded base level funding. In 1988, it is anticipated that travel costs will continue to increase with the FBI's committment to aggressively investigate the illegal activities of organized criminal groups and high-level narcotics traffickers. It is realized that overspending alone does not justify budget enhancements; however, in view of the FBI's efforts to maintain an aggressive posture, while eliminating unnecessary travel, $500,000 of additional travel funds is required.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Organized Crime Drug Enforcement	534	528	$39,474	534	534	$44,298	546	546	$46,254	12	12	$1,956

Long Range Goal: To identify, investigate, and prosecute members of high-level drug trafficking enterprises, and to identify and seize assets obtained with proceeds from illegal activity for the purpose of initiating forfeiture action; and to neutralize the operations of those organizations.

Major Objectives:

To pursue the goals of the FBI's National Drug Strategy which include targeting, investigating, seizing the assets and prosecuting the members of organized criminal groups who engage in high-level drug trafficking enterprises, as well as large-scale money laundering organizations. These groups include but are not limited to the Colombian cocaine cartels, Mexican heroin and cocaine networks, and the La Cosa Nostra (LCN) and Italian organized crime groups, such as the Sicilian Mafia, the Camorra, and the N'Drangheta. Other groups to be addressed by this strategy are the outlaw motorcycle gangs (OMG), Oriental groups, and other significant drug traffickers.

To promote a coordinated drug enforcement effort in each Organized Crime Drug Enforcement Task Force (OCDETF) area and to encourage maximum cooperation among all drug enforcement agencies.

To work fully and effectively with federal, state, and local agencies involved in drug enforcement.

To make full use of financial investigative techniques, including tax-law enforcement and forfeiture actions, to enable the Government to seize assets and profits derived from high-level drug trafficking.

Base Program Description: The investigative jurisdiction of the FBI in drug matters is based on Attorney General Order Number 968-82, dated January 28, 1982. The Order authorizes the Director of the FBI, concurrently with the Administrator of the Drug Enforcement Administration (DEA), to investigate violations of the criminal drug laws of the United States. These violations are detailed in the Comprehensive Drug Abuse Prevention and Control Act of 1970, also referred to as the Controlled Substance Act (Title 21, United States Code (USC)). Executive Order 12368, dated June 29, 1982, announced the formulation of policy regarding the coordination and oversight of international and domestic drug abuse. Subsequently, on October 14, 1982, the President directed that 12 task forces be formed to coordinate a nationwide initiative by federal, state, and local law enforcement agencies to investigate and prosecute major drug traffickers, organized crime figures, and others involved in illicit drug activity. In 1985, funding was provided for the creation of a 13th task force to operate in southern Florida.

It is estimated by governmental agencies that as many as 41 million people in the United States spend approximately $80 billion annually on heroin, cocaine, marijuana, and hashish. Illicit drug activities are a source of large profits for organized crime and other major traffickers. These profits are often funneled into other enterprises fostering a cycle of criminal activities, political and police corruption and creating a heavy financial burden on every United States citizen. In addition to the financial burden which must be borne by the public, law enforcement statistical data reveals that a large percentage of violent personal crimes are related to drug activities.

Prior to 1986, the FBI's drug program allocated resources toward dismantling illicit drug networks involving the LCN and nontraditional organized crime groups, such as the OMGs. In 1986, the FBI redefined its National Drug Strategy and identified Colombian cartels, Mexican groups, and Italian criminal organizations, primarily the Sicilian Mafia but including the Camorra and the N'Drangheta, as the most significant entities to be investigated. OMGs, Oriental groups, and other significant trafficking groups continue to be a part of this strategy.

In 1983, the FBI received an allocation of 322 Special Agents for OCDETF matters. In 1985 and 1986, funding was provided for a total of 360 and 362 agent workyears respectively. The FBI expended 538 agent workyears in 1985 to address OCDETF matters and approximately 504 workyears in 1986. In 1987, 410 agent workyears are funded. The FBI's commitment of resources to this program reflects the priority given OCDETF. The FBI's experience in OCDETF cases indicates that these investigations are resource intensive because of the necessity to employ Title III electronic surveillances, long-term undercover operations, and sophisticated physical surveillances necessary to develop evidence. The significance of the coordinated law enforcement effort directed against organized criminal groups involved in drug trafficking cannot be overstated. Resources in this program are being used to address some of the most significant drug investigations currently underway at the Federal level.

Accomplishments and Workload: Actual and estimated accomplishments in OCDETF investigations from 1985 to 1988 are set forth below:

			Estimates	
	1985	1986	1987	1988
Investigative Matters Handled	3,269	3,058	3,251	3,320
Title IIIs Initiated	48	34	35	35
Informations and Indictments	2,098	2,184	2,490	2,490
Convictions/Pre-trial Diversions	1,369	1,610	1,835	1,835
Court Ordered Forfeitures ($000 in thousands)	*	$20,775	$24,200	$24,200

* Court Ordered Forfeitures were not tracked as a separate item prior to 1986.

During 1986, OCDETF investigations resulted in over 1,950 indictments and 1,550 convictions. The cases mentioned below are typical examples of investigations conducted by OCDETF throughout the United States. They illustrate the fact that these investigations are long-term, complex and require the use of labor-intensive investigative techniques such as Title III surveillance and undercover operations.

1771

A joint FBI, DEA, and local law enforcement effort focused on the illegal activities of a suspected long-time associate of Milwaukee LCN figures, including the Family Boss and Underboss, resulted in the most severe sentence ever meted out on a Continuing Criminal Enterprise (CCE) conviction in the Eastern District of Wisconsin. One individual was convicted on RICO and CCE violations and sentenced to 121 years in prision. Twelve cocaine dealers who worked for this individual were also indicted and convicted on various drug charges during 1986.

The FBI arrested two subjects and seized 45 kilos of cocaine as the result of a joint FBI/DEA undercover investigation which focused on a drug trafficking organization. This organization, based in the cental United States, distributed about 10 kilos of cocaine per month. The source of supply was an eastern United States import business that has a direct source of supply from Bolivia.

The Santiago investigation was a two-year OCDETF investigation which evolved from an investigation of a close-knit group of Puerto Ricans (who were distributing multi-kilo quantities of brown heroin in the midwest) into an investigation of various members of the Mexican Herrera Organization in the Chicago, Denver, El Paso, Indianapolis, Miami, Los Angeles, and San Juan Field Offices. This case utilized up to nine Title III electronic surveillances, simultaneously, for a period of nine months as well as a number of undercover agents. Sufficient evidence was developed to indict 10 subjects for various Title 21 violations. Nine language specialists were utilized for a period of 9 1/2 months. An observation post was manned for two shifts for two months. To date, 44 subjects have been arrested without incident in this investigation and 12 fugitives are still outstanding. Civil forfeiture warrants for numerous automobiles, and 47 businesses and residential properties have been executed. Further, numerous weapons, approximately $400,000 in U. S. currency, eight kilos of brown heroin, nine kilos of cocaine, 13 pounds of marijuana, small quantities of other drugs, and gold jewelry (valued in excess of $500,000) have been seized. To date, a total of 44 subjects have been convicted and sentenced in this case. During these trials, 1,300 hours of video tapes and 3,000 still photos were entered as evidence.

An investigation involving Sicilian-based heroin was initiated in 1981 and involved seven FBI field offices, DEA, U.S. Customs Service, New York Police Department, and five foreign countries. This effort resulted in 47 Title III orders and over 13 months of continuous physical surveillances, undercover operations, and investigative analysis by all the above agencies, both domestic and international. This investigation culminated with the arrest of 37 individuals and the execution of 49 search warrants. Additionally, 175 Sicilian Mafia members and associates were subsequently indicted in Italy. In order to support this particular investigation, extensive domestic and foreign travel of Agent personnel was essential. At one point in this investigation, it was necessary to transport an entire surveillance team via a military transport plane at a cost of approximately $9,000 for fuel. Additional investigative expenditures involved contract translators at a cost of approximately $275,000. Since the initiation of this case, numerous other Sicilian Mafia drug investigations have been instituted. Although the spinoff cases are in their initial stages, they have all involved electronic surveillance, extensive physical surveillance, foreign travel, and utilization of Italian/Sicilian translators. Twenty-two defendants are presently standing trial in New York.

A joint FBI/Mississippi State Police investigation began in April 1985, directed against the drug trafficking activities of the Jackson Chapter of the Bandido motorcycle gang. An undercover operation, utilizing extensive consensual monitoring authority, gathered significant evidence regarding the Bandido's multistate drug activity, as well as their involvement in prostitution,

loan-sharking, transportation of stolen property, and the illegal possession of automatic weapons and explosives. This investigation was converted to an OCDETF matter in February 1986. Numerous purchases of drug evidence were successfully negotiated by the confidential sources. As a result of these efforts, grand jury indictments were returned against 13 members and associates of the Bandidos in August 1986. The indictments charged violations of Federal drug laws. In addition, one Bandido officer was charged with operating a Continuing Criminal Enterprise. To date, 12 of these individuals have been arrested and are pending trial.

An investigation was instituted addressing the illegal heroin/cocaine trafficking of the Black Mafia in the Eastern United States. Highly placed informants have indicated that heroin distributed by this organization is being supplied by the Gambino LCN family in New York. Undercover purchases of drugs and Title IIIs have been utilized to bring this investigation to an indictment stage.

An investigation was instituted on a group identified as being responsible for importation of heroin from Pakistan, Holland, Belgium, England, and subsequent distribution of this heroin throughout the east coast of the United States. In conjunction with the New York City Police Department and DEA, joint arrests and search warrants were executed. A total of forty-two subjects were arrested, two kilograms and 13 ounces of heroin and in excess of $48,850 in cash were seized. Bank accounts utilized by this group, located outside of the United States, have also been identified and forfeiture efforts are being pursued.

Program Changes: To continue its efforts toward attaining its established goal of significantly disrupting major drug organizations - an additional 12 agent positions will be required. If the FBI is to maintain its current, aggressive approach to the investigation and prosecution of major drug trafficking organizations, while closely coordinating its efforts in cooperative endeavors with other members of the OCDETF community, the additional resources must be provided. The requested increase will permit the FBI to continue working closely with the DEA, IRS, and U.S. Customs Service as well as foreign authorities to coordinate the penetration of these organizations in a manner in which financial assets can be tied to high-level drug activities so that seizures can be made.

The resources requested will enable the FBI to investigate, seize assets, initiate forfeiture actions, and support prosecution of members of organized criminal groups, such as the La Cosa Nostra, the Sicilian Mafia, Colombian narcotics cartels, and Mexican narcotics networks, who are engaged in high-level drug trafficking enterprises. Through the use of the the requested resources, the FBI will be able to participate more effectively in Organized Crime Drug Enforcement Task Force endeavors. In addition, it will be able to continue with the implementation of a strategic plan, for which the FBI received 48 agent positions in 1987, and which is being coordinated with the Drug Enforcement Administration, to investigate the activities of the Sicilian Mafia, Colombian cocaine cartels, and Mexican heroin groups which are significantly involved in the importation and distribution of narcotics. After its formal review and approval by the Director of the FBI, this plan was presented to the Attorney General in May 1986, who voiced his enthusiastic support for the initiative.

If the FBI's Organized Crime Drug Enforcement Task Force Programs are maintained at their present base levels of funding, they will continue to achieve accomplishments which will impact upon narcotics problems facing the United States. However, unless funding is increased, the FBI will not be able to pursue avenues of opportunity that have opened as a direct result of recent investigative successes. Thus, the FBI would be prevented from following through upon and expanding initiatives which could level

a devastating blow to the major narcotics networks. These cases often require substantial and protracted investigative efforts, which include the use of a variety of sophisicated techniques. In the event additional funding is not received, it will be necessary for the FBI to reduce its commitment to Organized Crime Drug Enforcement Task Force matters. Such an action would severely impant upon the ability of the Task Forces to address ongoing narcotics investigations. Moreover, the FBI would be unable to provide the Task Forces with the technical support -- that is, sensitive physical, electronic, and aircraft surveillance support -- which is of critical importance to the successful resolution of the complex, major investigations being conducted by the Task Forces.

A request is made for funds specifically for support of the National Drug Enforcement Policy Board because of increased requirements associatated with this responsibility.

The use of informants provides the FBI with a means to gather information and evidence and is often far more effective and efficient than the investigative efforts of agent personnel. While the amount of funds being expended by the FBI for informant payments continues to increase, both field office and FBIHQ management closely scrutinize requests for payments to insure that the monies paid for information, services, and/or expenses of informants are commensurate with the services which were performed. Payments to informants have historically exceeded funded allocations and have produced results commensurate with the amount of funds expended. In 1984, payments to informants exceeded funded levels by approximately $2.5 million. In 1985, these payments exceeded funded levels by approximately $2.1 million, and it is estimated that 1986 expenditures will exceed funding levels by approximately $2.2 million. This increase in spending is a result in the overall increase in the total number of informants being operated by the FBI, as well as, their involvement in more complicated investigations, which result in larger payments to informants. The statistical accomplishments attributable to informants is reflective of the quality of services and information being provided by FBI informants. In 1986, 1,458 subjects arrested; 10,978 subjects identified; 2,351 investigations initiated; $159,591,441 in value of merchandise recovered and 1,239 convictions were attributed to the use of informants within FBI investigations.

The requested increase of $825,000 in informant payments for the OCDE Program in 1988 is necessary if the FBI is to maintain the high quality investigative efforts being performed by its Special Agents through the efficient operation of informants. The emphasis being placed by the FBI on efforts to combat the importation of Mexican heroin from Sicily into the northeast will require the development of additional informant coverage by the FBI. Additional coverage will, in turn, require the expenditure of additional informant payments.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
White-Collar Crime	3,045	2,939	$158,906	3,044	2,957	$176,163	3,124	2,997	$178,166	80	40	$2,003

Long-Range Goal: To reduce losses in Government programs, private sector businesses, and labor unions from corruption, fraud, and embezzlements, and to provide investigative assistance to the Department of Justice (DOJ), including United States Attorneys throughout the United States, in Civil and Antitrust matters.

Major Objectives:

To identify, investigate, and obtain prosecution in: major fraud against the Government cases involving illegal practices by program and project management officials and officers of firms doing business with or for the Federal Government; Federal violations involving systematic corruption by Federal, state, and local executive and management level public officials, as well as private citizens acting in complicity with corrupt public officials; Federal fraud, bribery, and embezzlement violations committed by bank officers, directors, customers, and owners, particularly those that result in the financial institution's failure or merger in lieu of failure; Federal fraud violations committed by officers, directors, and major stockholders of financial institutions; Federal fraud violations committed by officers, directors, and owners of major companies involved in the illegal disposal of toxic waste; thefts or embezzlements of monies or assets of a labor organization, employee pension fund, or welfare benefit plan; and significant trademark counterfeiting, computer fraud, and bankruptcy fraud matters.

To establish new and innovative means of collecting and collating White-Collar Crime Program (WCCP) data from multiple sources in order to identify high impact white-collar criminal organizations for subsequent investigation.

To support the Antitrust Division of the Department of Justice in the enforcement of antitrust statutes in high-impact cases by conducting the necessary investigations.

To support the Civil Division of the Department of Justice and United States Attorneys throughout the country in representing significant Government interests in civil matters.

To support and actively participate in the efforts of the President's Council on Integrity and Efficiency, the Attorney General's Economic Crime Council, and the Interagency Bank Fraud Enforcement Working Group to coordinate a unified attack on high impact white-collar crime (WCC).

To assist other Federal, state, local, and foreign law enforcement and regulatory agencies in making a coordinated and effective attack on WCC.

To insure that WCCP management provides sufficient coordination, direction, and resources to enable the FBI to address all priority investigations.

To plan and implement undercover operations directed against the subjects of significant WCC investigations.

To recruit, direct, and maintain WCC informants and confidential sources and enhance liaison with professional associations and private businesses in order to maintain an adequate intelligence base concerning WCC matters within the investigative jurisdiction of the FBI.

To promote the utilization of electronic surveillance investigative techniques in WCC investigations.

Base Program Description: WCC is defined as those illegal acts which are characterized by deceit, concealment, or violation of trust and which are not dependent upon the application or threat of physical force or violence. Such acts are committed by individuals and organizations to obtain money, property, or services; to avoid the payment or loss of money or services; or to secure personal or business advantage.

The Department of Justice has identified and ranked priority areas regarding WCC. These are: crimes against Federal, state, or local governments by public officials and private individuals; crimes against businesses, consumers, investors, and employees; and crimes affecting the health and safety of the general public.

In response to the above, the FBI established three major priorities within the WCCP. They are: (1) fraud against the Government matters involving United States Government officials (and/or losses exceeding $25 thousand) and bribery and other public corruption involving Federal officials (Government Fraud); (2) Federal, state, and local public corruption (Public Corruption); and (3) financial crimes.

1776

Governmental Fraud Subprogram

These investigations address allegations of fraudulent acts involving federally funded programs or bribery/conflict of interest in the executive branch of Government. This top priority subprogram endeavors to investigate and seek prosecutions of those individuals who, through deceit or dishonesty, attempt to interfere with the lawful functioning of Federal agencies, programs, or projects. This subprogram has achieved its top priority status due to the concerns of the Attorney General's Economic Crime Council, the President's Council on Integrity and Efficiency, and FBI executives. The investigations given "priority" status are those involving frauds in excess of $25,000 and especially those involving the Department of Defense or the Department of Health and Human Services. Allegations of bribery and/or conflict of interest on the part of Federal employees are considered extremely sensitive and must be addressed immediately.

In addition to the corruption of Federal officials, this subprogram also deals with procurement, entitlement, and false claim frauds. Procurement frauds (with heavy emphasis on Defense procurements) include labor mischarging (charging other Government contracts for costs incurred on overrun contracts), defective pricing (falsifying or fraudulently withholding pertinent cost information during contract negotiations), product substitution, and false test certifications. Entitlement frauds primarily consist of applications for and/or receipt of Federal funding by those not eligible for such funding (many of the food stamp and health care frauds are representative of this). False claims run the gamut of charging the Government for work not performed

(usually by overstating progress payment requests), using false billing rates, billing for services that were not necessary, and creating completely fictitious invoices.

FBI participation in joint investigations with the Inspectors General and military investigative agencies has not only increased the number of significant fraud cases that are being investigated, but it also has drawn on other agencies' experience and expertise to assist in accomplishing thorough and comprehensive investigations in a timely fashion. Examples of this approach include: joint Defense fraud investigations coordinated through participation in the Defense Procurement Fraud Unit; joint city task force investigations with the Department of Housing and Urban Development and Veterans Administration addressing family housing frauds; and city task force investigations addressing false claims to Medicaid/Medicare made on the part of doctors, hospitals, and laboratories.

Public Corruption Subprogram

Public corruption involves the investigation of systematic corruption by Federal, state, and local executive and management-level public officials. Public corruption can be broadly defined as occurring when any elected or appointed public official (local, state, or Federal) acting for, or in behalf of, his/her public office asks, demands, solicits, seeks, accepts, receives, or agrees to receive anything of value in return for being influenced in the performance of any official act. The necessary evidence to support an allegation of public corruption must often be gained through the testimony of informants and cooperating witnesses, the use of consensually monitored conversations and court-ordered electronic surveillances, and the use of undercover operations. As these investigative techniques become known through their exposure during subsequent courtroom proceedings, they must be replaced by new and often more labor intensive techniques. Electronic and operational countermeasures are now being employed by some sophisticated white-collar criminals to thwart law enforcement efforts. Because of the intense pressures which wealthy and politically powerful public officials are able to exert, it can be extremely difficult for state and local authorities to effectively conduct public corruption investigations. The FBI must be able to pursue allegations of public corruption which cannot be deferred to state or local authorities.

Financial Crimes Subprogram

Financial crimes investigations primarily involve frauds, embezzlements and other thefts occurring within or against the national and international financial community. Priority matters currently of particular concern are bank failures or bank (and savings and loan association) mergers in lieu of failure caused by fraud and embezzlements perpetrated by bank officers, owners, or major stockholders. A 1984 Congressional study found actual or probable criminal misconduct by officers, directors, or other insiders in 61 percent of recent bank failures and concluded that officials of failed or problem banks usually escape prosecution or sanctions by the Government. This study indicated that criminal activities by bank officers, directors, and owners contributed to 35 bank failures in 1983. The assets of these institutions totaled far in excess of $3 billion. To illustrate the scope of the bank failure problem, from January 1, 1981 through December 31, 1986, 657 commercial banks and savings and loan institutions have been closed or merged with other financial institutions in lieu of failure. Of this total, 293, or 45 percent, occurred during the period from January 1, 1985, through December 31, 1986. Federal regulatory agencies forecast a continuing pattern of bank failures.

17777

The fraud by wire statute is one of the most effective tools available to combat national and international fraud schemes. These schemes include advance fee loan frauds, "Ponzi" investment frauds, pyramid business frauds, "boiler rooms", and numerous other types of fraud. The advance fee loan scheme preys upon the small businessman, the farmer, or entrepreneur who is vulnerable because of a desperate need for cash. An example of a significant national fraud case which utilized the fraud by wire statute, as well as bank fraud and embezzlement statutes, is a case which resulted in the conviction of seven former officers of ESM Government Securities, Incorporated, Ft. Lauderdale, Florida, and the former managing partner of the Miami office of Alexander Grant and Co., Certified Public Accountants. These individuals were convicted of participating in a nationwide fraud scheme involving the purchase and repurchase of Government securities, which caused losses of over $300 million to financial institutions, municipalities, and creditors. Continuing technological advances in mass marketing and electronic fund transfers enable the perpetrators of these fraudulent schemes to operate with remarkable speed and efficiency. Fraudulent bankruptcy, computer crimes, and stolen securities violations, as well as new or enhanced statutes under the Comprehensive Crime Control Act of 1984, are also addressed in this subprogram.

Testimony before the United States Senate, as recorded in the June 13, 1984, Congressional Record, reflects the Federal Government alone uses more than 16,000 computer systems, and the private sector utilizes more than 50,000 large, general purpose computers. In addition, some 3.5 million personal computers are currently in use in the business field. These computer systems represent potential targets of computer crime. The increasing numbers of and dependency on computers are expected to result in an increasing incidence of computer-related crime. Financial crimes matters such as bank failure and major fraud investigations often require the concentration of relatively large amounts of FBI personnel for extended periods of time.

FBI WCC investigators and accounting technicians, by virtue of their formal education and experience in accounting investigations, are highly qualified to conduct financial crimes investigations. Because of the voluminous amounts of documentary evidence encountered in these types of investigations, the FBI's Investigative Support Information System (ISIS) is often used to assist investigators in collating evidence and testimony on complex issues, events, and the activities of multiple defendants.

The FBI also conducts extensive investigations in connection with the Government's prosecution of antitrust matters and the litigation of civil matters.

Accomplishments and Workload: Accomplishments and workload of the WCCP are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Investigative Matters:				
Pending beginning of year	21,292	22,300	22,700	23,800
Received	45,338	46,365	47,300	48,250
Resolved	44,330	45,996	46,200	46,400
Convictions	4,091	4,031	4,100	4,100
Pre-trial Diversions	401	369	390	400
Fines ($000)	$20,721	$25,217	$26,200	$26,200

Item	1985	1986	Estimates 1987	1988
Recoveries ($000)(1)	$551,977	$1,382,734(2)	$550,000	$550,000
Potential Economic Loss Prevented ($000,000)	$297	$385	$380	$380
Claims against the Government ($000)				
Filed	$221,202	$212,200	$225,000	$225,000
Settled	$19,754	$17,899	$20,000	$20,000
Claims by the Government ($000)				
Filed	$3,859	$5,453	$5,500	$5,500
Settled	$3,250	$3,515	$3,500	$3,500

(1) Includes recoveries and restitutions.
(2) Includes a $1 billion court ordered restitution in an undercover operation which investigated international money laundering.

During 1986, convictions and pretrial diversions included 896 for Governmental Fraud investigations; 232 for Public Corruption investigations; 3,199 for Financial Crimes investigations, of which 61 percent were for bank-related violations; and 36 in Labor Matters not related to organized crime resulted. Additionally, there were 10 convictions and pretrial diversions, $665,267 in fines imposed, $13,000 in recoveries, and $6.6 million in potential economic losses prevented in antitrust and civil matters investigations.

On July 24, 1986, Litton Systems, Incorporated, was sentenced in U.S. District Court, Philadelphia, Pennsylvania, following a plea of guilty to 320 counts of false claims and mail fraud. The combination of restitutions, fines and civil damages of $15,698,997 was paid back to the U.S. Government by Litton as a result of this investigation. The case involved mischarging material cost on approximately 45 contracts for military hardware sold to the U.S. Army, Navy, and Air Force.

Also on July 24, 1986, in the Central District of California, Los Angeles, California, 19 subjects were charged with mail fraud, tax evasion, receipt of kickbacks, conspiracy, and aiding and abetting in a kickback scheme between contractors and subcontractors. Both cases were conducted jointly with Department of Defense investigative agencies and are examples of the FBI's efforts to combat fraud and corruption in the Defense procurement process.

Provider fraud in the federally-funded health care area has also been identified as a major crime problem. Organized efforts in 12 cities by the FBI, U.S. Attorneys' Offices, and the Office of Inspector General, Department of Health and Human Services, have resulted in an increase in the number of investigations and prosecutions. An example of the dedication to this effort has been the results achieved by the Detroit Division of the FBI in Medicare/Medicaid "prescription mills" fraud investigations since initiating this project in 1981. To date, 46 health care providers and six corporations have been indicted and convicted.

Additional training has been provided by FBIHQ to Naval Investigative Service (NIS) personnel through their quarterly fraud training courses in Athens, Georgia, and the DOD Inspector General's week-long fraud courses have been made available to the FBI through DPFU.

1779

On March 31, 1986, Walter Louis Nixon, Jr., Chief United States District Court Judge, Southern District of Mississippi, was sentenced to five years imprisonment following his conviction for two counts of perjury. The perjury pertained to Judge Nixon's testimony before a Federal grand jury concerning allegations that Judge Nixon received bribes for his assistance in fixing criminal cases. Judge Nixon is currently free on bond pending appeal.

On February 3, 1986, William C. Brennan, Judge, Supreme Court, State of New York, 11th Judicial District, was sentenced to five years imprisonment following his conviction on bribery charges. An FBI investigation had determined that Brennan sold and agreed to sell his influence in criminal cases before him and other Queens, New York, Supreme Court judges in exchange for cash bribes.

On December 18, 1986, R. Budd Dwyer, State Treasurer of Pennsylvania, was convicted in Harrisburg, Pennsylvania, for awarding a state contract in exchange for a promise of $300,000 in kickbacks.

Seven former officers of ESM Government Securities, Incorporated, Fort Lauderdale, Florida, and the former managing partner of the Miami office of Alexander Grant and Co., Certified Public Accountants, were convicted of participation in a nationwide fraud scheme involving the purchase and repurchase of Government securities, which caused losses of over $300 million to financial institutions, municipalities, and creditors.

Over 80 individuals were convicted in Texas of a real estate loan fraud scheme, which caused the failures of two savings and loan associations, the near failure of a third, and is expected to result in payment of over $400 million in Federal deposit insurance funds.

Over 70 individuals, including physicians, pharmacists, drug sales representatives, and drug wholesalers were convicted following an undercover operation directed toward the illegal diversion of prescription pharmaceuticals through fraudulent orders, distribution of samples, and sale of adulterated, mislabled, and expired drugs.

A group of individuals from South Florida were convicted of participation in a series of planned bankruptcies or "bust outs" in nine major cities, which caused credit losses of over $10 million to manufacturers nationwide.

Two former bank presidents were convicted and sentenced to prison terms of 24 years and 20 years, respectively, as a result of FBI investigation of criminal activity associated with the failures of banks in the Permian Basin area of Texas. A former director of one of the banks was also convicted and sentenced to a prison term of 10 years.

Ronald Ray Rewald was convicted in Honolulu, Hawaii, of Federal violations after investors in the investment firm of Bishop, Baldwin, Rewald, Dillingham, and Wong were defrauded of $22 million.

Program Changes: An increase of 42 agent positions (21 workyears), six special support positions and workyears, 32 general support positions (13 workyears), and $2,003,000 is requested specifically for the White-Collar Crime Program in order to effectively investigate the increased number of DOD procurement frauds and major bank failure fraud and embezzlement matters.

1780

Agent, general, and special support personnel enhancements are required to address significant crime problems in the WCCP. Frauds against the Government affecting procurements by DOD and major bank frauds and embezzlements are increasingly becoming the subject of substantial FBI investigative efforts. Since the FBI is presently utilizing nearly 100 percent of its funded WCCP personnel resources on significant WCCP investigative matters, the increased number of DOD procurement fraud and bank fraud and embezzlement cases projected in 1988 can only be investigated on a timely basis if additional personnel resources are provided.

Frauds against the Government affecting the 13 Departments and 57 agencies of the Executive Branch are the top investigative priority of the FBI's WCCP. Of primary concern are DOD procurement frauds which involve kickbacks from subcontractors to prime contractors, improper charges for labor (charging other Government contracts for costs incurred on overrun contracts), defective pricing (falsifying or fraudulently withholding pertinent cost information during contract negotiations), product substitution, and false test certifications. From 1984 to 1986, DOD fraud investigations conducted by the FBI, the majority of which are procurement fraud, increased 39 percent, from 552 to 768. In 1986, 896 convictions and pretrial diversions were obtained as a result of FBI investigative efforts in governmental fraud cases. Over two dozen criminal convictions were obtained against major defense contractors throughout the country following joint investigations with DOD investigators and coordinated through the Defense Procurement Fraud Unit. As a result of initiatives by the Defense Procurement Fraud Unit to combat DOD procurement frauds, the Defense Contract Audit Agency, the primary source of referrals of labor mischarging and defective pricing cases, instituted a system to generate reports of suspected irregularities. These reports of suspected irregularities resulted in a substantial increase in cases since 1984, which now number in the hundreds in 1986. It is expected that there will be an increasing number of FBI investigative matters in this area through 1988. Without additional resources to address the increased number of DOD procurement fraud investigative matters in 1988, the FBI will have insufficient resources to fully develop several major governmental fraud cases, which in turn will prohibit the Government from recouping funds lost by fraud and/or from prosecuting the persons responsible.

The number and complexity of major bank fraud and embezzlement matters under investigation by the FBI have increased dramatically in recent years. From 1983 to 1986 the number of bank fraud and embezzlement matters with losses in excess of $100,000 increased from 1,513 to 2,948, or 95 percent. A significant number of these investigations involved bank failure fraud matters. It is anticipated that the number of major bank fraud and embezzlement cases will continue to escalate into 1988. Without additional resources, the FBI will only be able to pursue the investigation of bank failure cases at the expense of efforts devoted to other significant WCCP cases. In order to effectively address the projected workload of bank fraud and embezzlement matters in 1988, additional agent and support resources will be needed.

To complement agent investigative efforts within the WCCP, six additional accounting technician positions are required. Accounting technicians have proven to be an extremely valuable resource in major WCC investigations by performing tasks such as reviewing ledger sheets, transaction documents, and other accounting documents, which would otherwise have to be performed by agent personnel. By relieving investigative personnel of these routine tasks, agents are able to focus on and pursue more complex aspects of investigations. The six additional accounting technicians requested are necessary for the FBI to handle effectively and efficiently its projected workload associated with the investigation of bank failure frauds and military procurement frauds.

1781

Activity: Investigative Support

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm Pos.	WY	Amount

Investigative support for FBI programs is provided through training, forensic laboratory examination and research, attaches in foreign countries, efficient management of investigative and administrative records, automatic data processing and telecommunications management and maintenance, and technical field support and equipment supply.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Training	388	377	$23,176	378	367	$24,369	378	367	$26,869	...	....	$2,500

Long-Range Goals: To provide the introductory training and on-going professional development of FBI Special Agents and support personnel to insure that they are prepared to carry out their responsibilities in an efficient and effective manner and in compliance with the law and Government regulations.

To evaluate the methods, techniques, and equipment which may enhance the FBI's ability to perform its law enforcement mission.

To maintain and improve the land, buildings, equipment, furnishings, and fixtures which make up the FBI Academy complex in a manner consistent with and conducive to an effective, efficient, safe, and healthy learning and living environment.

Major Objectives:

Provide the highest level of training services for new agents to insure that their knowledge and skills are developed to enable them to discharge their complex responsibilities in a professional manner at the outset of their careers.

Afford advanced professional training and support at the FBI Academy and in the field for special agents and support personnel, enabling them to carry out their responsibilities in an efficient, professional, and effective manner.

Improve the ability of mid-level and upper-level FBI executives to more effectively carry out their increasingly complicated responsibilities, and provide for job enrichment and career development opportunities for support personnel through educational and training programs at the FBI Academy and in the field.

Conduct necessary research, evaluation, and development, and provide direct field support to accomplish the training objectives cited above.

To enhance FBI/DEA investigative operations by the collocation of FBI/DEA training at the FBI Academy.

Base Program Description: New Agents Training Program: After being accepted as a special agent trainee, the period of instruction at the FBI Academy encompasses, but is not limited to, the following major topics over a 13-week period: substantive statutory violations, national security matters, basic law enforcement and forensic skills, behavioral science, legal instruction, communications, field office administration, firearms, arrest techniques, physical fitness, professional conduct, and ethics. Newly acquired skills in these areas are applied in various practical problems and Moot Court situations.

1783

Advanced Professional Training and Direct Field Support Programs: Special agents are periodically brought back to the FBI Academy for instruction in specialized areas based upon the investigative needs and priorities of the FBI. Specialized training and direct field support are also provided by FBI Academy instructors and FBI Headquarters' personnel in field offices if this method is more cost-effective or responds to the particular need of a specific field office.

Research, Faculty Development, and Liaison: Currently, a limited number of FBI Academy faculty members and field instructors are pursuing graduate study in job-related areas at various colleges and universities when instructional and investigative duties permit. In addition, ongoing faculty exchange programs exist between FBI Academy personnel and the Australian, British, and Canadian Police Colleges. FBI Academy instructors attend symposia, seminars, schools, and participate in other relevant educational experiences when possible. The faculty also maintains liaison with selected foreign law enforcement agencies and several foreign and United States military counter-terrorist units for exchange of training information and equipment.

Maintenance and Improvement of Physical Plant: Employees assigned to eight maintenance and craft shops perform the required maintenance for 401 acres; 24 major buildings; 23 fully-equipped classrooms; 15 training, storage, and utility structures, and the six FBI firearms ranges, all of which make up the FBI Academy training complex.

Accomplishments and Workload: The FBI Academy has an optimum capacity of approximately 150,000 student training days (612 beds x 5 days x 49 weeks). During 1986, 154,592 student training days were used with 68,269 (44 percent) used for General Law Enforcement Training (GLET). FBI employee training during 1986 was at 62,520 student days, with an additional 23,803 student days dedicated to DEA training. During 1986, 5,307 FBI employees were trained in various schools, seminars, working conferences, and symposia at the FBI Academy. This figure includes 440 new agent personnel.

Technical assistance in the form of case analysis, personality assessment and construction of personality profiles were provided in 130 FBI investigative matters. Significant time and effort were spent on major FBI investigations such as UNABOM, CHOKEHOLD, CAPMUR, FREEWHEEL and Top Ten Fugitive Michael Wayne Jackson.

During 1986, 280 hours of psychological services, assistance, and consultation by the Behavioral Science Unit were furnished to FBI administrators and personnel. Forty hours of post-critical incident reaction training were furnished to 13 special agents who had been involved in shooting situations and other life-threatening events.

During 1986, 8,224 FBI Special Agents were each afforded 68 hours of training in the field. In addition, 818 FBI Headquarters-based supervisory personnel received eight hours of mandated legal training. As such, 565,776 total mandated training hours for FBI Special Agents in the field and at FBI Headquarters were accomplished in 1986.

Approximately 47,696 total training hours for 11,924 support employees in the field and at FBI Headquarters were accomplished in 1986.

A total of 939 DEA employees participated in FBI Academy training sessions.

1784

The Fitness Indicator Test (FIT) is continuing on a semiannual basis (spring and fall) with computerized feedback to all agent personnel. Additionally, pre-entry fitness testing began field-wide in 1986 to measure fitness levels of all special agent applicants to insure they are all at a minimum level of conditioning.

Program Changes: Enhancements are needed in 1988 for equipment funding necessitated by the opening of the FBI Academy's new dormitory in late 1988. The new 250-student dormitory represents additional capacity and training capability for the FBI; however, it cannot be furnished from base level funds.

It is imperative that $2.5 million for the purchase of furniture and equipment for the FBI Academy's new dormitory be approved in 1988 to coincide with the completion of this multimillion dollar facility. It will be necessary to completely furnish the new dormitory building including, but not limited to, 250 single occupancy bedrooms, three conference rooms, several break-out rooms, a classroom, student reception and special purpose areas, and a kitchen.

By way of background, the new dormitory building, with anticipated occupancy by the summer of 1988, is more than a 250-student dormitory. The lobby and reception area will be the point of entry for all incoming students to the FBI Academy, and by virtue of it being staffed 24 hours a day, the hub of activity during all nonbusiness hours. Its meeting rooms will accommodate three concurrent seminars, and provide food and beverage service on the premises. Special accommodations have been incorporated into the design, making it possible for students to participate in secure classroom lectures and study in their adjacent bedrooms without jeopardizing the integrity of the required class security.

Dormitory accommodations are provided for a total of 250 persons, 20 students per floor plus provisions for the counselor (generally a class would consist of 40 students and two counselors rooming on two floors). Also, for the first time, the Academy will be able to fully accommodate handicapped or disabled guests in a bedroom commensurate with their special needs.

At the very inception of the project, the FBI recognized that the services of a professional furnishing consultant would be required to assist the Government in the planning and selection of furnishings for this facility. The Government's instructions to the interior consultant were straight-forward and simple. The furniture must be functional, durable, aesthetically and ergonomically comfortable, but not be expensive or create an image of extravagance or waste. It was emphasized that all furnishings, where possible, must be available on the GSA Schedule. Since the design development phase of the project, the interior consultant has been an active participant in the design of the building. The consultant has, on a number of occasions, briefed the Training Division's Project Officer and Managers on the interior furnishings, including what was currently available on the GSA Schedule.

1785

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Forensic Services - Federal...	336	325	$19,520	336	325	$21,257	336	325	$21,257	...	...	...

Long-Range Goal: To support the Federal criminal justice system by insuring, through scientific means, that all physical evidence is fully utilized to develop as much probative information as possible to reconstruct the crime, identify the guilty, and exonerate the innocent and to provide scientific and technical support to ongoing FBI and DEA investigations.

Major Objectives:

To provide professional, expeditious handling of requests for scientific examination of physical evidence.

To assist in the prosecution of criminal matters by providing sound, objective, expert testimony in a full range of forensic disciplines.

To provide scientific and technical support to ongoing FBI and DEA investigations.

To conduct sufficient forensic science research to make the best use of physical evidence, stay abreast of new technology, and improve the ability to support ongoing investigations.

To provide forensic science training to Federal investigative and crime laboratory personnel to maximize the use of physical evidence in the solution and prosecution of crimes.

To provide specially designed investigative devices and apparatus for use in criminal and other investigations.

Base Program Description: Requests for examination of evidence come to the FBI Laboratory as a result of FBI and DEA field investigations and from other Federal agencies which do not have laboratories with the technical capability to perform a particular type of examination.

The cases received include specific requests made by the contributor to conduct a wide-range of forensic examinations on the physical evidence (specimens) obtained during the investigation of the crime. Requests are received in the Evidence Control Center, where pertinent information concerning the request is recorded in a computer. The request is then assigned a priority for examination and assigned to a principal examiner. The principal examiner is totally responsible for the case - determining what examinations must be done to obtain the greatest technical information from the specimen(s), maintaining the chain of custody of the evidence, obtaining auxiliary examiners, supervising and conducting examinations, reading and assembling the results of examinations conducted by other examiners, and writing the final laboratory report. The examiner might be called upon to render expert testimony concerning the results of the examination in subsequent court proceedings.

1786

On occasion, during the investigation of FBI matters such as terrorist bombings, arson matters, undercover operations, kidnapings, and other major cases, Laboratory personnel are required to provide on-site technical support or to conduct a crime scene search. Agent examiners are also requested to perform undercover work when persons having a technical background are needed during an investigation.

The Laboratory provides direct scientific and technical support to ongoing FBI and DEA investigations. Areas of this support include the Bomb Data Center; management of the Polygraph Program; management of the Photographic Equipment Program; direct photographic assistance in complex investigative situations; artist's conception drawings; direct crime scene support in major cases and unusual investigative situations; design and fabrication of special investigative equipment; and special support to undercover operations.

The FBI dedicated the Forensic Science Research and Training Center (FSRTC) at the FBI Academy, Quantico, Virginia, on June 16, 1981. Using the scientific input from the forensic science community, industry, and academia, as well as identified FBI needs, a significant forensic science research program has been established. Forensic research, conducted mainly at the FSRTC, includes: basic forensic research, the evaluation of current and new scientific methods and equipment, and the development of standards to be used in forensic science examinations and FBI field operations.

With the opening of the FSRTC, the Laboratory substantially increased its capacity to provide forensic science training to FBI personnel, other Federal, state, and local law enforcement officers, and crime laboratory personnel. The purpose of this training is to increase awareness of the probative value of physical evidence within the Federal law enforcement community, to enhance the professional level of crime laboratory personnel, and to decrease state and local law enforcement agencies' dependence on the FBI Laboratory.

Accomplishments and Workload: Actual and projected accomplishments for this decision unit are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
1. Laboratory Examinations				
a. Requests for Examinations	12,032	12,568	12,600	12,600
b. Specimens Submitted	105,876	82,033	90,000	90,000
c. Examinations Conducted	773,926	907,286	910,000	910,000
d. Days Spent in Testimony	820	1,014	1,000	1,000

Statistics above are captured through the Laboratory's Management Information System and indicate the actual and expected forensic examination workload. Much of the increase in the number of examinations conducted may be attributed to successful research and/or technological advances which permit more examinations per specimen.

Item	1985	1986	1987	1988
2. Related Laboratory Support Activity				
a. Forensic Science Training Hours Devoted to New Agent and				

In-Service Training	10,788	7,299	12,888*	12,888*
b. Forensic Science Research:				
Workdays Devoted to Research	3,500	4,025	4,025	4,025
3. Other Significant Activities in the Federal Area:				
a. Polygraph Control Reviews	11,489	12,324	13,524	14,824
b. Trial Aids Prepared	5,466	5,029	5,130	5,387
c. Investigative Aids Prepared	5,150	3,373	3,440	3,612
d. Photographic Prints Processed	1,338,431	1,226,536	1,349,189	1,484,108
e. Microfilm Processed (feet)	348,926	393,475	432,822	476,104
f. Days Spent in Direct Investigative Support	838	767	800	800
g. Pages Translated	11,032	12,083	12,500	12,500

*This increase is due to the projected schedule of FBI/DEA New Agents and In-Service Training in 1987. Continuations of the increased level for 1988 are based on the projected need for replacements.

During 1986, FBI Laboratory personnel spent 767 workdays in the field in direct support of Federal investigations and 1,014 workdays providing testimony in support of Federal prosecutions.

Polygraph examiners conducted in excess of 2,500 polygraph examinations in criminal, foreign counterintelligence, and other matters of interest to the FBI and provided investigative direction in more than 2,100 instances. Over 850 examinees whose polygraph examinations indicated they were being deceptive either confessed their guilt or made significant admissions concerning their participation in, or knowledge of, the matter under investigation. Property valued in excess of $279 million was involved in those cases where confessions were obtained.

The examination of records associated with illegal drug operations began in 1983; that year 11 cases were handled. This increased to 28 cases in 1984, 58 in 1985, and in 1986, 83 such cases were handled.

During the past year, FBI Laboratory support was provided in such highly publicized cases as the John Walker Jr. Case. Laboratory Examiners assisted with the search of Walker's home which produced a considerable quantity of records and tradecraft paraphernalia. This, together with evidence submitted from other field offices, resulted in more than 500 pieces of evidence being examined in the case. Thousands of photographs were produced regarding the specimens and dozens of 30" x 40" enlargements were produced for the various trials. Polygraph examinations of Walker's wife established her truthfulness in her allegations of Walker's espionage activity, and during a subsequent polygraph examination, Walker made a full confession of his activities. The results of his polygraph examination were admitted into evidence in the trial. The results of these and other examinations, such as handwriting, hand printing, and typewriting, were key factors in the trials of Arthur Walker, John Walker's brother and co-conspirator, and Jerry Whitworth. The prosecution was of the opinion that the results of the Laboratory work and testimony were critical to the successful conclusion of the case.

1788

In the espionage case involving former FBI employee Richard W. Miller, in Los Angeles, Laboratory personnel working with specialized self-contained photographic equipment, aerial photography, concealments, and concealed installations provided day and night surveillance of the subjects. These photographs assisted in the investigation and were used in the trial. Additionally, Laboratory examiners assisted in the search of the residence for espionage related evidence. During the polygraph examination, Miller made a full confession of his espionage activity. The results of all examinations were admitted into evidence in the trial.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount	Perm Pos.	WY	Amount
Automatic Data Processing and Telecommunications....	579	566	$131,668	569	557	$135,450	569	557	$135,450	...	...	...

Long Range Goal: To support the FBI's information collection, storage, retrieval, and dissemination requirements through management of the Automatic Data Processing and Telecommunications (ADPT) resources and implementation of the long-range automation strategy.

Major Objectives:

During 1988, activities will be focused on implementation of an integrated, distributed data architecture, the infusion of artificial intelligence (AI) capabilities throughout the FBI's data processing environment, and the transition to software engineering methodologies through the Information Systems Engineering Center (ISEC), which will revolutionize the way application systems are developed at the FBI. Specific objectives directed toward accomplishing these goals, as well as supporting other ADPT Decision Unit activities, follow:

To implement ISEC to support the development and maintenance of quality information systems and to provide initial operational capabilities for the following ISEC components: User Engineering, Software Engineering, and Life Cycle Engineering.

To develop and implement Generic Case Management Software (GCMS) to support all investigative work functions and to integrate the common functions of the existing applications of Organized Crime Information System (OCIS), Investigative Support Information System (ISIS), and the Computer-Assisted Analytic Support System (CAASS).

To apply Artificial Intelligence (AI) technology to FBI information processing activities.

1789

To develop and implement an interactive version of the CAASS for FBI Headquarters to enhance its ability to manage investigative activities on a national level.

To maintain and enhance the integrated Terrorist Information System (TIS), which embeds knowledge based expert system capabilities to intelligent workstations in field locations.

To continue to maintain and enhance the OCIS, which distributes selected storage and processing functions to intelligent workstations in field locations and to convert OCIS to a new Data Base Management System (DBMS).

To implement the Labor Racketeering Expert System, which includes AI capabilities in conjunction with the OCIS.

To provide support to the highest priority investigations through the operation, maintenance, and enhancement of the ISIS.

To develop and implement an integrated Resource Management System (RMS), which provides on-line access, data query, and AI capabilities for personnel, financial, and statistical information in support of day-to-day management as well as executive decision making.

To complete the design, development, and implementation of an Automated Records Management System (ARMS) to integrate the data/functions among major ARMS subsystems and to support the development of a distributed index to be shared with the Field Office Information Management System (FOIMS) and other investigative systems.

To initiate the implementation of the second phase of Headquarters Office Automation, which includes adding photocomposition systems to already existing capabilities and interface to existing administrative and investigative systems.

To implement the third phase of the Decision Support System to provide FBI executives with analytic support and access to resource management and investigative information for long-range strategic planning and policymaking. A baseline AI capability will be established to support executive decision making. This capability will be enhanced to support crisis management requirements for major incidents, including counterterrorism matters.

To continue the development and implementation of a new integrated National Crime Information Center (NCIC) system to meet current and future information needs of the criminal justice community for the remainder of this century.

To support the the parallel operation and continued development of the Automated Identification Division System III (AIDS-III) and Interstate Identification Index (III) systems.

To enhance the integrated system to provide for the collection, analysis, and retrieval of homicide data in support of the National Center for the Analysis of Violent Crime (NCAVC).

1790

To complete the accelerated implementation of FOIMS and provide to the 59 field offices and all resident agencies baseline functional support, including automated indices, case management, and administrative reporting capabilities. Implement expanded FOIMS functions, which will include electronic distribution of investigative information, integrated with existing and planned systems in addition to knowledge based expert systems.

To implement the Universal File Number (UFN) system in the FBI's automated environment to provide a common reference point to consolidate case activities/information and to facilitate standardization of the index and migration to an integrated distributed environment.

To continue implementation of a secure, efficient, and cost-effective Intra-FBI Records Communications System (IRCS) to support all FBI data communications requirements.

Base Program Description: The ADPT Program provides centralized management of all resources related to the FBI's Long Range Automation Strategy (LRAS). Only the Fingerprint Identification Program, which has a special-purpose automation program outside the LRAS, manages its own ADPT resources. OMB Circular A-130 directs that ADPT resources be managed with the flexibility necessary to meet requirements while taking advantage of new technology and procurement opportunities which will result in improved productivity, efficiency, and cost savings. The FBI's LRAS, which calls for horizontal integration of the FBI's investigative and administrative functions across the field and vertical integration of management and decision-making functions throughout Headquarters up to the Director, has been stable since approved by the Director in 1981. Tactical plans are constantly reviewed and updated to meet the highest priority requirements, take advantage of technological improvements, deal with funding limitations, and realize productivity improvements and cost savings. The President's Private Sector Survey on Cost Control, which examined efficiency and effectiveness of government ADPT operations, cited the FBI as the exception in government for operating with an approved LRAS.

As noted, the FBI strategic direction for automation was first enunciated in 1981 and formally documented in a LRAS. This strategy called for a new integrated information architecture for the entire organization and supported the sharing of distributed data among users, performing of global queries and operations from any FBI location. It also prescribed judicious exploitation and application of advanced technologies such as: distributed processing and relational data bases; advance computation; artificial intelligence (AI), or more specifically, knowledge-based expert systems; telecommunications, and others in support of all major mission areas. Plans to build knowledge-based expert systems and embed them within major information systems (e.g., OCIS, TIS, etc.,) were included as a mainstream item this 1981 strategy. The factors influencing the LRAS included:

- The experience level of the agent workforce will be lowered by heavy retirement.

1791

- The fact that the scope and complexity of today's major investigations require automation support which transcends traditional data base functionality extending to investigative information systems requiring expert knowledge related to complex investigations.

- The realization that for existing systems such as OCIS, it was necessary to add and preserve the expertise and institutional knowledge possessed by leading practitioners and prosecutors.

- The awareness that these knowledge-based expert systems must be capable of drawing correct inferences when there are gaps in available information or where there is conflicting information.

All FBI investigative programs are dependent upon the services of this program. The FBI's investigative program managers have projected their personnel resource requirements and delineated their goals and objectives in anticipation of the support of this program's technical resources. If sufficient resources are not available, the FBI would be forced to respond to each new problem with a labor-intensive solution. Hence, the FBI would be unable to meet many of its investigative goals and objectives. The ADPT Program supports the other programs of the FBI through the following major information systems:

- Artificial Intelligence (AI) - The FBI considers AI as one of its most promising cost effective technical support initiatives, particularly in light of the enormous data requirements of the highest priority investigative activities. In 1984, the FBI began an initiative to apply AI to support several specific high-priority investigative needs consistant with the FBI's LRAS. The FBI has initiated efforts to apply AI in the form of knowledge-based expert systems to support investigations in the areas of labor-racketeering, narcotics, counterterrorism, and generic name searching. Significant progress in the development of a broad range of AI applications has been made during the 1985-1987 time frame, particularly in the successful fielding of AI applications to support labor-racketeering and narcotics investigations; however, because of limited resources, continued AI developments will be essentially restricted to minimal efforts which can be sustained by in-house personnel during 1988.

- Investigative Support Systems (ISS) - The information systems that directly support the investigative information collection, analysis, retrieval, and dissemination capabilities of the FBI constitute the ISS. These information systems, OCIS, ISIS, and CAASS, provide central data bases to facilitate case and program management at both the Headquarters and field office levels. These systems will be integrated to the maximum extent possible through the use of Generic Case Management. These systems also provide ad hoc ADP support to cases which involve voluminous and complex evidentiary information in an off-line mode.

- Resource Management System (RMS)- RMS provides FBI executives and managers with readily accessible and accurate resource information. This information supports and promotes sound managerial decisions regarding the effective and efficient use of investigative resources and long-range strategic planning and policymaking. It also is used to meet the external reporting requirements of the Department of Justice, Office of Management and Budget, General Services Administration, and the Congress. RMS developmental efforts are consistent with the direction and intent of Reform 88.

1792

- Field Office Information Management System (FOIMS) - This system will provide each field office with an integrated information processing system, incorporating word processing, data processing, and telecommunications technologies. The FBI's long-range automation plan will involve integration of FOIMS with RMS and the Automated Records Management System and, where appropriate, with the ISS. Additionally, efforts will be directed toward developing an optimum data architecture for use in a distributed environment. Initial efforts will focus on a distributed index.

- Autoated Records Management System (ARMS) - The "FBI Central Records System" at FBI Headquarters is composed of over 7,000 filing cabinets of hard-copy textual information, which is accessed through the FBI Headquarters General Index, containing approximately 60 million 3" x 5" manual index cards. ARMS consists of automating the general indices, file charge-out, locate, and mail serialization functions. ARMS will also be redesigned to integrate data/functions among major ARMS subsystems and to support the development of a distributed index with a Universal File Number to be shared with FOIMS in the distributed data architecture.

- Intra-FBI Records Communications System (IRCS) - The capability to transmit secure textual information rapidly between FBI Headquarters, field offices, and overseas posts is vital in fulfilling the mission of the FBI. With the rapid expansion of ISS systems and the advent of FOIMS, it has become necessary to lease point-to-point secure telecommunications services. The FBI will continue to develop and implement IRCS to support all FBI data communications requirements, including facsimile, teletype, access to FBI ADP systems, video, voice, image, text, teleconferencing, micrographics, and electronic mail.

- Telephone Systems - The FBI must have efficient and secure telephone facilities available to support its investigative mission. A major objective is to achieve secure voice capabilities for all field offices in order to support FBI counterintelligence activities.

- National Crime Information Center (NCIC) - The FBI's NCIC is the only national law enforcement teleprocessing system in existence which provides documented information on wanted and missing persons, stolen properties, and criminal histories. Contractual efforts to identify NCIC functional requirements through the year 2000 are underway and will be completed in 1987.

- Automated Identification Division System (AIDS) - The FBI is involved in a comprehensive project to automate its fingerprint card processing and related activities of the Identification Division. The resource requirements which are set forth in this program include general-purpose ADPT resources.

Accomplishments and Workload: Automation accomplishments, during 1986, were achieved in five principal areas: investigative support to the field in the form of major centralized systems (i.e., OCIS, ISIS and CAASS) augmented by stand-alone microprocessors; systems supporting primarily FBI Headquarters in administrative and criminal justice community missions; FOIMS; the initiation of formal programs to assure successful field/headquarters systems integration and systems auditability; and the initiation of efforts to imbed AI technology into the FBI's information systems. Additionally, the FBI's long-range plan was updated to reflect changes in required resources and strategies. This plan provides detailed direction for the budget formulation and acquisition process.

In 1986, OCIS was deployed to two additional locations for a total of 46 field locations serving 90 percent of the agents assigned to Organized Crime investigations.

ISIS was deployed to two new locations for a total of 39 field locations and FBI Headquarters. Twenty-six new data bases were implemented to support ongoing major case investigations. ISIS is now supporting 96 local data bases. On-site reviews were conducted in two field offices, which resulted in improved use of the ISIS system to support case requirements.

In 1986, assistance was provided to 18 field locations regarding 23 investigative matters in the form of field office special automated support.

The secure Computer Applications Communications Network (CACN) circuitry was expanded to support the accelerated implementation of FOIMS, the planned installation of existing investigative systems (ISIS, OCIS), and to allow migration to a single System Network Architecture.

Continued a contract with the Institute for Defense Analyses (IDA), a Federal contract research center, to support the development of "expert systems" to aid the FBI in the management of its labor racketeering, counterterrorism, and drug interdiction programs. IDA completed analytical support for implementing the Information Systems Engineering Center, the FBI's primary ADP research and development center, for future information systems initiatives.

Forty-five templates containing special logic rules for processing data to support labor racketeering and related statute violations were developed for the labor racketeering expert system. Graphic representations were developed that show the direct and indirect relationships between a person and a family organization, union, union fund, or a terrorist group. A matrix representation was developed to assist special agents in selecting subjects of organized crime and terrorist investigations for surveillance.

Modified and implemented NCIC software to improve article identification and the Canadian Warrant File. Completed software modification to the monthly stolen vehicle report to respond to legislative changes.

Completed synchronization of AIDS-II and AID-III data bases to insure compatibility for AIDS-III completion. Also continued to provide technical assistance in completion of AIDS-III.

Implemented the Legal Case Management System (LCMS) after successfully converting historical data from the earlier "LEGAL" data base.

An integrated computer workstation for the El Paso Intelligence Center (EPIC), with the capability to concurrently access three different computer systems and receive information on the movement of general aviation aircraft from two different sources was installed.

1794

Contracted with IDA to develop a redesigned personnel/payroll system to serve both the FBI and DEA.

Completed the conversion of active general indices records for a total of over 16,000,000 records or approximately 90% of the active general index.

Completed the installation of the Secure Automated Message Network (SAMNET) in all field offices, FBI Headquarters, two regional computer support centers, and EPIC for a total of 63 locations.

Achieved increased efficiency and effectiveness in the FBI Headquarters Computer Center:

- Processed 422,505 computer jobs, a 15 percent increase over 1985.
- Procured and installed 85 gigabytes of direct access storage devices, allowing the replacement of outmoded storage devices, expansion of data bases, and support for new project data base requirements.
- Procured and installed a 26 million instructions per second (MIP) processor, replacing a 4.3 MIP processor, and allowing improved throughput and productivity.
- Procured and installed six solid state paging subsystems, improving system performance and throughput.
- Enhanced user services through installation of 14 new proprietary software packages and upgrade of 41 existing software packages.

Implemented baseline FOIMS in 18 field divisions and 55 resident agencies and trained 2,600 employees from these locations. As of January 1987, 30 field divisions and 63 resident agencies are on-line to baseline FOIMS. Additionally, on-line baseline FOIMS capabilities were provided to the Criminal Investigative Division. FOIMS training was provided to ten new agent classes at the FBI Academy. Documented the FOIMS cost/benefits through a study performed by IDA.

Selected a site for the combined Mid-Atlantic/FBI Headquarters Regional Computer Support Center to be located in Northern Virginia.

Provided automated backup and recovery for the Western Regional Computer Support Center by the Northeast Regional Computer Support Center. Backup capabilities will be available during the first quarter of 1987.

Co-chaired an Office of Management and Budget interagency working group tasked with developing internal control guidelines for assessing the adequacy of controls over automated systems.

Developed and updated the FBI's microcomputer policy to provide standard guidance on management and control of microcomputers and related resources.

1795

It is noted the Legal Attache offices' primary function is of a service nature, to assist and facilitate the fulfillment of the overall responsibilities of the FBI. Their performance, particularly in regard to the areas of organized crime, white-collar crime, narcotics, terrorism, and foreign counterintelligence, can only be measured in terms of the quality and timeliness of information exchanged with foreign contacts, and its effects upon domestic investigations conducted by the FBI and other United States agencies to which this information is disseminated.

The following are examples of qualitative performance measures of this program, indicating the significant role played by the Legal Attaches in the FBI's overall program:

Legat Tokyo was instrumental in resolving a fraud investigation involving an attempt to negotiate 500 billion Japanese yen. The key witnesses were located and interviewed by FBI agents, and all subjects were subsequently indicted in Las Vegas, Nevada.

During August 9, 1986, Mexican Police from the State of Jalisco kidnapped and tortured a DEA agent stationed in Mexico. The subsequent investigation of the Mexican authorities involved, and liaison with Mexican officials was managed by the Legal Attaches in Mexico City. The investigation resulted in the identification and detection of 11 Jalisco State Police officers involved in the crime.

Legat Canberra provided pertinent, timely information concerning an espionage case successfully tried in the United States. Legat's efforts prepared the prosecution with information to adequately counter the testimony of a key defense witness.

Legat Bern in an effort to track over 8 million dollars in securities from U. S. mail has been instrumental in locating and recovering 2.5 million dollars in Switzerland.

Legat Paris along with police agencies from France, Belgium, the United Kingdom and the Netherlands seized a large cache of weapons and ammunition destined for the Irish National Liberation Army (INLA). The investigation discovered a link between the INLA and the French terrorists, Action Directe.

Efforts of the Montevideo Legat resulted in the location and arrest, by Brazilian authorities, of a Taiwanese organized crime gang.

Legat London was instrumental in coordinating British and U. S. investigations which resulted in the identification of the subject of an extortion case involving a prominent Arab citizen in England.

1796

	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Records Management.....	1,266	1,225	$40,117	1,232	1,191	$43,815	1,232	1,191	$43,815	...	...	...

Long-Range Goal: To manage the life cycle of FBI information, insuring that information is available in the right place, at the right time, to the right people, and at the lowest possible cost.

To insure that unnecessary records are not created, that necessary records are maintained and used in an effective manner, and that those records that have served their purpose are given proper disposition.

To provide direct management control over the processing, operation, and maintenance of investigative, personnel, administrative, and general files.

To facilitate lawful public access to FBI records in response to Freedom of Information and Privacy Acts (FOI/PA) requests and to continue efforts to maintain and safeguard National Security Information (NSI).

To develop and implement an information architecture which focuses on Automated Data Processing/Telecommunications (ADP/T) and other state-of-the-art technologies.

Major Objectives:

Insure mail is routed, classified, searched, serialized, corrected, and recorded promptly and to provide mailing, courier, and messenger services in a more cost-effective manner.

Complete the conversion of the Federal Bureau of Investigation Headquarters (FBIHQ) active index and electronic surveillance (ELSUR) index to a machine-readable, on-line mode in order to facilitate searching capabilities in the Main Card Searching and Name Searching programs and to support the Field Office Information Management System (FOIMS).

Complete the phased implementation of single station processing of mail, which will result in an item of mail being classified, searched, serialized, and recorded in one station.

Manage a complex program for FBIHQ and the field to dispose of duplicate and nonessential record material, identify permanent records to be accessioned to the National Archives, microfilm historical records that require permanent retention, and prepare appropriate records for accession to the National Archives.

Maintain, repair, and store an extensive volume of hard copy files in an efficient manner.

1787

Provide file review, name searches, and locate services in response to name check requests received from Executive Branch agencies and FBIHQ divisions.

Articulate, justify, and defend the FBI's position for withholding NSI in FBI files by implementing quality control procedures to seek compliance with Executive Order (EO) 12356 and Department of Justice (DOJ) directives by filing affidavits/declarations in response to Freedom of Information Act (FOIA) civil matters in a U.S. District Court.

Classify and protect NSI and informants or declassify information in FBI documents which is sought through FOI/PA individual requests and court actions.

Respond to administrative FOI/PA appeals by reviewing classification decisions applied to FBI documents which contain NSI, with the DOJ Review Committee, and to insure that the NSI withheld meets the substantive and procedural requirements of the current Executive Order and DOJ implementing directives.

Insure individuals requesting security clearances meet eligibility requirements and criteria for continued Federal employment, and conduct training seminars for FBI personnel in the areas of safeguarding NSI and its vulnerability to compromise.

Reduce the backlog of unprocessed FOIPA requests and the amount of time required to complete each matter.

Complete an analysis of the need and utility for a more structured reporting format to consistently and completely obtain identifying data on subjects, suspects, and victims; to monitor existing and newly implemented automated systems to ensure performance at levels acceptable to the users.

Institute a quality assurance program to assess completeness, accuracy, and timeliness of automated data, and institute procedures to enhance integrity of the data.

Develop and adopt similar/identical data base management systems and indices management software (records creation, modification, deletion, and searching) for consistency between FBIHQ and the field offices.

Make access to information faster and easier, which in turn will produce higher rates of return. This capability will act as an intellectual enhancement to managers and investigators who become more effective (work smarter) because they have access to better, more timely data, and communications channels.

Base Program Description: The Records Management Program is multifaceted, consisting of several distinct functional units responsible for assuring that information is maintained and available as required. A long-range plan for information management within the framework of the FBI's information architecture is essential. In the development and execution of the long-range plan, tasks normally associated with the development of an information system, such as the identification of user requirements, feasibility study, system design review, etc., will be completed. Design reviews will be completed for any newly proposed system. Existing policy will also be reviewed and modifications for new policy as required will be formulated and presented for approval.

1798

New systems are implemented and consistently maintained and evaluated along with existing systems. A key factor in the evaluation process will be the extent to which the user's needs are being satisfied. The existence of a large and/or complex data base will require consistent review and evaluation to insure the hardware and software components of the system are meeting performance criteria, as in the case of software searching routines for a 26-million-record file where certain selectivity and reliability standards must be met.

A primary mission of this program is to insure the completeness, accuracy, and timeliness of data in the automated records. Procedural changes/enhancements will be recommended where necessary, to insure the integrity of the data. This program will also be responsible for the Word Processing Center serving the entire RMD. The management of this center will include prototype testing of new procedures and equipment, user liaison, product quality assurance, and performance measurement and monitoring.

Included among the responsibilities of this area are: the maintenance of the FBI Headquarters automated mail distribution systems and file retrieval equipment; mail management; the dispatching of all outgoing FBI Headquarters mail; the maintenance of FBI Headquarters files; the consolidation and correction of FBI Headquarters records; the general index; the processing of all FBI Headquarters correspondence; implementation of records-processing procedures for FBI Headquarters correspondence; duplication matters; records disposition; and archival matters.

Additionally, this program provides for automated name searches (some name searches that require a check outside the automated data base time period will be performed manually) and file reviews of information from FBI files for authorized agencies within the Federal government, as well as local agencies and certain foreign police and other agencies under the Name Check Program; the management and coordination of designated Department of Justice Security Programs; the protection of NSI and the issuance of security clearances; conducting classification reviews of documents proposed for release outside the FBI, for the purpose of safeguarding NSI; processing NSI classification appeals matters in coordination with the Department Review Committee (DRC); preparation of affidavits defending nondisclosure of NSI which is the object of litigation and or civil discovery; and a classification review of records to be accessioned to the National Archives; and responding to requests for access to FBI records as required by the Freedom of Information and Privacy Acts.

Accomplishments and Workload: Accomplishments of the Records Management and Freedom of Information/Privacy Act Programs are presented in the following table:

			Estimates	
Workload	1985	1986	1987	1988
Mail to be processed	3,000,000	2,487,732	2,900,000	2,900,000
Files requested	653,745	576,369	725,000	725,000
Name checks received	2,444,763	2,316,351	2,450,000	2,400,000
FOIPA new requests	11,344	12,983	12,629	12,629

1799

Accomplishments	1985	1986	Estimates 1987	Estimates 1988
Mail classified	1,751,319	1,611,310	1,800,500	1,825,000
Mail searched	476,052	579,584	490,000	490,500
Mail numbered	1,041,451	872,243	1,075,500	1,000,500
Mail recorded	1,242,943	1,270,251	1,275,200	1,290,000
Mail filed	1,300,529	1,555,723	1,600,000	1,600,000
Mail dispatched	6,244,935	3,700,700	6,000,000	6,000,000
Security clearance investigations	460	427	640	640
Personnel security investigations	2,280	2,260	4,850	4,850
Industrial security investigations	...	1,560	3,036	4,099
Name checks handled	2,218,075	2,429,250	2,450,000	2,400,000
FOIPA requests handled	11,129	11,213	11,682	11,682

OAIM staff have also participated in the training of field office personnel during the FOIMS implementation stages. Nearly half of the field offices were provided the base line capability of FOIMS during 1986. Initiatives have reduced the response time of inquiries of the HQGI from a range of 40 to 60 seconds to between three and five seconds per inquiry, which has greatly improved the automated name searching efficiency of the Operations Section. Several studies have been initiated, including the feasibility of a bar code labeling system, the feasibility of an audio response system for the charging out and control of investigative and administrative files, and the feasibility of a departmental computing system to provide distributed processing.

A statistical validation of the converted HQGI was also implemented by OAIM during 1985 and has resulted in the implementation of several quality assurance procedures to shore up internal control and retention of processed information. These procedures have already proved successful in the early detection of deficient internal control procedures in magnetic tape management. The validation process has begun certification of index groups by letters of the alphabet which has now progressed through the letter Q. An automated microfiche system as an interim emergency backup has been implemented until appropriate emergency backup can be provided via the planned redundancy capabilities of the FBI regional computer centers. An acceptable microfiche format has been made operational with appropriate internal hardware and software which creates quality microfiche on a production basis. Quality assurance procedures have also been implemented to address field office areas of concern relative to their newly automated indices. A study has been initiated of subject identification techniques with supporting information on linguistics and name searching.

Forty-three microcomputers and 21 printers have been placed throughout the RMD for use as standalone microcomputers and/or word processors. In 1987, an additional 39 terminals and seven printers are expected to be obtained and installed for access to Automated Records Management System (ARMS) data files.

Based on the permanent injunction against FBI records destruction being vacated, the Records Management Division instituted a phased program to implement a file destruction and accession program for FBI records.

As a result of efforts by the FBI Mail Manager, changes have been made to increase the efficiency of mail processing and to reduce mail costs. Savings of $399,674 were realized for 1986.

The Service and Support Unit received 2,316,351 name check requests, of which 517,206 were performed by electronic searching.

The Security Programs Unit developed and implemented new procedures for trustworthiness investigations of both applicants and on board employees.

During 1986, the FOI/PA Section received 12,983 new requests and processed 11,213 requests.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Technical Field Support and Equipment.....	152	149	$69,054	147	144	$70,531	197	159	$94,684	50	15	$24,153

Long-Range Goal: To provide essential technical support and equipment to FBI field offices and conduct necessary research and development to maintain a level of technology sufficient to overcome criminal and terrorist adversaries.

Major Objectives:

To develop a technical field support and equipment (TFSE) long-range strategy, including an overall strategic outlook and tactical acquisition and implementation plans for each of the various programs within this decision unit.

Provide centralized management of the FBI's integrated digital voice privacy (IDVP) radio systems and FM radio communications system.

To conduct research and development efforts regarding new technical capabilities applicable to the FBI's investigative missions.

To identify and integrate common FBI and Drug Enforcement Administration (DEA) engineering and technical training functions to realize increased efficiency and effectiveness.

To provide FBI requirements to the research and development programs at the Defense Advanced Research Products Agency (DARPA) in order to gain the benefits of DARPA's extensive research efforts and avoid duplication of efforts.

To provide technical expertise in the examination of electronic-related evidence, such as recordings and communications interception devices, and to provide expert court testimony relating to these examinations.

To replace field office inventories of audio collection and recording equipment, audio analysis equipment, physical surveillance equipment, physical security and countermeasures equipment, firearms and tactical equipment, photographic equipment, crime-scene examination equipment, furniture, general office equipment, and automotive maintenance equipment as it reaches the end of its useful life.

To provide field office personnel with sophisticated technical equipment and on-site technical support required to support the FBI's complex and demanding investigative activities.

To insure the physical security of FBI facilities and to satisfy the requests of the Department of Justice (DOJ) and other United States Government agencies for electronic audio countermeasures.

To increase recruitment efforts and provide training for Technically Trained Agents (TTAs) and electronic technicians in order to upgrade their skills and keep them current on new technology and techniques.

To provide and maintain safe, reliable, and effective passenger-carrying automobiles and special purpose vehicles by replacing vehicles in the most cost-effective manner.

To monitor construction of the Engineering Research Facility (ERF) at the FBI Academy, Quantico, Virginia.

Base Program Description: The primary mission of the FBI is the investigation of violations of certain Federal criminal laws and hostile foreign intelligence operations within the United States and its territories. During the past several years, the FBI has intensified its investigations of organized crime, white-collar crime, and other violations. In addition, the FBI has assumed an investigative relationship with the DEA. The TFSE Decision Unit provides technical investigative support to field offices and maintains centralized management of all field equipment to maximize its use and expedite the completion of complicated investigative matters. Frequently, investigative objectives can not be met without sophisticated technical support. All field investigative programs are dependent upon the technical support and services provided by this program.

The primary thrust of this decision unit is the development, design, engineering, procurement, distribution, and installation of technical support equipment required for the successful accomplishment of the FBI's investigative missions and availability of adequate personnel to install, maintain, and assist in the operation of that equipment. This support is provided by the following major TFSE programs and equipment categories:

1802

- Radio Engineering: This program provides management, equipment development and procurement, maintenance, and frequency management support to all 59 field offices and other FBI elements which utilize radio communications. The integration of FBI, DEA, and United States Marshals Service (USMS) radio communication is managed through this program.

- Countermeasures: The countermeasures program provides technical expertise and equipment for the protection of FBI and other selected Government facilities which do not have a countermeasures capability.

- Interception of Communications (IOC): This program performs various electronic examinations, including IOC related cases, telephone toll fraud, burglar alarm defeat systems, radio devices, and scanners.

- Research and Development: The research and development program is responsible for three broad functions: technology assessment and evaluation, general engineering support, and program management of research and development projects.

- Operational Support: This program focuses on the development, design, engineering, procurement, distribution, and installation of technical support equipment required to assist the field with both physical and electronic surveillance. To respond effectively to growing field requests for more sophisticated and specialized technical equipment, the program is broken down into eight management groups to better support the FBI's investigative mission. The eight groups are:

  - Closed Circuit Television (CCTV), which manages and maintains an inventory of equipment, with the widest range of characteristics, that is matched with the requirements of each installation for optimum investigative and evidentiary results;

  - Microphone/Drilling/Telephone, which has extensive responsibilities in the audio collection area and manages the FBI's inventory of telephone and microphone systems equipment. This group has developed and is continuing to enhance a multiple-line computerized dialed number recorder system;

  - Electro-Optical Physical Surveillance, which is an area of rapid technological growth and which handles an extensive range of equipment. This group is developing optical tracking systems and examining fiber optic transmission systems;

  - Specialized Technical Surveillance Vehicles, which have become essential investigative tools. Replica vehicles and sophisticated, well equipped surveillance vans are required for successful completion of the FBI's mission;

  - RF/Radio Surveillance Aids, which meet the needs of the field for miniature transmitters for criminal investigations;

  - Technically Trained Agent (TTA) Program, which is responsible for training new TTAs and providing specialized training for current TTAs;

  - Crisis Management, which provides sophisticated technical support to the FBI's response in counterterrorism and/or hostage situations, and other crisis situations; and

- Locks and Alarms, which provides the capability to bypass locks and alarms during investigations, and which provides maintenance and parts replacement of defensive locks and alarm systems to insure optimal performance and effectiveness.

- Signal Analysis: There are two major foci within this program, Audio Processing and Field Recording Equipment. The majority of the FBI investigations require continuous use of recording equipment to gather evidence. Clear and understandable recordings are the best evidence that can be used to substantiate the testimony of witnesses and show the willing participation in the crime. An intelligible recording protects both the rights of the public and the rights of the accused.

- Firearms and Tactical Equipment: This program activity allows for the purchase of new and replacement handguns, shotguns, rifles, scopes, and protective body armour. It also provides for special equipment for field office Special Weapons and Tactics (SWAT) teams.

- Photographic, Photographic Laboratory, and Crime-Scene Examinations Equipment: This activity insures field offices have necessary photographic and equipment used to collect evidence at crime scenes, conduct photographic surveillances, and develop film and print photographs in field office photographic laboratories.

- Furniture and Office Equipment: This program activity allows for the replacement of field office furniture and office equipment, such as desks, chairs, file cabinets, safes, and calculators, reaching the end of its useful life.

- Passenger Carrying Automobiles: The FBI maintains a fleet of 6,261 automobiles to meet the basic transportation requirements of the investigative work force. The FBI fleet is centrally managed at FBIHQ. There are 39 maintenance facilities, which are staffed by 70 automotive maintenance employees. Methodologies are employed to determine the selection of automobiles, number to be purchased, and distribution to field locations.

- Surveillance and Utility Vehicles: Vans, trucks, and utility vehicles are used for surveillance and investigative support activities.

Accomplishments and Workload: The following are representative of the accomplishments achieved in 1986:

Installation of digital voice privacy radio systems for the Los Angeles and New York City Offices has been completed. Installation of systems for Boston, Chicago, Miami, and Washington Field Offices is near completion, with final testing currently being conducted. The contracts for 28 field offices were modified to incorporate integrated systems designs and changes. Installations for San Francisco, Houston, Baltimore, Buffalo, Las Vegas, and Dallas are in progress. The installation for Indianapolis is on an accelerated installation schedule in anticipation of the World Indoor Track events and the Pan-Am Games. The integrated voice privacy radio system for the FBI Academy was procured to support administration, security, and the combined training needs for the FBI and DEA.

1804

A major test equipment procurement plan was initiated to provide the latest test equipment to the field and to enable maintenance of new integrated voice privacy radio equipment.

The design of a new facility at the FBI Academy, Quantico, Virginia, which will include the integration of DEA technical support and research and development was completed. Current plans call for the completion of this facility during the Spring of 1990.

On-site technical assistance was provided to the field offices and technical support to undercover operations. Each of the FBI's major undercover operations received some type of technical support, which included video, audio, and/or surveillance equipment. The use of such equipment is vital to obtaining critical evidence necessary to support prosecution of subjects.

Fulfilled the majority of the FBI's field requests for electronic tracking devices through effective inventory control and transfer of equipment between field offices.

Completely redesigned the telephone used in hostage situations in conjunction with the FBI's Hostage Negotiations Program Manager, Central Intelligence Agency Psychiatrist Assessor, Department of Energy Psychologist Assessor, and private industry engineers.

Purchased and installed the FBI's first independently operational satellite communications system which will allow direct-dialed telephone communication from remote areas worldwide to any FBI location.

Installated multiple-line computerized pen register systems in four field offices, bringing the number of systems in operation in the field to ten.

Developed a new body transmitter to replace obsolete systems currently used in the field.

Modified and converted 18 vans and other vehicles into specialized surveillance vehicles.

Continued to use expertise in forensic examinations of taped conversations and magnetic tape to support FBI and other Federal, state, and local law enforcement requirements. This expertise is considered to be among the best in the world.

Twenty-three TTAs received two weeks of instruction on technical subjects and countermeasures techniques. Approximately 500 countermeasures inspections were conducted and technical assistance was provided to the United States Capitol Police.

Provided 180 electronic technicians with training on digital voice privacy radio systems, alarms, and advanced secure data.

Procured 480 new sedans and 145 surveillance and utility vehicles.

Program Changes: Fifteen support workyears (50 Positions), and $24,153,000 are requested for 1988. These increases are essential for this program to support effectively the investigative activities of the FBI and the priorities of the President and Attorney General.

1805

Integrated Digital Voice Privacy

This request includes $11,153,000 to help achieve the integration of digital voice privacy (DVP) radio systems of the FBI, DEA, and USMS. This effort is consistent with the Administration's initiatives to improve efficiency, economy, and effectiveness.

In August 1985, the Attorney General directed that the FBI take the lead in the design, development, and implementation of a single, integrated, DVP radio system to support the tactical radio requirements of the FBI, DEA, and USMS. A single DVP architecture will insure compatibility of radio communications among the three agencies. This is particularly important when concurrent jurisdiction of the FBI and DEA in narcotics matters is considered. Since the FBI was assigned responsibility with DEA in the area of narcotics violations, the number of joint operations between the two agencies has grown significantly and continued growth of joint operations is expected in the future. An integrated DVP system will decrease operational problems currently experienced in time-sensitive investigations because of the requirement to manually exchange radios between agencies. This system will also benefit the USMS by providing secure radio communications during the transporting of Federal prisoners, maintaining of courtroom security, and protecting of witnesses.

In addition to improved operational effectiveness, an integrated DVP system will provide a uniform consistent approach to planning, development, acquisition, implementation, and maintenance for the system, which will improve the efficiency of all participating agencies. DEA and USMS will benefit from the FBI's extensive DVP system with its wide geographic coverage. Also, cost benefits will be realized by eliminating overlapping network backbone circuits and attendant costs.

The Institute for Defense Analyses (IDA) has been contracted to perform an independent assessment of the relative costs and benefits of integrating the three systems under the current FBI architecture. The primary focus of the study is on defining each agency's functional requirements. Based upon analyses conducted to date, it is expected that some modifications and extensions to the FBI system will be necessary to meet the requirements of an integrated system. Also, additional VHF channels will be required to integrate the three agencies' tactical communications programs. Current FBI plans call for the architecture and design to be completed in 1987, with the build-up of the integrated system to start in 1988. The full cost for the integrated DVP system will not be determined until bids are submitted in response to the RFP and a contract awarded.

For 1988, $10,000,000 is requested to integrate voice privacy systems in the Northeast United States. This funding is essential for performing system engineering, making backbone architectural modifications, and procuring necessary equipment. This area has been designated as a priority by the three partner agencies in this initiative. It is requested that this funding be maintained in FBI base-level resources until the nationwide project is completed in 1992.

Fifteen workyears (50 positions) and $703,000 for field electronics technicians are requested to support current DVP radio requirements as well as the integrated effort. The current level of FBI field electronics technicians cannot handle the additional support which will be required for DEA and USMS. The electronics technicians will install equipment, prepare sites, and perform systems maintenance. The requested electronics technicians will allow the FBI to support more effectively the DEA and USMS.

1806

Funding totaling $450,000 is required to purchase 30 utility-type vehicles for use by field electronics technicians. The integrated voice privacy system will be linked via a network of approximately 1,500 radio antenna/microwave repeater sites. Many of these sites will be in remote locations. Regular maintenance antenna and microwave of equipment is required to extend the service life of capital investments. Without additional electronics technicians and vehicles, maintenance of the system will be less than desired, resulting in faster depreciation of equipment. These additional vehicles will allow the FBI to work toward the desired 2:1 ratio of electronics technicians to vehicles. At the present time, there are not sufficient vehicles to support this ratio.

Engineering Research Facility

Requested funding also includes $13,000,000 for construction of an Engineering Research Facility (ERF) at the FBI Academy, Quantico, Virginia. The FBI's Engineering Section and the DEA's Office of Science and Technology provide technical support and equipment in response to investigative needs. The ERF will provide the FBI and DEA with space required for their technical support activities. Additionally, space will be provided for the continued development of the Integrated DVP radio system, which is essential for FBI/DEA joint operations. Current plans include the establishment of an in-house rapid prototyping/quick reaction capability at the ERF. A rapid prototyping/quick reaction capability refers to a system of specialized design, development, and assembly tools for the fabrication and development of custom electronic devices. The establishment of this capability will greatly improve the FBI's ability to counter the activities of both the criminal element and individuals who might be involved in illegal intelligence activities against the Unites States Government. The multifaceted needs of special agent and other personnel in FBI field offices require the development of custom electronic devices as well as improvements to existing devices. Custom devices are often needed to meet an immediate or specific target opportunity. An example would be the fabrication of a customized audio collection device which could be hidden in a specific personal item and then surreptitiously implanted in a target area.

The rapid prototyping/quick reaction capability of the new ERF will result in cost avoidances. Currently, the FBI contracts for these services. An in-house fabrication capability will reduce the labor and overhead costs associated with these contracts, which generally account for 45 percent of the contract cost. Time savings of 75 percent are expected from this capability. In addition, security and control of the development process of customized electronic devices will be enhanced by maintaining design and development plans within a controlled space at the ERF. Also, the FBI's institutional knowledge base will be broadened because the experience gained in producing these devices will be kept in-house. The plans to build a rapid prototyping/quick reaction capability at the ERF will yield a modern facility which is versatile and applicable to future technology engineering efforts.

The current cost estimate for the joint ERF is $36,511,000. Existing resources for the ERF include $9,000,000 in no-year funding that was approved in the 1985 budget cycle for the FBI's portion of the facility; $982,000 was added by OMB to fund DEA's share of the facility. This funding was nonrecurred in 1986. Since inception of this effort in 1983, ERF requirements have continued to evolve and grow. Analysis by the architectural and engineering firm of Moseley-Hening Associates has determined that the original cost estimate for the building will require an additional $26,529,000, of which $13,000,000 is being requested in 1988. In terms

1807

of personnel, the number of FBI personnel to be housed at the facility has grown from 208 to 246. It was originally estimated that a staff of 14 from DEA would be housed at the ERF; that number has now grown to 56. It is planned that the ERF can accommodate continued personnel growth for the next ten years. The increase in the number of personnel working at the ERF is one factor leading to the requirements for a larger facility. Initial space requirements formulated in February 1985, totaled 189,153 gross square feet; current space needs for the facility require 250,210 gross square feet. Other nonpersonnel and technical requirements resulting in changes to the ERF, beyond those initially funded, include enhancements to fabrication and shop facilities to permit a quick reaction fabrication capability; an antenna and acoustics test facility; a heating/air conditioning plant separate from the FBI Academy; expanded waste treatment facilities; additional hallways and common space to accommodate the net square footage requirements; improved site security; and additional food service space requirements. The enhancement also provides for access roads for construction equipment and construction change orders. Approving this enhancement will provide for completion of the ERF, and it will also establish a fixed price contract which will greatly contribute to controlling costs. It is requested that the $13,000,000 be recurred in 1989 to permit completion of the facility and that resources provided in 1988 remain available until expended.

DEA personnel will occupy approximately 36,300 gross square feet of space at the ERF. This estimate is based upon a space requirements survey performed by an architectural and engineering firm. The construction costs associated with collocating DEA with the FBI at the ERF are estimated at $4,300,000. The cost of collocating DEA is included in the overall $36,511,000 cost estimate for the ERF.

Activity: State and Local Assistance

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease

This activity supports state and local law enforcement by providing training and furnishing laboratory, identification, and informational services. The FBI National Academy, the National Crime Information Center (NCIC), and the Uniform Crime Reporting (UCR) programs are but a few of the services funded under this activity.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
General Law Enforcement Training	283	275	$17,356	281	273	$19,314	281	273	$19,314	...	...	...

Long-Range Goal: To improve the investigative, managerial, and technical capabilities of local, county, state, and international law enforcement personnel through training and education.

Major Objectives:

To continue to provide training to 800 state and local law enforcement officers annually in the FBI National Academy Program.

To identify training needs at the state and local level through a Nationwide Law Enforcement Training Needs Assessment Program.

To provide timely training programs on issues of critical concern to the law enforcement community both in the field and at the FBI Academy.

To train local police officers to become qualified instructors.

To conduct approximately 275 advanced schools annually by FBI Academy personnel in support of the Field Police Training Program (FPTP), and provide 60,000 hours of instruction for 190,000 law enforcement officers.

To continue to provide crime analysis, criminal personality profiles, and violent crime related information in order to assist local law enforcement in the resolution of major crimes of violence.

To continue instructional emphasis on violent crime matters using existing and developing systems.

To operate and promote the National Center for the Analysis of Violent Crime (NCAVC) to administer research, training, and investigative support programs designed to assist the law enforcement community in their understanding and investigation of unusual, bizarre, and vicious violent crimes.

To participate in one sectional and 35 FBI National Academy retraining sessions for the 47 Chapters of the FBI National Academy Associates.

To continue to offer appropriate short courses to, and participate in training with, select foreign law enforcement agencies both in the United States and abroad.

To continue to publish scholarly articles by Academy personnel on a wide variety of subjects of concern to the local law enforcement community.

To provide, on a limited basis, training in basic criminal investigative matters to foreign police in the Caribbean area and in the Pacific Islands Trust Territories.

To conduct the FBI National Law Institute (NLI) for the instruction of state, and local legal advisors.

Base Program Description: The General Law Enforcement Training (GLET) mission of the FBI is achieved by the interaction of diverse programs offered at the FBI Academy and provided through the FPTP. The FBI Academy offers a wide variety of training programs which are made available at no cost to selected criminal justice personnel. The courses range from highly technical one-week programs to the eleven-week National Academy Program. In a presentation taped for the FBI National Academy Associates retraining session July 17, 1985, at Tampa, Florida, commemorating the fiftieth anniversary of the National Academy, President Ronald Reagan included the following observations in discussing the accomplishments of the National Academy over the past 50 years: "The National Academy is an example of Federalism at its best, enhancing the ability of state and local authorities to do their jobs. Actually, one might look at it as paying back local and state law enforcement for their day-to-day assistance in helping Federal officers make arrests, gather information, and develop cases. It is cooperation which benefits everyone. This cooperation is crucial in confronting such problems as narcotics, white-collar crimes, and crimes assisted by high technology."

The FBI Academy staff conducts research, establishes program objectives, and develops courses of instruction to meet identified training needs. For example, the need for executive training led to the development of the National Executive Institute (NEI) in 1976, and the Law Enforcement Executive Development Seminar (LEEDS) in 1981. Both programs, in conjunction with the National Academy, help alleviate the critical lack of management training in law enforcement agencies.

In the FBI's FPTP, over 2,000 trained FBI instructors assigned to 59 FBI field offices and numerous resident agencies participate in local police training programs throughout the Nation. This training assistance at the basic level is extensive and is the backbone of FBI training assistance to local law enforcement. It is at this level of training that the rapport between local police and FBI Agents is developed, which then fosters cooperative efforts between agencies in the investigative criminal cases.

Accomplishments and Workload: During 1986, a total of 68,269 student training days were dedicated to the National Academy and other executive development training programs for local law enforcement managers.

Approximately 23,000 student training days were dedicated to specialized and technical programs which included 125 specialized schools, working conferences, or symposia attended by more than 3,307 criminal justice personnel.

Training and operational support programs continue to make a significant contribution in support of state and local efforts to combat and solve violent crimes. The NCAVC began operation in June 1985, and 1986 represents its first full year of operation. During 1986, NCAVC assisted local and state law enforcement agencies in analyzing and investigating cases where offenders were responsible for 197 homicides, 203 rapes, 77 sexual assaults, and 93 arsons.

1811

In addition to the specialized and technical training programs offered at the FBI Academy, 43,627 student training days in 1986 were attributed to training programs conducted at state and regional training facilities.

During 1986, the FBI's Field Police Training Program provided 61,582 hours of instruction at 5,467 schools attended by 194,082 local, county, and state criminal justice personnel.

An important benefit of the FBI's GLET Program, both at the FBI Academy and through our 59 field offices, is the cooperation it generates from local, county, and state law enforcement agencies.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Forensic Services - Non-Federal....	122	119	$8,346	122	119	$9,182	122	119	$9,182	...	...	....

Long-Range Goal: To support the non-Federal criminal justice system through a program which provides: specialized forensic science training to crime laboratory personnel; crime-scene training to law enforcement personnel; and cost-free examination of evidence and necessary court testimony for agencies which do not have access to crime laboratories, or in complex cases which are beyond the capability of the local laboratory.

Major Objectives:

To fully utilize the Forensic Science Research and Training Center (FSRTC) in order to train additional state and local crime laboratory personnel which will improve the ability of jurisdictional laboratories to keep pace with the rising forensic examination case load.

To share the results of successful forensic science research projects with state and local crime laboratories.

To facilitate and coordinate information dissemination among the Nation's crime laboratories.

To maintain leadership in the crime laboratory community by hosting the "Annual Symposium on Crime Laboratory Development" and other scientific symposia and through participation in various other scientific meetings and symposia.

1812

To provide professional and expeditious handling of requests for examination of physical evidence and sound, objective, expert testimony in cases submitted by state and local law enforcement agencies which meet the criteria for FBI Laboratory examination.

Base Program Description: The FSRTC uniquely combines forensic science research with forensic science training in a physical plant which has been designed and equipped to meet the rigorous requirements of these activities. Federal, state, and local crime laboratory and law enforcement personnel receive training in courses which have been carefully selected and developed after consultations throughout the law enforcement and crime laboratory communities. Many of the courses offered are not available anywhere else in the United States.

The research staff is augmented with visiting scientists from the academic community and other government agencies, and the training staff is augmented, as necessary, with experts from the FBI Laboratory. Training is normally conducted at the FSRTC; however, where proper training facilities exist Laboratory instructors conduct specialized forensic schools in the field. Results of successful research projects are shared with the crime laboratory community.

Under this program, forensic science examinations of evidence submitted in connection with criminal investigations and prosecutions with necessary expert court testimony may be performed, free of charge, for all duly constituted law enforcement agencies in the United States. All requests for examinations involving state and local matters are carefully screened. It is the policy of the FBI Laboratory to return requests from state and local laboratories when it can be determined that the contributing laboratory has the capability to perform the examination. State and local law enforcement agencies are encouraged to use jurisdictional laboratories when available. However, some law enforcement agencies still do not have access to jurisdictional laboratories and even when available such laboratories often do not have the sophisticated instrumentation and/or expertise to perform the necessary examination(s).

Accomplishments and Workload: Actual and estimated accomplishments concerning this decision unit are set forth in the following Workload and Performance Summary.

Item	1985	1986	Estimates 1987	Estimates 1988
1. Forensic Science Examinations				
a. Requests for Examinations Handled	6,288	6,155	6,200	6,200
b. Examinations Conducted	375,935	387,148	380,000	380,000
c. Days Spent in Testimony	1,171	1,252	1,200	1,200

Examination statistics are captured through the Laboratory's automated Management Information System. These statistics demonstrate that the forensic science training provided to state and local crime laboratory personnel is having the desired effect in stabilizing the FBI Laboratory's workload. The increases in examinations conducted are occasioned by successful research, primarily in Serology and Microscopic Analysis, which permits more examinations per specimen. Many state and local law enforcement agencies still do not have access to jurisdictional laboratories and, even when available, jurisdictional laboratories do not have the expertise and/or instrumentation to perform all indicated examinations.

*Decrease is due to substantial increase in FBI/DEA New Agent Training which is projected through 1989.

During the past year the FBI Laboratory hosted three symposia which were designed to aid and further professionalize the law enforcement and forensic science communities. These sessions included: An International Symposium on Driving Under the Influence of Alcohol and/or Drugs, March 24-26, 1986, 168 attendees representing 36 states and 4 foreign countries; an International Symposium on Forensic Immunology, June 23-26, 1986, 175 attendees representing 41 states and 7 foreign countries; and an International Symposium on the Forensic Applications of Digital Image Processing, June 16-20, 1986, 54 attendees representing 23 states and seven foreign countries.

The Fourteenth Annual Symposium on Crime Laboratory Development was held at the FBI Academy and was attended by 170 crime laboratory directors representing 130 individual crime laboratories.

During 1986 a total of 55 specialized forensic courses were taught in 32 specific areas of forensic science. The number of students attending these courses increased from 1,362 in 1985 to 1,526 in 1986. One new specialized course was added: The "Detection and Examination of Footwear Impression Evidence."

The FBI Laboratory publishes the "Crime Laboratory Digest" as a rapid means of communication through which the Nation's crime laboratories can exchange information or ideas. This booklet is published and distributed four times each year.

FBI Laboratory assistance was provided to state and local law enforcement agencies in such highly publicized cases as the one involving a series of homicides in which ten women were abducted, raped, and murdered over an eight-month period beginning in May 1984, in the Tampa/Hillsborough County, Florida area. Four of the homicides were linked by the FBI Laboratory through red carpet fibers, hairs, and similarities in the knots used to bind the victims. When a suspect was developed, red fibers seized during a search of his vehicle were microscopically matched with those from the homicides. When confronted with the evidence, the suspect admitted his participation and furnished a full statement. In June 1986, he was found guilty in state court and sentenced to death.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Fingerprint Identification.....	2,583	2,595	$78,622	2,509	2,521	$86,596	2,509	2,521	$86,596	...	...	...

Long-Range Goal: To provide accurate and timely fingerprint identification and related services to Federal, state, and local criminal justice agencies, as well as other governmental agencies and entities, as mandated by Federal statutes, regulations, and executive orders.

Major Objectives:

To provide for fingerprint identification and arrest-record services on a timely basis to all authorized users.

To provide for the posting of wanted and parole/probation notices in the FBI's files at the request of criminal justice agencies, and for timely notification to appropriate agencies when there is arrest activity against the posted records.

To provide latent fingerprint examination and testimony services to Federal, state, and local law enforcement agencies.

To provide fingerprint training to Federal, state, and local law enforcement personnel.

To provide, as a humanitarian service, assistance to Federal, state, and local governmental authorities in the identification of missing persons and unknown deceased persons, including on-site assistance at major disasters.

To automate the Fingerprint Identification Decision Unit work functions to achieve greater efficiency and personnel and operating cost savings.

To support the development of the Interstate Identification Index (III), which is the Federal-state cooperative effort to decentralize to the states the responsibility for storing and exchanging interstate criminal history records.

Base Program Description: The FBI's responsibility to provide a much needed national entity to centralize fingerprint record keeping and fingerprint identification was established by an Act of Congress in 1924. The Fingerprint Identification Program provides an invaluable service to the criminal justice community by performing two primary functions: (1) It serves as the Nation's fingerprint identification index; and (2) it compiles and disseminates criminal history records. It is authorized to receive both criminal and noncriminal fingerprint cards. The FBI compiles criminal history records of persons arrested for serious/significant offenses from fingerprint cards and disposition reports voluntarily submitted by criminal justice agencies. Copies of these records are disseminated in response to requests from criminal justice agencies, as well as other authorized Governmental agencies and entities. It also receives and retains on file noncriminal fingerprint cards of Federal employees,

military personnel, aliens, and persons desiring to have their fingerprints on file for identification purposes. There are presently over 178 million fingerprint cards maintained in the FBI's files, representing over 59 million persons. During 1986, the FBI received an average of 50,553 fingerprint cards, correspondence, and other types of mail per day. This represents an increase of 9,690 items per day above the 1985 average, which were submitted by the more than 23,000 authorized contributing agencies. In addition to the fingerprint processing services provided to the criminal justice community, the FBI: (a) performs examinations of physical evidence submitted by Federal, state, and local law enforcement agencies for latent "crime scene" fingerprints, and provides, if necessary, expert court testimony as to the results; (b) conducts training schools in fingerprint science for Federal, state, and local law enforcement personnel; (c) posts wanted and parole/probation notices in its criminal records in order to notify criminal justice agencies when there is new arrest activity against such records; and (d) assists Federal, state, and local governmental authorities in the identification of unknown deceased persons, including on-site assistance at major disasters.

In serving as the Nation's repository and clearinghouse for fingerprint and arrest records, the FBI must be effective and efficient. Timely responses are vital to the operation of the Nation's criminal justice system. Delays in processing criminal fingerprint cards can result in the release of fugitives before their true identities are determined, impede criminal investigations, and hamper prosecutorial, judicial, penal, and parole/probation actions. Also, delays in processing applicant fingerprint cards can result in monetary losses and hardships in the employment and licensing sectors. As a result of substantial work backlogs and delays in response time (from three days in the early 1970s to 27 days in 1981), the FBI was forced to suspend certain non-Federal applicant services in 1982. The services were restored in 1983 with the institution of the User-Fee Program. This Program charges a fee for processing fingerprint cards which is used to pay the full cost of providing the service. During 1986, a total of 1,125,742 fingerprint cards were processed, a 21 percent increase over 1985, resulting in cash receipts of $13,553,757. Increases in receipts are expected to continue as additional states fully join the Program and as additional state statutes requiring national fingerprint checks are put into effect.

The automation of the fingerprint identification operation was a result of attempting to solve the problems experienced in the 1970s. During this period, the workload increased at a rate that could not be matched by productivity increases in a manual operation. This resulted in lengthy response-output times and huge work backlogs. The obvious alternative was to look in the direction of techniques to automatically read and search fingerprint cards. A study conducted in 1971 determined the feasibility of incorporating such techniques, and the FBI began a three-phased implementation of automation.

The initial phase, known as the "Automated Identification Division System - Phase I," or "AIDS-I," involved the computerization of the criminal history records of first offenders. It was implemented in 1973 and over 10 million criminal history records have been automated to date. About 85 percent of all criminal history records are now disseminated from the automated file. At the same time automatic fingerprint reading equipment was used to computerize the fingerprints stored in the FBI's criminal master file. The initiation of computerized name searching was implemented with "AIDS-II" in 1979. In March 1986, automation of the name search file was completed, and currently over 18 million names are computerized. This enables the FBI to perform an automated name search on all incoming workload. Computerized fingerprint searching was implemented in 1979 on a pilot basis and has expanded to the point where about 95 percent of all incoming fingerprint cards requiring a fingerprint search are now searched through the automated fingerprint processing system.

1816

The third phase of automation, "AIDS-III," began in January 1985 and is expected to be completely operational by the end of 1987. This system will replace the two major automated systems and will reduce the FBI's processing time to one day. The FBI's present work-processing time of about 12 workdays is incompatible with the rapid on-line computer inquiry and response requirements of the National Crime Information Center's III. AIDS-III will allow the FBI to support the III concept of decentralizing arrest records.

Accomplishments and Workload: The accomplishments of the Fingerprint Identification Program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Fingerprint cards				
Criminal Justice and Federal Applcant				
Received	6,005,112	6,282,804	6,395,000	6,587,000

Fugitives Identified Through				
Posting of Wanted Notices	17,342	19,199	18,500	19,000
Latent Fingerprint Cases Processed	18,244	15,451	19,500	20,000

1817

Item	1985	1986	Estimates 1987	1988
Suspects Identified by Latent Fingerprint Examinations	3,060	3,747	3,500	3,600
Fingerprint Schools Conducted	198	176	225	240
Interstate Identification Index Requests Received and Processed	496,815	714,906	625,000	650,000
Communications Mailed	8,941,822	9,463,036	9,703,000	10,105,000

*All user-fee receipts are not processed because of immediate rejections (failure to comply with established procedures and/or requirements) and returns due to illegible fingerprints.

Substantial progress has been made in the development of AIDS-III. Construction was started in January 1986, on the new major computer center for AIDS-III and in July the contractor moved the development effort into the J. Edgar Hoover FBI Building after installing the AIDS-III computers in the new computer center.

The conversion of the name search file was completed in March 1986, which now enables the FBI to perform an automated name search on all incoming receipts.

The FBI Disaster Squad assisted in the identification of victims of four aircraft disasters, a hijacking in Malta; a mining disaster in Castle Dale, Utah, and the Space Shuttle disaster at the Kennedy Space Center, Florida. There were 403 victims examined in these disasters and 168 were identified by fingerprints and/or footprints. This represents a 65 percent increase over the number of victim examinations conducted during 1985.

During 1986, Latent Fingerprint Specialists conducted 9,091,277 fingerprint comparisons, a 24 percent increase over 1985.

In June 1986, 13,020 name checks submitted by magnetic tape for security clearances of those individuals who were affiliated with the Statue of Liberty Rededication were processed.

The Fingerprint Identification Program will have 2,521 direct funded workyears in 1988, a reduction of 74 funded workyears from the 1987 level of 2,595. This change is attributable to agency-wide management productivity savings reductions in 1988.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Criminal Justice Data and Statistics Services.....	205	200	$8,546	194	189	$9,189	194	189	$9,189	...	...	...

Long Range Goal: To generate reliable statistics for use in law enforcement administration, operation, and management, and to improve the overall effectiveness of the criminal justice system through effective handling and exchange of documented criminal justice information.

Major Objectives:

National Crime Information Center (NCIC)

To provide an automated data-base system to meet the needs of criminal justice agencies on a continuous basis.

To provide a nationwide telecommunications system for the storage and dissemination of documented information concerning wanted and missing persons, stolen property, criminal histories, and laboratory comparison standards.

To coordinate meetings and facilitate informational input from the NCIC Advisory Policy Board and Regional Working Groups to insure continuation of a user-oriented management process.

To coordinate and successfully implement necessary system enhancements to meet the needs of user agencies.

To re-evaluate the information processing requirements of the criminal justice community through the year 2000.

Uniform Crime Reporting (UCR)

To implement an enhanced UCR Program on a national and state-by-state basis.

To provide training, technical consultation, and assistance to the UCR staff and state and local law enforcement officials in developing and maintaining accurate data and improving management strategies relating to compiling and publishing UCR crime statistics on a monthly, semiannual, and annual basis.

To comply with the Congressional mandate of the Anti-Arson Act of 1982, to compile and tabulate information regarding special reports of arson, and implement and monitor a special arson statistical program.

To collect, record, analyze, publish, and report detailed and comprehensive data as contained in the "Law Enforcement Officers Killed," "Assaults on Federal Officers," "Bomb Summary," and "Arson" programs.

Base Program Description: The NCIC program addresses the problem of the inability of the criminal justice community to function effectively without accurate and timely information. The NCIC provides an interstate teleprocessing system to exchange documented criminal justice information on wanted and missing persons, stolen property, criminal histories, and laboratory comparison standards. The FBI, with advice of the NCIC Advisory Policy Board and Regional Working Groups, manages the NCIC for the benefit of local, state, and Federal law enforcement agencies. The operation of the NCIC Advisory Policy Board is governed by the Federal Advisory Committee Act, 86 Statute 772.

The NCIC addresses the criminal justice community's need by providing nationwide availability of information to combat the highly mobile criminal. The availability of this information increases the opportunity to locate wanted persons at large, missing persons who might be a danger to themselves or others but who are not criminals and stolen property which otherwise might never be returned to the rightful owner. In addition, the timely availability of Computerized Criminal History (CCH) information to prosecutors, judges, and correctional officers protects the American public by permitting fully informed decisions in the following matters: law enforcement investigation, booking and criminal processing, presentence investigation concerning flat term and minimum sentencing laws, risk classification for custody and supervision, bond decisions, parole, and probation. The timely availability of information also enhances the ability of the FBI to accomplish its investigative mission. NCIC services must be available to approximately 57,000 user agencies with varying needs. These users are geographically dispersed and operate computer equipment with different capabilities manufactured by various companies. NCIC must meet the changing needs of users, the system must remain reliable and responsive, record data quality must be maintained, and sufficient training must be provided to users.

NCIC provides access to automated criminal history data entered into the Interstate Identification Index (III). During 1983 and 1984, an enhanced capability to obtain individual criminal histories was provided to the users of NCIC. This capability was made possible with an expanded test of the III. The NCIC, FBI Identification Division, and 19 state agencies interconnected their criminal recordkeeping systems to make available the records of more than ten million offenders. These 19 states have become active participants in entering and updating their state records in the file. Prior to the expansion of the III, only about two million records were maintained in the NCIC system. The number of available records will continue to increase by more than 15,000 per week as individuals are arrested for the first time. In addition to providing criminal records, the III features improved record quality and saved resources for both participating state agencies and the FBI by eliminating duplication of recordkeeping at the state and national levels.

The basic authority for the operation of the NCIC is contained in Title 28, United States Code 534, which authorizes the Attorney General to acquire, collect, classify, and preserve identification, crime, and other records, and exchange these records with and for the official use of authorized officials on the Federal, state, and local levels. The Attorney General has delegated his authority under this Statute to the Director of the FBI. Executive Order 10450 provides for the utilization of these services to meet security requirements for Federal employees. The FBI is authorized by 86 Statute 1115 to exchange identification records with officials of Federally chartered or insured banking institutions and, if authorized by state statue and approved by the Attorney General, to officials of state and local governments for the purposes of licensing and employment. Dissemination of NCIC records is subject to Title 28, Code of Federal Regulations, Part 20.

The authority for the FBI to administer the UCR Program is contained in U.S. Code, Chapter 33, Title 28, Section 5. Further legislation, the Anti-Arson Act of 1982 (Public Law 97-298), directed the FBI, in cooperation with the United States Fire Administration, to develop and prepare a special statistical report on arson. The UCR Program provides direct administration over the collection and processing of crime data received from contributing agencies to insure an accurate, comprehensive, and nationwide compilation of crime-related statistics for use by all levels of government in formulating productive programs to reduce lawlessness in American society. The UCR Program has been maintained by the FBI for more than 55 years due to the need for a national repository and training base for criminal statistics. Should the Federal Government excuse itself from this function, crime statistics from many states would cease to be collected and the capability to analyze nationwide crime data would end. No other Federal agency solicits arrest, clearance, or police employment data based on direct voluntary contributions from over 16,000 law enforcement agencies in the United States. The UCR Program is considered an important link between fire services and Federal, local, county, and state law enforcement.

Accomplishments and Workload: Workload statistics for the NCIC and UCR are presented in the following tables:

National Crime Information Center

	1985	1986	Estimates 1987	Estimates 1988
1. NCIC Transactions	164,048,934	183,949,095	195,000,000	205,000,000

Work continued on the NCIC 2000 project, which will identify the functional requirements for the NCIC system through the year 2000. The functional requirements identified will provide the basis for the redesign of the NCIC system.

Plans continue for implementation of the new UCR Program. In conjunction with the implementation process, testing of the new system has been initiated in the South Carolina UCR Program. The 1985 edition of "Crime in the United States" was released on July 27, 1986, one of the earliest release dates for the publication since 1965.

The FBI completed the Crime Indicators System VI which quantified the relationship between serious crime and its causes. Crime resource documents, which addressed age-specific arrest rates and race-specific arrest rates were sent to all state UCR programs, state statistical analysis centers, and selected academicians. Two press releases were generated based on the FBI's crime-analytic efforts on drug arrests and on the prevalence of residential burglary. Statistical models were developed for cities with populations of 100,000 or more in order to formulate individual city jurisdictional profiles.

Activity: Program Direction

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease

Long-Range Goal: To provide effective leadership, management, direction, and control for the Federal Bureau of Investigation.

Major Objectives:

To provide leadership for the FBI in support of the organization's long-range goal through the promotion of high morale and efficient commitment of personnel and nonpersonnel resources.

To provide: legal advice, training, and guidance to all FBI personnel in administrative, investigative, and personnel matters; conduct and administer all FBI legal training, prepare training monographs, and legal articles for publication; rule on petitions for remission or mitigation of civil administrative forfeiture; provide legal advice to the field offices and FBI Headquarters on legal problems associated with civil and criminal forfeiture; and to provide legal counsel and defense of civil litigation and administrative claims involving the FBI, its personnel (past and present), and FBI records.

Review and defend documents in discovery and produce documents in civil suits, exercising that care necessary to ensure that all privileges available to the Government are properly asserted.

To effectively advocate the FBI's position with respect to all legislative proposals with the Department of Justice (DOJ), Office of Management and Budget (OMB), and the Congress; to effectively represent the interest of the FBI with respect to responses to Congressional inquiries and oversight responsibilities; to competently advise the Director and other FBI officials on matters relating to the Congress; and to competently represent FBI interests with national legal organizations.

To obtain public cooperation and support in FBI investigative areas and to increase the public's awareness of FBI activities and accomplishments through news releases, feature articles, interviews, speeches, publications, radio and television appearances, and announcements, correspondence, and tours.

To conduct audits, inspections, and evaluations of FBI programs to ensure their economic value and effective compliance with objectives, applicable laws, and regulations; and to ensure that FBI personnel conduct the organization's activities in a proper and professional manner.

1824

Base Program Description: The Director, with the advice and counsel of the FBI's Executive Assistant Directors and members of the Executive Conference, sets policy and provides leadership and direction to the organization. The Executive Assistant Directors, with the assistance of their respective staffs, transmit policy statements, guidelines, and other managerial information to the Assistant Directors, who direct the daily operations of the Headquarters divisions.

The budget program provides: overall direction and control in all phases of budget and accounting functions; coordinates the automation effort for a comprehensive financial accounting system, conducts analytical studies for management; collects and reports data concerning investigative workload and statistical accomplishments of the 59 field offices; monitors undercover funds; and ensures that approved funds for undercover and other operational requirements are provided.

The objectives of the General Legal and Civil Litigation-Civil Discovery Programs are carried out by special agent attorneys, with assistance from paralegal specialists, who provide timely and accurate legal advice to FBI management and personnel, defend suits and resolve claims resulting from investigative and administrative actions in the field and FBI Headquarters. FBI personnel are kept informed of their legal responsibilities and changes in the law through instruction and timely dissemination regarding information of new matters and investigative operations both in the planning and execution stages. Close daily liaison is maintained with the Department of Justice regarding the defense of civil actions, resolution of administrative claims, disclosure of records under the Freedom of Information and Privacy Acts and the Right to Financial Privacy Act, and the representation of FBI concerns and legislative needs. Special agent attorneys also represent the agency in Equal Employment Opportunity (EEO) and Merit System Protection Board (MSPB) hearings.

The Congressional Affairs Office (CAO) seeks to effectively advocate FBI positions with respect to all legislative proposals before the Congress and to competently advise the Director and other FBI executives on matters relating to the Congress. This liaison relationship with the Congress serves as the focal point of all FBI contact with the Legislative Branch. In 1986, the CAO coordinated and assisted the Director and other FBI executives in 33 appearances as witnesses before the Congress. The CAO also coordinated the FBI's response to 84 requests for information from Congressional committees, and it monitored the progress of over 1,800 separate pieces of pending legislation. In addition to its legislative priorities, the CAO also represents the FBI's interest by maintaining liaison with nationally recognized professional legal organizations.

The Public Affairs program is responsible for providing the American public with a factual accounting of the FBI's programs, operations, and services on a continuing and timely basis and for sharpening the public's perception of FBI goals. Tours of the J. Edgar Hoover FBI Building, news media requests, correspondence with the public, and other related matters are coordinated by the Public Affairs Program. Public cooperation and support are essential to the FBI's effectiveness as an investigative and intelligence bureau. Without this cooperation and support, the FBI's success would be greatly reduced in the high-priority areas of Foreign Counterintelligence, White-Collar Crime, Terrorism, Organized Crime, and Narcotics Investigations.

Evaluation of FBI activities is carried out by the Program Evaluations and Audits and Inspections programs. These programs ensure that policies, procedures, and operations of the FBI meet present and anticipated requirements, and that they are efficiently, effectively, and economically performed. The Inspections Program further evaluates FBI performance through inspections (on a biennial basis) of field offices, Headquarters divisions, and legal attaches. The Director and executive management officials are

advised of inspection results as well as instructions and recommendations in reference to compliance, efficiency, effectiveness, and economy of the administrative, financial, and investigative operations of the organization.

Accomplishments and Workload: Accomplishments and workload of the Executive Direction and Control Program are presented in the following table:

Item	1985	1986	Estimates 1987	Estimates 1988
Testimony, constituent requests, and Congressional/investigative liaison..	4,412	5,248	4,498	4,498
Radio scripts, press summaries, major press releases, and statements.....	39,105	39,114	39,126	39,126
Law Enforcement Bulletin (LEB) (readership)[1].....	550,000	840,000	840,000	840,000

Inspections completed.....	30	41	33	44
EEO complaints completed.....	13	8	20	20
Administrative inquiries completed.....	12	10	10	10
Investigations closed.....	367	412	475	475
Intelligence Oversight Board (IOB) matters closed.....	6	2	15	15
Field office audits.....	36	35	36	36
FBIHQ funds/systems audits.....	8	9	18	20
Undercover operations audits.....	14	24	29	36

[1] Increase in LEB from 1985 to 1986 reflects extra copies printed of one issue requested by FBI Academy for training.
[2] Fewer publications requested for 1986.
[3] 1986 reversal is directly attributable to the high turnover level in personnel.
[4] Number of pages reviewed for Civil Discovery resulted in the increase of subpoenas for 1986.

[5] Increased liaison matters occured between 1985 and 1986 due to GAO/DOJ request

During 1986, the Budget Staff prepared presubmission analyses and briefing books for all FBI programs; coordinated budget formulation and presentation with Drug Enforcement Administration (DEA) representatives, in addition to the preparation of FBI budget submissions and briefing of FBI executives on budget submission content; reviewed and analyzed the Justice Management Division (JMD), DOJ, budget request with a summary of recommendations to the Assistant Attorney General - Administration; prepared and distributed periodical field and Headquarters personnel comparison reports for internal use by FBI program managers; and handled appropriate confidential funding, imprest, and field statistics matters.

1827

In 1986, the Congressional Affairs Office continued to represent the FBI's interests before the Congress by successfully advocating or endorsing legislative revisions and reforms in areas such as the Freedom of Information Act and laws governing electronic interception, as well as obtaining access to certain records of foreign counterintelligence cases. In addition, the CAO provided critical analysis and advice during the formulation and subsequent passage of the Anti-Drug Abuse Act of 1986.

The Public Affairs program continued to advise the Director, FBI officials, field offices, and legal attaches of major activities and events concerning the FBI through various special news packages and summaries. Other continuing activities included the research and preparation of speeches for the Director and other FBI officials, and the coordination of major media interviews of FBI executives, focusing on the areas of Foreign Counterintelligence (FCI), Organized Crime, Terrorism, White-Collar Crime, and Narcotics Investigations. The program was responsible for the coordination of courtyard concerts; preparation of biographical sketches and press releases relating to executive appointments, and retirements; writing and editing radio scripts; publishing the Law Enforcement Bulletin; and preparing outgoing correspondence to members of Congress, other Government officials, FBI field offices, and to the general public.

The General Legal Program provided extensive research and guidance instrumental in establishing the FBI's Drug Deterrence Program and in drafting major amendments to Title III of the Omnibus Crime Control and Safe Street Act of 1968. In addition, reviews of 544 applications for court authorized electronic surveillance were conducted, responses to 360 legal research projects were produced, and legal assistance regarding 2,295 other matters was given.

The Civil Litigation Program successfully completed several major civil actions, including Church of the Scientology vs. Lindberg, Kenyatta vs. Moore, and Donovan vs. FBI. In addition the units resolved 358 other civil actions There was also active participation in the drafting and indemnification of employees found liable in civil actions as a result of their employment. Finally, the discovery units continued to handle the massive document production resulting from such civil actions as National Lawyer's Guild vs. Attorney General, including 1,009,302 pages of FBI files being reviewed for release.

During 1986, the Internal Inspections Programs completed inspections of eight legal attaches, five Headquarters divisions, and 28 field divisions. During this period, the program issued 1,832 instructions and recommendations. Of that total 548 were instructions relating to compliance deficiencies. The remaining 1,284 instructions and recommendations related to the effectiveness, efficiency, and economy of the administrative and/or investigative operations of the inspected entity. A total of 24 EEO complaint investigations were initiated, eight of which were completed during the period. Ten administrative inquiries were also handled during the period. In furtherance of the FBI's Career Development Program, the Office of Inspection (OI) trained 50 future executives. In 1986, the Office of Professional Responsibility (OPR) supervised 443 cases, of which 89 were personally investigated by OPR. In addition, 11 Intelligence Oversight Board (IOB) matters were handled by OPR. Liaison with OPR/DOJ is maintained and internal and external administrative guidelines are being adhered to with reference to IOB matters.

During 1986, the Program Evaluations and Audits Program initiated 11 studies and evaluations such as the "Use of Non-Agent Pilots", "Evidence Handling and Storage", and "Undercover Operations". Three program evaluations were initiated, including review of the Applicant Investigations Program and Civil Rights Program. The program conducted financial and compliance audits at 34 field offices. Six Congressional audit reports were issued during the year with 11 undercover operation audits near completion.

1828

The Audit Unit conducted two joint field office audits with DEA. The annual audits covered FBIHQ funds/systems such as Cash Management, Fourth Quarter Procurements, and FBI Official Reception and Representation Funds and reports were issued. An audit of the food concession contract with Canteen Corporation was also performed. The Electronic Data Process (EDP) Audit of the Organized Crime Information System was initiated, and virtually all of the field work was accomplished during the year. Also, 60 Government Accounting Office/DOJ liaison matters were handled during this period on a timely basis.

	1987 Appropriation Anticipated			1988 Base			1988 Estimate			Increase/Decrease		
	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount	Perm. Pos.	WY	Amount
Administrative Services.....	749	732	$24,524	731	715	$25,994	770	753	$30,144	39	38	$4,150

Long-Range Goal: To provide a complete range of administrative services to maintain the FBI as a functional entity.

Major Objectives:

To meet all mandated requirements for pay administration, performance appraisal and merit pay, and position management for approximately 23,000 FBI employees.

To increase the FBI's ability to use automated personnel data for decision-making via the Resource Management System and the Personnel Information Center.

To recruit, process, and hire qualified minority and female special agent and support personnel.

To provide safety, health, and employee assistance programs.

To provide an effective equal employment opportunity program.

To effect permanent transfers or temporary assignments as necessary to meet the overall mission of the FBI.

To develop human resources planning, and in so doing, provide a coordinated recruitment approach to recruit experienced/qualified talent well in advance of needs; improve planning of assignments and analysis and control of personnel-related costs (e.g., turnover, relocation, training, recruitment).

1829

To ensure appropriate disciplinary recommendations that are timely, objective, fair, and legally sound are made with regard to FBI personnel.

To develop valid job-related selection criteria for entry and promotional level support personnel positions.

To provide effective procurement and supply support for all FBI activities.

To process all property seized for forfeiture purposes in an effective manner.

To provide service to our escorted visitors.

To process security background investigations for individuals requiring access to FBI facilities.

To ensure and provide maintenance, scheduling, and reporting on FBI Headquarters' automotive fleet vehicles.

To ensure accurate and timely preparation of the FBI's biweekly payroll, prompt distribution of payroll checks, statements of earnings, and savings bonds; accurate and expeditious processing of invoices and vouchers, providing of relocation assistance for transferred employees and their families; and the providing of research analysis and interpretation of existing travel regulations, new provisions in the regulations, and amendments thereto.

To prepare all required financial data reports related to budget execution in a timely manner.

Base Program Description: The Personnel Services Program is responsible for: the administration, coordination, and policy formulation of pay administration, retirement, leave, safety, disciplinary action, employee performance, recognition, and indoctrination, applicant recruitment, processing of employee transfer matters, and compiling and reporting personnel statistical data. This program is also responsible for the administration of the Performance Appraisal and Merit Pay Systems, coordination and implementation of the Equal Employment Opportunity and Affirmative Action Programs, and Employee Assistance Program to include the Mandatory Drug Deterrence Program.

The General Services Support Program has the responsibility for: the procurement of all FBI equipment, goods, services, and supplies; the management of FBI equipment, inventory, stock, and processing property seized for forfeiture purposes.

This program must also provide support service functions relating to printing, warehousing, security, safety, supplies, and space needs (related to the acquisition, alteration, renovation, and release of GSA controlled space) on a justified demand basis to FBI Headquarters and the field, and manage the responsibilities for operation, maintenance, alteration, and repair of the JEH Building as provided for in the Delegation of Authority from GSA to the Department of Justice (DOJ).

1830

The Systems Support Program prepares the FBI's payroll and distributes statements of earnings, salary and expense checks, leave accounting records, and savings bonds. All invoices and vouchers are audited and paid in accordance with existing rules, regulations, and directives. This program is responsible for relocation and travel matters involving FBI personnel and administering vouchers relative to the Field Support Account, Imprest Fund, and undercover operations; and research, analysis, and interpretation of existing travel regulations, new provisions in regulations, and amendments thereto, furnishing appropriate information and assistance to all FBI personnel in these matters.

The Financial Management Program provides overall direction and control in all phases of accounting functions, including all types of voucher payments and procurements; coordination of the automation effort for a comprehensive financial accounting system, and preparation of various analytical studies and financial reports for management.

Accomplishments and Workload: Accomplishments of the Administrative Services Program are presented in the following table:

Item	1985	1986	Estimates 1987	1988
Staff Actions	4,732	11,445	12,125	12,550

Procurements (Software/Hardware) Completed	4	6	6	8

* Activity was not performed in these years

During 1986, within the Personnel Services Program, 18,934 health and life insurance program forms were processed; 290 retirement applicants were processed, and more than 2,700 employees were administered clerical, mechanical, and language aptitude tests.

A Resource Management System Personnel Task Force continues to redesign the Personnel Information Network and a fieldwide survey was conducted to assess the field support personnel needs for 1986.

Research was conducted regarding recruiting techniques and resources and relevant data were provided to all Applicant Coordinators on a regular basis. Additionally, critically low applicant pools of linguists, engineers, computer specialists, minorities, and females have been enhanced.

The FBI processed 38,403 escorted visitors. An additional 6,098 temporary badges were issued to FBI employees. A total of 242 full-field background investigations were completed along with 722 limited inquiries and 1,610 name checks.

Security support was provided for special events in the auditorium, courtyard, Tour Route, and cafeteria areas.

Extensive detailed space specification packages were prepared for the major field office headquarters relocations of Alexandria, Washington Field Office, Miami, Knoxville, Mobile, Las Vegas, El Paso, Columbia, and Phoenix.

To further support FBI Headquarters' components, the FBI acquired over 18,000 square feet of warehouse space through the GSA and completed the relocation of warehousing and field supply operations from FBI Headquarters to warehouse facilities at Greenbelt, Maryland, and the Washington Navy Yard, thereby freeing up office space required for expansion at the JEH FBI Building.

During 1986, the Accounting Section installed and began implementing additional or upgraded financial management software functions, including purchasing, consumable inventory, fixed property, and accounts payable; and extended on-line access and update capabilities of the Financial Management System to additional accounting analysts, which included initial installation of a local area network to enhance the analytical and data transfer capability. In addition, existing formats for 1) reporting by program to support internal management and external oversight requirements and 2) internal control of document entry were developed or enhanced.

Program Changes: Increases of 38 workyears, 39 positions, and $4,150,000 are requested in 1988 for the Administrative Services Program. A major theme of the FBI's 1988 budget request is the necessity to achieve balance between a significantly augmented investigative capability over the past five years and an inhibited growth in Administrative Services to support the investigative functions. From 1983 through 1987, on a direct funding basis, the FBI has grown by 2,921 workyears, a 15.4 percent increase, while Administrative Services has grown by only 40 workyears, or 5.1 percent. While the increases in investigative personnel have enhanced the overall effectiveness of the FBI, additional personnel are needed to perform administrative functions to support the investigative personnel. Examples of the negative impact resulting from the significant growth in investigative programs and the restricted growth in Administrative Services include: a deterioration in the quality of pay and position management work affecting the quality of service obtained from employees; a projected shortfall in hiring adequate numbers of employees, especially those in "specialty/technical" areas that have become so crucial to daily operations; and delays in the initiation of forfeiture procedures causing the time for storage of items to increase, depreciation in the value of seized items, and forfeiture actions to be lost in court. Unless increases in personnel are obtained for the Administrative Services Program, the FBI will be unable to effectively deploy investigative personnel in response to ever changing mission requirements.

The number of employees requiring physicals, requesting training, and filing health benefits forms and claims will increase. All headquarters agent personnel will receive in-house annual physicals. Two nurses and one general support are required to assist

with these physicals. A preretirement planning process has been established to allow employees nearing retirement to go through a trouble-free transition to retirement. Three employee relations specialists are being requested to administer the preretirement planning and to assist with the processing of Government Employee Training Act (GETA) request forms and to administer the Psychological Services and Alcohol Program. Two instructors are requested to teach in-house stenographic, typing, and other courses in clerical skills. These training classes will allow the FBI to train the personnel already onboard and to promote from within.

The workload of the Performance Recognition and Awards Unit (PRAU) has dramatically increased from 1981 through 1986 and is expected to continue through 1988. Five personnel management specialists, two personnel assistants, and two general support are requested to address the increasing workload in performance appraisal matters. There is a projected 10 percent increase in the number of performance rating matters to be processed in 1988 above the 1986 number.

Since its inception in 1983, the FBI Personnel Resources Unit has planned strategy for the recruiting of agents and special and technical personnel. It has also identified a number of long-range research projects related to human resource forecasts. These objectives cannot be met with the existing base level of two agents. Four human resources analysts and one clerk-typist are being requested to conduct the long-range research project and assist in other recruiting responsibilities.

One agent is being requested to train field agents in the Targeted Selection Interview (TSI), which is used in the special agent selection process. Because a large number of agents will become eligible to retire, a high agent turnover is expected to occur over the next ten years. This will heavily tax the field offices to provide the interviews necessary to hire a large number of agents. Unless a system of continued training of interviewers is maintained along with a full quality control capability, there is a danger of severely hampering the agent selection system.

The newly established Personnel Information Center (PIC) generates personnel reports and graphics for all headquarters divisions and field offices. It also has an automated skills bank. The maintenance of this computer software and the influx of microcomputers into the Personnel Section have created a need for computer specialists. Four workyears are being requested to enhance the capabilities of the PIC and to maintain the current software.

In the Administrative Summary Unit (ASU) a trend has developed over recent years toward an increased complexity in administrative actions handled. This is best exemplified by the fact that ten special agents have been indicted/convicted over the past five years for various violations of state and federal law. This trend significantly adds to the investment of time per case by ASU personnel and thereby affects the overall output of the unit in terms of meeting established deadlines. The ASU has also received two additional responsibilities in recent years, namely, reviewing all unacceptable performance appraisals for final resolution and reviewing all shooting incidents. These added responsibilities are being handled without additional personnel, thus creating a higher than desirable turnaround time on administrative actions. One agent and one general support are being requested so that the turnaround time for all actions can be reduced to less than 30 calendar days.

Two traffic management specialists are being requested for relocation services. The Relocation Unit administers contracts with third party relocation service companies in regard to authorizing the purchase of a transferred employee's home by one of these companies. Relocation services provided to FBI employees are projected to increase by 45 percent in 1988 over the 1986 figure.

Five support workyears are being requested for position classification matters. As other field programs continue to grow, there is a direct increase in the number of position classification actions required. For 1988, the Pay and Position Management Unit (PPMU) is projecting a demand of 3,130 position classification actions compared to 2,924 actions completed in 1986. Due to this anticipated increase in workload, coupled with the normal turnover of classifiers, it is imperative that the base level be increased to permit the unit to develop an adequate cadre of classifiers to meet the needs of the position classification system.

The integrated digital voice privacy radio project will require an additional supervisory special agent for contract negotiations and awards. The Contract Review Unit is expecting to award 30 more contracts in 1988 than in 1986, a 16 percent increase. The integrated DVP project is a major FBI undertaking that will be in the contract award stage in 1988, necessitating continued involvement by the unit and contributing to its increased workload. The addition of a supervisory special agent will allow the Contract Review Unit to effectively and responsibly address its projected workload increase in 1988 and subsequent years.

The Forfeiture and Seized Property Program is responsible for the management of the FBI's forfeiture and abandonment programs, which encompass the areas of civil and criminal seizure of property as well as the disposition of forfeiture property. These responsibilities also include the administration of the FBI's "sharing" program for the transfer of Federal forfeiture activities, the payment of awards, the purchase of drug evidence, and the retrofitting of vehicles placed into official use. The forfeiture program is requesting an agent at headquarters to address the forfeiture-related areas of narcotics investigations. Since 1984, this unit has had a 232 percent increase in forfeiture matters.

Increased nonpersonnel resource needs for Administrative Services include providing security in the form of antiterrorist vehicle ramp barriers ($150,000); providing for employee-related performance awards, external training, recruitment funds, publication costs, and consulting services for the in-house physical examination and psychological services programs ($1,553,000); acquiring additional parking space and repair facilities for the FBI's automotive fleet, including surveillance vehicles ($638,000); and acquiring additional basic maintenance and computer supplies ($485,000).

Salaries and expenses

Justification of Adjustments to Base
(Dollars in thousands)

	Perm. Pos.	Workyears	Amount
Savings resulting from Management and Productivity Initiatives.....	-200	-200	-$2,000
Uncontrollable Increases:			
1. One additional compensable day.....	...	...	2,923

The annual salary rate for Federal employees is based on 260 paid days. FY 1988 has one more compensable day (262) than 1987 (261). (Permanent personnel compensation of $659,121,000 divided by 260 = $2,535,000 plus $388,000 for benefits)

2. Annualization of additional positions approved in 1987.....			...	142	3,558

This provides for the annualization of 142 additional positions approved in 1987.....

	Approved 1987 Increases	Annualization Required
Annual salary rate of 774 approved positions.....	$19,417,000	
Less lapse (18 percent).....	- 3,495,000	$3,495,000
Net Compensation.....	15,922,000	
Associated employee benefits.....	2,888,000	63,000
Total Costs subject to annualization.....	18,810,000	3,558,000

3. Annualization of Federal Employees' Retirement System Costs.....	...	...	58,029

This request provides for the additional costs in 1988 necessary to continue implementation of the Federal Employees' Retirement System Act of 1986, P.L. 99-335. This act established a retirement program for Federal civilian employees and postal workers hired after December 31, 1983, who are covered by social security, and for employees under the Civil Service Retirement System who choose to transfer into the new system. The calculations were

	Perm. Pos.	Workyears	Amount
determined from an OMB approved formula. The Office of Management and Budget had allowed $23,005,000 for 1987. The total amount requested for 1988 was $80,415,000. Thus, total annualization required for 1988 is $57,410,000.			
4. Annualization of 1987 pay increase.....	...	...	$18,692
This request provides for the annualization of the January 4, 1987, pay increase. The calculation of the amount required for annualization is based on 68 paid days (October 1, 1986, through January 3, 1987), which were not included in the pay raise amount of $9,309,000. Additionally, $9,308,000 of the 1987 pay requirement was absorbed. Total annualization required is $18,692,000.			
5. Within-grade increases.....	...	...	6,425
This request provides for an expected increase in the cost of within-grade increases. This increase is generally consistent with increases experienced in recent years and is approximately one percent above the base for compensation and related benefits for permanent employment. (Personnel compensation of $5,654,000 and benefits of $771,000 = $6,425,000)			
6. Medicare costs.....	...	...	234
Beginning January 1, 1985, the base on which earnings for medicare computations are calculated increased from $37,800 to $39,600. Additionally, beginning January 1, 1986, the base for computation increased to $42,000 and the rate changed from 1.35 to 1.45 percent. This increase is computed for 16,471 eligible employees.			
7. Locality based per diem.....	...	...	3,000
Public Law 99-234 autherized a new locality-based per diem and lifted the $75.00 ceiling in certain geographic areas. An uncontrollable increase of $3,000,000 is required to meet the expected 10 percent increase to total travel funds.			

	Perm. Pos.	Workyears	Amount
8. Federal Employees' Compensation Act (FECA) - Workers' Compensation.....	...	...	$959
This increase reflects the billing provided by the Department of Labor for the actual costs in 1986 of employees' accident compensation. The 1988 amount will be $4,770,000 or $959,000 over the 1987 base.			
9. GSA Rent.....	...	...	14,472
In 1987, the Rent system replaces the Standard Level User Charges (SLUC) system. GSA will charge rental rates that approximate those charged to commercial tenants for equivalent space and related services. An uncontrollable increase of $14,472,000 is required to meet our commitment to GSA.			
10. GSA recurring reimbursable services.....	...	...	351
Reimbursable payments are made to GSA for heating, ventilation, and air conditioning provided in excess of normal working hours and for guard service. GSA has estimated a 4.2 percent increase of $351,000 in fees for these services in 1988 over the 1987 charges of $8,361,000.			
11. Federal Telecommunications System (FTS).....	...	...	185
The General Services Administration has advised of a 16 percent increase in Federal Telecommunications System (FTS) Intercity costs for 1986. This increase is mainly due to unanticipated tariff increases, savings GSA had built into their original budget estimate which will not materialize and FY 1985 costs which were not billed by GSA last year. An increase of $185,000 over the 1987 base of $6,393,000 is requested.			
12. Telephone Service.....	...	...	1,000
On February 25, 1986, the District of Columbia Public Service Commission (PSC) issued its final order in the Chesapeake and Potomac telephone company (C&P) rate case. The PSC, in its order, allowed C&P to increase its rates by $31 million and set the rates for C&P's intrastate services. An increase of $1,000,000 over the 1987 base of $1,217,552 is requested to pay these charges.			

	Perm. Pos.	Workyears	Amount
13. GPO printing costs	...	...	$44

The Government Printing Office (GPO) is currently projecting a 3 to 4 percent increase over the 1987 printing cost of $1,453,000. An additional $44,000 will be required in 1988.

14. General pricing level adjustment	...	...	11,676

This request applies OMB pricing guidance as of December 1986 to selected expense categories. The increased costs identified result from applying a factor of 3.5 percent against those subobject classes where the prices that the Government pays are established through the market system instead of by law or regulation. Generally, the factor is applied to supplies, materials, equipment, contracts with the private sector, transportation costs, and utilities. Excluded from the computation are categories of expense where inflation has already been built into the 1987 estimates.

Object Class	General Pricing Level Adjustment
Travel and transportation of persons	$1,160
Transportation of things	53
Rental payments to others	48
Communications, utilities, and miscellaneous charges	4,865
Other services	4,040
Supplies and Materials	973
Equipment	537
Total	11,676

Total uncontrollable increases	...	142	121,548
Decreases (automatic non-policy)			
1. Nonrecurring costs - reappropriation	...	...	-5,636

In 1987, unobligated balances were reappropriated to provide no-year funding for a special project. This amount is being nonrecurred in 1988.

	Perm. Pos.	Workyears	Amount
2. Reduction for change in hourly rate.....	...	...	-$1,697

Public Law 99-272, the Consolidated Omnibus Budget Reconciliation Act of 1985, required the computation of annual salary rates to be based on 2,087 hours, rather than 2,080. The same amount that was reduced in 1984 and restored in 1986 is requested for reduction in 1988.

3. Reduction in health benefits.....	...	...	-1,508

The Federal Employees' Health Benefits Act (P.L. 93-246) provided that the Government's share of health insurance would be 60 percent of the total rate commencing in 1975. Effective for the first pay period after January 1, 1986, the FBI's actual contribution to health insurance decreased approximately 7.6 percent due primarily to reduced carrier rates. The requested decrease includes $1,508,000 for decreased rates under the 1987 budgeted base of $21,108,000.

4. Nonrecurring Costs - artificial intelligence.....	...	...	-6,000

The 1987 request contains $6,000,000 for artificial intelligence. This entire amount is being nonrecurred in 1988.

Total decreases.....	...	...	-14,891
Total, adjustments to base.....	-200	-58	104,657

Federal Bureau of Investigation

Salaries and expenses

Consulting and Related Services
(Dollars in thousands)

	1986 Actual	1987 Estimate	1988 Estimate
Consulting Services	$5,924	$3,647	$3,927

Consulting services are used to support the continuing development and enhancement of the FBI's automated data processing and information systems. The services of the Institute for Defense Analyses (IDA) were used to study the cost benefits associated with implementation of the Field Office Information Management System (FOIMS). FOIMS is a multiyear, multimillion dollar developmental project which will serve as the backbone of the FBI's integrated distributed data processing environment. The services of IDA were also used to perform a cost benefit analysis and develop a cost module for the integrated digital voice privacy radio system. Additionally, SAFE, Incorporated performed an analysis of radio frequency requirements for the voice privacy project. An architectural and engineering firm is being used to manage the construction of the Engineering Research Facility.

The services of consultants are obtained when either in-house staff does not possess a particular expertise or resources to conduct certain research activities, or when a service or project can be performed more economically by an outside academic or research facility. For example, the services of Dr. Murray Miron, Syracuse University, are used to obtain psycholinguistic analyses of coercive communications. The FBI will continue to use the services of the National Bureau of Standards to support the design and implementation of the Automated Identification Division System (AIDS-III) and to develop enhancements to the Automated Latent System.

The FBI contracts with physicians to perform in-house physical examinations. Additionally, the services of qualified psychiatrists are retained to support a psychological services program available to all FBI employees and their immediate families. For 1988, an increase of $280,000 is requested for consulting and related services supporting the psychological services and in-house physical examination programs.

1852

Mr. WEBSTER. I guess this will be your last appearance? How many times have you been here?

Mr. WEBSTER. I guess this will be my ninth or tenth appearance, I am not sure, Mr. Chairman.

Mr. SMITH. Well, you have had a good relationship with this Committee. I don't know whether it is right to say I am sorry you are going, because I suppose you want to go or you wouldn't be leaving.

Mr. WEBSTER. I am not sure about that.

Mr. SMITH. Nevertheless, it has been a good relationship and I hope that whoever your replacement is, we have the same relationship with him. You may proceed with your statement.

Mr. WEBSTER. Thank you, Mr. Chairman, and I assure you I will do everything to make sure that the next director understands the cordial relationship that has done so much good for the Bureau and, I think, for the country.

I want to express my appreciation to you and the other Members of your Subcommittee for all the confidence you have expressed through the years in the FBI. I think we have achieved some commendable results from our criminal and foreign counterintelligence investigations during the past year.

The resources and authorizations that you have given us have allowed us to address unanticipated investigative exigencies while attending to our other responsibilities in an effective manner.

For fiscal year 1988, the FBI is requesting a total of $1,484,421,000 for 22,974 positions and 22,267 workyears. This represents a net increase, over the 1988 base, or $75,775,000, 718 permanent positions, and 494 direct workyears.

To continue to meet our investigative responsibilities in foreign counterintelligence and other criminal violations, additional resources are critical. Let me emphasize now some of our 1988 initiatives.

ORGANIZED CRIME INVESTIGATIONS

First with respect to our organized crime investigations, during 1986, our organized crime program achieved over 2,000 indictments and over 1,700 convictions. The FBI's organized crime drug enforcement investigations secured an additional 1,950 indictments and over 1,550 convictions. A Sicilian-based heroin investigation, initiated in 1981, culminated with the arrest of 37 individuals and the execution of 49 search warrants. Seven FBI field offices, DEA, U.S. Customs Service, New York City Police Department, and five foreign countries participated in this investigation.

I think you are aware that there were major convictions in that case just recently. Also, three "Bosses," two "Underbosses," nine "Capo Decinas," 22 "Soldiers," and 109 "La Cosa Nostra" associates were convicted in 1986 in FBI La Cosa Nostra investigations.

Although we have been successful in several La Cosa Nostra investigations, organized crime's influence on everyday American life continues. The additional resources requested will enable the FBI to focus on criminal control and domination of some major national and international unions in the United States, and permit us to seize the illicit profits of organized criminal groups. The organized

crime drug enforcement budget increase will allow us to continue to work closely with other U.S. Government agencies and foreign authorities to penetrate drug-trafficking enterprises.

By doing so, we can seize the financial assets of the upper echelon of drug trafficking enterprises.

The requested increases include 106 agent and 139 support positions for organized crime and 12 agent positions for organized crime drug enforcement. Budget authority increases include $13.6 million for organized crime and $2 million for organized crime drug enforcement.

WHITE-COLLAR CRIME

Turning to white-collar crime, the top investigative priority of this white-collar crime program is fraud against the Government. These investigations center on Department of Defense procurement frauds, which involve bribery; improper charges for labor; defective pricing; product substitution; and false test certifications. In the last two years Defense Department procurement fraud cases have increased 37 percent.

This requested increase will improve our ability to address fraud-related bank failures. The Nation's financial institutions have been experiencing failures at a rate not seen since the Great Depression. Insider fraud and abuse is a significant contributing factor in many of these failures.

Due to the severity of the problem, the Attorney General's Economic Crime Council has recently made financial fraud its number two criminal priority, behind Department of Defense fraud. Federal banking supervisory agencies forecast a continuing trend of financial institution failures, which would place additional strain on our investigative resources.

Our request for white-collar crime totals 42 agent and 38 support positions and $2 million in budget authority.

TERRORISM PROGRAM

As you know, the FBI is the lead Federal law enforcement agency in the United States Government's fight against terrorism and is responsible for preventing, interdicting, and investigating the criminal activities of domestic and international terrorist groups and individuals.

Over the past several years the arrest, prosecution, and incarceration of the key leadership elements of various terrorist organizations have contributed to a general decline in the number of terrorist incidents committed in the United States. Seventeen confirmed incidents of terrorism occurred in the United States last calendar year. Although this represents a slight increase following a decline from 51 in 1982, 31 in 1983, 13 in 1984, to seven in 1985, statistically, we are dealing with a small number of figures.

Ten of the 17 incidents of terrorism last year occurred on the Island of Puerto Rico and are attributed to Puerto Rican independence extremist groups. Five other terrorist incidents occurred in Coeur d'Alene, Idaho, and have been attributed to right-wing hate groups.

During 1986, the terrorism program recorded 105 arrests and 86 convictions. FBI investigative efforts prevented eight terrorist incidents from occurring in 1986. These included four potential bombings, a planned prison escape, and the possible overthrow of the Government of Suriname.

Over the past several years, the arrest, prosecution, and incarceration of the key leadership elements of various terrorist organizations have contributed to a general decline of terrorist organizations have contributed to a general decline of terrorism in this country. But the increase that we witnessed last year is evidence that the threat posed by foreign and domestic terrorist groups continues to be quite real.

The FBI has acquired expanded extraterritorial jurisdiction and authority to act, due to legislation which you passed in 1984, and again in 1986. Where deemed appropriate is in certain terrorist-related hostage situations, we have that jurisdiction. And we must investigate it abroad. Since June 1985, significant resources have been expended in foreign investigations of hostage taking outside the United States.

The FBI is committed to intensifying the investigative activity and upgrading the analytical capability in our terrorism program. I have confidence that we can continue to demonstrate that it is possible to deal lawfully with the crime of terrorism.

The requested increases include 21 agents and 12 support positions and $1.9 million in budget authority for the domestic terrorism program.

OFFICE OF LIAISON AND INTERNATIONAL AFFAIRS

I have included an item that I think will be of interest, and of special interest, to Congressman Early, who has frequently asked about this subject. On November 23, 1986, I approved the establishment of the Office of Liaison and International Affairs.

The Office of Liaison and International Affairs has responsibility for the legal attache and foreign liaison programs. Specifically, the Office of Liaison and International Affairs oversees the operation of 13 legal attache offices which cover 67 countries throughout the world. Further, the office coordinates regular liaison with 30 Washington, D.C.-based foreign representatives of 16 foreign agencies.

Within its overall responsibility, the Office of Liaison and International Affairs maintains an active working relationship with Interpol and supports foreign police cooperation matters in the United States.

INTEGRATED DIGITAL VOICE PRIVACY RADIO SYSTEM

Turning now to some of our technical efforts. In August 1985, the Attorney General directed that the FBI take the lead in the design, development, and implementation of a single, integrated voice privacy radio system. This system will support the tactical radio requirements of the FBI, DEA, and U.S. Marshals Service, thereby ensuring compatibility of radio communications among the three agencies. This is particularly important when the concurrent jurisdiction of the FBI and DEA in narcotics matters is considered.

Advantages of the integrated system include a uniform, consistent approach to planning, development, acquisition, implementation, and maintenance. The system will also improve geographic coverage and cost benefits. Since 1986, the FBI and DEA have successfully operated a "testbed" for an integrated radio system in the Boston field office. The experience gained from this "testbed" is being used to guide the ongoing integration efforts.

Our enhanced requirements for the integrated digital voice privacy radio system include 50 electronics technician positions and associated budget authority of $703,000 for personnel. In addition, the request includes $10 million for equipment to integrate the radio systems for the FBI, DEA, and U.S. Marshals Service offices in the northeast United States.

ENGINEERING RESEARCH FACILITY

Our request for the Engineering Research Facility will provide the FBI with the physical plant needed to implement advanced capabilities that are neither available nor possible at our present facility. Among these capabilities is a rapid-prototype quick-reaction capability that will result in substantial savings and cost avoidances.

Currently, the FBI must contract for the design and fabrication of custom electronic circuits and devices often needed to take advantage of immediate or specific investigative opportunities. With the establisment of an in-house fabrication capability, the FBI will be able to reduce not only the cost of custom devices, but also the time required to obtain them.

In some cases, this will reduce the time required from 24 months to six months. Construction of the Engineering Research Facility will improve greatly the FBI's ability to respond to these situations.

Additionally, the Engineering Research Facility will support the integrated digital voice privacy radio system and complement the collocation of the FBI's Engineering Section and DEA's Office of Science and Technology.

Congress provided $9.982 million in 1985 for the construction of an engineering facility. An additional $13 million is required in 1988 to continue planned construction, with the total construction cost of the facility estimated to be $36.5 million.

TRAINING

A third dormitory, to be completed in late 1988, will enable students to participate in secure classroom lectures and study in their adjacent bedrooms without jeopardizing security. The new multimillion dollar facility will consist of 250 single-occupancy bedrooms and three conference rooms. We are requesting $2.5 million for furniture to make the dormitory functional.

FOREIGN COUNTERINTELLIGENCE PROGRAM

We are also seeking further enhancements for our foreign counterintelligence program, representing the final installment in President Reagan's five-year initiative to increase the FBI's foreign counterintelligence capabilities.

ADMINISTRATIVE SERVICES

Although it represents a relatively small dedication of resources, our request for additional administrative services funds is also an essential priority. The FBI requires four agents and 35 support positions and associated funding of $4.2 million in budget authority for all aspects of administrative services. These resources will enable the FBI to maintain efficient financial services and effective personnel management, including the required recruiting and hiring of personnel.

Mr. Chairman, that is a brief overview of our 1988 request. I am providing you will a more extensive summary for the record, and I will now be very pleased to respond to any of your questions.

[The statement of Mr. Webster follows:]

72-165 O—87——59

DEPARTMENT OF JUSTICE
WILLIAM H. WEBSTER
STATEMENT OF THE DIRECTOR
FEDERAL BUREAU OF INVESTIGATION
BEFORE THE HOUSE APPROPRIATIONS SUBCOMMITTEE
ON THE DEPARTMENTS OF COMMERCE, JUSTICE, AND
STATE, THE JUDICIARY, AND RELATED AGENCIES

GOOD AFTERNOON, MR. CHAIRMAN. I WISH TO EXPRESS MY APPRECIATION TO YOU AND THE OTHER MEMBERS OF YOUR SUBCOMMITTEE FOR YOUR CONTINUED CONFIDENCE IN THE FBI. THE FBI HAS ACHIEVED COMMENDABLE RESULTS FROM ITS CRIMINAL AND FOREIGN COUNTERINTELLIGENCE INVESTIGATIONS. THE RESOURCES AND AUTHORIZATIONS YOU HAVE GIVEN US HAVE ALLOWED US TO ADDRESS UNANTICIPATED INVESTIGATIVE EXIGENCIES WHILE ATTENDING TO OUR OTHER RESPONSIBILITIES IN AN EFFECTIVE MANNER.

FOR FISCAL YEAR 1988, THE FBI IS REQUESTING A TOTAL OF $1,484,421,000; 22,974 POSITIONS; AND 22,267 WORKYEARS. THIS REPRESENTS A NET INCREASE, OVER THE 1988 BASE, OF $75,775,000; 718 PERMANENT POSITIONS; AND 494 DIRECT WORKYEARS.

TO CONTINUE TO MEET OUR INVESTIGATIVE RESPONSIBILITIES IN FOREIGN COUNTERINTELLIGENCE AND OTHER CRIMINAL VIOLATIONS, ADDITIONAL RESOURCES ARE CRITICAL. LET ME EMPHASIZE SOME OF OUR 1988 INITIATIVES.

ORGANIZED CRIME INVESTIGATIONS

DURING 1986, OUR ORGANIZED CRIME PROGRAM ACHIEVED OVER 2,000 INDICTMENTS AND OVER 1,700 CONVICTIONS. THE FBI'S ORGANIZED CRIME DRUG ENFORCEMENT INVESTIGATIONS SECURED AN ADDITIONAL 1,950 INDICTMENTS AND OVER 1,550 CONVICTIONS. A SICILIAN-BASED HEROIN INVESTIGATION, INITIATED IN 1981, CULMINATED WITH THE ARREST OF 37 INDIVIDUALS AND EXECUTION OF 49 SEARCH WARRANTS. SEVEN FBI FIELD OFFICES, DEA, U.S. CUSTOMS SERVICE, NEW YORK CITY POLICE DEPARTMENT, AND FIVE FOREIGN COUNTRIES PARTICIPATED IN THIS INVESTIGATION. ALSO, THREE "BOSSES," TWO "UNDERBOSSES," NINE "CAPO DECINAS," 22 "SOLDIERS," AND 109 ASSOCIATES WERE CONVICTED IN 1986 IN FBI LA COSA NOSTRA INVESTIGATIONS.

ALTHOUGH WE HAVE BEEN SUCCESSFUL IN SEVERAL LA COSA NOSTRA INVESTIGATIONS, ORGANIZED CRIME'S INFLUENCE ON EVERYDAY AMERICAN LIFE CONTINUES. THE ADDITIONAL RESOURCES REQUESTED WILL ENABLE THE FBI TO FOCUS ON CRIMINAL CONTROL AND DOMINATION OF SOME MAJOR NATIONAL AND INTERNATIONAL UNIONS IN THE UNITED STATES, AND PERMIT US TO SEIZE THE ILLICIT PROFITS OF ORGANIZED CRIMINAL GROUPS. THE ORGANIZED CRIME DRUG ENFORCEMENT BUDGET INCREASE WILL ALLOW US TO CONTINUE TO WORK CLOSELY WITH OTHER U.S.

GOVERNMENT AGENCIES AND FOREIGN AUTHORITIES TO PENETRATE DRUG-TRAFFICKING ENTERPRISES. BY DOING SO, WE CAN SEIZE THE FINANCIAL ASSETS OF THE UPPER ECHELON OF DRUG TRAFFICKING ENTERPRISES.

THE REQUESTED INCREASES INCLUDE 106 AGENT AND 139 SUPPORT POSITIONS FOR ORGANIZED CRIME AND 12 AGENT POSITIONS FOR ORGANIZED CRIME DRUG ENFORCEMENT. BUDGET AUTHORITY INCREASES INCLUDE $13.6 MILLION FOR ORGANIZED CRIME AND $2 MILLION FOR ORGANIZED CRIME DRUG ENFORCEMENT.

WHITE-COLLAR CRIME

THE TOP INVESTIGATIVE PRIORITY OF THE WHITE-COLLAR CRIME PROGRAM IS FRAUD AGAINST THE GOVERNMENT. THESE INVESTIGATIONS CENTER ON DEPARTMENT OF DEFENSE PROCUREMENT FRAUDS, WHICH INVOLVE BRIBERY; IMPROPER CHARGES FOR LABOR; DEFECTIVE PRICING; PRODUCT SUBSTITUTION; AND FALSE TEST CERTIFICATIONS. IN THE LAST TWO YEARS DEFENSE DEPARTMENT PROCUREMENT FRAUD CASES HAVE INCREASED 37 PERCENT. THIS REQUESTED INCREASE WILL IMPROVE OUR ABILITY TO ADDRESS FRAUD-RELATED BANK FAILURES. THE NATION'S FINANCIAL INSTITUTIONS HAVE BEEN EXPERIENCING FAILURES AT A RATE NOT SEEN SINCE THE GREAT DEPRESSION. INSIDER FRAUD AND ABUSE IS A SIGNIFICANT CONTRIBUTING FACTOR IN MANY OF THESE FAILURES. DUE TO THE SEVERITY OF THE PROBLEM, THE ATTORNEY GENERAL'S ECONOMIC CRIME COUNCIL HAS

RECENTLY MADE FINANCIAL FRAUD ITS NUMBER TWO CRIMINAL PRIORITY, BEHIND DEPARTMENT OF DEFENSE FRAUD. FEDERAL BANKING SUPERVISORY AGENCIES FORECAST A CONTINUING TREND OF FINANCIAL INSTITUTION FAILURES, WHICH WILL PLACE ADDITIONAL STRAIN ON OUR INVESTIGATIVE RESOURCES.

OUR REQUEST FOR WHITE-COLLAR CRIME TOTALS 42 AGENT AND 38 SUPPORT POSITIONS AND $2 MILLION IN BUDGET AUTHORITY.

TERRORISM PROGRAM

THE FBI IS THE LEAD FEDERAL LAW ENFORCEMENT AGENCY IN THE UNITED STATES GOVERNMENT'S FIGHT AGAINST TERRORISM AND IS RESPONSIBLE FOR PREVENTING, INTERDICTING, AND INVESTIGATING THE CRIMINAL ACTIVITIES OF DOMESTIC AND INTERNATIONAL TERRORIST GROUPS AND INDIVIDUALS. OVER THE PAST SEVERAL YEARS THE ARREST, PROSECUTION, AND INCARCERATION OF THE KEY LEADERSHIP ELEMENTS OF VARIOUS TERRORIST ORGANIZATIONS HAVE CONTRIBUTED TO A GENERAL DECLINE IN THE NUMBER OF TERRORIST INCIDENTS COMMITTED IN THE UNITED STATES.

SEVENTEEN CONFIRMED INCIDENTS OF TERRORISM OCCURRED IN THE UNITED STATES LAST CALENDAR YEAR. ALTHOUGH THIS REPRESENTS A SLIGHT INCREASE FOLLOWING A DECLINE FROM 51 IN 1982, 31 IN 1983, 13 IN 1984, TO SEVEN IN 1985, STATISTICALLY WE ARE DEALING WITH A RELATIVELY SMALL NUMBER OF FIGURES. TEN OF THE 17 INCIDENTS OF TERRORISM LAST YEAR OCCURRED ON

THE ISLAND OF PUERTO RICO AND ARE ATTRIBUTED TO PUERTO RICAN INDEPENDENCE EXTREMIST GROUPS. FIVE OTHER TERRORIST INCIDENTS OCCURRED IN COUER D' ALENE, IDAHO, AND HAVE BEEN ATTRIBUTED TO RIGHT-WING HATE GROUPS. DURING 1986, THE TERRORISM PROGRAM RECORDED 105 ARRESTS AND 86 CONVICTIONS. FBI INVESTIGATIVE EFFORTS PREVENTED EIGHT TERRORIST INCIDENTS FROM OCCURRING IN 1986. THESE INCLUDED FOUR POTENTIAL BOMBINGS, A PLANNED PRISON ESCAPE, AND THE POSSIBLE OVERTHROW OF THE GOVERNMENT OF SURINAME.

OVER THE PAST SEVERAL YEARS, THE ARREST, PROSECUTION, AND INCARCERATION OF THE KEY LEADERSHIP ELEMENTS OF VARIOUS TERRORIST ORGANIZATIONS HAVE CONTRIBUTED TO A GENERAL DECLINE OF TERRORISM IN THIS COUNTRY. BUT THE INCREASE WE WITNESSED LAST YEAR IS EVIDENCE THAT THE THREAT POSED BY FOREIGN AND DOMESTIC TERRORIST GROUPS CONTINUES TO BE QUITE REAL. THE FBI HAS ACQUIRED EXPANDED EXTRATERRITORIAL JURISDICTION AND AUTHORITY TO ACT, WHERE DEEMED APPROPRIATE, IN CERTAIN TERRORIST-RELATED HOSTAGE SITUATIONS. SINCE JUNE 1985, SIGNIFICANT RESOURCES WERE EXPENDED IN FOUR INVESTIGATIONS OF HOSTAGE-TAKING ABROAD.

THE FBI IS COMMITTED TO INTENSIFYING THE INVESTIGATIVE ACTIVITY AND UPGRADING THE ANALYTICAL CAPABILITY IN OUR TERRORISM PROGRAM. I HAVE CONFIDENCE THAT WE CAN CONTINUE TO DEMONSTRATE THAT IT IS POSSIBLE TO DEAL LAWFULLY WITH THE CRIME OF TERRORISM.

THE REQUESTED INCREASES INCLUDE 21 AGENT AND 12 SUPPORT POSITIONS AND $1.9 MILLION IN BUDGET AUTHORITY FOR THE DOMESTIC TERRORISM PROGRAM.

OFFICE OF LIAISON AND INTERNATIONAL AFFAIRS

ON NOVEMBER 23, 1986, I APPROVED THE ESTABLISHMENT OF THE OFFICE OF LIAISON AND INTERNATIONAL AFFAIRS. THE OFFICE OF LIAISON AND INTERNATIONAL AFFAIRS OVERSEES FBI HEADQUARTERS UNITS HAVING RESPONSIBILITY FOR THE LEGAL ATTACHE AND FOREIGN LIAISON PROGRAMS. SPECIFICALLY, THE OFFICE OF LIAISON AND INTERNATIONAL AFFAIRS OVERSEES THE OPERATION OF 13 LEGAL ATTACHE OFFICES WHICH COVER 67 COUNTRIES THROUGHOUT THE WORLD.

FURTHER, THE OFFICE COORDINATES REGULAR LIAISON WITH 30 WASHINGTON D.C.-BASED FOREIGN REPRESENTATIVES REPRESENTING 16 FOREIGN AGENCIES.

WITHIN ITS OVERALL RESPONSIBILITY THE OFFICE OF LIAISON AND INTERNATIONAL AFFAIRS MAINTAINS AN ACTIVE WORKING RELATIONSHIP WITH INTERPOL AND SUPPORTS FOREIGN POLICE COOPERATION MATTERS IN THE UNITED STATES.

INTEGRATED DIGITAL VOICE PRIVACY RADIO SYSTEM

IN AUGUST 1985, THE ATTORNEY GENERAL DIRECTED THAT THE FBI TAKE THE LEAD IN THE DESIGN, DEVELOPMENT, AND IMPLEMENTATION OF A SINGLE, INTEGRATED VOICE PRIVACY RADIO SYSTEM. THIS SYSTEM WILL SUPPORT THE TACTICAL RADIO REQUIREMENTS OF THE

FBI, DEA, AND U.S. MARSHALS SERVICE, THEREBY ENSURING COMPATIBILITY OF RADIO COMMUNICATIONS AMONG THE THREE AGENCIES. THIS IS PARTICULARLY IMPORTANT WHEN THE CONCURRENT JURISDICTION OF THE FBI AND DEA IN NARCOTICS MATTERS IS CONSIDERED. ADVANTAGES OF THE INTEGRATED SYSTEM INCLUDE A UNIFORM, CONSISTENT APPROACH TO PLANNING, DEVELOPMENT, ACQUISITION, IMPLEMENTATION, AND MAINTENANCE. THE SYSTEM WILL ALSO IMPROVE GEOGRAPHIC COVERAGE AND COST BENEFITS. SINCE 1986, THE FBI AND DEA HAVE SUCCESSFULLY OPERATED A "TESTBED" FOR AN INTEGRATED RADIO SYSTEM IN THE BOSTON FIELD OFFICE. THE EXPERIENCE GAINED FROM THIS "TESTBED" IS BEING USED TO GUIDE THE ONGOING INTEGRATION EFFORTS.

OUR ENHANCED REQUIREMENTS FOR THE INTEGRATED DIGITAL VOICE PRIVACY RADIO SYSTEM INCLUDE 50 ELECTRONICS TECHNICIAN POSITIONS AND ASSOCIATED BUDGET AUTHORITY OF $703,000 FOR PERSONNEL. IN ADDITION, THE REQUEST INCLUDES $10 MILLION FOR EQUIPMENT TO INTEGRATE THE RADIO SYSTEMS FOR THE FBI, DEA, AND U.S. MARSHALS SERVICE OFFICES IN THE NORTHEAST UNITED STATES.

THE ENGINEERING RESEARCH FACILITY

OUR REQUEST FOR THE ENGINEERING RESEARCH FACILITY WILL PROVIDE THE FBI WITH THE PHYSICAL PLANT NEEDED TO IMPLEMENT ADVANCED CAPABILITIES THAT ARE NEITHER AVAILABLE NOR POSSIBLE AT OUR PRESENT

FACILITY. AMONG THESE CAPABILITIES IS A RAPID PROTOTYPING/QUICK REACTION CAPABILITY THAT WILL RESULT IN SUBSTANTIAL SAVINGS AND COST AVOIDANCES. CURRENTLY, THE FBI MUST CONTRACT FOR THE DESIGN AND FABRICATION OF CUSTOM ELECTRONIC CIRCUITS AND DEVICES OFTEN NEEDED TO TAKE ADVANTAGE OF IMMEDIATE OR SPECIFIC INVESTIGATIVE OPPORTUNITIES. WITH THE ESTABLISHMENT OF AN IN-HOUSE FABRICATION CAPABILITY, THE FBI WILL BE ABLE TO REDUCE NOT ONLY THE COST OF CUSTOM DEVICES, BUT ALSO THE TIME REQUIRED TO OBTAIN THEM. IN SOME CASES, THIS WILL REDUCE THE TIME REQUIRED FROM 24 MONTHS TO SIX MONTHS. CONSTRUCTION OF THE ENGINEERING RESEARCH FACILITY WILL IMPROVE GREATLY THE FBI'S ABILITY TO RESPOND TO THESE SITUATIONS.

ADDITIONALLY, THE ENGINEERING RESEARCH FACILITY WILL SUPPORT THE INTEGRATED DIGITAL VOICE PRIVACY RADIO SYSTEM AND COMPLEMENT THE COLLOCATION OF THE FBI'S ENGINEERING SECTION AND DEA'S OFFICE OF SCIENCE AND TECHNOLOGY.

CONGRESS PROVIDED $9.982 MILLION IN 1985 FOR THE CONSTRUCTION OF AN ENGINEERING FACILITY. AN ADDITIONAL $13 MILLION IS REQUIRED IN 1988 TO CONTINUE PLANNED CONSTRUCTION, WITH THE TOTAL CONSTRUCTION COST OF THE FACILITY ESTIMATED TO BE $36.5 MILLION.

TRAINING

A THIRD DORMITORY, TO BE COMPLETED IN LATE 1988, WILL ENABLE STUDENTS TO PARTICIPATE IN SECURE CLASSROOM LECTURES AND STUDY IN THEIR ADJACENT BEDROOMS WITHOUT JEOPARDIZING SECURITY. THE NEW MULTI-MILLION DOLLAR FACILITY WILL CONSIST OF 250 SINGLE-OCCUPANCY BEDROOMS AND THREE CONFERENCE ROOMS. WE ARE REQUESTING $2.5 MILLION FOR FURNITURE TO MAKE THE DORMITORY FUNCTIONAL.

WE ARE ALSO SEEKING FURTHER ENHANCEMENTS FOR OUR FOREIGN COUNTERINTELLIGENCE PROGRAM, REPRESENTING THE FINAL INSTALLMENT IN PRESIDENT REAGAN'S FIVE-YEAR INITIATIVE TO INCREASE THE FBI'S FOREIGN COUNTERINTELLIGENCE CAPABILITIES.

ALTHOUGH IT REPRESENTS A RELATIVELY SMALL DEDICATION OF RESOURCES, OUR REQUEST FOR ADDITIONAL ADMINISTRATIVE SERVICES FUNDS IS ALSO AN ESSENTIAL PRIORITY. THE FBI REQUIRES FOUR AGENT AND 35 SUPPORT POSITIONS, AND ASSOCIATED FUNDING OF $4.2 MILLION IN BUDGET AUTHORITY FOR ALL ASPECTS OF ADMINISTRATIVE SERVICES. THESE RESOURCES WILL ENABLE THE FBI TO MAINTAIN EFFICIENT FINANCIAL SERVICES AND EFFECTIVE PERSONNEL MANAGEMENT, INCLUDING THE REQUIRED RECRUITING AND HIRING OF PERSONNEL.

SUMMARY

MR. CHAIRMAN, I HAVE CONCLUDED A BRIEF OVERVIEW OF OUR 1988 REQUEST. I AM PROVIDING YOU WITH A MORE EXTENSIVE SUMMARY FOR THE RECORD, AND I WILL BE PLEASED TO FURNISH ANSWERS TO ANY QUESTIONS YOU MAY NOW HAVE.

OMB REDUCTIONS

Mr. SMITH. Thank you.

What was your request for fiscal year 1988 to OMB?

Mr. WEBSTER. I have those figures.

Mr. SMITH. Did they reduce your request?

Mr. WEBSTER. They reduced our 1988 appropriations request by a total budget authority figure of $40,273,000 which consists of $9,336,000 in personnel funding and $30,937,000 in nonpersonnel funding.

Mr. SMITH. Just for the record, break that down for us.

Mr. WEBSTER. Yes, we will be happy to do that.

[The information follows:]

OMB REDUCTIONS TO FBI'S 1988 BUDGET REQUEST

OMB reduced the FBI's FY 1988 program increases by a total budget authority figure of $40,273,000, consisting of $9,336,000 in personnel funding and $30,937,000 in nonpersonnel funding. The reductions to personnel increases represent a total of 399 positions, of which 189 were for Special Agent positions and 210 for support positions.

The largest personnel reductions occurred in the areas of Organized Crime and Terrorism. In these two areas alone, personnel reductions of 152 agent positions and 101 support positions were made.

In the area of nonpersonnel reductions, some of the more notable priority items, which were disallowed include increases for informant payments, travel, artificial intelligence, and GSA Rent.

DETAILS

Specific details regarding the above personnel/nonpersonnel reductions are shown below by decision unit.

Decision unit	SA positions	SPT positions	Total positions	Personnel funding	Nonpersonnel funding	Total funding
Other field programs	83	79	162	$4,270	$6,707	$10,977
Organized crime [1]	69	49	118	3,579	2,238	5,817
OCDE [2]	(12)		(12)	(1,956)	2,612	656
White-collar crime [3]	42	34	76	1,945	125	2,070
ADP & tele-communications [4]		1			12,000	12,000
Records management [5]	7	11	18	821		821
Technical field support and equipment [6]		37	37	677	1,479	2,156
Administrative service [7]					5,776	5,776

[1] $2,238 (nonpersonnel) included: Informant payments (255); and travel ($1,983)

[2] OMB allowed 12 SA POS ($1,956) more than the FBI's request to OMB; $2,612 (nonpersonnel) included: Informant payments ($825); National Drug Enforcement Policy Board ($135); and travel ($1,652)

[3] $125 (nonpersonnel) denied: Informant payments ($125)

[4] $12,000 (nonpersonnel) included: Artificial Intelligence ($12,000)

[5] All personnel increases were denied by OMB.

[6] $1,479 (nonpersonnel) included: Travel ($1,027); and electronics technicians' vehicles ($452)

[7] $5,776 (nonpersonnel) included: GSA rent ($4,935); and travel ($841)

Note: Positions and budget authority amounts shown in parentheses for OCDE represent add-ons by OMB over and above the FBI's request. Hence, these add-ons offset reductions made by OMB.

TERRORISM

Mr. SMITH. Terrorism has not hit this country yet, but what can you tell us about it? I can't believe that terrorists have waited so long to strike this country.

Mr. WEBSTER. There are many reasons that we can hypothesize why we have been so fortunate. I always start by saying that probably it is because the FBI has made it unattractive here. So having given ourselves appropriate credit, we can look around for other things that might have influenced it. Probably the most logical one is that it is easier to attack Americans and American institutions abroad than it is to do so in the United States, and we have many easy targets out there.

Thirty percent of the annual terrorist events worldwide are directed against United States Citizens or United States property, commercial or Governmentally owned. The number of worldwide terrorist incidents last year was in the high 700's leveling off a little last year, but the year before that there was a 35 percent increase over the previous year, so it is something that can't say has stopped or it is going down.

I think whether we will see more of it in the future in the United States hinges on a number of things. The resources we have been spending have been aimed at building a good intelligence base, understanding where the incidents might come from. That, I think is reflected in the number of incidents in the last few years that we have actually been able to prevent from happening.

That intelligence base is just not gathering millions of facts and figures, but focusing on those areas or specific directions where good analysis points us. We are keeping track of the infrastructures that are available or could be potentially available to Middle East terrorist groups who are not active in the United States. The infrastructures are active, but we have not experienced terrorist events from the Middle East.

If something should happen abroad, for instance, a major American retaliatory strike somewhere in the Middle East or some other event of that kind, which might lead to retaliation in the United States, or re-retaliation, then I would expect it very likely that people who have made the threats, such as a Colonel Qadhafi, would make a serious attempt to retaliate here.

For the present, it is much easier for them to vent their spleen on more vulnerable targets outside the United States, and there are plenty of those.

Mr. SMITH. But there are plenty of people in the United States that could do it. We really don't have a way of keeping track of people.

Mr. WEBSTER. No. This is a major problem. People can come across the borders relatively easily. We have a long border on the north and on the south, and historically we have never been able to control them with a level of closeness.

The people that are here right now are really not, in our best intelligence assessment, capable of doing major terrorist activity themselves. They would require others coming over here, although they could provide the support systems, the safe houses and the equipment, additional equipment that might be needed.

So we keep a very close track of the infrastructures. I am sure you will recall, because we talked about this in the late 1970's, when the Iranians had taken our hostages, and about two potential problems. We had 65,000 Iranian students in the United States. We still have a very substantial number of Iranian nationals. We have somewhere in the range of between 2,500 and 3,000 Libyan students, for example.

There are large numbers of Palestinian groups and others from the Middle East who tend to band together with organizations and societies that are not illegal in and of themselves, but some are engaging in illegal activity and that would be grounds for deportation.

Mr. SMITH. But we have Iranians here now. We have no way of knowing whether they go to our consular services in Europe, who are flooded with visa requests. We have no way to check, to know whether the addresses or occupations they give are right, or whether any of it is true. We simply can't check.

Mr. WEBSTER. We are still in catch-up time in that area. The INS has vastly improved its situation since the late 1970's when little old ladies with shoe boxes were keeping slips of paper, trying to figure out whether people had come or gone or not. But they are computerizing and they have, I think, under Commissioner Nelson made tremendous progress. But I would be the last one to say that that would be the vehicle by which we could, with certainty, keep terrorists from entering the country if they wanted to do so.

FBI'S ROLE IN DRUG ENFORCEMENT

Mr. SMITH. Give us the benefit of your experience before you leave this position, on how the FBI fits into the present drug effort, whether it is as good as the way it use to be or if improvements could be made. How do you view this the FBI's role?

Mr. WEBSTER. I would start by saying that in 1982 the Attorney General gave the FBI concurrent jurisdiction with DEA. We literally have the same jurisdiction that they do in all matters except their regulatory matters in which we are not involved, the regulation of illicit drugs.

In addition to that, organized crime drug enforcement task forces were formed around the country to deal with multiagency investigations where Customs or DEA or FBI or INS or Coast Guard or other agencies could collectively be more effective than the individual agencies going off on their own in different directions. That has been useful and largely effective.

With respect to the FBI and DEA, the Attorney General directed that the DEA should report through the Director of the FBI in order that I could develop a common strategy for the two agencies. That has been taking place. I can liken it best at present to two water skiers behind a motor boat.

We have come together in many, many significant ways. Standards of admission for DEA's special agents have been elevated to FBI standards. We are now conducting some 900 joint investigations. We have co-located facilities in many places. We train all the DEA agents at Quantico now under common training provisions. These are just some of the things we are doing.

In my opening statement I made reference to our efforts to have a common communications system with digital voice privacy that protects us from the criminals who have listened to those conversations in the past. The kind of conversation that permits DEA to have private circuits, the FBI to have private circuits, and the Marshals to have private circuits and yet talk to each other on joint investigations. That is going very well.

We must have 40 different link-up projects currently underway to make the two organizations work more closely together.

The ultimate question, of course, is whether they should be merged or integrated into a single organization for greatest effectiveness.

Arguments can be made both for and against that. The Attorney General has my views and the views of others and has that problem under consideration.

The forfeiture provisions that were adopted in the last several sessions of Congress have been used very effectively and form one of the real linchpins in the drug effort. We have to get the drug cartels and that is where it hurts them. We must be able to seize their estates or anything that they have invested in as the result of illegal activity. Those seizures have gone up enormously, and with the additional legislation, we have been allowed to convert the proceeds of those seizures into money to fight drug trafficking, both at the Federal level and at the State and local level. We are now sharing those proceeds with State and local agencies, trying to build up their drug enforcement capability so that potentially we will not have to ask the Congress for as much additional funds as we might otherwise have to do by treating it as a purely Federal problem.

I am trying to encapsulate this. We are making progress and we have had record arrests, record convictions, and record seizures. We have a new national drug strategy which I will be happy to describe, an FBI strategy that will focus our resources now on the basis of four years' experience on those areas best calculated to break up the enterprises, and the distribution systems and keep the drugs out of mainstream America.

But we have not fully and adequately addressed the problem of drug prevention and abuse, that is, reducing the demand for drugs. When I look at where we are today and see all those achievements, yet still see the cost of cocaine lower than it was just a few years ago, this indicates that cocaine is in plentiful supply and consumption is going up, it doesn't make me feel any better that marijuana is going down and that heroin is not going up. Heroin is about the same and has a sort of definable user or consumers, because they die and so it is not getting to be a bigger pool. Cocaine represents our challenge today and tomorrow.

It is a challenge of the present and the future. I am not satisified that there has been enough education and enough effort put into reducing the demand for drugs. Until that happens, all our seizures are not going to make that much difference.

TRADITIONAL ROLE OF THE FBI IN REGARD TO DRUG ENFORCEMENT

Mr. SMITH. Has the traditional role of the FBI been changed by being in this drug effort?

Mr. WEBSTER. I don't believe it has. I believe it has been expanded to deal with drugs representing the violent crime and crimes that are caused as a result of drug trafficking.

Mr. SMITH. Has it diverted resources from other areas?

Mr. WEBSTER. Yes, it has. In all candor, it has, because in 1982 when we were asked to get into this we were not given additional funds at least initially. We worked these cases through the organized crime resources and teamed our investigative efforts at organized crime in drugs and financial crimes in drugs and public corruption in drugs. There is a lot of public corruption in drugs, police officers and municipal employees and so on.

I think that was an appropriate thing to do, but it meant that we could not generate as much energy against such other important targets as the relationship between organized crime and some corrupt labor unions. We are now moving in that direction because there has been backfilling of our organized crime program with the additional resources that have been given to us.

We have committed about 1,000 special agents out of the 9,000 or 9,100 that we have to the drug program. Measured by the workyears, it represents approximately 10 percent of our total field resources.

We are only funded for about 357 special agent workyears in the organized crime drug enforcement task forces, and in our general program we are funded for about 43 agent workyears, whereas we have used 504 agent workyears in the drug task forces and 515 agent workyears in the general program. So we are overburdened in this area.

But I do not think it has changed the character of the FBI's responsibilities or turned it into an entirely drug-related organization. We are carrying out our organized crime responsibilities, our white-collar crime responsibilities, all that within the context of drug investigations.

It is the number one crime problem in the United States. And the FBI is and should be a part of the solution.

APPOINTMENT OF WEBSTER AS CIA DIRECTOR

Mr. SMITH. Mr. Alexander?

Mr. ALEXANDER. Thank you, Judge, welcome. I congratulate you on your continued good work for the good of the order.

Mr. WEBSTER. I appreciate that.

Mr. ALEXANDER. I congratulate you on your new appointment and look forward to working with you in that regard as well.

Mr. WEBSTER. I do, too. Thank you.

Mr. ALEXANDER. I would like to ask a question off the record.

[Off of the record.]

[Back on the record.]

Mr. SMITH. Mr. Rogers?

Mr. ROGERS. Thank you, Mr. Chairman. Mr. Director, it is good to see you.

Mr. WEBSTER. Thank you.

Mr. ROGERS. Glad to see you at your old shop here. We congratulate you on your promotion with mixed feelings, because we regret your leaving the FBI. You have done an excellent job with that agency and it has been a difficult time.

Mr. WEBSTER. Thank you, sir.

OMB'S A-76 POLICY

Mr. ROGERS. And you have done it with great grace.

I want to talk to you about your personnel levels and the OMB A-76 policy for a minute or two. I remember the 1987 budget request included an increase of 469 general support positions, designated as a top priority, on the basis that the lack of adequate general support staffing for the investigative personnel caused problems in routine clerical functions. Then in your 1988 request, you included a reduction of 200 support workyears, based on management productivity initiatives. In view of that 1987 request, how is it possible to now take a 200 workyear reduction in 1988?

Mr. Webster. Well, it is not easy. It tends to exacerbate the problems that I identified in my opening statement, and stressed when I was here last year about the importance of building up our support personnel to adequately give the needed support to our agents in the field. This is part of the Administration's effort to identify kinds of work that could be better done in the private sector and we were assigned this reduction. Actually, we were assigned certain numbers of positions to identify, that could be better done in the private sector at a more effective price. The problem with it, and it continues to confuse me, although I have talked to Jim Miller and other about it in trying to better understand it, is that we identified those support positions which have been removed, but I have not seen any money to pay the private sector people who are going to do the work that was supposed to be done by these people more effectively on the private side. I have to confess my continued confusion on this particular one.

Mr. ROGERS. Well, OMB's A-76 policy ostensibly would require the agencies to contract-out activity which could be done less expensively than in-house; but I am wondering if you have any thoughts about whether or not that is an appropriate requirement for the FBI, in view of the confidentiality of a lot of your work?

Mr. WEBSTER. Well, some of it just can't be done that way. We did our best because we had a kind of quota to identify those areas where, if we were asked to take that quota, we could consider utilizing outside resources.

But I can't find the money to pay the outside resources. That is part of the problem.

This reduction represents, I think, the bottom line after we had negotiated away a number of other positions that they would have liked to cut but we simply couldn't take the additional A-76 cuts because of the security of our records.

OMB REDUCTIONS

Mr. ROGERS. What was your original personnel request to OMB for 1988?

MR. WEBSTER. Let's see.

MR. ROGERS. That is, compared to what you have submitted to us.

MR. WEBSTER. We asked for 399 more positions than OMB approved, of which 189 were for Special Agent positions and 210 were for support positions.

MR. ROGERS. All right.

MR. WEBSTER. Most of those reductions were in the organized crime and terrorism sections.

Mr. ROGERS. How many personnel did OMB reduce your request by?

MR. WEBSTER. 152 agent positions and 101 support positions in those programs.

MR. ROGERS. How much of that was supposed to be contracted out under A-76?

MR. WEBSTER. I don't know, but if those figures are available, I will supply them for the record.

[The information follows:]

OMB REDUCTIONS TO ORGANIZED CRIME AND TERRORISM PROGRAMS

Regarding the 152 agent positions and the 101 support positions reduced by OMB in the Organized Crime and Terrorism programs, none of these positions would have been contracted out under the A-76 program.

1988 DOJ AUTHORIZATION BILL REDUCTIONS FOR FBI

Mr. ROGERS. I understand that OMB may be the least of your worries since the Judiciary Subcommittee has reduced your request by another $200 million.

Mr. WEBSTER. I just learned about that today. That is more than the whole white-collar crime program or the whole organized crime program.

Mr. ROGERS. I gather that would do substantial injury to your program?

Mr. WEBSTER. Yes, it would.

OMB REDUCTIONS IN PRIORITY REQUESTS

Mr. ROGERS. What were the highest priority items which were not approved by OMB in your request?

Mr. WEBSTER. We had $2,225,000 for support to the intelligence community, consisting of money for rent and utilities associated with operational support provided by the FBI for intelligence collection efforts of another member of the intelligence community. We had $12 million budgeted for artificial intelligence, a very important program in the FBI. We had $6 million available in 1987, and we believed that we needed $12 million to continue this initiative.

I mentioned the reductions in organized crime, 69 agents, 49 support, $3,579,000.

In terrorism, 83 agents, 52 support, $3,622,000.

Those are the principal priorities.

ORGANIZED CRIME INFORMATION SYSTEM

Mr. ROGERS. You request an increase for Organized Crime Information System (OCIS) analysts and I wondered what workload increases would support that proposed increase in personnel?

Mr. WEBSTER. The principal reason that we need to expand our OCIS database, which was originally directed at traditional organized crime activities, has to do with our expanded responsibilities in drugs. Much of the data coming in has to do with organized crime and drug trafficking.

We are still having trouble getting the information into our system. Presently, only about 50 percent of the information is being processed into OCIS.

Mr. ROGERS. Is that because of a shortage of personnel?

Mr. WEBSTER. Yes.

Mr. ROGERS. You are asking for an additional 64 people to support that system. Would that solve the data and computer problems that you have had?

Mr. WEBSTER. "Solve" is a word I want to check with Mr. Bayse. We think it will cover it because we are in some 40 offices at the present time, including one terminal in Rome. We originally contemplated only 23 field offices for this database but it has been so valuable and so needed that we have expanded it into 40. There may be one more request in 1989 and for the present this is going to get us into them.

OTHER POTENTIAL REDUCTIONS

Mr. ROGERS. If you have to cut another $200 million below your request is this a place where you would have to cut?

Mr. WEBSTER. This is one of the obvious places where we would simply have to slow down and defer our progress.

Mr. ROGERS. I gather from your testimony that the information from these locations is extremely valuable in the organized crime effort in this country?

Mr. WEBSTER. Absolutely. If you just look at last year and this year, the convictions that have occurred within the past week in the Pizza case, the conviction of the top players in the national crime commission, which is at the very top of the organized crime hierarchy, major New York crime families, and other crime families throughout the country. We could not have done this, in my opinion, without the OCIS program.

INFORMANT PAYMENTS

Mr. ROGERS. Switching gears to informant payments for a second, do you know what the total funding requirement is for that program in the 1988 request?

Mr. WEBSTER. $5,631,000 was funded in 1986, and we spent some $7,398,000, or $1,767,000 over the funded amount, so we are requesting an increase of $2,592,000.

Mr. ROGERS. For informant payments?

Mr. WEBSTER. Yes.

Mr. ROGERS. And why is that running so much over your anticipated level in that year?

Mr. WEBSTER. I think the main problem is that we have always overspent, in other words, we have been overspending. Another way of saying it is we have not been funded up to the level of expenses and those expenditures have been growing with the kinds of organized crime and drug investigations that we are currently engaged in, and we are trying to realistically approach what our needs are rather than overspending what you have given us.

WITNESS SECURITY

Mr. ROGERS. You are requesting $750,000 for witness security. In addition, the U.S. Marshals requested 36 positions and $1.1 million for fiscal year 1988 for their witnesss security program. I wonder if you could briefly describe the differences between the U.S. Marshals' witness security and your programs and what is the relationship between the two?

Mr. WEBSTER. We are requesting $750,000 for witness security. We are the Marshal Service's biggest customer, and we sponsor about 120 individuals very year into their program. There is a period of time when the Marshals Service cannot take them. During the time necessary to get them into the program, the FBI has the responsibility for their safekeeping and for their safety, as well as for some of their activities in connection with trials, and there are some individuals who simply don't want to be in the Marshals Service for one reason or another. There are some who are simply too valuable as witnesses for the prosecution whom the prosecutors want us to take care of even though they won't go into the Witness Security Program. But most of the cost, I think, if we analyze it would be in the threshold period, trying to take care of them until the Marshals Service program accepts them.

Mr. ROGERS. Is the dual system working okay?

Mr. WEBSTER. Yes, working much better than it was a few years ago. The Marshals Service has made a lot of improvement in the quality of that program, and made it more platable to individuals who go into the program. That has helped us in selling the program and getting prople in—but many of the people we are using now are obvious candidates for assassination or injury or intimidation and must be protected.

Mr. ROGERS. Mr. Chairman. I have a few more questions but I will wait for the second round.

ENGINEERING RESEARCH FACILITY

Mr. SMITH. Mr. Dwyer?

Mr. DWYER. Good afternoon, Judge. Good to see you.

Mr. WEBSTER. Thank you.

Mr. DWYER. You are requesting $13 million for construction of a joint Engineering Research Facility. Would you tell us a little more about that, sir?

Mr. WEBSTER. I say joint, it is joint with the Drug Enforcement Administration.

Mr. DWYER. Yes.

Mr. WEBSTER. We do a great amount of engineering work to design special types of equipment and make it adaptable to modern forensic and investigative work, and some of that equipment is

highly classified and highly sensitive. It is also used in foreign counterintelligence capabilities.

In order to standardize the work of DEA and FBI and get cost benefits and increased efficiency both the FBI and the DEA recognize the advantage of bringing the two organizations together under one roof having a common engineering center. The two engineering groups and others reviewing it have identified new potentials and cababilities for various types of equipment that we can make better than off the shelf. We can make it cheaper in the preliminary test runs, and we can make it faster. For that reason the common location offers us some considerable advantages.

It is not creating empty space. We were already forced out of the FBI building for engineering facilities and are in a temporary location at the present time. DEA is faced with similar space problems.

So it is a matter of consolidating our programs in a way that launches us into a much healthier future in terms of the future capabilities both in our ability to design and use modern technology equipment and in our ability to get it done sooner and faster and cheaper.

Mr. DWYER. Aren't these efforts duplicative in other places in our government?

Mr. WEBSTER. They are really not. This type of research and development has to focus on out specific kinds of needs. We borrow a great deal from available technology and Mr. Bayse, who heads our office of Technical Services, and who has a long and wide experience in Defense and other areas and keeps track of the current state of the art. But this is not so much in basic research as it is in the adaptability of cutting edge technology for law enforcement.

Mr. DWYER. You would think that there are some other agencies in our government, be it the military or CIA, that might be dealing with the same type of equipment.

Mr. WEBSTER. They may be dealing with the same kind of engineering principles, but very rarely are they dealing with the same kind of equipment. For instance, I recall a few years ago we adopted photo-enhancing capabilities that the Navy was using in submarine work to improve our ability to enhance photographs taken in bank robberies and other situations of that kind, just for example.

It is that type of adaptability, plus certain kinds of surveillance equipment that no other military or civilian agency has a need for or involvement with.

Mr. DWYER. Well, given these times of fiscal constraints, you can understand why I ask the question.

Mr. WEBSTER. I certainly understand your asking it, and it is one that you would naturally look at because of the sizable number. I think it represents a potential savings in cost and keeps our ability to deal with modern crime at the cutting edge.

INTEGRATED DIGITAL VOICE PRIVACY

Mr. DWYER. You mentioned the disintegrated digital voice privacy radio system. I emphasize the word "privacy." Is there any system that you can develop that will guarantee privacy?

Mr. WEBSTER. Yes, when we talk about digital voice privacy we are talking about a system that is virtually impossible to decode on

line. You can take it and put it in a computer and some weeks later you know what was said. By that time, the tactical advantage of knowing what was said is of no value to our opponents. We have our secure voice telephone if that is the question, but it is very, very expensive and it is only available on a limited basis using crypto chips.

Mr. DWYER. I understand that. This system you speak of in your statement though, is that going to be developed by the private sector?

Mr. WEBSTER. Well, we have been using Motorola for most of those and it is off-the-shelf equipment.

Mr. DWYER. Off-the-shelf equipment?

Mr. BAYSE. Latest model commercially available equipment.

Mr. DWYER. You build in your own code then?

Mr. BAYSE. We generate our own crypto codes, yes, sir.

Mr. DWYER. I wanted to ask that question because I read a newspaper article when I was in Florida a few weeks back. There was a manufacturer of speed boats that was murdered and it turns out that they suspect he was murdered because he built some fast boats for narcotics traffickers and built faster boats for the Coast Guard. That was the insinuation in the newspaper, whether it is true or not, I don't know. It seems to me any commercial equipment that will be bought off-the-shelf—well, you answered the question with the coding on it.

Mr. WEBSTER. We have a very good relationship with the manufacturer and I don't imagine they are in any hurry to design a method to defeat their own program.

Mr. WEBSTER. Could we go off the record for purposes of discussion.

Mr. DWYER. By all means.

[Discussion off the record.]

[Back on the record.]

DOMESTIC TERRORISM

Mr. DWYER. Also, Judge, in your budget justification there is a statement made that domestic threats appear to be more imminent. I think you are talking about foreign terrorists and domestic terrorists, yet you think there is more threat from domestic than foreign terrorists, and the word "imminent" is used. I read an article where we expect a lot of problems, criminal and otherwise, from ethnic groups and crime groups. Would you comment on that?

Mr. WEBSTER. Well, there are a number of ethnic groups who have been active in this county. The Sikhs, for example, have been active and when they see an opportunity to cause a major event involving India, we are at risk at that point. We are able to get wind of that ahead of time and stop them. There are some Oriental crime groups. We have one group that I would not categorize as a crime group but it is a terrorist group which calls itself the Jewish Defense League. It has been active against anything Soviet or pro-Soviet, such as the Soviet missions or the Cuban missions, or anyone they believe has Nazi or anti-Semitic affiliations.

They have been repudiated by every reputable Jewish organization in the country, but they continue to support violent activity,

and they have killed people and have claimed credit for killing people such as Odeh on the West Coast, head of the Arab Anti-Defamation League.

These are generally the groups that come most readily to mind. We have, of course, our own problems with the Puerto Rican Independence Movement, which has been with us for some time. The Macheteros and other organizations function on the Island of Puerto Rico; primarily the FALN organization functions in this country. That is not exactly a racial group, but it is one based upon a segment of our society that is seeking independence from the United States.

I mentioned before you arrived that 17 incidents occurred last year, which is more than the seven the year before, but I don't think that is cause for major alarm. Ten of those incidents took place in Puerto Rico, five took place in Coeur d' Alene, Idaho, which you mentioned, and two in New York. We had only one person killed last year, but we did prevent some eight incidents from taking place that might have been substantially more life-threatening.

The real risk, and the real anxiety that I think our citizens are expressing, has to do with the Middle Eastern terrorism. They have seen it over there, they have seen our Marines blown up, they have seen hostages taken and they have seen other violent activity associated with a whole range of organizations, not a single organization, but a range of organizations, some of which are supported by governments, state-sponsored terrorism. Because of the fanaticism and apparent lack of value of human life, people are fearful that that could come to the United States. We have been able to prevent a couple of such incidents.

We have had no actual Middle East terrorist activity which was successful in the United States, but there are substantial infrastructures here which have been here for some time, student organizations and country organizations, and we are doing our best to keep very close track of those under our guidelines to see if there is any effort to utilize or manipulate those organizations in support of some future terrorist event.

BOMBINGS OF ABORTION CLINICS

Mr. DWYER. How about abortion clinics?

Mr. WEBSTER. We have not called those terrorist incidents by our own definition because although there have been numerous abortion clinic incidents, we have never found any that were related in a city-by-city thing. The man in Maryland who recently gave himself up may have carried out more than one in this area, but it was an individual without a group. It was not a terrorist organization. And while we don't include them in our statistics, I should like to emphasize that I have pledged the full resources of the FBI to Stephen Higgins, head of the Bureau of Alcohol, Tobacco and Firearms. I think they have made that particular problem as its number one priority, and given an enormous effort, with great success. They have solved over two-thirds of all of the known incidents, which also helps us to be sure that there are no groups

working the country because we are solving the cases and they are not groups.

Mr. DWYER. Thank you very much, Mr. Chairman.

INTEGRATED DIGITAL VOICE PRIVACY

Mr. SMITH. Mr. Mollohan?

Mr. MOLLOHAN. Thank you, Mr. Chairman.

Judge Webster, in your testimony, I understood you to say that you were pleased with the Voice Privacy Program, the progress of the voice privacy program, and also the integrated voice privacy project; is that correct?

Mr. WEBSTER. We are very pleased with the testbed experience we have had to date.

Mr. MOLLOHAN. The GAO just issued a report which I have here, as of February 1987, expressing some concerns about both of those programs. Could you reconcile the concerns expressed by the GAO with your test?

Mr. WEBSTER. Maybe Mr. Bayse, our Assistant Director in charge of the Technical Services Division should respond to that technical question.

Mr. BAYSE. We just received the report, and we are preparing a response to it and we have found some factual inaccuracies with the report and some incomplete analyses.

We reviewed the test data in Boston as recently as this week and it is satisfactory and we are working toward integration in the Northesst. Our digital voice privacy system is available to many of our field divisions, it has worked through the 1984 Olympics, through the special operations groups. We have had some difficulties in getting some of the installations done and getting sites for our transmitters and our repeaters. However, the system has so far been successful; it is used in operations every day, in probably about 30 of our offices. We are integrating with DEA and the Marshals in the system.

We are ready to go forward with it and we will respond to the GAO report officially.

Mr. WEBSTER. If I might add—I am not prepared to add to what Mr. Bayse has said about the technical aspect of it—but if I might add this, that in my experience I can think of nothing in terms of field needs that has aroused more interest and urgency through the years than to have a digital voice privacy system in place. The prospect of trying to handle a kindnaping drop, or a major foreign counter-intelligence event, or terrorist event, when so many other people for various reasons, good and bad, can overhear by simply carrying a Bearcat scanner around, has been a real problem in the field. I have traveled extensively throughout the field and been in cars with the digital voice privacy in effect and there is instant enthusiasm over the ability to conduct business without everybody listening in and knowing what your plans are.

Mr. MOLLOHAN. Its benefits are very apparent.

I understand that much of the equipment was off-the-shelf equipment. The GAO raises the concerns about cost overruns and delay of development. I wonder, if this is predominantly an off-the-shelf

request, why are you experiencing cost overruns and these significant delays?

Mr. WEBSTER. I think we probably better furnish you with a copy of our response with the technical information on it.

[The information follows:]

COST OVERRUNS IN THE DVP SYSTEM

The Technical Services Division is currently formulating a response to GAO concerns about cost overruns and delay of development regarding the digital voice privacy initiative. A copy of this response will be furnished to the Committee at a later date.

INTEGRATED DIGITAL VOICE PRIVACY

Mr. WEBSTER. Before we went to the one-shelf equipment, we did substantial research of our own. Largely because it was readily available, the shelf equipment was cheaper and we thought equally effective. Therefore, we decided that we did not want to engage in a major commitment of resources to something that was full of bugs. I have been under the impression there have been relatively few bugs in this.

Mr. BAYSE. That is correct. The problem has been in installing and implementing in a geographic area, and having to pay a premium to put towers or transmitters on top of a bank building or something. We would probably take exception to the report with regard to overruns in that some of the costs that have been incurred have been uncontrollables in the sense that we had to establish the system in pretty demanding environments like downtown Manhattan, and so forth. But we will give you a copy of our response to GAO.

Mr. MOLLOHAN. Thank you.

I would just like to commend you, Judge Webster, on your tenure at the FBI.

Mr. WEBSTER. Thank you.

Mr. MOLLOHAN. The job you have done with terrorism since you assumed that responsibility has been remarkable. The incidents are way down, the bombings are certainly way down. You have done a great job.

Mr. WEBSTER. I appreciate that. Thank you.

Mr. MOLLOHAN. I wish you the best of luck in your new position.

Mr. WEBSTER. Thank you.

Mr. MOLLOHAN. Thank you, Mr. Chairman.

TESTING OPERATIONS

Mr. SMITH. You have been involved with numerous stings, operations over your tenure, and, hopefully, you have had an opportunity to reflect on them. Would you care to comment on whether you ought to be involved in these sting operations, or whether the operations ought to be changed?

Mr. WEBSTER. I think I can make a few observations, Mr. Chairman. I continue to support them, they have a proper role in investigative activity. They are not a substitute for traditional techniques. They are to be used when ordinary techniques will not succeed.

This occurs primarily in so-called victimless crime situations, where it is difficult to obtain any kind of willing witness to give us information and we know that the crime is going on, such as in the pervasive corruption of the Judicial system in Chicago in Cook County, which resulted in a Greylord case, which I saw in yesterday's morning paper resulted in the 50th conviction, that has rendered enormous service to the citizens of Chicago in a problem area that no one knew how to deal with.

I think that we learned from our earlier experiences. Abscam cases, for example, have passed into history. As you know, all of the cases resulted in convictions and all the convictions were affirmed on appeal. We did not lose a single one.

Nevertheless, there were lessons to be learned there and we did learn them. One of those, I think, is that we review very carefully, the predication for any type of undercover activity directed against public officials, not relying upon rumor or allowing bounty hunters to go out and see who they can bring in.

I think that was a positive move and one that we recognize. We also realize from our experiences in that situation and in other cases, that a cooperating witness—that is, an individual who has most likely himself been corrupt or criminal—is not automatically born again because he comes to work for us and he has to be very carefully managed, and watched, and wherever possible, removed from the scenario as soon as he can help us establish our own credibility inside the organization, whether it is a terrorist organization or a drug organization or some corrupt political enterprise. The same principle applies.

We are very careful these days to keep that in mind. Now, those were our two primary areas of vulnerability.

The use of undercover operations has not been expanded. We have had about the same number of what we call "Group 1," or long-term investigations, for the past several years. We finish some and we start others.

Very early on after the Abscam cases had started, but before they were completed, I realized the need for a review group and I established an undercover activity review committee which consists of our experts in the Bureau and three or four members of the Department of Justice, who sit on that committee.

Long-term investigative stings, as you call them, and I think you mean the longer term rather than the fence and theft type operations——

Mr. SMITH. Well, both really.

Mr. WEBSTER. The longer ones that are sensitive, potentially sensitive and involve potential expenditures of funds, have to pass through a review process that includes the recommendation of the Special Agent-in-Charge in the field, the recommendation of the United States Attorney, who will have to prosecute the case, and the approval of the undercover activity review committee. In especially sensitive matters, proposed undercover operation has to come to me. At different levels we have them passed off, but the more sensitive ones I have an opportunity to review and I discuss these with corresponding officials in the Department of Justice. So I think we have been very careful about not taking cases that endanger the technique.

I put it that way because from the law enforcement view, I think it is a very important useful technique, one that the Congress could easily curtail or limit if it lost the confidence in our ability to manage it. So we are doing our best to manage it well.

PROBLEMS IN UNDERCOVER OPERATIONS

Mr. SMITH. There has been criticism of these stings and now that Abscam is over, people will begin to openly discuss it. They were afraid to discuss it before for fear you were trying to get on one side or the other. In any event, there were at least two sting operations where they tried to get somebody to commit a crime and they refused to do so.

Mr. WEBSTER. I would not characterize it the way you have. If you permit me to do so, I would argue just the opposite.

We were put in that position, in fact, I personally put into place two protective techniques. The first one was in the Abscam case, where we used corrupt middlemen and corrupt influence peddlers who were themselves under investigation and didn't know they were dealing with the FBI, and were ultimately indicated and prosecuted and put in prison. We were using them to trace their influence and see who they were using. The scenario called for the undercover agent, posing as a representative of a sheik, to deal with them and he was instructed to tell those middlemen that the sheik did not want to deal with any public official who did not want to do business with the sheik. In other words, the sheik was asking for favors for which he they would be paid in contravention of the law, and they had to know that the sheik was not going to sell them on doing anything, not bringing anybody to the representative who didn't want to engage in corrupt activity.

The second requirement, which was a fall-back position, in order to protect someone who might innocently be brought by a corrupt middleman who didn't follow those instructions, was that no money should pass until the public official made corrupt respresentations.

Mr. SMITH. Isn't there something wrong with ever having asked them to do something illegal when they were the type of people who wouldn't accept?

Mr. WEBSTER. We didn't ask them to. The influence peddlers apparently made the pitch and we recognize the risk of using one corrupt person to deal with another person who he says is corrupt.

I think that our track record through the years in that area has been very good. I can think of only the Delorean case, as the one where any jury has found any entrapment or improper inducement in any of the undercover cases. That one is not clear.

I didn't like that case particularly to begin with, because I think we failed to corroborate the cooperating witnesses' statements on the closed circuit television, which we could have done had we just simply anticipated that kind of a problem. But it is a pretty good track record for nine years to have had only one such case where entrapment was established.

Mr. SMITH. Well, you don't want to encourage somebody to commit a crime that they otherwise wouldn't have done.

Mr. WEBSTER. I certainly agree with that. As I say, predication is the way to deal with that. We focus heavily on the predication—that is, what are the occasions during which a person wants to engage in crime—before we go out to see whether that is true or not.

Mr. SMITH. Let's discuss the small time stings. I know when I was in a prosecutor's position, we had a few stings to look for who is buying stolen goods, but we always would pretend to have some stolen goods. Some of these recent stings have been the other way around. If you set up and say, I am buying, you will get people to go out and rob houses that they otherwise might not do. I just think you are working on the wrong end of that deal.

Mr. WEBSTER. The most effective stings in that area are the ones that are targeted at identifying the fences. If you can get rid of the fences, you won't have trouble with the other.

Mr. SMITH. Right. When you set yourself up as a fence and say, I am buying, then what you are doing is encouraging people to break into houses. People on drugs will go out and rob somebody, maybe kill somebody, to obtain the stolen goods they wouldn't normally get if there wasn't a market for it. I think you ought to work on the other end, to find out who buys it, by saying that you have the goods.

Mr. WEBSTER. I understand your position and that argument has been thoroughly ventilated in the courts. So long as we have the prejudice position rule, at least that technique is sanctioned by the law, you will have some potential stimulation of crime and you have to ask yourself whether or not that is not a cost you will be willing to pay to get the major players out of there. I recall giving a Rembrandt back to the Government of France that was recovered in Bolivia, that I don't think we would have gotten if we had not used that sting.

Mr. SMITH. There may be exceptions to the rule, but when you are dealing with people breaking into houses, I mean there are plenty of people out there who, if you encourage them to do it, they will do it. I know of one case, as told to me by a local law enforcement official where people broke into houses to steal goods they would not have otherwise done. They did it because they were told there was a market for this.

Mr. WEBSTER. The number of our undercover activities is relatively small and not vast and open to encourage people to come in and do business. I don't know whether I brought those figures with me or not.

INVOLVEMENT IN UNDERCOVER OPERATIONS

Mr. SMITH. I wonder, in view of all your personnel needs, if you ought to be involved in these things.

Mr. WEBSTER. We are not involved in that type of thing. I could use, for example, the undercover technique which resulted in the prevention of the assassination of Prime Minister Gandhi; the prevention of the assassination of President Suazo of the Republic of Honduras; the undercover operation that led to the convictions in the Bonnano family cases; the——

Mr. SMITH. You are dealing with a totally different level now with which nobody would argue.

Mr. WEBSTER. Then I think the Greylord cases are worth your review, simply because this was a situation in which we had reviewed predications and found we were right. We tried to persuade no judge. The judges were already on the take. We had no evidence, other than by simulating the situation in which they had already been functioning, so that we could get believable evidence. In many of those cases, they set their own prices. They clearly laid out what they wanted and it wasn't a question of introducing somebody to crime. They were already there.

Our criminal undercover operations for the fiscal years 1982 to 1986, if I could add these to the record, range from 262 investigations in 1982 to 179 in 1986. This is not a take-over program, from our point of view. At the same time, the number of convictions resulting from those undercover operations went from 680 in 1982 to 1,364 in 1986. It is a good track record in terms of control, used for specific purposes, and very important results.

NARRATIVE DETAIL AND SUPPORTING STATEMENT

Fiscal Year 1988 Appropriations Request
Federal Bureau of Investigation

The following exhibits and narratives describe the funding requested for Fiscal Year 1988 and provide comparisons of this request with those of previous years. For 1988, the FBI is requesting a total funding of $1,484,421,000, 22,974 permanent positions, and 22,267 direct workyears. This request represents a net increase of $75,775,000, 718 positions, and 494 workyears over the base level for 1988.

EQUAL EMPLOYMENT OPPORTUNITY WITHIN THE FBI

Equal Employment Opportunity (EEO) within the FBI encompasses several areas of responsibility. Through the Complaints Processing System every effort is made to properly handle complaints within Federal guidelines and resolve informally as many issues as feasible. Additionally, EEO Staff personnel promote awareness of the complaints system and the EEO process through lectures to new employees, selected in-service sessions, and annual division conferences. Special Emphasis Program Managers work to provide appropriate programs through which protected classes may participate in nationally acclaimed observances such as Hispanic Heritage Week and Black History Month.

The FBI is continuing its efforts to increase the number of women and minorities in its employ with particular emphasis on the Special Agent position. The following exhibit presents a profile of the FBI's work force by sex and race along with an indication of increases made among the Special Agent population since February 1978.

ORGANIZATION OF THE FBI

THE FBI IS A FIELD-ORIENTED ORGANIZATION IN WHICH TEN DIVISIONS AT FBI HEADQUARTERS PROVIDE PROGRAM DIRECTION, SUPPORT SERVICES, AND COORDINATION TO 59 FIELD OFFICES, APPROXIMATELY 400 RESIDENT AGENCIES, AND 13 FOREIGN LIAISON POSTS. EACH FIELD OFFICE, EXCEPT NEW YORK, WHICH IS HEADED BY AN ASSISTANT DIRECTOR, HAS A SPECIAL AGENT IN CHARGE WHO IS RESPONSIBLE FOR ALLOCATING PERSONNEL AND OTHER RESOURCES TO HANDLE EFFECTIVELY ALL FBI MATTERS WITHIN ITS GEOGRAPHICAL TERRITORY. AGENTS AT LIAISON POSTS ABROAD ACT AS A LIAISON IN CONNECTION WITH CRIMINAL AND OTHER MATTERS WITHIN THE FBI'S JURISDICTION. OF THE TOTAL AMOUNT REQUESTED BY THE FBI FOR 1988, 65.7 PERCENT, OR $975,471,000, IS FOR FIELD INVESTIGATIVE OPERATIONS AND THEIR COORDINATING ELEMENTS. THIS DOES NOT INCLUDE HEADQUARTERS SUPPORT, SUCH AS ADP OPERATIONS, EXECUTIVE DIRECTION, ADMINISTRATIVE SERVICES, RECORDS MANAGEMENT AND TECHNICAL FIELD SUPPORT AND EQUIPMENT FUNDING, AMONG OTHERS, ALL OF WHICH COMPLEMENT BOTH FIELD AND HEADQUARTERS ACTIVITIES.

EXHIBITS FOLLOW THAT SHOW THE ORGANIZATION OF THE FBI AND THE LOCATION OF FIELD OFFICES, THE LOCATION OF FOREIGN LIAISON POSTS, AND ADDITIONAL INFORMATION REGARDING THE LEGAL ATTACHES PROGRAM.

FOREIGN LIAISON - LEGAL ATTACHES PROGRAM

The Legal Attaches Program is designed to provide a continuing and prompt exchange of information and assistance with foreign law enforcement and other agencies in order to insure that the responsibilities of the FBI are met. The FBI will assist cooperative foreign agencies with their legitimate and lawful investigative interests in the United States.

For over 35 years the FBI has maintained posts abroad known as legal attache offices. There are currently 13 posts covering more than 80 countries, enabling the FBI's 59 field offices and Headquarters to receive a constant and prompt exchange of criminal and other information. Legal attaches develop and maintain close liaison with relevant and duly authorized law enforcement and other agencies of the countries covered to insure that the FBI's statutory investigative responsibilities are met in a timely and professional manner.

Prior to assigning FBI personnel to foreign countries, the concurrence of the United States Ambassador and the Foreign ministry of the host government must be obtained. The United States Department of State provides office space and other administrative support for the program on a reimbursable basis.

EXHIBIT NO. 10

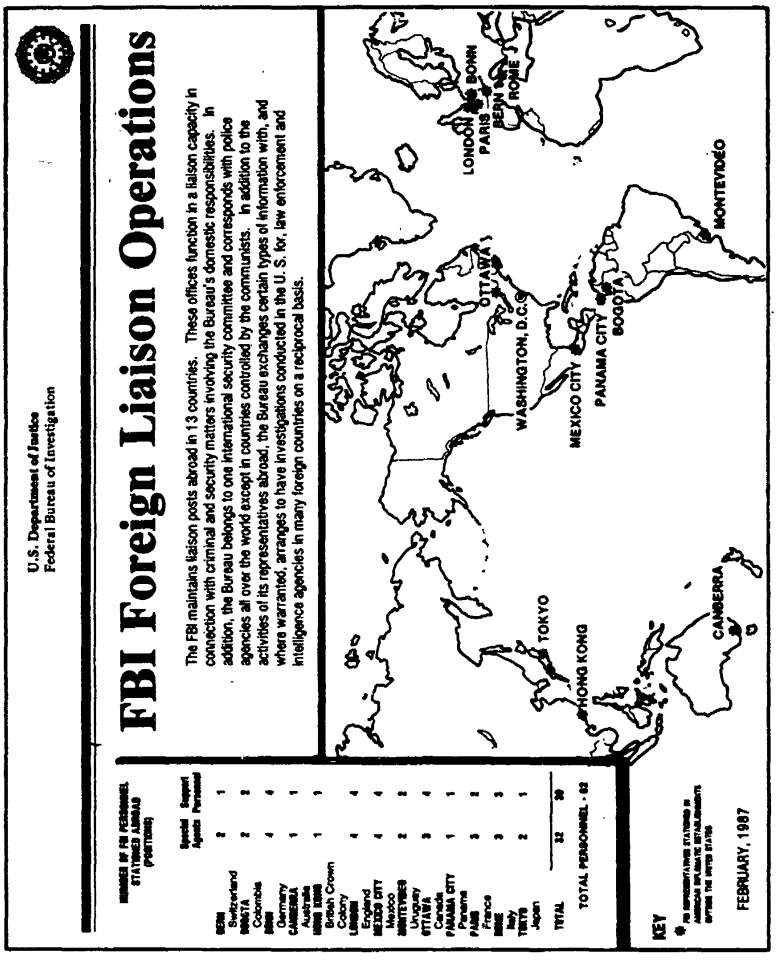

EXHIBIT NO. 11

INVESTIGATIVE PROGRAMS

THE FBI'S PRINCIPAL BUDGET ACTIVITY IS CRIMINAL, SECURITY, AND OTHER INVESTIGATIONS. THIS BUDGET ACTIVITY INCLUDES RESOURCES FOR MANAGING AND COORDINATING FIELD INVESTIGATIONS AND RESOURCES FOR ALL FIELD INVESTIGATIVE OPERATIONS. FIELD OFFICES ARE RESPONSIBLE FOR ALL INVESTIGATIONS, INCLUDING THE NATIONAL PRIORITY LAW ENFORCEMENT AREAS OF ORGANIZED CRIME, WHITE-COLLAR CRIME, FOREIGN COUNTERINTELLIGENCE, AND TERRORISM. THIS BUDGET ACTIVITY WILL REQUIRE 15,796 POSITIONS AND $975,471,000 IN 1988 TO EFFECTIVELY CARRY OUT THE FBI'S INVESTIGATIVE MISSION. PROGRAM INCREASES ARE BEING REQUESTED IN THE AREAS OF: ORGANIZED CRIME, TO FOCUS ON THE LA COSA NOSTRA'S CRIMINAL CONTROL AND DOMINATION OF FOUR MAJOR NATIONAL AND INTERNATIONAL UNIONS; ORGANIZED CRIME DRUG ENFORCEMENT, TO ENHANCE COOPERATIVE EFFORTS AGAINST DRUG TRAFFICKING ENTERPRISES; AND WHITE-COLLAR CRIME, TO ADDRESS A GROWING NUMBER OF DEPARTMENT OF DEFENSE PROCUREMENT FRAUD AND BANK FAILURE FRAUD CASES, AMONG OTHERS.

THE FOLLOWING INFORMATION AND EXHIBITS SHOW AGENT WORK-YEAR USE IN MAJOR INVESTIGATIVE PROGRAMS DURING 1986 AND DESCRIBE ACTIVITIES WITHIN THESE AREAS.

EXHIBIT NO. 12

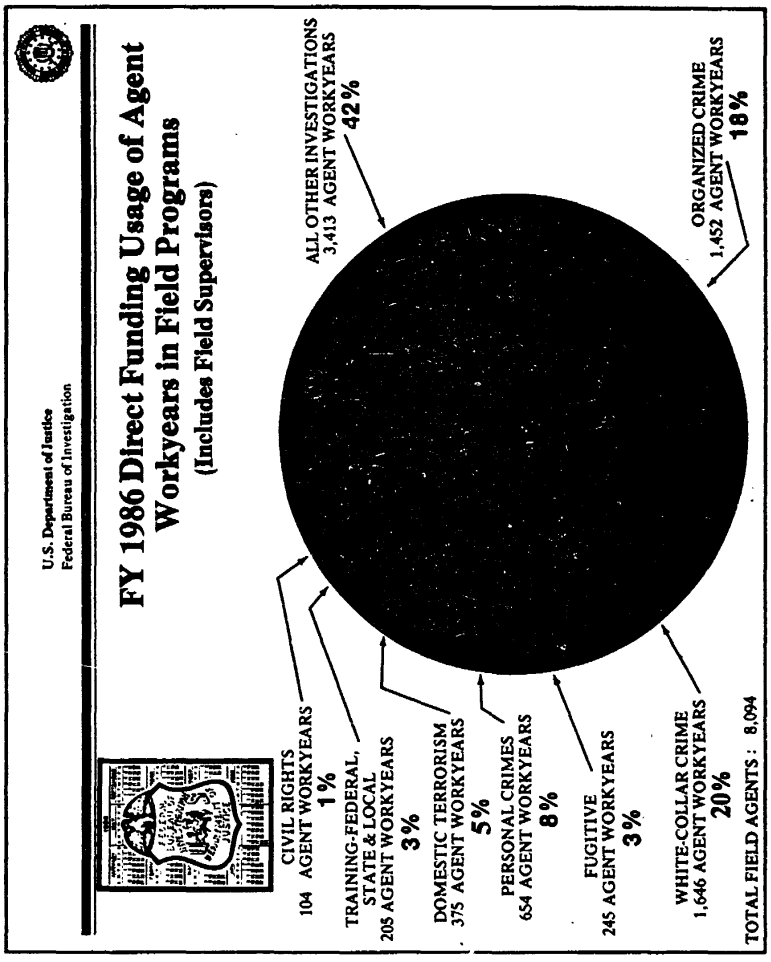

EXHIBIT NO. 13

ORGANIZED CRIME INVESTIGATIONS

The FBI's Organized Crime Program has as its goal the reduction of the sphere of influence that organized criminal groups exert over the citizens of the United States and to eliminate the adverse affect which results from that influence. This will be accomplished through an investigative program that approaches this problem in a systematic, coordinated and sustained manner.

Two of the primary objectives of the FBI's Organized Crime Program are (1) the determination of the extent of influence and control the LCN has established within the legitimate labor community in the United States and (2) the penetration of the hierarchy of the La Cosa Nostra by identifying the leadership and membership of the 25 LCN families. Funding for the Organized Crime Program will enable the FBI to pursue an aggressive and successful labor racketeering program that will remove the LCN's control of labor organizations and have a lasting and positive impact upon the nation's economy.

The unprecedented investigative and prosecutive successes against the LCN in recent years can be attributed to the evolution of the Enterprise Theory of Investigation. Experience has shown that prosecution of individuals for specific criminal acts has had little effect on the overall criminal organization. The Enterprise Theory of Investigation requires separate investigations conducted against individual members of a specific group or family be combined for prosecution, using both the criminal and civil provisions of the Racketeer Influenced and Corrupt Organization statute, commonly known as RICO. Under this approach the group or family is named as an enterprise. Convictions on this basis result not only in significant periods of incarceration, but provide for the seizure of assets accumulated by the enterprise through its illegal activity, and can prohibit members of the enterprise from associating with corrupted labor unions, infiltrated businesses, compromised institutions, or even with other members.

The recent prosecutions, resulting primarily from independent investigations directed at the hierarchy of the five New York LCN families and the "LCN Commission," the governing body of these LCN criminal enterprises, have exposed the LCN's corrupting influence within the International Brotherhood of Teamsters, the Laborers International Union of North America, the Hotel and Restaurant Employee's Union and the International Longshoreman's Association. The evidence presented in these cases has demonstrated that the LCN's influence in labor unions allows for the disruption of the competitive free market in various industries such as construction, trucking, air freight, and the cement industry.

Investigative and prosecutive successes have also confirmed a nationwide organized crime influence in many

EXHIBIT NO. 14

industries through local or national control of labor unions. The FBI intends to expand the use of the Enterprise Theory of Investigation to focus resources on these industries. The investigative strategy used by the FBI directed at the LCN influence in certain industries through labor union control has been refined through application. The criminal problem has been exposed and now will be addressed, not only in other affected industries in the northeast, but in every major commercial market in the nation. Several national and regional initiatives are already underway to expand this effort.

The Organized Crime Information System (OCIS) is an integral part of the FBI's Organized Crime Program. OCIS is being implemented in additional field locations, allowing the FBI to further enhance its organized crime intelligence gathering capabilities through the use of a computer based network. The primary objective of OCIS is to improve the FBI's ability to collect, collate, analyze, and use available investigative data in furtherance of successful prosecution of organized criminal groups. Funding dedicated to the Organized Crime Program enables continued implementation of OCIS and provides FBI field offices analytical support personnel to operate the system.

• Organized Crime Program Accomplishments

As a result of a prosecution in New York of the leader of the Colombo LCN family, a civil complaint was filed charging 31 defendants with controlling a labor organization through a pattern of racketeering activities. This was the first civil action filed against an LCN family as an enterprise and the labor organizations they influence and control. Additional civil filings will be pursued as the criminal cases are adjudicated.

In addition, investigative efforts of the FBI's Organized Crime Program resulted in 612 convictions in 1986. Included in these convictions are a significant number of LCN members and their associates, union members, and public officials. Additionally, over $5,250,000 in fines were levied against convicted individuals; in excess of $18,747,000 in recoveries and restitutions were obtained; and over $120,263,000 in potential economic losses were prevented. A total of 829 indictments were recorded as a result of investigations in the program.

Following are exhibits showing agent time spent by major category of Organized Crime investigations and convictions obtained in Federal court.

DRUG INVESTIGATIONS
(Organized Crime Program and Organized Crime Drug Enforcement Task Forces)

The single most significant crime problem facing American society today is the illegal importation, distribution, and use of narcotics. This evaluation is shared at all levels of government including the White House, Congress, Law Enforcement Officials and, according to national surveys, by the majority of the citizens in the United States. Statistics, White House directives, media coverage, public testimony, and congressional oversight committees clearly support this evaluation. In 1982, the FBI received concurrent jurisdiction to investigate violations of the criminal drug laws of the United States.

In 1986, as a result of experience gained since 1982 and based on a comprehensive study of the intelligence gathered during the previous four years, the FBI redefined its National Drug Strategy. This new strategy is intended to more clearly focus the FBI's investigative resources on those organized crime groups controlling significant segments of the illegal drug and narcotics markets. The FBI, in close coordination with the Drug Enforcement Administration, will endeavor to reduce the incidence of illegal drug trafficking, and other criminal activity which drug trafficking generates, through investigations designed to dismantle the organizations involved in the distribution of cocaine and heroin, and seize their illegal profits through forfeiture proceedings. Several of the major organizations already identified include Colombian and other South American cocaine cartels, Mexican heroin and cocaine networks, and Sicilian Mafia drug trafficking networks.

While the FBI's investigative authority is limited to the United States and its possessions, the FBI maintains close liaison with law enforcement agencies of foreign governments in order to establish and follow through with a coordinated effort against the activities of organized crime figures. A number of major investigations have shown close links between the LCN in our country and the Italian Mafia in Sicily. These investigations are centered on the importation of huge quantities of heroin into the United States as well as the laundering of millions of dollars of drug generated funds.

Close cooperation has been established with Italian Law Enforcement officials and new initiatives are underway with the Japanese Government concerning the Oriental crime groups. The feasibility of exchanging timely intelligence information with Japanese authorities is being reviewed. A formal meeting between both countries will be held in early 1987.

As with the Organized Crime Program, the Organized Crime Information System (OCIS) is an integral part of the FBI's drug investigation efforts. OCIS was originally intended to be implemented in the 23 field offices which had an LCN family or

significant LCN activity. However, as the FBI's responsibilities and commitment in the area of drug investigations have increased, so have the demands placed on OCIS. Plans now call for virtually all field office locations to have access to OCIS. This will allow the FBI to further enhance its drug intelligence gathering capabilities through the use of a computer based network by improving the FBI's ability to collect, collate, and analyze available investigative data. Funding dedicated to the Drug Program enables continued implementation of OCIS and provides FBI field offices analytical support personnel to operate the system.

o Drug Investigations Accomplishments

During 1986, investigative efforts resulted in 2,799 convictions. Included in these convictions are LCN members and their associates and members and associates of the major drug trafficking groups identified in the FBI's National Drug Strategy: Colombian cartels, Mexican networks, and Sicilian Mafia networks. Additionally, over $16,117,000 in fines were levied against convicted individuals; in excess of $8,612,000 in recoveries and restitutions were obtained; and over $2,930,000 in potential economic losses were prevented.

WHITE-COLLAR CRIME INVESTIGATIONS

White-Collar Crime (WCC) is defined as those illegal acts which are characterized by deceit, concealment, or violation of trust and which are not dependent upon the application or threat of physical force or violence. Such acts are committed by individuals and organizations to obtain money, property, or services; to avoid the payment or loss of money or services; or to secure personal or business advantage.

The Department of Justice has identified and ranked priority areas regarding WCC. These are crimes against: Federal, state, or local governments by public officials and private individuals; crimes against businesses, consumers, investors, and employees; and crimes affecting the health and safety of the general public.

In response to the above, the FBI established three major priorities within the WCCP. They are: (1) fraud against the Government matters involving U.S. Government officials (and/or losses exceeding $25,000) and bribery and other public corruption involving Federal officials (Government Fraud); (2) Federal, state, and local public corruption (Public Corruption); and (3) financial crimes.

During the fiscal year ending September 30, 1986, 19.9 percent of the total investigative personnel of the FBI were utilized in conducting white-collar crime investigations. This effort accounted for 4,031 convictions or 34 percent of the convictions obtained in all FBI investigations during fiscal year 1986. An additional 369 individuals were placed in pretrial diversion programs. In fiscal year 1986, more than $25.2 million in fines were levied, and recoveries and restitutions totaled $1.383 billion.

• Governmental Fraud Subprogram

These investigations address allegations of fraudulent acts involving federally funded programs or bribery/conflict of interest in the Executive Branch of Government. This top-ranked subprogram endeavors to investigate and seek prosecutions of those individuals who, through deceit or dishonesty, attempt to interfere with the lawful functioning of Federal agencies, programs, or projects. This subprogram has achieved its status as the top priority due to the concerns of the Attorney General's Economic Crime Council, the President's Council on Integrity and Efficiency, and FBI Headquarters. The investigations given "priority" status are those involving frauds in excess of $25,000 and especially those involving the Department of Defense or the Department of Health and Human Services. Allegations of bribery and/or conflict of interest on the part of Federal employees are considered extremely sensitive and must be addressed immediately.

EXHIBIT NO. 22

In addition to the corruption of Federal officials, this subprogram also deals with procurement, entitlement, and false claim frauds. The procurement frauds (with heavy emphasis on Defense procurements) include labor mischarging (charging other Government contracts for costs incurred on overrun contracts), defective pricing (falsifying or fraudulently withholding pertinent cost information during contract negotiations), product substitution, and false test certifications. The entitlement frauds primarily consist of applications for and/or receipt of Federal funding by those not eligible for such funding (many of the food stamp and health care frauds are reflective of this). False claims run the gamut of charging the Government for work not performed (usually by overstating progress payment requests), using false billing rates, billing for services that were not necessary, and creating completely fictitious invoices.

The FBI's participation in joint investigations with the Inspectors General and military investigative agencies has not only increased the number of significant fraud cases that are being investigated, but it also has drawn on other agencies' experience and expertise to assist in accomplishing thorough and comprehensive investigations in a timely fashion. Examples of this approach include: joint Defense fraud investigations coordinated through participation in the Defense Procurement Fraud Unit, which resulted in over two dozen criminal investigations against major defense contractors throughout the country; four joint target city Task Force investigations with the Veterans Administration addressing family housing frauds; current planning for Task Force investigations with the Department of Housing and Urban Development similar to those undertaken with the Veterans Administration; and eight target city task force investigations addressing false claims to Medicaid/Medicare made on the part of doctors, hospitals, and laboratories.

• Public Corruption Subprogram

Public Corruption involves the investigation of systematic corruption by Federal, state, and local executive and management level public officials. Public corruption can be broadly defined as occurring when any elected or appointed public official (local, state, or Federal) acting for or in behalf of his/her public office asks, demands, solicits, seeks, accepts, receives, or agrees to receive anything of value in return for being influenced in the performance of any official act. The necessary evidence to support an allegation of public corruption must often be gained through the testimony of informants and cooperating witnesses, the use of consensually monitored conversations, and the use of undercover operations. As these investigative techniques become known through their exposure during subsequent courtroom proceedings, they must be replaced by new and often more labor intensive techniques. Electronic and

operational countermeasures are now being employed by some of these same sophisticated white-collar criminals.

While FBI investigations involve officials at all levels of government, investigative priority and emphasis are provided to those matters involving Federal officials. Due to the large number of local office holders, the volume of matters under investigation has traditionally involved more local and county governments. Public corruption investigations are, for the most part, not undertaken by state and local authorities for a number of reasons, and such investigations have become a major component of the FBI's white-collar crime program.

The FBI's investigative response to public corruption continues to be immediate, aggressive, and thorough. Prior to initiating an investigation, a careful evaluation is made regarding the credibility and motivation of the individual making the allegations and of the facts that are available to corroborate or refute these allegations. The goal of each investigation is to resolve whether or not the allegations are true. Due regard is given to the integrity and reputation of the public official alleged to have engaged in criminal conduct.

• Financial Crimes Subprogram

Financial crime investigations primarily involve frauds, thefts, and embezzlements occurring within or against the national and international financial community. Priority matters currently of particular concern are bank failures or bank (and savings and loan association) mergers in lieu of failure caused by fraud and embezzlements perpetrated by bank officers, owners, or major stockholders. A 1984 Congressional study found actual or probable criminal misconduct by officers, directors, or other insiders in 61 percent of recent bank failures and concluded that officials of failed or problem banks usually escape prosecution or sanctions by the Government. This study indicated that during 1983, criminal activities by bank officers, directors, and owners contributed to 35 bank failures.

To illustrate the scope of the bank failure problem, from January 1, 1981, through December 31, 1986, a total of 657 commercial banks and savings and loan institutions have been closed or merged with other financial institutions in lieu of failure. Of this total, 293, or 45 percent, occurred during the period from January 1, 1985, through December 31, 1986. Federal regulatory agencies forecast a continuing pattern of bank failures.

The Fraud By Wire statute is one of the most effective tools available to combat national and international fraud schemes. These schemes include advance fee loan frauds, Ponzi investment frauds, pyramid business frauds, boiler rooms, and numerous other types of fraud. The advance fee loan scheme preys upon the small businessman, the farmer, or entrepreneur who is

vulnerable because of a desperate need for cash. An example of a significant national fraud case which utilized the fraud by wire statute, as well as bank fraud and embezzlement statutes, is a case which resulted in the conviction of seven former officers of ESM Government Securities, Incorporated, Ft. Lauderdale, Florida, and the former managing partner of the Miami office of Alexander Grant and Co., Certified Public Accountants. These individuals were convicted of participating in a nationwide fraud scheme involving the purchase and repurchase of Government securities, which caused losses of over $300 million to financial institutions, municipalities, and creditors. Continuing technological advances in mass marketing and electronic fund transfers enable the perpetrators of these fraudulent schemes to operate with remarkable speed and efficiency.

Fraudulent bankruptcy, computer crimes, and stolen securities violations, as well as new or enhanced statutes under the Comprehensive Crime Control Act of 1984, are also addressed in this subprogram.

FBI WCC investigators and accounting technicians, by virtue of their formal education and experience in accounting investigations, are highly qualified to conduct these investigations. Financial crimes matters such as bank failure and major fraud investigations often require the concentration of relatively large amounts of FBI personnel for extended periods of time. Because of the voluminous amounts of documentary evidence encountered in these types of investigations, an electronic data processing system, the Investigative Support Information System (ISIS), is often required to assist investigators in collating evidence and testimony on complex issues, events, and the activities of multiple defendants.

The FBI also conducts extensive investigations in connection with the Government's prosecution of antitrust matters and the litigation of civil matters.

• Labor Matters

The FBI also conducts investigations of "Labor Matters" which are aimed at the protection of the rights of union members and certain unlawful conduct of union officials and employers. Definite investigative jurisdiction is established, through consultation with United States Attorneys and the Department of Justice, prior to the initiation of these investigations in recognition of the potential impact of the involvement of the FBI in union/management activity.

Following are exhibits showing agent time spent by major activity of White-Collar Crime investigations and convictions obtained in Federal court.

FOREIGN COUNTERINTELLIGENCE INVESTIGATIONS

The FBI is charged with responsibility for foreign counterintelligence (FCI) investigations within the United States. This function is derived from various criminal statutes, such as the Espionage Statues and Foreign Agent Registration Act. In addition, FCI investigations are conducted in accordance with Presidential Directives issued pursuant to the inherent power of the President to protect and defend the Constitution of the United States. Executive Order 12333, issued December 4, 1981, is the current Presidential authority for the FBI's FCI investigations. In compliance with existing Executive Orders, the Attorney General has established guidelines for the conduct of FCI activities in the United States. The first guidelines became effective May 28, 1976. Within the parameters of these guidelines and statutes, the FBI is given discretion to develop and implement the FCI program.

The mission of the FCI program is to identify and neutralize the threat posed by hostile intelligence services and their agents in the United States. Activities to accomplish this mission include penetration, disruption, expulsion, arrest, and prosecution.

In the course of fulfilling its FCI mission, the FBI serves the policy making levels of the United States Government by providing an overview of foreign intelligence activities within the United States. As a result, Government officials are assisted in making informed decisions concerning national security requirements. The FBI also furnishes analyses to other agencies of the Executive Branch that have specific intelligence responsibilities, enhancing the effectiveness of these agencies in accomplishing their missions. FBI investigative responsibilities have expanded due to a much wider geographic access, increase in the numbers of individuals requiring investigations, and the use of sophisticated technical collection equipment on the part of foreign intelligence personnel.

The FBI has a defined role within the Intelligence Community. Inasmuch as foreign-directed intelligence activities are transnational in nature, the FBI must coordinate investigative operations with other United States agencies and cooperating foreign police and security services in order to insure the accomplishment of established FCI objectives. This liaison is a most integral component of the FBI's FCI program.

EXHIBIT NO. 26

72-166 O—87——61

DOMESTIC TERRORISM INVESTIGATIONS

Terrorism investigations are undertaken in order to detect, prevent and/or react to unlawful, violent acts and criminal activities of domestic terrorist groups or individuals. These groups are based and operate entirely within the United States and direct their activities at elements of our Government or population with the intent to either overthrow the United States Government, interfere with the activities of a foreign government in the United States, substantially impair the functioning of the Federal Government, a state government or interstate commerce, or deprive Americans of their civil rights, as guaranteed by the United States Constitution. The authority for these investigations is derived from Federal statutes and orders from the President or the Attorney General. In addition, violations of certain Federal statutes, which would logically relate to terrorism, such as bombing matters, nuclear extortion, hostage-taking, sabotage, and the protection of foreign officials, are handled within the Terrorism Program.

The FBI defines terrorism as the unlawful use of force or violence against persons or property to intimidate or coerce a government, the civilian population, or any segment thereof, in furtherance of political or social objectives. In order to combat terrorism, quality intelligence must be gathered and acted upon to prevent planned violence from occurring. The intelligence process involves the collection and analysis of information regarding groups or individuals who have demonstrated a willingness and capability to engage in illegal terrorist activity.

Domestic terrorism investigations are premised upon the fundamental duty of government to protect the public against criminal violence intended to destroy the constitutional system or to deny any segment of the population the exercise of their Constitutionally guaranteed rights. This duty must be performed with care in order that the government itself not act in such a way as to stifle legitimate forms of dissent. To ensure the propriety of investigations, the Attorney General issued investigative guidelines for conducting Domestic/Security Terrorism Investigations in April 1983. Domestic security investigations are used to assemble intelligence information on terrorists but with restrictions necessary to protect the rights of United States citizens. The approach taken to these investigations is similar to that taken in other racketeering investigations. That is to say, the focus is on the unlawful activity of the group rather than on the motives. If it can be reasonably established that two or more persons are allied in the commission or planning of unlawful violent acts, they can be investigated for involvement in an ongoing criminal enterprise. Further, the investigation may extend to persons supporting the criminal enterprise by providing safehouses, money, weapons, or the like. These guidelines establish a consistent policy concerning when an investigation may be initiated and the methods that may be employed in conducting the investigation.

EXHIBIT NO. 27

The Attorney General's guidelines permit the government to actively combat terrorism while at the same time avoid the repressive measures that the terrorists seek to provoke in their efforts to influence the government. As of February 1, 1987, there were 21 organizations under investigation based on these guidelines.

Although the number of actual terrorist incidents recorded in the United States has generally declined, this favorable trend should not be regarded as a signal that eradication of violent terrorism is close at hand. More properly, the reduction in terrorist incidents in the United States closely corresponds to the FBI's acceleration of an all-out counterterrorist effort which has been characterized by the steady commitment of resources, enhanced counterterrorism training, and more efficient use of an increasingly effective intelligence base. To successfully counter the increasing threat, a redirection of FBI resources was considered necessary by the FBI. The amount of FBI resources devoted to counter terrorism steadily increased as terrorist activity against United States targets around the world increased. In view of these increased threats, the Director of the FBI decided to elevate terrorism to the status of a national priority program effective October 1, 1982.

The FBI is committed to a program of intensified investigative activity which will continue to successfully counter the violent intentions of terrorist organizations deployed in the United States. The arrest, prosecution, and incarceration of key leadership elements of various terrorist organizations coupled with successful preventative measures has significantly contributed to the decline in the number of terrorist incidents committed in the United States. It would, as stated, be incorrect to conclude from these counterterrorism successes that the pernicious threat of terrorism in the United States has been all but eliminated. The United States, because of its size, porous border, open society, and official involvement in the global political arena, is constantly vulnerable to terrorist attacks. Terrorist infrastructures and support networks are in place and certain terrorist groups may be motivated to initiate attacks in the United States in response to United States foreign policy initiatives or out of maniacal desire to neutralize dissident behavior which may appear in emigre communities found in almost every corner of the Nation.

The FBI's counterterrorism efforts, if they are to achieve desirable results, must be viewed as a long-term proposition. It takes years and much effort to build necessary intelligence bases, the networks of cooperating citizens, and cadres of experienced, trained special agents. It is not, therefore, the FBI's intention to remove the pressure from those elements of society that pose a threat to American persons or interests. On the contrary, for the foreseeable future, counterterrorism will remain a national priority program. All FBI investigative activity is carried out with the objective of minimizing the threat of terrorism to the American people and, as evidenced by the diminished level of terrorist activity in recent years, the FBI's preemptive efforts have been very successful.

PERSONAL CRIMES INVESTIGATIONS

The "street-crime" nature of many Personal Crimes Program investigations enables the FBI to become directly involved in the effort to stem the incidence of violent crimes that affects communities across the Nation. Through this program the FBI addresses a group of criminal offenses sharing the common characteristics of threatened or actual injury or loss of life. These crimes, which include threats, assaults, kidnapings, and assassination on/of the President, Vice President, Executive Department heads, Supreme Court Justices, Members of Congress, other designated Federal officials, their families, and Federal law officers; bank robberies; kidnapings; tampering with consumer products; theft of controlled substances; extortions; and crimes aboard aircraft, among others, often have considerable impact on the communities and individuals involved due to their potential for violence, the high public profile of their victims, and the opportunity for substantial monetary losses.

Investigative accomplishments attributable to the Personal Crimes Program contributed substantially to the overall performance and success of the FBI during 1986. During this period, 2,182 informations and indictments were filed, 1,525 arrests and locates were made, and 2,099 convictions were obtained in Federal court. Ninety-six percent of these convictions were for felony offenses. FBI investigations also contributed to the convictions of another 645 persons who were prosecuted in state or local court for personal crimes in 1986. The following are representative of major program accomplishments during 1986:

In May 1986, a significant product tampering case was successfully resolved when a subject was arrested for contaminating various capsules with poison in an attempt to manipulate the stock price of the manufacturer. This case began in March 1986, when blister packages containing cold and diet capsules were contaminated with warfarin, a rat poison, and placed on store shelves in Florida and Texas. The manufacturer of these products withdrew them after news agencies received telephone calls from a man who demanded that capsule drugs be taken off the shelf for public safety. The FBI identified the individual by a fingerprint found on one of the packages containing poisoned capsules. Subsequently, the subject pleaded guilty and was sentenced to 27 years in prison.

On September 16, 1986, a nine-year-old girl was abducted from her school in Naples, Florida, and left in a cardboard box in a rural wooded area. Intense and thorough investigation by the FBI resulted in the rescue of the girl, recovery of the $1.5 million ransom, and the arrests of four men.

Following are exhibits showing agent time spent by major category of Personal Crimes investigations and convictions obtained in Federal court.

FUGITIVE INVESTIGATIONS

The FBI's Fugitive Program provides direct assistance, at several different levels, to other Federal, state, and local law enforcement agencies. Investigative assistance under this program during 1986 yielded a total of 914 arrests by FBI agents and the locating of 528 individuals wanted by other law enforcement authorities.

Under provisions of the Unlawful Flight Statute, the FBI assists state and local law enforcement agencies seeking felons who cross state boundaries to avoid arrest, prosecution, or confinement. Typically, these fugitives are wanted for violent crimes such as murder, armed robbery, aggravated assault, and rape, while others are charged with narcotics law violations or major property thefts. Individuals wanted for these crimes often comprise the "hard-core" career criminal element whose unchecked activities pose a threat to community safety and property. Additionally, this statute is also used as the basis for investigating the unlawful taking of children by natural parents in defiance of custody decrees. During 1986, the FBI initiated 2,407 new Unlawful Flight investigations at the request of state and local law enforcement, of which 289 were related to parental kidnapings. Investigative efforts in these cases, as well as 2,066 other Unlawful Flight cases pending at the beginning of the year, resulted in the arrests of 808 individuals by FBI Agents and locating of another 461 wanted persons.

As part of the FBI's initiative against illegal narcotics traffickers, investigations are conducted to locate and apprehend major Drug Enforcement Administration (DEA) fugitives. These fugitives are Class I and Class II narcotics law violators for whom Federal warrants are outstanding. Since this cooperative effort began in late 1981, DEA has referred 1,012 individuals to the FBI for investigation, including 265 in 1986. Sixty-three DEA fugitives were apprehended by the FBI in 1986. The FBI also provides assistance to other Federal agencies, at their request.

The FBI also provides assistance to the United States armed forces in locating military personnel deserting under aggravated circumstances. Requests from local law enforcement agencies for laboratory and forensic assistance, as well as locating individuals for interview, are also serviced.

As a member of the International Criminal Police Organization (INTERPOL), the FBI cooperates with foreign police agencies conducting criminal investigations. INTERPOL membership is a significant complement to the FBI's Legal Attache program in criminal matters.

Following are exhibits showing agent time spent by major category of Fugitive investigations and unlawful flight and other arrests made.

GENERAL GOVERNMENT CRIMES INVESTIGATIONS

The United States Government, as a property owner, employer, and supplier of goods and services to its constituent agencies, departments, and the general public, is not immune from the reach of criminals. The FBI, through its General Government Crimes Program, works to reduce the personal and tax dollar impact of such criminal activity.

General Government Crimes Program investigations are directed toward the identification, investigation, and prosecution of criminals and criminal groups engaged in serious personal and major property crimes committed against or on property where the United States Government has jurisdiction, which includes approximately 430 major Department of Defense installations, numerous civilian agency buildings and sites, national parks and recreation areas, approximately 256 Indian reservations, and 47 Federal penitentiaries and correctional facilities. Also investigated under this program are cases referred to the Department of Justice by the Selective Service System (SSS) in which an individual is suspected of failing to register with SSS as required by law, individuals impersonating Federal officials, and false identification matters.

During 1986, 876 individuals were convicted in Federal court for General Government Crimes Program offenses; another 84 persons were convicted in state or local court as a result of FBI investigative efforts. FBI investigations also resulted in the recovery of more than $2.7 million in stolen or illegally possessed property and the prevention of nearly $1.1 million in potential economic losses.

Following are exhibits showing agent time spent by major category of General Government Crimes investigations and convictions obtained in Federal court.

GENERAL PROPERTY CRIMES INVESTIGATIONS

Crime remains a pervasive problem in American society, one that affects millions of citizens in every community across the Nation. More than 10 million property crimes, one every three seconds, were reported to state and local law enforcement agencies during 1985 according to Uniform Crime Report data. National Crime Survey data released by the Bureau of Justice Statistics (BJS), Department of Justice, showed that 25 percent of American households, approximately 22 million, were touched by a crime of violence or theft in 1985. Also, according to Uniform Crime Report data, the number of property crimes in 1985 was up five percent from the 1984 volume; motor vehicle theft showed an increase of seven percent.

The FBI's General Property Crimes Program focuses on thefts from interstate shipments, the interstate transportation of stolen goods and motor vehicles, individuals and groups engaged in such criminal activities, and fences buying and selling stolen property. Program investigations often develop links between property crime occurrences, fences, organized crime, and narcotics trafficking. Other program investigations include arson matters, crimes on the high seas and destruction of aircraft or motor vehicles. Traditional investigative approaches to property crime occurrences are complemented with the use of undercover operations directed against specific crime problems. Undercover operations enable FBI Agents to identify and penetrate theft rings and fencing operations, to obtain intelligence information about criminal activities, and to gather evidence against high-echelon criminals who have previously been able to insulate themselves against direct lines of complicity in illegal activities.

Property crime undercover operations have successfully penetrated organized automobile theft and "chop shop" operations throughout the country. An undercover operation related to organized automobile theft in the Memphis, Tennessee, area ceased operation in the early part of 1986. During this operation, state and local law enforcement officers and FBI special agents posing as buyers of stolen vehicles and heavy equipment were able to infiltrate areas of these organized theft operations which previously have been virtually untouched by law enforcement. Numerous stolen high-value vehicles were purchased from professional thieves and their associates. Due to the efforts of this one undercover operation, 124 convictions and $3.6 million in recoveries were realized.

The culmination of an investigation by a task force of local police agencies and the Buffalo FBI office in February 1986 resulted in 11 convictions. As part of a plea agreement, two subjects were debriefed regarding more than 50 burglaries committed by a "Hi-Tech Burglary Gang," so named for the members' use of electronic devices to bypass sophisticated alarm systems and police scanners. A total of $4 million in missing art and antiques was recovered.

EXHIBIT NO. 49

Property crimes undercover operations have also helped in the increasing motor vehicle insurance fraud problem. In another successful undercover operation conducted in Detroit, Michigan, 170 individuals were charged either by complaint or indictment of mail fraud and 163 vehicles were recovered valued at $1,059,500.

In 1986, the San Antonio FBI Office concluded an investigation into the bombing of American Airlines Flight 203 at the Dallas/Fort Worth Regional Airport on October 30, 1985. While in flight, a smoldering fire ignited in the baggage hold area of the plane from an improvised explosive device. When the cargo hold doors were opened upon landing, flames erupted; however, they were quickly extinguished. No injuries were sustained by the passengers, crew members, or ground personnel. The FBI Laboratory determined that the explosive device was located in the luggage of a female passenger who was accompanied by her three children. Her husband was developed as a suspect and extensive investigation determined that he was deeply in debt, used and sold narcotics, and had purchased $2.65 million in life insurance on his family. This suspect was subsequently charged in connection with the bombing incident and, after entering a guilty plea, was sentenced to two 20-year prison terms. Investigation has identified two other individuals who made and sold the explosive device.

During Fiscal Year 1986, the General Property Crimes Program's efforts resulted in the conviction of 1,131 persons, 894 arrests, and 114 subjects located. Another 395 persons were convicted in state or local court as a result of FBI investigative efforts. In this period, stolen property in the amount of $129,332,491 was recovered; $1,900,855 in fines was assessed; and $33,891,193 in potential economic loss was prevented.

Following are exhibits showing agent time spent by major category of General Property Crimes investigations and convictions obtained in Federal court.

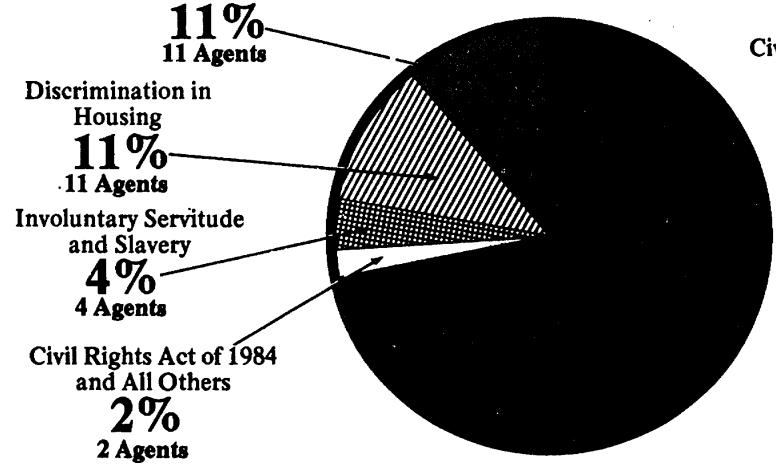
CIVIL RIGHTS INVESTIGATIONS

The Civil Rights Program addresses investigations rising from the actual or attempted abridgment of rights provided to citizens and inhabitants of the United States under the Constitution and laws of the country. The primary objective of this program is to enhance and protect those rights through expeditious investigation of matters within FBI jurisdiction. Both civil and criminal matters are investigated in close coordination with the the Civil Rights Division of the United States Department of Justice.

In addition to conducting investigations, resources will also be used in 1987 to provide specialized instructional programs to FBI field supervisors and investigators. The purpose of these seminars is to enhance the managerial and investigative skills of Special Agents assigned to civil rights investigations by keeping them abreast of complex civil rights issues, thus enabling a more timely, accurate, and effective response to civil rights matters referred to the FBI. Similar programs will also be conducted for local and state law enforcement officers attending the FBI National Academy program at Quantico, Virginia. These programs will increase participants' knowledge concerning Constitutional rights and the special duties and obligations which the law imposes on law enforcement officers in upholding and protecting these rights.



Following are exhibits showing agent time spent by major activity of Civil Rights investigations and convictions obtained in Federal court.

CRIMINAL INFORMANT PROGRAM

The FBI considers the criminal informant to be an important and invaluable investigative tool in fulfilling its investigative responsibilities. Due to the myriad of criminal matters investigated by the FBI and the increasing sophistication of some individuals in the criminal element, it has become imperative, over the years, for the FBI to rely upon the information provided by informants to resolve many of the complex cases under investigation. The FBI has enjoyed success in the resolution of numerous complicated cases due, in no small part, to the use of criminal informants. Employment of some investigative techniques such as electronic surveillances is dependent upon information provided by the criminal informant.

Virtually every major case investigated by the FBI involves the use of an informant in some capacity and the information provided by them results in substantial numbers of arrests and convictions each year. Informants provide information of intelligence value leading not only to the solution of crimes, but also to the recovery of stolen property, the locating of wanted persons, and the detection of some crimes in the planning stages.

FBI informants often furnish information regarding criminal acts which are in violation of state laws or of Federal laws over which the FBI has no jurisdiction. This information is disseminated to the appropriate law enforcement agency to assist in its investigations.

Informants are not used by the FBI to circumvent legal or ethical restrictions. Informants are given specific instructions not to participate in acts of violence, use unlawful techniques to obtain information, or initiate a plan to commit criminal acts. Informants are sometimes authorized to participate in criminal activities with persons under investigation if it is determined that such activities are necessary to obtain information needed for purposes of Federal prosecution. If this participation in otherwise criminal acts involves significant risk of violence, corrupt actions by high public officials, or severe economic loss to a victim, the concurrence of an appropriate United States Attorney is obtained prior to the authorization being given.

EXHIBIT NO. 47

Informants are paid for services and expenses on a cash-on-delivery basis for information provided in authorized investigative activities. The amount paid to an informant is determined by the FBI based on the value of the information provided by the informant.

Currently, the FBI is in the process of implementing a computer system to assist in providing effective management of its Criminal Informant Program. Analytical data concerning information provided by informants, geographic locale for various types of informants, areas of criminal expertise, and payment authorizations will be available to field office personnel to enable them to make the most effective and efficient use of their informants in the conduct of ongoing criminal investigations.

CRIMINAL UNDERCOVER OPERATIONS

The undercover technique has opened avenues of investigative pursuit not available in the context of the traditional investigative process. The presence of an undercover special agent provides firsthand special agent testimony relating to the nature and the scope of the criminal activities, the extent of involvement of the various offenders, and the location of items of evidence. Undercover agents are often able to obtain evidence relating to the knowledge, intent, and predisposition of individuals involved in criminal activity which, combined with the use of audio and/or video tapes, produces the strongest and most convincing evidence in a court of law. Undercover agents have the ability, in certain situations, to penetrate the highest levels of criminal activity, which heretofore have been unreachable.

The undercover technique also allows for more effective and safer use of sources and informants, in that the information obtained from the undercover operative may preclude the necessity for sources/informants to testify in court. In addition, undercover operatives often obtain evidence of past and planned crimes. In the instance of a planned crime, the undercover technique affords the FBI the opportunity to take a proactive approach, rather than investigating solely after the fact.

Firsthand testimony from undercover agents increases the chance of conviction and thus reduces the necessity to offer immunity or reduced charges to defendants and of using convicted felons or former confederates in order to prosecute higher echelon subjects.

All FBI criminal undercover operations are conducted in accordance with the Attorney General's guidelines for undercover operations.

Following are exhibits showing the number of criminal undercover operations conducted and convictions obtained in Federal court as a result of undercover operations.

APPLICANT INVESTIGATIONS FOR OTHER AGENCIES

The FBI assists other Federal entities, including the White House, Department of Justice, Department of Energy, and others, by conducting approximately 4,000 background investigations concerning persons being considered for Presidential appointments and other important and sensitive positions in the United States Government. During the past year, continued progress in improving the timeliness and the quality of these investigations has been realized. Several investigations conducted developed unfavorable information concerning the candidate which resulted in denial of employment or of access to national security information.

The FBI is continuing its efforts to improve the quality of background investigations to ensure that the requesting agencies have a completely thorough and objective basis upon which to make employment and security access decisions.

Following is an exhibit showing background investigations conducted by the FBI for other Federal agencies.

INVESTIGATIVE SUPPORT AND STATE AND LOCAL ASSISTANCE

SUPPORT FOR FBI FIELD INVESTIGATIVE PROGRAMS AND ACTIVITIES IS PROVIDED FOR UNDER THE INVESTIGATIVE SUPPORT BUDGET ACTIVITY. INVESTIGATIVE SUPPORT INCLUDES TRAINING, FORENSIC LABORATORY EXAMINATIONS AND RESEARCH, EFFICIENT MANAGEMENT OF INVESTIGATIVE AND ADMINISTRATIVE RECORDS, AUTOMATED DATA PROCESSING AND TELECOMMUNICATIONS MANAGEMENT AND MAINTENANCE, AND TECHNICAL FIELD SUPPORT AND EQUIPMENT SUPPLY. IN 1988, THESE ACTIVITIES WILL REQUIRE 2,790 POSITIONS AND $328,052,000. PROGRAM INCREASES ARE BEING REQUESTED TO SUPPORT THE IMPLEMENTATION OF AN INTEGRATED DIGITAL VOICE PRIVACY RADIO SYSTEM FOR THE FBI, DRUG ENFORCEMENT ADMINISTRATION, AND UNITED STATES MARSHALS SERVICE; TO CONSTRUCT AN ENGINEERING RESEARCH FACILITY; AND TO EQUIP AND FURNISH A THIRD DORMITORY BUILDING CONSTRUCTED AT THE FBI ACADEMY, QUANTICO, VIRGINIA.

STATE AND LOCAL LAW ENFORCEMENT ARE SUPPORTED THROUGH TRAINING PROGRAMS, LABORATORY AND FINGERPRINT IDENTIFICATION EXAMINATIONS, AND CRIMINAL JUSTICE DATA AND STATISTICS SERVICES, INCLUDING THE NATIONAL CRIME INFORMATION CENTER AND UNIFORM CRIME REPORTING PROGRAMS. THESE ACTIVITIES WILL REQUIRE 3,106 POSITIONS AND $124,281,000 IN 1988.

THE FOLLOWING INFORMATION AND EXHIBITS DESCRIBE ACTIVITIES IN THE AREAS OF INVESTIGATIVE SUPPORT AND STATE AND LOCAL ASSISTANCE.

EXHIBIT NO. 53

1952

TRAINING PROGRAMS

Training provided by the FBI to its employees can be generally categorized into two areas: (1) Basic - new agents' training at the FBI Academy, and (2) Specialized - in-service training for Special Agents and support personnel at the Academy and at the field office level.

The New Agents' Training Program provides a high level of instruction to insure that basic knowledge and skills are developed to enable new Special Agents to discharge their complex responsibilities when they are initially assigned to investigative operations in the field. The First Office Agent also receives professional guidance, assessment, and training during the probationary period (one year) in the field.

Specialized training is accomplished through formal in-service programs conducted at the FBI Academy for Special Agents and support personnel. Direct field support programs using FBI Academy instructors and/or police instructors assigned to the various field offices afford additional in-service training at the field level.

In-service training is designed to develop the full potential of all FBI personnel and to specifically enable them to:

-conduct complex investigations in the highest national priority areas: organized crime, white-collar crime, foreign counterintelligence, narcotics, and terrorism, as well as carry out all other general criminal investigations, and

-apply basic law enforcement skills and knowledge such as law, behavioral science, firearms, defensive tactics, and raid and arrest techniques.

Employees participate in sophisticated management, assessment, and education programs to improve the abilities of support managers as well as the mid- and upper-level FBI executives to more effectively carry out their complicated responsibilities, including personnel and program management, affirmative action, media relations, and budgeting.

In-service training provides job enrichment and career development opportunities for personnel through educational programs at the FBI Academy and elsewhere.

Training efforts at the Academy and in the field support crisis management training for FBI personnel who will be expected to respond in the event of terrorism, aircraft hijackings, hostage incidents, or other life-threatening situations.

EXHIBIT NO. 54

FBI training efforts include faculty improvement and research and development programs, which are essential to provide effective direct field support and training program improvement and assessment.

During fiscal year 1986, 3,677 FBI employees attended various training sessions conducted at the FBI Academy. A total of 430 new agents entered on duty during this period. Specialized in-service training included courses in white-collar crime, organized crime, foreign counterintelligence, terrorism, narcotics, legal matters, crisis management, forensic science matters, behavioral science topics, undercover operations, management and executive development, technical and electronic training, and instructor and special seminars.

• Police Training Operations

The FBI provides courses of instruction for state and local criminal justice practitioners, both at the FBI Academy and throughout the United States at state, regional, and local training facilities in order to improve their administrative, investigative, management, and technical capabilities. This instruction is offered consistent with instructional expertise, availability of personnel, and budgetary limitations.

The principal course offered at the FBI Academy is the "FBI National Academy Program." This is an eleven-week, multi-discipline course for seasoned law enforcement managers nominated by their agency heads because of their potential for continuing advancement. Sessions are conducted four times a year for a total of 800 officers annually. The academic courses in this program are accredited by the University of Virginia. By the end of fiscal year 1986, 20,183 officers had completed this program of which 803 were foreign students, with one out of seven of the graduates who are active in law enforcement being the head of their agency.

In 1976, the FBI instituted the National Executive Institute. This program, 15 days in length, is designed to meet the needs of the chief executive officers of our Nation's largest law enforcement organizations. To date, more than 270 executives have participated in this program. In 1981, the Law Enforcement Executive Development Seminar, which is designed for police chiefs from mid-sized agencies, was implemented. By the end of 1986, 406 police executives had been graduated from this course.

Specialized schools and courses dealing with a broad range of criminal justice related topics, such as Police Personnel Communications, Hostage Negotiation, Computer Related Crimes, Death Investigations, Interpersonal Violence, Criminal Psychology, Law Enforcement Laboratory Matters, and similar subjects are offered at the Academy. They range in length from three days to four weeks. During fiscal year 1986 specialized schools and symposia were offered for 5,021 criminal justice personnel.

72-165 O—87——62

In addition to course offerings, FBI Academy faculty conducted research and provided assistance to Federal, state, and local law enforcement on a myriad of topics and investigative techniques, including psycholinguistics, forensic hypnosis, psychological profiling of unknown subjects of multiple homicide and sex crime cases, hostage negotiations, crisis management, and on major case strategy consultations.

• National Center for the Analysis of Violent Crime

In 1986, the National Center for the Analysis of Violent Crime (NCAVC) completed its first full year of operation at the FBI Academy. The NCAVC is a law enforcement oriented behavioral science and data processing center consolidating research, training, investigative, and operational support functions for the purpose of providing expertise to law enforcement agencies confronted with unusual, vicious, or repetitive violent crimes. The NCAVC consists of the following four programs: Research and Development, Training, Profiling and Consultation, and the Violent Criminal Apprehension Program (VICAP). VICAP analyzes unsolved homicides, compares information, and links similar cases together from throughout the United States so that a coordinated investigation can take place.

Six investigators from major law enforcement agencies completed a one-year fellowship in advanced behavioral science techniques in the NCAVC, bringing the total number of graduates of this unique program to eleven.

• Other State, Local, and Foreign Police Training

During 1986, FBI instructors provided 61,582 hours of instruction in 5,467 law enforcement schools attended by 194,082 criminal justice practitioners in the field.

Instructors from FBI Headquarters supported this field training effort in a variety of subjects such as Forensic Science Applied Criminal Psychology, Identification Matters, Management, Uniform Crime Reporting, Arson, Death Investigation, and Instructor Development. The Training, Laboratory, Identification, Criminal Investigative, and Technical Services Divisions offered a total of 478 specialized schools to local, county, and state criminal justice personnel, reaching more than 33,987 students.

As an adjunct to police training matters, the FBI has traditionally offered training in ongoing courses to a few select foreign police officers. Since 1938, the FBI has trained, through the National Academy Program, 803 officers from friendly foreign nations, and there are 187 graduates from U. S. territories and possessions. In 1982, the FBI began a pilot program in Puerto Rico to train foreign police officers in basic criminal investigative matters. The training program is now an

established FBI school called the Caribbean Police School (CPS) and was offered twice each year since 1982, each session lasting four weeks. During the ten sessions, 235 mid-management officers were trained: 41 from Puerto Rico, 19 from the U. S. Virgin Islands, 31 from the U. S. Navy and U. S. Army, and 144 from 18 foreign countries.

LABORATORY SERVICES

The FBI Laboratory is one of the largest and most comprehensive crime laboratories in the world. Since its inception in 1932, it has provided leadership and service in the scientific solution and prosecution of crimes in the United States.

FBI Laboratory services are funded and administered under two programs: Forensic Services - Federal and Forensic Services - Non-Federal. Although a distinction is made in administering funds and capturing statistics, all Laboratory examiners and technicians work in both programs using the same laboratory facilities and instrumentation.

Under the Forensic Services - Federal program, FBI Laboratory examiners participate in ongoing field investigations by conducting crime-scene searches; performing special surveillance photography; executing search warrants; and providing other on-scene scientific and/or technical services as necessary. Forensic examinations of evidence are performed in the Laboratory in support of FBI, DEA, and other Federal investigations. Expert court testimony and demonstrative evidence are provided as necessary to enhance prosecutive efforts. Funding in this program also supports an active and successful forensic science research program and forensic science training for Federal investigative crime laboratory personnel at the Forensic Science Research and Training Center; specialized photographic and investigative equipment in support of ongoing investigations; oversight of such programs as the Polygraph Program, the Foreign Language Services Program, and the Photographic Equipment Program; and the training, publication, research, and operational support provided by the Bomb Data Center.

Under the Forensic Services - Non-Federal program the extensive resources of the FBI Laboratory are made available to state and local law enforcement agencies throughout the United States. The present policy is to concentrate on providing sufficient training to state and local crime laboratory examiners of physical evidence to increase their professionalism. Direct services will continue to be provided when law enforcement agencies do not have access to jurisdictional laboratories and where the jurisdictional laboratory does not have the necessary instrumentation and/or expertise to perform the indicated examination.

The success of efforts to increase the professionalism of state and local law enforcement agencies through providing highly specialized training in forensic disciplines to their crime laboratory examiners, is dependent upon adequate funding for this program. Much of this training is not available anywhere else in the United States and without it jurisdictional laboratories would find it difficult to improve and expand their capabilities.

EXHIBIT NO. 55

• FBI Laboratory Accomplishments

During 1986, the FBI Laboratory received 18,723 requests for examinations containing 162,853 specimens of evidence. More than 1,294,700 examinations were performed on these specimens. Of the examinations performed, approximately 907,600 were in support of FBI and other Federal investigations. The remaining approximately 387,100 were performed at the request of state, county, and municipal law enforcement agencies. During the past year, Laboratory examiners responded to 1,022 commitments for testimony in courts of various jurisdictions throughout the United States. These commitments required the expenditure of 2,120 workdays.

Other notable accomplishments include the preparation of 8,402 investigative and prosecutive aids and the processing of 1,226,536 photographic prints.

• Current FBI Laboratory Research and Training Efforts

The Forensic Science Research and Training Center (FSRTC), located at the FBI Academy, was formally opened and dedicated June 16, 1981. This unique facility houses both research and training laboratories and classrooms. The FSRTC is meeting the needs of the forensic science community by providing the necessary environment for practical "hands-on" training and applied research.

The training programs offered at the FSRTC are designed to maximize the use of physical evidence in the solution and prosecution of crimes; to enhance the professionalism of state and local crime laboratory personnel; and to meet the needs of Federal crime laboratory personnel. During 1986 this training was provided to 924 National Academy Students; 435 new FBI Agents; 240 new DEA Agents; 1,528 students in specialized forensic science courses primarily for state and local cri e laboratory and law enforcement personnel; and 378 FBI in-service personnel.

During the past fiscal year the Laboratory hosted four major symposia. These symposia, attended by scientists from throughout the United States as well as eight foreign countries, included "The 14th Annual Symposium on Crime Laboratory Development," "The International Symposium on Driving Under the Influence of Alcohol and/or Other Drugs," "An International Symposium on the Forensic Applications of Digital Image Processing," and "An International Symposium On Forensic Immunology."

To stay abreast of advancing technology and to better meet the needs of the law enforcement community, the FBI Laboratory engages in a research program which encompasses the entire range of forensic disciplines. Specific targets are selected through close liaison with FBI investigators as well as

other Federal, state, and local law enforcement personnel. Results of research efforts are shared through publication of the "Crime Laboratory Digest," which is circulated throughout the law enforcement community and through articles published in various scientific journals. In 1986 the areas of concentration included biochemistry, immunology, chemistry, physics and polygraph. The most noteworthy advances included two new human bloodstain examination techniques which have been implemented into the caseworking protocol of the Serology Unit. These methods are more powerful and reliable than those previously used and allow for the examination of more samples in a given period of time than was previously possible.

Following are exhibits showing annual laboratory examinations for Federal, state, and local law enforcement agencies for the period 1982 through 1988 and the laboratory assistance to non-Federal law enforcement agencies in 1986.

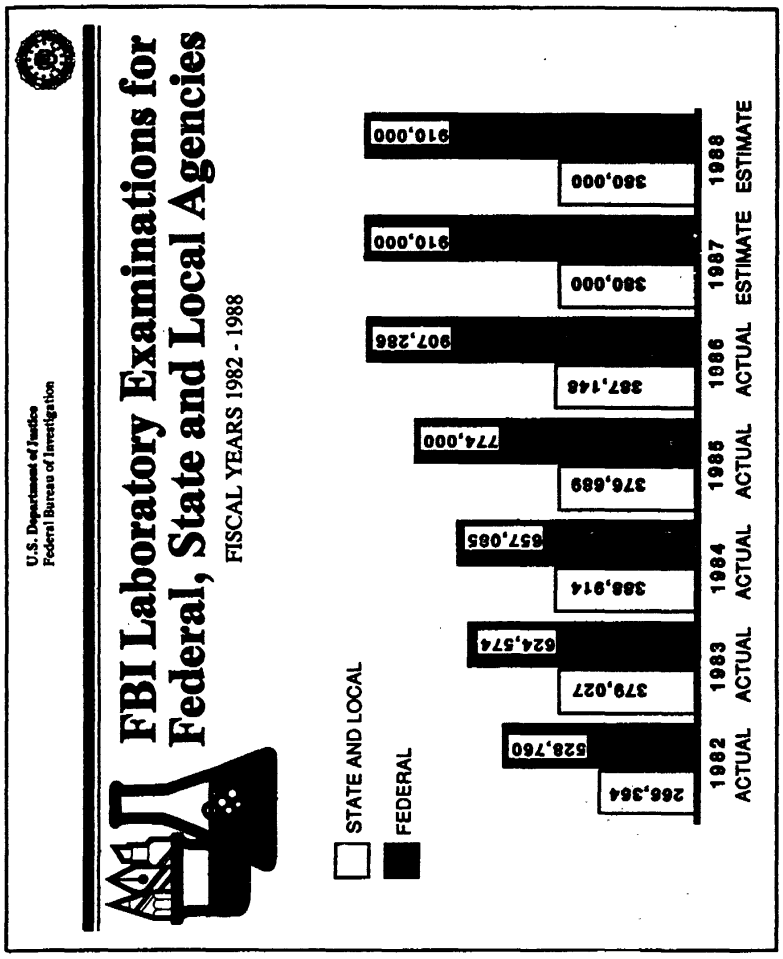

EXHIBIT NO. 56

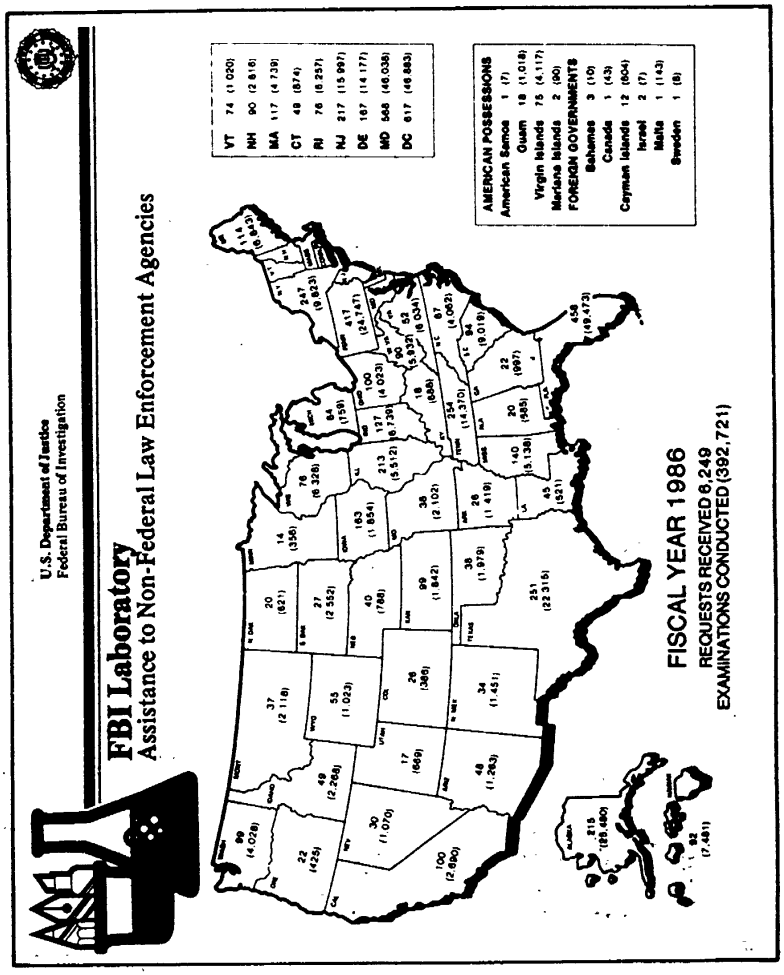

EXHIBIT NO. 52

FINGERPRINT IDENTIFICATION

The FBI's Identification Division serves as the Nation's centralized repository and clearinghouse for fingerprint records. In that capacity, the FBI furnishes identification and criminal history record services to over 23,000 agencies which are authorized to use these services by Federal statutes, regulations, and Executive Orders. The FBI's fingerprint files act as a "locator" or "index" of criminal arrest activity throughout the United States, thus avoiding time-consuming and costly checks of all 50 states to ascertain a person's complete criminal history.

When the FBI was authorized by Congress in 1924 to collect and disseminate fingerprint cards and arrest record information, it began operations with about 810,000 fingerprint cards. As of January 1, 1987, the FBI possessed over 179 million fingerprint cards, of which over 94.5 million contain criminal history data for over 23.6 million persons. The remaining 84.7 million fingerprint cards relate to over 36 million persons who have been fingerprinted in connection with employment in Federal agencies, military service, alien registration, and personal identification.

The reliance placed upon the FBI's services is evidenced by its enormous workload. During each workday of 1986, the Identification Division received an average of 50,553 pieces of mail, of which 29,696 were fingerprint cards and 20,857 were other types of mail, including name check requests, arrest disposition reports, expunction/purge requests, and requests by individuals to review and/or revise their records. These items of mail were submitted by Federal, state, and local criminal justice agencies for law enforcement purposes; Federal, state, and local government agencies and officials for employment and licensing purposes; authorized foreign governments for international police cooperation purposes; and banking and securities and commodities futures institutions for employee security purposes.

The FBI provides the following services: arrest and applicant fingerprint card identification and recordkeeping; posting of wanted and parole/probation notices; examining physical evidence for latent fingerprints and the providing of court testimony as to the results of examinations, if needed; training in fingerprint science; maintaining fingerprint records of persons currently reported missing; and the identifying of amnesia victims and unknown deceased persons.

Major accomplishments during 1986 included: the processing of over 7.3 million fingerprint cards and over 5.1 million pieces of other correspondence; the identification of 19,199 fugitives by their fingerprints; the handling of 15,487 latent fingerprint cases, some of which involved the use of advanced laser technology; the furnishing of assistance in the

identification of deceased victims in four air disasters, a hijacking in Malta, a mining disaster in Castle Dale, Utah, and the Space Shuttle disaster at the Kennedy Space Center, Cape Canaveral, Florida.

Since 1983, the FBI has operated a user-fee system in which a fee is charged for processing each applicant fingerprint card submitted by banking institutions, securities and commodities future industries, and state and local employment and licensing authorities. These fees are used to pay for the personnel and related nonpersonnel costs of providing this service. During 1986, the FBI processed 1,038,179 revenue-producing fingerprint cards and collected $13,553,757 in processing fees.

• Fingerprint Identification Accomplishments

Major work production accomplishments of the FBI's Identification Division for 1986 include:

Category of Accomplishment	Number of Accomplishments
Fingerprint cards processed	7,310,613
Correspondence, forms, and name checks processed	1,469,864
Expedite and special requests processed	213,539
Disposition reports processed	3,022,686
Wanted and probation/parole notices maintained on file	116,773
Fugitives identified by fingerprints	19,199
Expungement and purge requests processed	401,774
Nonserious offense entries deleted from arrest records	103,387
Latent fingerprint cases handled	15,487
Suspects identified as the result of latent fingerprint examinations	3,747
Federal, state, and local court appearances made by FBI Latent Fingerprint Examiners	310
Sentences in cases where court appearances made:	
Prison terms (years)	3,203
Life sentences	23
Death sentences	10

• Automation of Fingerprint Identification Operations

The FBI has pursued a program to automate the work operations of the Identification Division for nearly 18 years. Starting in 1967, the FBI sponsored research to develop: (a) computerized equipment which would automatically scan and read inked fingerprints appearing on fingerprint cards; and (b) computer programs which would compare and match the computerized fingerprint data. By 1969, experimental models of fingerprint reader equipment and matching programs had been successfully demonstrated. A study performed in 1971 concluded that it would be technically, economically, and operationally feasible to incorporate automated fingerprint reader and matching equipment, as well as name searching and response generation capabilities, into the FBI's fingerprint work operations. Consequently, the FBI devised an overall plan to develop a fully automated system to be known as the Automated Identification Division System (AIDS). Due to the magnitude of the automation task, it was necessary to divide the project into three phases (AIDS-I, AIDS-II, and AIDS-III) and implement the phases over a period of several years.

The following progress has been achieved toward the goal of fully automating the FBI's fingerprint work operations:

Year	Fingerprint Identification Automation Milestones
1972	Prototype automatic fingerprint reader system is delivered to the FBI.
1973	AIDS-I operations begin on August 30, 1973. This phase provides for the building of a computerized file of identification and arrest data on first offenders, the printing of indices cards, and the generation of the "No Record" or arrest record responses to fingerprint cards and name check requests. To date, over ten million "first offender" records have been entered into the system and kept updated with subsequent arrest and disposition data.
1976-77	Five production-model fingerprint readers are delivered and placed into operation, converting the criminal fingerprint search file into computerized form. To date, over 18.6 million fingerprint cards have been converted.

Year	Fingerprint Identification Automation Milestones
1979	AIDS-II supersedes AIDS-I on October 18, 1979. This phase, which is the one presently operational, provides for enhanced capabilities, e.g., "on-line" versus "batch" processing, and computerized name searching in place of the manual name indices. Computerized name searching of the automated arrest record file was initiated on October 29, 1979, and now represents about 99 percent of the name searching performed. Also in 1979, pilot automated fingerprint searching operations are initiated in 1 of the 23 units of the criminal fingerprint searching file.
1981	A semiautomatic fingerprint reader system, with 20 input stations, is delivered. This equipment is used to computerize fingerprints which cannot be read by the fully automatic fingerprint readers due to low-quality inked fingerprints and latent fingerprints.
1982	An automated user-fee system is implemented to charge for the processing of noncriminal/non-Federal applicant fingerprint cards.
1983	Automated fingerprint searching operations are expanded to all units of the criminal fingerprint searching file. Presently, about 95 percent of the fingerprint searching is performed automatically.
1984	Over eight million "rap sheets" contained in the FBI's fingerprint files become available on-line through the National Crime Information Center (NCIC) telecommunications network as part of the NCIC Interstate Identification Index (III). The request and response are transmitted on-line in a matter of seconds to the many thousands of NCIC users throughout the country.
1985	The contract for the AIDS-Phase III was awarded on January 2, 1985, to Science Applications International of McLean, Virginia. This phase will combine all of the previously developed capabilities to make a fully integrated, highly efficient system.

During 1986, construction was implemented on the new major computer center for the AIDS-III. This system will replace two major automated systems and will reduce the Identification Division's processing time for fingerprint cards and other documents to one day. It will also support the NCIC's III concept for decentralizing arrest records. In July 1986, the contractor moved the development effort into the J. Edgar Hoover FBI Building after installing the AIDS-III computers in the new computer center. Computer programming has resulted in the second release for testing. AIDS-III is expected to be fully operational by the end of 1987.

Following are exhibits showing annual fingerprint card receipts from 1982 through 1988 and a breakdown by type of the number of fingerprint cards on file as of January 1, 1987.

RECORDS MANAGEMENT PROGRAM

The Records Management Program is multifaceted, consisting of several distinct functional units responsible for assuring that information is maintained and available to support FBI operations. Information management is no longer simply the management of hard copy records, but the management of the life-cycle of information regardless of the form information may take. The FBI has turned to meeting the challenge of information management life-cycle by exploring a wide range of modern technologies and applying those technologies to automate labor intensive processes and thereby increasing efficiency and effectiveness.

The Office of Automation and Information Management (OAIM) is responsible for all automated information management initiatives within the program, and continues to support the Field Office Information Management System (FOIMS). FOIMS increasingly brings advanced information management systems to support field offices and speeds the reporting of investigative operations and makes basic information available in a more manageable form.

Progress during 1986 included the conversion of 2.6 million more index records to an automated medium, bringing the total number of such records converted to over 16 million. Acceptance of name check requests in a form and format for automated searching has progressed to where approximately one-third of the requests from the largest name check requests contributors are processed automatically and a no record response is provided within 24 hours. Other major contributors are preparing to participate in this service.

The National Name Check Program processed 2,157,105 name check requests during 1986. These requests were from executive branch agencies, certain Congressional committees, the Federal judiciary, foreign police and other agencies, and state and local agencies within the criminal justice system. A total of 11,046 name checks associated with the July 4, 1986, Statue of Liberty celebration were processed for state, local, and Federal agencies, including the FBI.

Under the FBI's Security Program, a total of 3,328 security clearance investigations were performed, focusing on the "trustworthiness" of an individual for access to National Security Information. Additionally, 819 briefings/ debriefings for individuals and groups were performed and 5,268 security clearances or special accesses regarding FBI employees were certified. The Information Security Control program reviewed 21,487 documents for proper classification.

An automated records/retrieval system for all FBI employees having access to sensitive compartmented information became operational to more efficiently monitor and exchange information with other intelligence agencies.

EXHIBIT NO. 61

The Records Management Program, through cost-savings initiatives, realized a savings of $401,541 in mailing costs, and $151,085 in duplicating costs.

As a result of meticulous planning and formulation of strategy between the Records Management Division and the Department of Justice, Civil Division, the U.S. District Court, District of Columbia, vacated the permanent injunction against records destruction by the FBI on September 9, 1986. An aggressive file destruction and accession program has been implemented by the Records Management Division which will gradually relieve overcrowded conditions in the field.

During 1986, the Freedom of Information and Reform Act was passed. This was a major accomplishment and represents the culmination of an effort toward reform which began in 1979. It provides the statutory tools with which to assure greater protection for sources and sensitive investigations. The Freedom of Information and Privacy Act Section received 12,193 requests, reopened an additional 609, and processed/closed 11,772 inquiries. In addition, 852 administrative appeals, and 107 FOIPA litigation matters were resolved.

The following exhibit shows the progress in the conversion to an automated medium of the FBI Headquarters general index.

AUTOMATED DATA PROCESSING AND TELECOMMUNICATIONS OPERATIONS

The Automated Data Processing and Telecommunications (ADP/T) program provides the FBI with information collection, storage, retrieval, and dissemination capabilities through the use of automated data processing, telecommunications, and word-processing resources. The FBI uses ADP/T resources to directly support investigative as well as administrative requirements whenever it will achieve greater efficiency. In addition to meeting its own requirements, the FBI also dedicates a significant amount of its data processing resources to support certain related needs in the entire criminal justice community. Investigative, administrative, and law enforcement support information systems are managed centrally to make the most efficient use of the FBI's computer resources.

- Expert System Development

In 1984, the FBI began an initiative to apply artificial intelligence (AI) techniques to support several specific high-priority investigative needs consistent with the FBI's Long Range Automation Strategy. The FBI has initiated efforts to apply AI in the form of knowledge-based expert systems to support investigations in the areas of labor-racketeering, narcotics, counterterrorism, and generic name searching. Significant progress in the development of a broad range of AI applications has been made during the 1985-1986 time frame, particularly in the successful fielding of AI applications; however, because of limited resources, continued AI development will be restricted to minimal efforts sustained by in-house personnel during 1988.

Following are charts showing computer center resources distribution, professional ADP personnel utilization, and field office computer workstation installations.

NATIONAL CRIME INFORMATION CENTER

The National Crime Information Center (NCIC) is a nationwide criminal justice information teleprocessing network which provides documented criminal justice information to the entire criminal justice community. NCIC contains records on stolen property, i.e., vehicles, license plates, guns, securities, boats, and serialized articles; wanted persons for whom arrest warrants are outstanding; criminal histories on persons arrested for serious offenses; unidentified persons; and missing persons meeting specific entry criteria. An NCIC Advisory Policy Board, made up of Federal, state, and local criminal justice officials, furnishes advice to the FBI Director on policy matters concerning NCIC operations and thereby allows the users a voice in the overall management of the system. The users of NCIC, which include the criminal justice agencies in the 50 states, all Federal law enforcement agencies, the Royal Canadian Mounted Police, the Police of the Commonwealth of Puerto Rico, and the United States Virgin Islands, obtain these services on a cost-free basis.

• NCIC 2000 Project

NCIC became operational 20 years ago, on January 27, 1967. At that time there were 15 agencies participating. During the first year of operation, NCIC logged 2,500,000 transactions--an average of 6,580 per day. At the end of 1967, approximately 357,000 records had been entered in the system. By 1986, the number of participating agencies had grown to over 57,000, with over 183,000,000 transactions recorded--an average of more than 500,000 per day. As of January 1987, more than 183,000,000 records were maintained in the NCIC data base.

In 1985, the FBI and representatives of the NCIC user community developed a statement of work to define NCIC functional requirements through the year 2000. The resulting blueprint for the redesign of NCIC calls for using state-of-the-art technology and includes features to improve and maintain accuracy and completeness of data in NCIC. In 1986, the FBI contracted services from the MITRE Corporation to conduct an analysis of NCIC's functional requirements through the year 2000. This system design study will be completed in 1988.

Following are exhibits that show annual NCIC transactions from 1982 through 1986 and a breakdown of records entered in NCIC, as of January 1, 1987.

UNIFORM CRIME REPORTING PROGRAM

The Uniform Crime Reporting program was conceived and implemented by our Nation's law enforcement agencies in 1930. At its inception, two basic needs were recognized. First, it was believed the American people deserved an accounting of the extent and nature of criminal activity. Second, law enforcement leaders needed an administrative tool to better manage their departments.

On a monthly basis, statistical data concerning the incidence of criminal acts from over 16,000 individual law enforcement agencies nationwide is collected. Data collection is grouped according to certain basic types of offenses, namely, murder, forcible rape, robbery, aggravated assault, burglary, larceny-theft, motor vehicle theft, and arson. These categories comprise the Crime Index. Additionally, statistical information on arrests, property loss, and other factors relevant to criminal activity is aggregated. Collected and analyzed data are disseminated in various formats, such as:

-Semiannual releases on crime trends, law enforcement officers killed, and bombing incidents, and

-Annual publications of "Crime in the United States," "Law Enforcement Officers Killed and Assaulted," "Bomb Summary," and "Arson."

Substantial cooperative efforts at all levels of the law enforcement community are necessary in gathering the data upon which the Uniform Crime Reporting program depends. The benefits derived from the program are indeed significant and have resulted in an increased understanding of the crime problem which confronts the citizenry of this country.

Currently, the entire Uniform Crime Reporting program is undergoing an extensive redesign. Numerous offenses have been defined and added to the Crime Index, and data elements for incident and arrest reports have been identified for collection in the enhanced program. The Uniform Crime Reporting Program in the State of South Carolina was selected to serve as the test site for implementation of the new system, and guidelines were prepared outlining the functional data requirements and data linkings for automated collection in the new system. The test is scheduled to begin in the spring of 1987.

The Special Arson Program began collecting arson data in January 1987. In late 1986, over 30,000 handbooks and 100,000 arson incident reports were mailed to fire and arson investigators across the country in preparation for the new program.

The following exhibit shows the percent change in Uniform Crime Reporting program index offenses between the years 1985 and 1981.

PROGRAM DIRECTION

THE PROGRAM DIRECTION BUDGET ACTIVITY PROVIDES RESOURCES FOR THE EXECUTIVE DIRECTION AND CONTROL AND ADMINISTRATIVE SERVICES PROGRAMS. THESE PROGRAMS SUPPORT THE EXECUTIVE MANAGEMENT, LEGAL, PLANNING, INSPECTION, ADMINISTRATIVE, AND FINANCIAL MANAGEMENT FUNCTIONS OF THE FBI. DURING 1988, THE FBI WILL REQUIRE 1,282 POSITIONS, 1,245 WORKYEARS, AND $56,617,000 FOR PROGRAM DIRECTION ACTIVITIES.

INCREASED RESOURCES ARE REQUESTED FOR THE ADMINISTRATIVE SERVICES PROGRAM TO MAINTAIN EFFICIENT FINANCIAL SERVICES AND EFFECTIVE PERSONNEL MANAGEMENT, INCLUDING THE RECRUITING AND HIRING OF AGENT AND SUPPORT PERSONNEL.

EXHIBIT NO. 72

ADMINISTRATIVE SERVICES PROGRAM

The goal of the Administrative Services Program is to provide a complete range of administrative services required to maintain the FBI as a functional entity. This goal is supported through four program areas.

• Personnel Services Program. The Personnel Services Program is responsible for: the administration, coordination, and policy formulation of pay administration, retirement, leave, safety, disciplinary action, employee performance, recognition, and orientation, applicant recruitment, employee transfers, and compiling and reporting personnel statistical data. This program is also responsible for the administration of the Performance Appraisal and Merit Pay Systems, coordination and implementation of the FBI's Equal Employment Opportunity and Affirmative Action Programs, and Employee Assistance Program, to include the Mandatory Drug Deterrence Program.

• General Services Support Program. This program is responsible for the procurement of all equipment, goods, services, and supplies. Additionally, the General Service Support Program manages FBI equipment, inventory, and stock, as well as processes property seized in forfeiture actions. Other responsibilities include printing, warehousing, security, safety, and space management, including the acquisition, alteration, renovation, and release of GSA controlled space.

• Systems Support Program. The Systems Support Program is responsible for preparing the FBI's payroll and distributing statements of earnings, salary and expense checks, leave accounting records, and savings bonds. Also handled by this program are relocation and travel matters and vouchers relating to field support accounts, imprest fund, and undercover operations.

• Financial Management Program. This program provides overall direction and control in all phases of accounting functions, including all types of voucher payments and procurements, coordination of the automation of the financial accounting system, and preparation of various financial reports and schedules.

Following are exhibits showing FBI Special Agents hired and Drug Enforcement Administration applicants processed by the FBI.

1983

Mr. SMITH. Just one more question on that. You have explained today all the important things you have to do. Should you be geting involved in such things as thievery of television sets?

Mr. WEBSTER. No. There has to be—for any FBI investment of resources, as distinguished from some help to a local police department——

Mr. SMITH. You usually encourage local police departments to set up the sting, but should be spending your resources even on that?

Mr. WEBSTER. If we thought we were talking about hijacked trucks or talking about major organized crime participation in some kind of program, then we might want to be in there. But I think street crime is largely the problem of local police.

Mr. SMITH. In that case, you are looking for somebody that buys the stuff?

Mr. WEBSTER. That is correct. We are looking for somebody who is selling that kind of equipment who was in that business.

For instance, we have used undercover techniques to identify major chop shop activities in which huge automobile rings are stealing vast numbers of automobiles, chopping them up, and participating. I think that is an appropriate use to identify those organizations and break them up.

But in order to do that we have to move in and be considered a customer. Or a supplier or a thief.

Mr. SMITH. Any other questions?

Mr. ROGERS. Yes.

Mr. SMITH. Mr. Rogers.

Rogers. Could we go off the record, Mr. Chairman.

Mr. SMITH. Yes.

[Back on the record.]

Mr. ROGERS. Thank you, Judge.

Thank you, Mr. Chairman.

Mr. SMITH. Thank you, Mr. Director. Again we thank you for your cooperation and the excellent working relationship we have had all these years.

You have rendered a great service to that institution and the country.

Mr. WEBSTER. Thank you very much, Mr. Chairman.

Mr. SMITH. We wish you well in your new job.

Mr. WEBSTER. Thank you very much. Thank you.

[The questions for the record and the answers submitted thereto, follow:]

QUESTIONS FROM MR. NEAL SMITH

Federal Bureau of Investigation

Question:

The appropriation language schedule in your 1988 Congressional submission includes a change in the level of representation funding from $45,000 to $70,000. Would you explain why this increase is needed?

Answer:

A total of $70,000 is requested for representation funds and is required to provide additional funding for FBI Headquarters, Field Divisions, and Legal Attaches to accommodate the representatives of friendly foreign law enforcement agencies and official representatives. Due to the international aspects of some terrorism, white-collar crime, organized crime, fugitive, and narcotics cases, there is a need to have funds to represent the FBI properly in the company of foreign law enforcement agencies. In many instances, such official activities are to reciprocate for hospitality afforded to FBI representatives by foreign law enforcement agencies. These funds provide the opportunity to expand working relationships between the FBI and friendly foreign services and afford liaison opportunities.

Question:

Your 1987 request included a proposal to charge State and local attendees for the full cost of their meals and lodging while in training at the National Academy. Does your 1988 request include a proposal to charge State and local attendees? What is the FBI's position on this?

Answer:

The "Department of Justice Appropriation Act, 1987" stated in part that "The Director of the Federal Bureau of Investigation (FBI)... shall not establish and collect fees to provide training to State and local law enforcement officers at the FBI National Academy. Any fees collected for training of State and local law enforcement officers, which occurred at the National Academy on or after October 1, 1986, shall be reimbursed to the appropriate officer or agency." In fact, the FBI did not collect any such fees in 1987.

For 1988, the FBI's budget does not propose to charge State and local law enforcement for training at the FBI Academy. Funding for this training, including monies for travel, food, and lodging, is included in the FBI's base.

Question:

During 1986, two agents were killed and several others critically wounded near Miami, Florida. Does the FBI have adequate funding

72-165 O—87——63

available to purchase the firearms necessary to put its agents on a par with those in the criminal element? In general, does the FBI have sufficient resources to provide to its field agents to prevent another tragedy such as the one at Miami?

Answer:

As a result of the Miami incident, a detailed study was conducted concerning the FBI weapons inventory. Based on the FBI's analysis of the Miami tragedy and intelligence concerning the type of firearms being utilized by the criminal element, who might be subjects of drug or violent crime investigations, the FBI needs to enhanced its weapons for the safety of field Agents. The types of weapons needed to put FBI special agents on par with those of the criminal element include semiautomatic handguns, semiautomatic shoulder weapons, sniper rifles, shotguns, and additional protective gear such as body armor and night vision equipment.

An assessment of our firearms and related equipment base funding revealed the FBI does not currently have adequate funding available to purchase enhanced firearms for field agents, and would require an additional $1.2 million in order to purchase suitable equipment.

Question:

Your request includes a request for a specially equipped surveillance aircraft. What are the total funding increases associated with this request? Why is another specially equipped surveillance aircraft needed?

Answer:

Included in the budget enhancement is $3,500,000 for the purchase of one twin-engine turboprop aircraft with a Forward Looking Infrared (FLIR) system. This amount includes $2,000,000 for the aircraft, $500,000 for the FLIR, and $1,000,000 to modify the aircraft to install the FLIR.

With only one FLIR-equipped aircraft in our inventory, the FBI is unable to respond to more than one major case at a time, and during periods of scheduled or unscheduled maintenance, the FBI has no FLIR-equipped capability at all. A second aircraft will permit the FBI to respond to two major cases occurring simultaneously, will still permit the FBI to have a FLIR capability during maintenance periods, and will improve response time to the West Coast.

Terrorism Program

Question:

On page three of your justification you discuss the number of terrorist incidents prevented. Are these incidents here in the United States or overseas? Without compromising your methods or

procedures, could you describe one of these events to include how you uncovered it and how you prevented it from occurring?

Answer:

During calendar year 1986, the FBI prevented eight terrorist incidents. Six of the prevented incidents would have occurred in the United States, the other two overseas, one being in Canada.

The FBI received information from Canadian authorities indicating that Sikh terrorists intended to plant an explosive device in an Air India facility or aircraft, either in Canada or at JFK International Airport, New York. This information seemed plausible because of the June 23, 1985, downing of an Air India jetliner which killed 329 persons over the North Atlantic.

Investigations, determined that New York City is the only point of departure for Air India aircraft in North America. Subsequent joint investigative efforts by the FBI and the Royal Canadian Mounted Police resulted in the identification of five individuals believed to be involved in a plot to bomb an Air India aircraft. On May 30, 1986, Canadian authorities arrested these five individuals and conducted searches at eight locations in the Montreal, Canada, area. The five persons arrested are believed to be Sikh terrorists and were taken into custody in Canada and charged with conspiracy to manufacture and utilize explosive devices with intent to cause injury. Accordingly, the joint efforts of the FBI and the Canadian authorities interdicted a potential bombing.

Two of these individuals have been convicted of this crime and sentenced to life imprisonment.

Question:

You also discuss on page three your new-found role concerning hostage-taking abroad. What exactly is the FBI's jurisdiction and authority to act overseas and could you give us some examples?

Answer:

The statutory authorities for the FBI's extraterritorial investigations regarding terrorism are in the "Act for the Prevention and Punishment of the Crime of Hostage-Taking", Public Law No. 98-473, (codified at 18 U.S.C. § 1203); and the "Omnibus Diplomatic Security and Antiterrorism Act of 1986," Public Law No. 99-399, (codified at 18 U.S.C. § 2331). In addition, extraterritorial authority exists in the Attorney General's authority to detect and prosecute crimes against the United States (28 U.S.C. § 533). These statutes were enacted to protect U.S. citizens abroad from terrorist attacks and to provide a legal vehicle by which terrorists could be prosecuted in the United States for crimes committed overseas.

Although the authority exists for such extraterritorial investiga-

tions, host country approval is necessary before the FBI can conduct an investigation in a foreign state's territory.

The FBI has conducted six major extraterritorial investigations resulting in indictments of terrorists. For example, Mohammed Ali Hamadei, whom the U.S. Government is attempting to extradite from West Germany, was indicted in connection with the hijacking of TWA Flight 847 which occurred in June 1985. Hamadei is charged with air piracy and murder.

Other extraterritorial investigations that have been conducted by the FBI are: the hijacking of the "Achille Lauro" in October 1985, on which 80 U.S. citizens were traveling and American Leon Klinghoffer was killed; the November 1985, hijacking of Egypt Air Flight 648, which had three U.S. citizens on board; TWA Flight 840, which had 90 U.S. citizens aboard when an explosion killed four Americans and the September 1986, hijacking of Pan Am Flight 73 in Karachi, Pakistan, which had 44 U.S. citizens aboard, two of whom were killed.

Question:

How many terrorist incidents took place in the United States during 1986? How does this number compare to previous years? To date, how many terrorist incidents have taken place in 1987? What impact does this have on resource level requirements?

Answer:

In calendar year 1986, there were 17 terrorist incidents in the United States. This compares with 51 in 1982, 31 in 1983, 13 in 1984, and seven in 1985. One individual was killed and 19 were injured as a result of the terrorist acts in 1986. To date, in 1987, there have been no terrorist acts committed in the United States.

Although the number of actual terrorist incidents recorded in the United States has generally declined, this favorable trend should not be regarded as a signal that eradication of terrorism is close at hand. More properly, the reduction in terrorist incidents in the United States closely corresponds to the FBI's acceleration of counterterrorist efforts which has been characterized by the steady commitment of resources, enhanced counterterrorism training and more efficient use of an increasingly effective intelligence base. Relaxation of current FBI efforts or reduction of resources available to counter terrorist activities in the United States would certainly be detected by terrorist organizations and individuals and could result in a reversal of what has otherwise been a general downturn in terrorist activity.

Drug Enforcement

Question:

Does your 1988 request provide the resources needed to implement your drug strategy?

Answer:

The FBI's National Drug Strategy (NDS) is a three to five year strategy and its implementation is in progress. The NDS resource requirements are not fully specified in the 1988 request because the FBI is in the initial phase of implementation. Concentration of resources is ongoing with the assignment of agents to major drug distribution centers. Resource needs will continue to be assessed in view of the progress achieved and the changing nature of the drug problem.

Question:

Twelve agent positions are being requested for Organized Crime Drug Enforcement. In light of all the recent publicity regarding the magnitude of the drug problem, are twelve agent positions adequate for addressing your responsibility in this area?

Answer:

Twelve additional agent positions are adequate to address our responsibilities at this time. The FBI commenced implementation of its National Drug Strategy (NDS), which is a three to five year strategy, in 1986. The NDS identifies those organizations which control the major segments of the illegal drug market. The early phase of the strategy concentrates resources in major drug distribution cities.

Question:

What level of resources has the FBI utilized in combating the drug problem as compared with its funded resources for this purpose? What level of resources would be required to really make a difference in combating the drug problem? Why are drugs so plentiful despite the best efforts of law enforcement agencies?

Answer:

Since the FBI received concurrent jurisdiction with DEA to investigate drug violations, in every year more agent resources have been used than were funded. The specific agent workyears utilized were:

Program	1983		1984		1985		1986	
	Funded	Used	Funded	Used	Funded	Used	Funded	Used
OCDETF	167*	183	321*	321	360	538	362	504
OC/NARC.	0	520	0	489	43	523	43	515

*Reimbursable funding received for the OCDE Program during 1983 and 1984.

To have a greater impact on the drug problem, the FBI redefined its drug mission in May 1986. This effort has assisted in focusing the FBI's efforts on those organizations controlling large segments of the illegal drug market, such as the Sicilian Mafia, the La Cosa Nostra, Colombian/South American trafficking organizations, Mexican trafficking groups, Oriental crime groups, and outlaw motorcycle gangs.

The implementation of the FBI's National Drug Strategy (NDS) began in 1986. The Strategy is a three to five year strategy that is evaluated continuously to measure the FBI's progress and resource needs.

The FBI believes that our drug law enforcement efforts have made a difference and that as the President's Commission on Organized Crime found "without effective domestic law enforcement, the drug abuse problem, and its concomitant organized crime effects, would be immeasurably worse."[1]

The drug trafficking and drug abuse problem facing the United States is of such magnitude that it will not be solved by investigative agencies alone. Long-term success will require a comprehensive program of both supply and demand reduction.

Drugs are plentiful despite law enforcement's best efforts because of the high demand for these controlled substances by the user population. Strong drug education, drug awareness programs, and drug treatment efforts are key steps which over time will greatly enhance law enforcement efforts to address the drug abuse problem in the United States.

Question:

What is the status of the 60 special agent positions and $4 million provided by the Senate Committee during the 1987 budget cycle to enhance the Organized Crime Drug Enforcement Program?

[1] America's Habit: Drug Abuse, Drug Trafficking, and Organized Crime, page 360.

Answer:

The allocation of 48 special agent positions has been made with our field office staffing levels adjusted accordingly. The positions are being filled through new agent training and reassignment of agents in the field. These allocations have been made principally to those cities identified as Level I and Level II drug distribution centers including Chicago, Los Angeles, and Miami. The FBI has also requested 12 additional agents to be deployed in 1988.

The allocation of agents is as follows:

Field Office	Additional OCDE Positions
Albuquerque	3
Atlanta	2
Chicago	6
Dallas	2
El Paso	2
Houston	4
Los Angeles	6
Miami	8
Philadelphia	2
Phoenix	3
San Antonio	4
San Diego	3
Washington Field	2
FBI Headquarters	1
TOTAL	48

Motor Vehicles

Question:

You request appropriation language to allow you to purchase additional motor vehicles in 1988. What is the number of additional vehicles and associated funding requested?

Answer:

The FBI is requesting that the appropriation language be amended to allow the FBI to purchase 1,650 replacement and 350 additional vehicles. The FBI is submitting this request for operational flexibility reasons and is not requesting any additional funds to support these language changes directly.

However, the FBI is requesting additional funding in the amount of $450,000 to purchase 30 additional vehicles for the Electronics Technicians requested to support the Digital Voice Privacy Program. Also, the new positions requested in this budget for the FBI will require 244 additional vehicles which will cost approximately $2,486,000.

Question:

You claim you require these vehicles to support investigative personnel increases over the past two years. What is the criteria used to determine vehicle requirements?

Answer:

The FBI uses a complex vehicle complement formula that takes into account every vehicle user and every different geographic area and assigns vehicles to users based on a graduated vehicle-to-user ratio. For example, a large field office has a less favorable vehicle-to-user ratio than a smaller office or resident agency, where public transportation is limited or non-existent. This complement formula has been in place since 1984 and has worked very effectively in equitably distributing the FBI's vehicle resources.

As a rule of thumb the following vehicle-to-user ratios apply:

Personnel-To-Vehicle Ratio

Special Agents (SAs).....	1.4 : 1
Special Operations Group SA.....	1 : 1
Special Support Group Personnel.....	1.5 : 1
Electronics Technicians.....	1.5 : 1
Accounting Technicians.....	2 : 1
Investigative Analysts.....	1 : 1
Forfeiture Analysts.....	1 : 1
Organized Crime Drug Enforcement (OCDE).....	1.25: 1

Question:

Assuming the Congress approves your personnel increases for 1988, what is the total number of vehicles required by the FBI and how does this compare to your current inventory?

Answer:

Of the 718 positions requested by the FBI in 1988. The following new requirements are summarized as follows:

253	Special Agents	- 181 vehicles
50	Electronics Technicians	- 33 vehicles
40	SSG Personnel	- 27 vehicles
6	Accounting Technicians	- 3 vehicles
	Total	244 vehicles

Thirty additional, vehicles are requested for existing Electronics Technicians.

Current FBI base funding in 1988 allows for the purchase of approximately 1,613 vehicles.

Cumulatively, these total 1,887 vehicles, which will represent 26 percent of the FBI fleet of approximately 7,100 vehicles.

Question:

Of your total current inventory, how many vehicles exceed your replacement cycle of six years or 60,000 miles?

Answer:

Approximately 2,700 vehicles currently exceed the six year/60,000 mile replacement cycle mandated by the General Services Administration (GSA).

Question:

How did you determine this replacement cycle?

Answer:

The six year/60,000 mile replacement cycle is contained in the current GSA Federal Property Management Regulations established in 1947. The FBI recommends, and GSA has implemented for their own fleet, a three-year replacement cycle. FBI studies indicate a three-year replacement cycle would produce a savings of $1.8 million in operating costs alone per year and after full implementation, reduce the current base budget by $5.3 million. Cost avoidance after the initial eight-year payback period would amount to $24.5 million over ten years and $60 million over 15 years.

Question:

You state in your justification that the FBI will end 1987 with a documented shortfall of 120 vehicles. Can you provide some specific impacts of this shortfall on your investigative personnel?

Answer:

Due to the shortage of vehicles, some investigative personnel will not have basic transportation available to conduct criminal and foreign counterintelligence investigations. Special agents may have to wait for the return of vehicles from other users or double up in conducting the work. For major investigations, large concentrations of Bureau vehicles are needed on short notice. Offices not having appropriate complement levels of vehicles are often times forced to use rental vehicles which are not properly equipped with voice privacy radios or other technical equipment needed to assist in the investigation.

Digital Voice Privacy Radio System

Question:

The FBI took the lead in the design, development and implementation of a single, integrated VHF Digital Voice Privacy (DVP) radio system

to support the tactical requirements of the FBI, Drug Enforcement Administration (DEA), and U.S. Marshals Service. What is your current completion date for architecture and design of the radio system?

Answer:

An integrated digital voice privacy (IDVP) radio system design study is underway in the "Northeast Corridor" of the United States which includes the Boston, New Haven, New York, Newark, Albany and Buffalo field offices. A user needs survey was conducted in those offices during March, 1987. The IDVP design and implementation dates will be decided based on the results of the design study and user needs survey. It should be noted that from a design standpoint, the IDVP system is not viewed as a single system. Its design requires that specific functional and geographic factors which vary throughout the U.S. be considered. The anticipated completion date for architecture and design of the IDVP system is 1990.

Question:

Do you plan to field test the radio prior to implementation and, if so, when will this be completed?

Answer:

A field "test bed" for the integrated digital voice privacy (IDVP) radio system is being conducted in the Boston field office. All mobile radio units and more than ninety-five percent of the fixed equipment, e.g., base stations and repeaters, is installed. This "test bed" is providing valuable data and insight concerning operational details and inter-operability requirements for the nationwide IDVP system. As stated in the previous answer, a design study is underway for the "Northeast Corridor." A user needs survey is also underway in those offices. The results of the "test bed", design study, and user needs survey are expected in September 1987, and will be used to project IDVP requirements throughout the rest of the country.

Question:

The Digital Voice Privacy (DVP) radio system you plan to use, is it the same as the one that has been installed for the past several years in FBI offices around the country?

Answer:

The FBI's original plan called for a DVP radio system, using the VHF radio spectrum and a proprietary encryption standard, to support only FBI needs. Since that time, the thrust of the DVP program has evolved from an FBI-wide system to an integrated system supporting the FBI, the Drug Enforcement Administration (DEA), and the U.S. Marshals Service (USMS). In August, 1985, the Attorney General directed the FBI to lead the design, development, and implementation

of a single integrated DVP radio system to support the needs of the three agencies. The integrated DVP system will share the FBI's backbone architecture rather than three separate ones. Additionally, DEA and the USMS will adopt the FBI's encryption standard.

An integrated system will provide economies related to centralized equipment procurement, inventory management, and maintenance. A single integrated DVP staff avoids inefficiencies and reduces overhead. Also, cost benefits will be realized by elimination of overlapping network backbone circuits and attendant costs.

Question:

You request 50 additional field electronics technician (ET) positions to support digital voice privacy (DVP) requirements. How many such technical positions do you currently have supporting your existing systems and why do you anticipate their workload will increase enough to warrant 50 additional positions?

Answer:

The FBI is currently funded for 249 field ETs. Among the major responsibilities of these ETs are the FBI's telecommunications systems, the Field Office Information Management System, and the integrated digital voice privacy (IDVP) system.

The additional ETs are needed to maintain radios in working order, service leased radio antennas and microwave repeater sites, and install car radios, consoles, base stations, and related equipment. Currently, the FBI has an inventory of over 5,000 mobile and 3,500 portable DVP radio systems. This inventory will grow as more field offices receive DVP radio systems. The network of radio antennas and microwave repeater sites functioning as the backbone of the DVP system is expected to grow to 3,600 sites for the IDVP system - more than double the number of sites required for the clear channel radio system. Additionally, the FBI requires additional ETs to support Drug Enforcement Administration and U.S. Marshals Service installations and equipment in order to maintain the integrity of the IDVP system pursuant to NSA data encryption standards.

Question:

In 1987 you requested $983,000 for vehicles and it does not appear you have adjusted your 1988 base to take this into account. Since this amount is in your base why do you require an additional $450,000 for utility-type vehicles?

Answer:

The $983,000 requested in 1987 was reduced by $197,000 prior to enactment. In addition, incomplete restorations of the prior year's Gramm-Rudman sequestrations resulted in a reduction of $2,646,000 to the automotive budget, causing a break in the replacement and maintenance cycle, which increased costs for the fleet. Also, the

increased number of Electronic Technicians to support the Digital Voice Privacy initiative has necessitated additional vehicles in support of their mission. The $450,000 requested in FY 1988 is to address this need.

Engineering Research Facility

Question:

The FBI received $9,982,000 in 1985 for the construction of a joint FBI/DEA engineering research facility (ERF). At that time, what was the estimated cost to complete the facility and what was the estimated completion date?

Answer:

When the FBI formulated its 1985 budget request in November 1983, the cost for construction of a joint FBI/DEA ERF was estimated at $9,982,000 and occupancy was scheduled for mid-1988.

Question:

According to your justification, the current cost for completion of the Engineering Research Facility (ERF) is estimated to be $36,511,000. What changes have occurred since 1985 and what do you now see as the completion date?

Answer:

Requirements for the ERF have continued to evolve and grow since the inception of this effort during the 1985 budget cycle. Initial space requirements totaled 77,586 gross square feet; current space requirements total 250,210 gross square feet. This increase in space requirements was driven by both increases in personnel and technological requirements. The number of FBI engineering personnel has grown from 208 to 255. It was estimated originally that a staff of 14 from DEA would be collocated at the ERF; that number has now grown to 56. Increased technological and special requirements include state-of-the-art computer-aided design, engineering, and manufacturing capabilities; enhancements to fabrication and shop facilities to permit quick reaction to technical investigative requirements; an antenna and acoustics test facility; a heating/air conditioning plant; expanded waste treatment facilities; additional hallways and common space to accommodate the net square footage requirements; improved site security; and additional food service space requirements. The anticipated completion date for all phases of the ERF is 1990.

Question:

What would be the cost today to provide the Engineering Research Facility (ERF) capability envisioned in 1985?

Answer:

When the FBI formulated its 1985 budget request, the cost for construction of a joint FBI/Drug Enforcement Administration (DEA) ERF was estimated at $9,982,000. The cost today to provide the ERF capability envisioned at that time would be approximately $17,000,000.

Question:

Is this move freeing up space at other FBI/DEA locations that will result in lower GSA rents at those locations?

Answer:

The FBI will require the continued lease of the Newington Engineering Research Facility (ERF) to house its engineering staff until the Quantico ERF is constructed. It is expected that the FBI's engineering staff will be moved to the new facility by May 1990.

The FBI will evaluate its space requirements as that time draws near. A determination regarding the FBI's need for the vacated Newington space will be made after this evaluation. DEA will make its own determination regarding its space requirements.

Question:

Will the Drug Enforcement Administration (DEA) pay a proportionate share of costs to operate and maintain the Engineering Research Facility (ERF)?

Answer:

Details of a reimbursable agreement between the FBI and DEA relating to operations and maintenance costs of the ERF are currently under discussion.

Question:

Why does the Engineering Research Facility (ERF) require a heating/air conditioning plant separate from the FBI Academy?

Answer:

A separate heating/air conditioning plant is required because the existing FBI Academy plant cannot support the additional requirements of the ERF. A detailed analysis conducted by the architectural and engineering firm of Moseley-Hening Associates determined that a separate plant was needed.

Question:

What benefits does the Department expect from the collocation of FBI and Drug Enforcement Administration (DEA) engineering and research and development (R&D) staffs?

Answer:

The collocation of FBI and DEA engineering and R&D staffs will enhance further the excellent cooperation which exists between the two agencies. The technical capabilities of both agencies will increase due to the daily contact between the specialized staffs. The collocation of the staffs will reduce or totally eliminate duplicative engineering activities conducted by the FBI and DEA as well as promote joint R&D efforts to solve technical problems common to both agencies. The collocation of the staffs will allow the DEA to take advantage of the FBI's state-of-the-art computer-aided design, engineering, and manufacturing capabilities and its rapid prototyping/quick reaction capability. A rapid prototyping/quick reaction capability refers to a system of specialized design, development, and assembly of tools used to fabricate and develop custom electronic devices. The Defense Advanced Research Projects Agency, Department of Defense, has agreed to match funding with the FBI for this capability. The DEA will benefit by reducing both the cost of custom devices and the time required to obtain them.

Recruitment of Qualified Agents

Question:

According to recent FBI budget documents, a significant number of FBI special agents will become eligible to retire throughout the remaining 1980's and early 1990's. What proportion of all agents are likely to retire during this period (remaining 1980's - early 1990's)? What is being done to recruit qualified persons with special skills and backgrounds to replace these retirees? Specifically, will the Bureau be able to meet its needs for engineers, attorneys, accountants, scientists, pilots, and other individuals with particular expertise and skills?

Also, is the Bureau successfully recruiting individuals of different ethnic backgrounds, e.g., Oriental, Hispanic-American, needed for undercover investigations of organized criminal groups?

Answer:

Projected figures indicate that approximately 4,500 special agents or nearly 50 percent of the total agent population will retire prior to 1997. This figure is based upon an average retirement age of 52 years, two months among the special agent population. Should any factor such as a diminution or enhancement of the retirement benefits package occur, this retirement rate could experience a further "surge" based upon such action. However, at a minimum it appears

that 50 percent of all special agents will retire within the next nine years.

The FBI has successfully initiated the Regional Recruiting Project in the southeast section of the United States. This project utilizes veteran special agents in an intensive program of contacts with College Placement Offices and professional and community organizations identified as having a significant audience of individuals with specialized skills and educational backgrounds needed to replace those retiring as well as the anticipated skills needed to staff future needs of the Bureau. Additionally, the Personnel Resources Unit has initiated efforts to retain, through Government contract, the services of a full service advertising agency in order to target specifically the scope and content of recruitment advertising so as to reach more directly the targeted audience of individuals necessary to hire special agents.

The entire thrust of the drive to move toward a professional corps of special agent recruiters (the Regional Recruiter Special Agent) is to create the type of targeted, directed recruiting that can be responsive to the needs of the Bureau's future work force. Successful recruitment is simply the product of educating a targeted audience as to the availability of employment. Regional Recruitment is doing this now and will continue to do this as it is expanded throughout the United States.

Recently, the Bureau has been more successful in recruiting individuals of different ethnic backgrounds. For instance, in the area of Hispanic-Americans, the recruitment of such individuals has been identified and stressed as the number one priority recruitment need of the Bureau. Since 1983, the FBI has regularly attended and participated in all National-level Hispanic professional associations, including National Hispanic Chamber of Commerce, Hispanic Bar Association, etc.

Major recruitment advertising projects have been targeted toward individuals with language proficiency in various critical languages; however, the main stumbling block in terms of hiring large numbers of language qualified people is the fact that, in particular, Spanish-speaking applicants do not pass our initial proficiency test in large numbers. This is currently under study and being coordinated with the Language Services Unit. There is approximately a 60 to 65 percent failure rate at present.

The present recruitment trends indicate that larger numbers of such individuals are being attracted to the FBI, in time this will translate into more hiring from these groups.

Question:

Regarding recruitment of individuals with special expertise or characteristics, page 103 of the budget justifications indicates (1) that critically low "applicant pools" of such individuals have been "enhanced", but (2) there is "projected shortfall in hiring adequate

numbers of employees, especially those in 'specialty/technical' areas." Explain this apparent contradiction.

Answer:

The correct term for this would be apparent complication. The seeming contradiction of both statements is that all employers nationwide are suffering through the same projected shortfall of hiring adequate numbers of technically trained individuals. There are more jobs for such specialties than there are people to fill them. So even though the Bureau has expanded or enhanced the size of the eligibility pools in an effort to enhance the number of such hires, the fact is that we still do not have a sufficient number of qualified, suitable applicants for such positions given the intensive scrutiny (background investigation, health exam, drug screening, testing and interview requirements) we place these people under. The problem faced here is nationwide, governmentwide and industrywide, and is simply one of supply and demand for such people. Quite pointedly, the demand for such employees outweighs the supply, and until both come into a sense of balance, the FBI will continue to have to maintain aggressive recruiting techniques in this area.

Question:

A recent news article suggested that the maturity of FBI agents, and particularly of supervisors, has been declining. Further, this article alleged that this phenomenon is having negative consequences and may have contributed to the recent tragic death of a female agent from fellow agents' gunshots.

- Is the maturity of supervisory agents falling and do you believe that there have been negative consequences if it has?
- If there are negative consequences, what is the FBI doing to minimize them?
- Finally, do you believe that a modification in the current retirement policy for agents would be desirable?

Answer:

The maturity of FBI agents, and particularly FBI first-line supervisors, actually has increased in recent years. First-line FBI field supervisors currently are approaching an average of approximately four years in that capacity, which is a significant increase from the two years, six month level in 1980. Moreover, the average age of special agent investigators in nonsupervisory positions has increased from 36 years, 11 months in 1980 to 39 years, one month presently and likewise, our first-line field supervisors, from 40 years, seven months to 43 years, five months. The special agent work force is a mature, professional cadre, and no modification of our current retirement policy for agents is desired.

Question:

Recently an assistant special agent-in-charge brought suit against the FBI alleging discrimination. The suit alleges that Hispanic agents are assigned to offices in areas with high concentrations of Hispanics and where investigations would involve possible Hispanic criminal groups. This assignment policy is said to limit the career potential of agents with Hispanic backgrounds.

How does the Bureau reconcile the need to use agents with Hispanic or other ethnic backgrounds in investigations involving ethnic groups with the need to provide appropriate career advancement opportunities?

Answer:

When a person is specifically hired by the FBI as a special agent based on an identified ability, be it the ability to speak Spanish or the fact that they are an Electrical Engineer, it is absolutely fundamental that their assignments reflect this ability to the extent that the Bureau has a demonstrated need. If one accepts the basic premise that promotion reflects a job well done, then the notion that specific assignments prevent promotion is unfounded. An equitable comparison to the singularity of assignment facing the Spanish speaker would be to look at the totality of special agents who have entered the Bureau under the Engineering Program. This particular group, perhaps more than any other, remains exposed to the potential of being "tied" to their expertise for their entire career, and could equally, yet unjustifiably, charge discrimination in promotion. No such charge has been levied, and in fact an analysis of special agents with an engineering background, as opposed to their assignment, would show that despite any such assignment they have not suffered any neglect in terms of promotion. There are electrical engineer special agents occupying positions from field supervisor to Special Agent in Charge. The same may be said for Spanish speaking special agents in terms of their promotions. There are Hispanic agents in assignments at promotional levels ranging from field supervisor to Assistant Special Agent in Charge. Excellence at ones' responsibilities translates to promotion, and that is the simple fact of life as it relates to opportunities facing Hispanics or any other group within the FBI.

Employee Clearances

Question:

One theme running through several of the recent dramatic spy cases has been the lack of periodic reviews of the security clearances granted to Federal employees. Periodic or random checks into the background of Federal employees who handle sensitive information may identify individuals susceptible to compromise or may cause individuals to think twice about compromising national security. Does the FBI reevaluate the security clearances of its employee? Do you believe that periodic or random checks into the background of all

Federal employees with Secret or Top Secret clearances are desirable? Would the cost of such updates be justified?

Answer:

Two components within the FBI Security Program identify and address employee conduct with emphasis directly on trustworthiness and continued eligibility for access to National Security Information (NSI) and sensitive material:

a. The Sensitive Compartmented Information (SCI) Special Access Program evaluates approximately 6,000 of the 20,000 FBI employees when granting the new special access, and every five years thereafter, if the SCI access continues. The evaluation consists of a credit and criminal check, and a personnel file review. Employees are briefed and debriefed relative to their responsibilities for handling NSI. Security concerns which arise are handled according to the provisions of Director of Central Intelligence, Directive No. 1/14, entitled "Minimum Personnel Security Standards and Procedures Governing Eligibility for Access to Sensitive Compartmented Information."

b. The Personnel Security Program is tasked with:

   1. Investigating an employee's prospective spouse.

   2. Evaluating data contained in a Personnel Status and Security Questionnaire furnished by each employee every two and a half years.

   3. Monitoring foreign travel of all employees.

   4. Providing general security awareness briefings including individually tailored hostile intelligence threat briefings to employees.

The recently proposed "FBI Security Clearance Program" will serve as the apparatus to:

   1. Document employees' awareness of the need and responsibility for the protection of NSI through briefings and debriefings.

   2. Adjudicate the trustworthiness concerns which relate to employee behavior concerning financial irresponsibility, cohabitation, alcohol, drugs, criminal activity, security violations, emotional and mental disorders, and associations.

   3. Establish procedure for the revocation of the employee's clearance and subsequent removal from employment.

The recent upsurge in espionage matters indicates evaluation of an employee's trustworthiness is not only desirable, but essential to the protection of National Security.

Question:

On a related topic, several months ago news articles appeared suggesting that an FBI agent, who had gotten into financial difficulty, had allegedly sold classified information, either to foreign governments or to organized crime figures in the U.S. The agent involved was transferred from FBI headquarters, where he had access to FBI computers, to the training facility at Quantico.

- What is the status of this case? Is the agent still being investigated? If not, has he been cleared of all charges?

- If not cleared, is he to be charged with crimes, administratively disciplined, etc.?

Answer:

Although the news article referred to was not completely accurate, the agent is the subject of an on-going criminal investigation concerning receipt of improper bank loans. The investigation indicates that the agent did not sell classified information. The agent was reassigned to other duties during the investigation. Since the matter is before a Federal Grand Jury, it would not be appropriate to discuss the case in more detail, at this time. If criminal prosecution is not brought against the agent, the FBI will review the matter for appropriate disciplinary or personnel action.

Civil Rights Investigations

Question:

In the past two years there have been several highly publicized incidents involving violations of the civil rights of certain individuals. For example, in 1985 a black couple and an interracial couple suffered incidents of violence and harassment after moving into an all-white neighborhood in Philadelphia. More recently, civil rights marchers were abused in Forsyth County, Georgia, during a peaceful rally. What role does the FBI play in protecting and maintaining the civil rights of U.S. citizens and inhabitants? Is there evidence that civil rights violations are increasing?

Answer:

The thrust of the FBI's efforts in civil rights matters is to assure, in close coordination with the Department of Justice, a national environment in which the Federally protected civil rights of citizens and inhabitants are guaranteed. This goal is achieved by three principal activities. First, prompt investigation of allegations of civil rights violations has a deterrent effect upon potential violators and assures the public of effective redress of violations committed by public officials under color of law. For example, the FBI's immediate investigation of possible civil rights violations which occurred during the first civil rights march in Forsyth County, Georgia, on January 17, 1987, is credited by some officials with

having deterred more serious violence at the second and much larger march in Forsyth County on January 24, 1987. Second, the FBI has initiated management actions to concentrate its resources upon civil rights cases which have regional or national impact and the greatest potential for prosecution. These actions are in part responsible for the increase from 47 felony civil rights convictions in 1982 to 66 felony convictions in 1986. Lastly, since most civil rights allegations involve alleged violations of individual civil rights by law enforcement officers, the FBI continues to provide instruction to other law enforcement agencies concerning the responsibilities and obligations of peace officers under Federal civil rights statutes. Although few of the cases involving law enforcement officers result in prosecution, the FBI's training efforts may result in greater sensitivity to these issues and reduce the number of alleged violations.

There is no specific evidence that civil rights violations are increasing. In fact, in the past three years there has been a decline in the number of civil rights investigative matters received by FBI field offices. During the period of 1982 through 1984 approximately 8,200 investigative matters were received by FBI field offices each year. This declined to about 7,600 in 1985 and to about 7,300 in 1986. The FBI attributes this reduction, in part, to its training efforts and to its aggressive investigation of civil rights violations.

Product Tampering

Question:

Over the past several years, the public has been subjected to an increasing onslaught of product tampering incidents, with several deaths attributable to product tampering. Notwithstanding the FBI's solution of the Marks case, these product tampering cases seem to be extremely difficult to solve.

What, if anything, can Congress, manufacturers, or others do to forestall future product tampering cases or to enhance the ability of law enforcement agencies to track down the culprits?

Answer:

In 1983, Congress passed the Federal Anti-Tampering Act, which became Public Law 98-127. This legislation adequately addresses the problems associated with product tampering including false reports that a product has been, or will be, contaminated.

Numerous manufacturers of food, drugs and packaging material are attempting to develop "tamper evident" packaging for a variety of consumer products. The development of "tamper evident" packages may deter some individuals from committing this type of crime and help the public discern if a product has been adulterated before consuming it.

The majority of cases investigated by the FBI involve false reports (generally made by an anonymous telephone call) to a manufacturer or retail store that one or more of its products has been, or will be, contaminated with a poison or other dangerous substance. The task of identifying the individuals who make such random anonymous calls is difficult, but the FBI is making progress in this area and has had a number of cases successfully prosecuted in Federal court. The FBI intends to continue its vigorous enforcement of the Anti-Tampering Statute and to work closely with manufacturers and trade associations to develop methods to reduce this insidious criminal behavior.

Reimbursable Applicants

Question:

The reimbursable applicant workload is projected to triple from 1986 to 1988. What accounts for the dramatic increase? Will the Bureau be able to handle this increase and what actions are being planned to enable it to do so?

Answer:

During each of the past several years the FBI has conducted reimbursable background investigations (BIs) of about 1,700 individuals for other agencies, excluding the Drug Enforcement Administration. Each BI causes investigation in about seven different field office locations and the individual case initiations by the field offices are reflected as workload under "Investigative Matters Received." By agreement with the Department of Justice, the FBI was tasked with conducting BIs on about 600 individuals annually who are applicants for support positions in the offices of the United States Attorneys throughout the country. The FBI began receiving requests for these investigations on October 1, 1986. The Department of Energy (DOE) has advised the FBI it intends to request BIs on approximately 3,900 persons annually who are being considered for, or hold DOE's "Q-sensitive" clearances. This is an increase of approximately 2,400 BIs over the average of about 1,500 requests received from DOE in past years. DOE opines that the Atomic Energy Act, as amended, requires that the FBI conduct BIs of persons being granted DOE "Q-Sensitive" clearances. These additional obligations almost triple the number of individuals being investigated in this element of the applicant program. The FBI will be able to handle this additional workload and has begun obtaining the necessary resources. The Office of Management and Budget (OMB) has transferred 20 field agent and six headquarters support reimbursable workyears to the FBI from the Office of Personnel Management (OPM) to conduct the investigations on USA staff applicants which were conducted formerly by OPM. Additional reimbursable resources will be obtained to conduct the increased level of DOE BIs.

Domestic Security/Terrorism Investigations

Question:

According to recent FBI budget documentation, the domestic terrorism threat is not expected to diminish. Puerto Rican terrorist activity has increased; Jewish terrorist groups have made an apparent resurgence, and the threat continues from such right-wing terrorist groups as the Posse Comitatus and the Aryan Nations.

What is the FBI doing to counter domestic terrorism?

Answer:

Domestic terrorism, historically, has been a problem in the United States. To counter the threat, a number of things have been and are continuing to be done. The terrorism program was elevated to a national priority for the FBI in 1982. As such, appropriate resources have been directed to address the problem.

The FBI first tries to prevent a terrorist incident from occurring. The FBI has ongoing investigations of every group or organization known to be involved in terrorist activity in the United States. Through these investigations, FBI agents establish effective liaison with other law enforcement entities and develop those sources necessary to allow the FBI to prevent acts of terrorism. As part of this cooperative venture, the FBI has established a number of Joint Task Forces (JTF) on terrorism in certain cities in the United States. The JTF is composed of Federal, State, and local law enforcement agencies that work together in a concerted effort to interdict possible terrorist activities.

When a terrorist incident does occur, fast and aggressive reaction is the best way to counter the threat. The FBI uses the liaison which has been established and puts the resources of the intelligence base to work, in an effort to identify the perpetrators quickly.

Since establishing terrorism as a national priority, the FBI has also intensified and upgraded its training programs to counter the domestic terrorist threat. The FBI is very actively involved in counterterrorism planning and work with many other Federal, State and local agencies in this regard.

The FBI's aggressive, sustained approach has been effective in reducing the number of terrorist incidents in this country from 51 in 1982 to 17 in 1986.

Question:

In combating the threat of domestic terrorism, the FBI must act within statutory constraints and guidelines promulgated by the Attorney General.

- Has the FBI been able to execute its responsibility to thwart domestic terrorism within successfully these constraints?

- Are there any provisions of law or the guidelines that should be modified to enable the FBI to better counter terrorism?

Answer:

The current statutory constraints and Attorney General guidelines allow sufficient flexibility for the successful investigation and prosecution of domestic terrorist crimes. At the present time, it is not necessary to modify or amend any of the constraints placed on these investigations.

Question:

The budget justifications note that it has been necessary to draw resources from the international terrorism subprogram to meet domestic terrorism program needs. On the other hand, the justifications also state that in reality only one terrorism program exists, with the same agents typically working both international and domestic areas.

Does the Bureau have sufficient resources for both domestic and international terrorism? If not, what are the most critical resource needs, e.g., more agents, more equipment, or more funds for informants?

Answer:

In October 1982, the FBI elevated the Terrorism Program to a national priority status in response to a recognized growth of the threat. The FBI distinguishes between "domestic" and "international" terrorism in the United States in that, international terrorism is that which has a foreign or transnational character, while domestic terrorism does not. Because of this distinction, the domestic and international elements of the FBI's Terrorism Program operate under different funding and guidelines provisions. In reality, however, the FBI has one Terrorism Program and views this overall program as a national priority.

The most critical need is to increase the number of personnel so that the FBI may adequately address the terrorist threat. Thirty-three additional positions are being requested for the domestic portion of the Terrorism Program. Of these, 20 agent and 12 general support positions are for the Domestic Terrorism subprogram (field) and one agent position is requested for the Domestic Terrorism subprogram (Headquarters Coordination).

Since 1983, the FBI has had to redirect resources from the international portion of the terrorism program to address domestic terrorism needs. Agents have also been redirected from other programs allowing the FBI to utilize more agents than have been funded in the terrorism program.

Question:

Recent news accounts regarding the arrest and possible deportation of eight Popular Front for the Liberation of Palestine members indicate that a ten-month FBI investigation revealed no criminal acts by these individuals. Deportation proceedings, therefore, are based on provisions of the McCarren-Walter Immigration Act which allow for exclusion of aliens who are members of an organization that advocates world communism.

- Do you agree that the INS should have acted under these provisions to deport the eight individuals?

- Do you believe that the provisions of the law should be used in a proactive effort to deport individuals to prevent possible domestic terrorism?

Answer:

The basis for the FBI's investigation, of the eight persons who were arrested by INS in January 1987, was that these individuals are members of the Popular Front for the Liberation of Palestine (PFLP), an international, Marxist Leninist terrorist organization, which had publicly called for the commission of terrorist acts against the interests of the United States throughout the world.

During the course of these investigations, it was determined that these individuals may have been in violation of immigration regulations. In accordance with established procedures, this information was provided to the INS. Any time information is developed that the subject of an FBI investigation may be in violation of a law which is under the jurisdiction of another agency, that information is disseminated. That agency must then make a decision concerning follow-up action. The FBI will cooperate in any subsequent investigation consistent with applicable law, guidelines, and procedures.

When information is received by the FBI that members of international terrorist organizations, who are not citizens of the United States, may be in this country in violation of immigration laws this information is provided to the INS. The subsequent deportation of these people may well serve to forestall the activities of the terrorist organization in question.

With regard to the McCarren-Walter Immigration Act, in view of the fact that its provisions fall within the purview of another government agency, it would be inappropriate for the FBI to comment as to its application.

Question:

The FBI is "continuing to develop and train" a Hostage Rescue Team.

. How close is the Bureau to achieving full development of this team?

. What must be done to obtain a fully developed team?

Answer:

The FBI's Hostage Rescue Team (HRT) is fully developed in the sense that it is currently capable of carrying out its mission as a civilian law enforcement alternative to the use of military force for the resolution of high risk terrorist takeovers and hostage situations. As long as the HRT exists as a unit, it will always continue to evolve, developing new tactical concepts and techniques to maintain its capability to carry out its mission.

Question:

Media articles have suggested that Puerto Rican independence terrorists may be receiving training and support from communist or communist-affiliated nations. Does the FBI have evidence supporting these allegations? If so, what actions do you believe are needed to address this threat to United States citizens?

Answer:

The involvement of representatives or intelligence services from communist or communist-affiliated nations with Puerto Rican independence terrorist elements has been a concern of the FBI for many years. Prior to 1984, no evidence existed which could prove any logistical or financial support from a foreign government to these Puerto Rican groups. It was known that members of these groups had traveled to foreign countries and it was strongly suspected that support and training were being furnished.

The involvement and complicity of hostile foreign government representatives and/or intelligence services was documented by the FBI during the investigation of the September 12, 1983, robbery of $7.2 million from a Wells Fargo depot in Hartford, Connecticut, and the October 30, 1983, Light Anti-tank Weapon (Law) rocket attack of the Federal Building housing the FBI office in Hato Rey, Puerto Rico. Responsibility for these criminal acts was claimed by the Puerto Rican terrorist organization known as the Revolutionary Party of Puerto Rican Workers-Boricuan Popular Army MACHETEROS, more commonly referred to as the MACHETEROS.

Investigation of the MACHETEROS involvement in these criminal acts and a review of documents subsequently seized on August 30, 1985, during the arrests of MACHETEROS members and searches of their residences have revealed that representatives of a hostile foreign government had furnished support to the MACHETEROS, had been advised and consulted concerning an internal split of the organization, met with the leadership of the group in another foreign country, and had provided and was willing to continue to provide the organization with training, weapons, and explosives.

Continued and aggressive investigation of these terrorist organizations utilizing all legal means available is the most effective means of countering this threat to the United States.

Question:

Domestic and international terrorism can be integrally linked.

. Does the FBI maintain liaison with the CIA and other entities responsible for collecting foreign intelligence information?

. Are these relationships satisfactory?

. Can they be improved, and if so, how?

Answer:

The Terrorism Section, Criminal Investigative Division, has contact with the CIA and other entities responsible for collecting terrorism-related foreign intelligence information on a regular basis. Many employees, both agent and analyst, are involved in a number of committees and groups which meet on a regular basis and through which an exchange of intelligence information occurs.

There also exists, on a regular basis, a substantial exchange of information, such as name traces and threat-related intelligence, both foreign and domestic. Almost daily contact occurs in the area of exchange. Furthermore, the FBI maintains liaison offices which have regular contact with the CIA and other entities responsible for collecting foreign intelligence information.

These relationships are, for the most part, well received by all concerned parties; however, enhancements in these relationships are the focus of continued efforts.

Organized Crime Investigations

Question:

The FBI has been very successful in investigating organized criminal groups (La Cosa Nostra/Mafia). During the past year, these investigations have yielded positive results in terms of successful federal prosecution and conviction of major organized crime figures.

Do you feel that the convictions of the heads of these groups have permanently crippled organized criminal enterprises in the U.S., as some newspaper and magazine articles have stated? If not, will the FBI continue to pursue major organized crime figures?

Answer:

The recent indictments and convictions of the LCN hierarchy have left several of the LCN families in a state of disarray. The hierarchy of the five New York LCN families, as well as other LCN families, have

been indicted and/or convicted. However, to reduce the efforts against the LCN at this time would be a serious miscalculation of the extent of the control the LCN holds over certain labor unions and industries. Experience has shown that the criminal activities of an LCN family do not stop simply by convicting and incarcerating the upper echelon. Their positions are filled by subordinates, often acting as figureheads who maintain constant contact with their jailed superiors. In addition, an often discounted segment of the LCN are the countless criminal "associates" who operate with or at the behest of the LCN. This association can vary in degree, but the common thread is that these individuals work for the financial benefit of the criminal enterprise.

The Federal Government must pursue the opportunities that are now available in order to follow through and render ineffective the influence of these already weakened criminal enterprises. To delay would give the LCN the much needed time they require to reorganize and re-establish their grip on certain sectors of the American society.

The FBI will continue to pursue the LCN utilizing the Enterprise Theory of Investigation. This approach requires separate investigations that have been conducted against individual members of specific groups or family, be combined for prosecution, using both the criminal and civil provisions of the Racketeer Influenced and Corrupt Organizations statute, commonly known as RICO. Under this approach the group or family is named as an enterprise. Convictions on this basis result not only in significant periods of incarceration, but provide for the seizure of assets accumulated by the enterprise through its illegal activity, and can prohibit members of the enterprise from associating with corrupted labor unions, infiltrated businesses, compromised institutions, or even with other members.

The FBI intends to expand the use of the Enterprise Theory of Investigation to focus resources on those industries in which the LCN has significant influence. The investigative strategy used by the, FBI directed at the LCN influence in certain industries through labor union control has been refined through application. The criminal problem has been exposed and now will be addressed. Recent indictments and convictions are indeed impressive and encouraging, but they are merely the first steps in a long road to our goal of eliminating the LCN as a significant threat to American society.

Question:

Many law enforcement officials fear that we are currently seeing the development of new ethnic organized crime groups that could come to rival the traditional groups.

- What should we be doing to nip this problem in the bud?
- What specifically is the FBI doing? Does the FBI need any assistance in this regard?

Answer:

Oriental Organized Crime (OOC) groups and Colombian/South American drug trafficking groups are rapidly emerging, non-traditional ethnic organized crime organizations. As the traditional organized crime groups are disrupted through successful investigations and prosecutions, it is possible that the other non-traditional organized crime groups may become more powerful.

Early assessment of these emerging groups' capabilities and goals coupled with aggressive investigations and prosecutions are necessary to prevent their entrenchment in American society. Through information gathered by the FBI from investigations, informants, and undercover operations, these non-traditional groups are being identified and prosecuted. The Miami Field Office of the FBI has identified in excess of 200 Colombian/South American drug trafficking organizations. Resources are being concentrated toward these groups in major drug distribution cities.

In the first quarter of 1987, the FBI had over 200 pending cases directed at major OOC groups. They are being addressed as part of the FBI's National Drug Strategy (NDS). Key offices involved in these investigations include New York, Los Angeles, and San Francisco. As the intelligence base expands, additional cities such as Boston and Houston are being identified as having OOC problems. The NDS is a three to five year strategy and the implementation phase began in 1986.

Organized Crime Information System (OCIS)

Question:

As described, OCIS appears to be a valuable method of increasing the efficiency with which the Bureau can use its agents. However, the data base is far from complete, with a considerable backlog of case information to be entered into the system.

Will additional positions be required as OCIS is fully implemented in additional field offices?

Answer:

The FBI anticipates that virtually all FBI field offices will have at least retrieval capability of OCIS by 1989. However, not all locations will require an OCIS analyst to process information. The 66 positions requested in the 1988 Congressional Budget will have an immediate impact on the estimated 2,000 pending cases not being processed into OCIS. In addition, these positions will provide the much needed analytical support.

Informants

Question:

Informants are used in many FBI investigations, including organized crime cases. However, some recent cases seem to call into question how well the FBI is managing the use of informants. For instance, numerous allegations have been made in the media about inappropriate and perhaps improper handling of Jackie Presser, the recently indicted Teamsters Union head, as an informant. The use of Michael Raymond, alias Michael Burnett, as an informant also came under intense scrutiny because of his recent indictment for one murder and his possible involvement in the murders of four other persons.

Has the FBI thoroughly evaluated the use of informants within the past several years? If so, what changes have resulted from this evaluation?

Pursuant to these recent cases, is the FBI planning a review of the use of informants? If so, when will it be conducted and what will be the nature of the evaluation?

Answer:

The FBI makes a sharp distinction between the types of individuals who provide information with regard to FBI investigations. For instance, an individual who has indicated a desire to testify for the FBI as a result of information provided on a particular investigation is termed a cooperating witness (CW). A CW receives oversight, on a field level, from the case agent, supervisor, and Special Agent in Charge (SAC) or Assistant Special Agent in Charge (ASAC). On an FBIHQ level, a supervisor of the substantive violation along with his/her unit chief, section chief, Deputy Assistant Director (DAD), and Assistant Director (AD) provided necessary oversight.

An individual providing information on Foreign Counterintelligence or International Terrorism matters is referred to as an asset. In addition to the oversight at the field level, the substantive unit and section provide oversight on an FBIHQ level along with the respective DAD and AD.

A criminal informant is described as an individual who provides information to the FBI concerning criminal violations on a confidential basis. Along with oversight of criminal informants at the field level, oversight is provided at FBIHQ by the Criminal Informant/Witness Security Programs Unit (CI/WSPU). This unit continually monitors and evaluates all facets of the Criminal Informant Program (CIP) of the FBI and initiates policy changes when necessary. Representative of the important policy changes made are two recent examples: (1) raising the level of authorization in the field for an informant to engage in ordinary criminal activity from the supervisor level to the Assistant Special Agent in Charge level; and (2) requiring each field office to explain how a previous

monetary or payment authority was expended for an informant prior to a new authorization being granted at FBIHQ.

In addition to the evaluations conducted by the CI/WSPU, the Office of Inspections, Inspection Division, conducts a very thorough evaluation of each FBI field office's CIP in the biannual inspection of the office. In addition, the CI/WSPU at FBIHQ and the overall CIP is subjected to this same scrutiny by the Office of Inspections every two years during the CID inspections.

There are no special evaluations of the FBI's CIP planned; however, due to the many joint FBI and Drug Enforcement Administration (DEA) narcotics investigations and the FBI's concurrent jurisdiction in the investigation of narcotics violations, a review of the current Attorney General's Guidelines on the FBI's Use of Informants was undertaken. A working group comprising FBIHQ and DEAHQ personnel developed issues of mutual interest to each Agency concerning guidelines for informants. Drafts of proposed new guidelines have been prepared and reviewed. The most recent draft was reviewed by the AD, Criminal Investigative Division (CID), and revisions encompassing his recommendations have been made. The new draft will be re-submitted to the AD, CID, for further review. Upon his approval, the draft will be forwarded to DEAHQ for their review and comment. Once DEAHQ has completed a review, the draft will be forwarded to the Director of the FBI for his approval. The draft will then be submitted to the Attorney General who is the final authority for changes to be made in these guidelines.

Question:

The budget justification mentions close monitoring of payments to informants. Interestingly, Mr. Frank Varelli, a former FBI informant, has filed suit alleging that the agent responsible for him skimmed payments that were to be made to Mr. Varelli.

How does the FBI assure that proper payments are made to informants and how does the Bureau determine the proper use of a payment?

Answer:

When a special agent makes a decision to pay a criminal informant for services or expenses incurred in assisting the FBI, he or she must provide written justification to the field office management. The memorandum prepared must contain the amount previously paid to the informant, the date the informant was opened, and information justifying the requested amount. Authorization to pay the informant is obtained from the Special Agent in Charge (SAC) or, in his/her absence, the Assistant Special Agent in Charge (ASAC). An alternate contact agent must be present at the first payment made to an informant unless strong written justification can be given to FBIHQ for not having an alternate contacting agent present. Further, an alternate contacting agent must be present at all subsequent payments to an informant unless written justification can be given to and approved by the SAC or ASAC in the absence of the SAC. Receipts must

be obtained from all informants at the time each payment is made unless strong written justification can be given to FBIHQ for not obtaining a receipt. The informant file is reviewed by the field supervisor every 60 days ensuring that not only is the informant productive, but that he is being operated in conformance with the Attorney General's Guidelines and FBI rules and regulations. On an annual or biannual basis, depending upon the size of the field office, the Audit Staff at FBIHQ conducts a very thorough audit of all of a field office's financial transactions to include payment of informants. Again, on a biannual basis, the Office of Inspections conducts a review of each field office's Criminal Informant Program (CIP). Part of the CIP audit concerns payments made to informants.

The proper size of each payment is suggested by the special agent handling the informant and is reviewed by his/her supervisor and the SAC or ASAC in the field. Once an office has exhausted its payment authority for an informant, a communication is prepared and forwarded to FBIHQ requesting a new authorization. The communication must contain a detailed explanation as to how the previous authority was expended. Depending upon the cumulative amount previously authorized for a particular informant, the review at FBIHQ may be limited to a Criminal Informant/Witness Security Programs Unit Supervisory Special Agent and Unit Chief on the lower end of the spectrum, or will graduate through various authority levels which may include: Section Chief, Investigative Support Section; Section Chief, Substantive Section; Deputy Assistant Director, Criminal Investigative Division (CID); Assistant Director, CID; Executive Assistant Director, Investigations; and, in some cases, the Director.

Seizures and Forfeitures

Question:

The volume of seized and forfeited property handled by investigative agencies has increased dramatically in recent years. However, State and local police agencies have recently complained that the Federal Government has been slow to process the seized items and to disperse proceeds to cooperating police departments. Has the FBI experienced problems in this area? If so, what is being done to resolve the problems?

Answer:

The FBI is experiencing problems in processing seized items which have either been referred to the FBI for forfeiture or which the local police have requested as a result of a joint investigation. The delay in processing adoptive forfeitures from the police department goes hand-in-hand with the dramatic increase of the FBI's own seizures. There are a number of reasons for these delays, including inadequate staffing levels, the fact that investigations and subsequent forfeiture actions are more complicated than initially projected, and the fact that information provided to the FBI by local police for adoptive forfeitures is often incomplete or insufficient to meet Federal standards for forfeiture. In addition, forfeiture

actions are most often contested in judicial forfeiture actions and delays are approaching 18 months. Once cases are referred for judicial forfeiture, the FBI has no ability to control the timing of the process.

In an effort to resolve the problem internally three specific actions have been implemented:

1) the processing of forfeiture actions at FBIHQ has been streamlined and responsibilities of field personnel in the forfeiture process have been redefined;

2) additional staffing is being allocated to the forfeiture program through the reassignment of funded workyears;

3) outside contract personnel will be brought on board to assist in the processing of forfeiture actions by handling such matters as data entry, generation of notice letters and advertisements, and associated clerical tasks.

It is the FBI's goal to reduce the time necessary for the processing of administrative forfeiture actions from the present time of approximately 240 days to approximately 120.

Question:

It is noted that one additional agent is being requested to help with forfeiture-related areas of narcotics investigations. Is this a sufficient increase in staffing given the 232 percent increase in forfeiture matters since 1984?

Answer:

The passage of forfeiture legislation in 1986; the delegation of the administrative forfeiture responsibility; and the increased complexity of forfeiture investigations have resulted in the forfeiture process being significantly more labor intensive then initially projected. The complex nature of the actions, coupled with the dramatic increase in the volume of activity, became apparent recently. The agent workyear for 1988 is required immediately to assist in the administration of the program. This enhancement, together with the three activities contained on the previous page, will adequately address this problem.

Question:

The budget justification indicates that insufficient administrative support has resulted in delays in the initiation of forfeiture procedures causing the time for storage of items to increase, depreciation in the value of seized items, and forfeiture actions to be lost in court. These are serious consequences. How will the hiring of one agent for the forfeiture area alleviate problems that are attributed to a lack of administrative staff?

Answer:

The hiring of an additional special agent will contribute to the reduction of time necessary for processing forfeitures by providing additional staffing in the final review phase of FBI forfeiture procedures. Special agent personnel review the completed forfeiture files to determine if issues such as probable cause for forfeiture and sufficiency of the notice process have been met. At the present time, only one special agent is available in the Forfeiture and Seized Property Unit to perform this function and this has resulted in a substantial backlog. An additional agent will not completely eliminate the backlog, but will help to reduce it.

Travel/Transportation Requests

Question:

Travel/transportation requests are projected to rise from 30,000 in 1985 to 62,000 in 1988. This is a tremendous increase.

- What underlies the trend? Is this increase necessary? Why?
- What is being done to minimize the substantial costs associated with such an increase in travel/transportation?

Answer:

The projected increase in travel/transportation requests is simply based upon the planned expansion of the Airline Reservations Office's (ARO) teleticketing network to encompass nearly 100 percent of field office air travel. The costs associated with these travel/transportation requests will be mainly an increase in manpower resources to process the increased volume of requests. The bulk of the travel is already being performed. The degree to which we are able to expand ARO's teleticketing network will dictate what percentage of the travel will be processed through ARO by 1988. These projections represent an increase of services provided by ARO rather than an increase in travel.

Question:

Similarly, the justifications indicate that a 45 percent increase in relocation services for FBI employees is expected between 1986 and 1988. Again, this is costly activity that should be closely monitored, and perhaps curtailed.

- Are all of these relocations necessary? Why?
- When did the Bureau last study the issue of whether frequent transfers of agents are desirable and what was the result of the study?

Answer:

These projections represent an increase in services utilized rather than an increase in the number of transfers. All transferrers are eligible to avail themselves of at least part of the relocation services. Although new hires are not eligible for the guaranteed home sale part of the relocation program, they may utilize several aspects of the program which are available at no cost to the FBI, i.e., homefinding and mortgage financing assistance. Our on-going relocation education program, particularly with new agents training at the FBI Academy, Quantico, Virginia, has improved the awareness level of employees concerning their transfer-related entitlements. This should result in a significant increase in the number of transferees utilizing relocation services in 1988.

During 1986, the Office of Program Evaluations and Audits (OPEA) reviewed overall Bureau transfer policy; however, no recommendations were made concerning the issue of "frequency of transfers," per se. This is primarily attributable to the fact that consistent with current agent transfer policy a transfer, may be mandated and can be expect during the course of an agent's career. Additional transfers are optional or result from an agent's voluntary participation in the Career Development Program.

Field Office Information Management Systems (FOIMS)

Question:

What is the current projected cost and schedule for the accelerated FOIMS implementation plan? Why has the accelerated FOIMS implementation taken so long?

Answer:

In 1983, Director Webster approved the proposal to accelerate the implementation of FOIMS. Accelerated FOIMS implementation includes field office administrative functions such as case management, leads, indices, and personnel management. Since 1978, more than $125 million has been expended on FOIMS. Accelerated FOIMS will be on-line to all 59 field offices and 407 resident agencies by the end of December 1987 at a total cost of approximately $200 million. This estimate includes funding for acquisition and installation of workstations, construction and/or renovation of existing field offices in the Northeast Regional Computer Support Center (RCSC), and the Western RCSC, lease of hardware and software, data communications and maintenance expenses, contractual support for cost-benefit studies systems programming, and personnel costs. In 1983, the FBI entered into a contract with the Systems Development Corporation/ Burroughs to acquire workstations to support the FBI's automation activities. However, the contract award was protested by another corporation. Litigation of the contract resulted in substantial delays in workstation deliveries and software development.

Additional accelerated FOIMS has experienced delays due to the restricted budgetary climate. In 1986, the sequestration of funds from the Balanced Budget and Emergency Deficit Reduction Act of 1985 resulted in a loss of $16.9 million budgeted for intelligent workstations and $5 million budgeted for field office renovations related directly to FOIMS. In addition to the sequestering of funds, $5 million was reallocated from accelerated FOIMS to cover overexpenditures in other areas of the FBI. All of these factors has caused the delay in implementation.

Question:

When does the FBI plan to complete full implementation of FOIMS and how much will full implementation cost? What are the current annual operating costs for FOIMS and what will these cost be under full implementation?

Answer:

The full implementation of FOIMS includes extended functionality as well as the fully distributed environment with up to six regional computer support centers (RCSCs). The FBI expects extended FOIMS functionality to be operational in all field offices and resident agencies by 1991. Extended FOIMS functionality includes single source data entry, real time global query/transaction processing capabilities, and embedded expert system capabilities to support investigative work functions through standardized software. The fully distributed environment, with up to six RCSCs operational, is scheduled for 1993. The estimated total cost to complete FOIMS is projected at $297 million for capital investments and $38 million annually for operations and maintenance costs. Current annual operating expenses including lease of hardware and software, and data communications and maintenance expenses are approximately $25 million; by 1993 annual operating expenses are projected at approximately $38 million.

Question:

How have the delays in FOIMS implementation affected the FBI's ability to carry out its mission?

Answer:

Delays in FOIMS implementation have had an adverse impact on the FBI's ability to carry out its mission in several areas. The inability to collate available data is limiting the FBI's investigative abilities. Attempts to locate certain information are not made in a manual environment when such attempts result in a large output of resources. Collation of such information is elementary for an automated system such as FOIMS. In addition, the effective analysis of data collected through technical surveillances has been slowed through these delays.

The inability to share investigative data and files instantaneously among offices is also limiting the FBI's investigative abilities. Significant time delays are experienced by agents requiring access to investigative files. Current access to investigative files may require from one to several days in FBI resident agencies. The need to set various investigative leads will be eliminated when FOIMS is fully implemented because data such as rap sheets, indices, and automatic transfer of photographs will be available on-line to all offices and resident agencies through FOIMS.

Security of the FBI's data resources is less than adequate without full FOIMS implementation. An automated environment provides the means for a higher level of security than a manual environment. For example, full FOIMS implementation will restrict access to sensitive data to specific users who have a need-to-know. It will also provide for logging of all transactions. In the event of a security problem or leak, it is possible to determine what personnel accessed specific data.

Question:

In its 1988 budget request, the FBI indicates that the Institute for Defense Analyses completed a study that documented the costs and benefits of FOIMS. What cost factors were considered in this study? What were the key benefits described in the study and were they quantified? What is the bottom line of this cost-benefit study?

Answer:

The cost factors considered by the Institute for Defense Analyses (IDA) in its study documenting the costs and benefits of FOIMS include construction of regional computer support centers, renovation of FBI field offices, the purchase of equipment, lease of hardware and software, telecommunications and maintenance expenses, contractual support for cost-benefits studies, systems programming, system analysis, and design, supplies, and personnel costs.

The key benefits described in the study related to both efficiency and effectiveness. Efficiency benefits represent the value of time saved by investigative personnel utilizing FOIMS to retrieve data rather than manually searching files. Time saved is considered cost avoidance. Total efficiency benefits were estimated at more than $115 million through 1992. Effectiveness benefits represent the value of answers to questions that would not have been obtained using a manual search method. Total effectiveness benefits were estimated at more than $4.8 billion through 1992.

The study determined that a seven to one benefit-to-cost-ratio will be attained for the FOIMS program from inception through 1992. This ratio includes all sunk costs which have been incurred.

Expert Systems

Question:

What is the status of the FBI's artificial intelligence (AI) initiatives?

Answer:

The current status of the FBI's AI initiatives is as follows:

The Labor Racketeering Expert System is interfaced with the FBI's Organized Crime Information System (OCIS). Increased functionality of the Labor Racketeering Expert System has been achieved through the use of prototyping methodology and continued rule development by the FBI's organized crime experts in this area, in conjunction with technical personnel engaged in knowledge acquisition. Specifications for the full production system have been defined. A subset of this production system has been installed in an FBI field office to support a major labor racketeering investigation. The full production system will be completed in 1988.

System support for narcotics interdiction at the El Paso Intelligence Center (EPIC) is operational. EPIC now has the capability to access multiple agency databases from a single workstation with a single screen format for all queries. Additional workstations were installed in February 1987, to support new organizational elements at EPIC. The system provides an interface to flight plan sources and uses sophisticated mapping software to track aircraft and vessels and locate radio transmitters. Development of flight plan analysis and automatic query generation is underway. The system should be completed fully by the end of 1987.

The Counterterrorism Expert System is being developed through the use of prototying methodology. The latest prototype includes a variety of initial and general investigative rules and specific, complex, fine-grained rules for surveillance and other operations which have been identified as critical items by investigative experts at FBI Headquarters and major field offices. Full production system design has begun and a subset of this system will be available to FBI Headquarters users in 1987. The final system will be available to all users in 1988.

The first phase of the Generic Name Search Expert System has been completed. This system is now capable of identifying names as belonging to or derived from a particular nationality/language with a reliability in the high 90 percentile. Knowing this derivation, particular linguistic rules can be applied to aid in the search of various databases. The next phase of development is to integrate this name search capability with various FBI production systems and incorporate additional linguistic rules. This system will be completed in 1987.

The Payroll/Personnel/Decision Support Expert System is being developed through the use of prototyping methodology. Development of an integrated payroll/personnel system capability to support both the FBI and DEA was mandated by Reform 88. The Decision Support portion of this expert system is a high priority initiative as it will be an important executive management tool supporting decisionmaking both on a day-to-day basis and during crisis incidents. Initial working prototypes of this portion of the system will be completed by the end of 1987. The payroll and personnel portions of the system will be completed in 1987.

Question:

What expert systems capabilities are being developed and how much will they cost?

Answer:

Artificial Intelligence (AI) and expert systems initiatives are underway in the areas of labor racketeering, narcotics interdiction, generic name search, counterterrorism and decision support. Funding totaling $13,834,000 has been obligated for the development of these expert systems. These expert systems will be completed with the funding already provided, excluding the decision support system which requires outyear funding. It is anticipated that the decision support system will require additional funding of approximately three million dollars.

Question:

What work is the Institute for Defense Analyses (IDA) performing for the FBI and when will it be complete? How much is the FBI paying the Institute for this work?

Answer:

IDA is performing a wide range of work for the FBI including the implementation of law enforcement support expert systems, the development of an integrated payroll/personnel system capability supporting the FBI and DEA, a decision support system, and the performance a various analyses and studies.

IDA is leading prototyping activities and selected production models associated with the implementation of law enforcement support expert systems in the areas of labor racketeering, narcotics interdiction, counterterrorism, and generic name search capabilities. The narcotics interdiction and generic name search expert systems will be completed in 1987. The labor racketeering and counterterrorism expert systems will be completed in 1988. Funding totaling $11,842,000 has been provided to IDA for these expert systems.

IDA is developing an integrated payroll/personnel system capability to support both the FBI and DEA. This capability was mandated by

Reform 88. The payroll/personnel system capability will be completed in 1987.

IDA is also developing a decision support expert system which will be integrated with the personnel/payroll system. The decision support expert system is a high priority initiative as it will be an important executive management tool supporting decisionmaking both on a day-to-day basis and during crisis incidents. Initial working prototypes of the system will be completed in 1987. To date, funding totaling $1,992,000 has been provided to IDA for the personnel/payroll and decision support expert systems. Outyear funding of approximately three million dollars will be required to complete the decision support initiative.

IDA has conducted analyses for the FBI regarding its automation and voice privacy radio initiative. A study is now underway to determine the impact of automation on the FBI. Since one of the previous automation studies was completed below cost, the FBI did not require additional funding for this study. Results of the study are expected by June 1987. In February 1987, a study regarding the FBI's Strategic Information Operations Center (SIOC) was begun to address areas including the delineation of SIOC requirements, functions, and procedures, the establishment of relevant interfaces with other agencies, and to provide a comprehensive plan. The anticipated completion date for the study is February 1988. Funding totaling $195,000 was provided to IDA for completion of this task.

Question:

In response to questions during the 1987 appropriation hearings, Mr. Webster said that "the first version of the Labor Racketeering Expert System will be applied this year in a major investigation." Was this expert system used and what was the result?

Answer:

A major organized crime investigation in the Midwest is currently being supported by the labor racketeering expert system. Because the investigation is ongoing, specific details cannot be divulged at this time. However, feedback from agents conducting the investigation has been extremely favorable. Based on the success of this application, the Labor Racketeering Expert System is being refined to expand its knowledge base to include rules for new statutes, laws, and investigative expertise.
